WASHINGTON
1914

VOLUME LI, PART V.

# CONGRESSIONAL RECORD,

## SIXTY-THIRD CONGRESS, SECOND SESSION.

## SENATE.

TUESDAY, *March 3, 1914.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, we pray Thee to write all Thy laws in our hearts. In our minds do Thou put them. Then shall we be Thy people and Thou shall be our God. Give us a continual disposition toward obedience to Thy holy will. We pray for the ministry of Thy spirit to enlighten our intellect, to sanctify our will, to control and subdue all our hearts, and bring us into the highest relation to Thyself. May there be no disposition to disobedience or rebellion in any of us, but a very glad and willing submission to the will of God. Grant that through Thy ministry we may measure up to the responsibilities of this day and of this office. For Christ's sake. Amen.

The VICE PRESIDENT resumed the chair.

The Secretary proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. SMOOT and by unanimous consent, the further reading was dispensed with and the Journal was approved.

### USELESS PAPERS IN DEPARTMENT OF COMMERCE.

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Secretary of Commerce, stating that there is in the Department of Commerce an accumulation of documents and files of papers which are not needed nor useful in the transaction of the current business of the department and have no permanent value or historical interest. The communication will be referred to the Select Committee on the Disposition of Useless Papers in the Executive Departments.

Mr. SMOOT. Communications of that kind have gone to the Committee on Printing in the past. We have acted upon a great many of them.

The VICE PRESIDENT. On the disposition of useless papers?

Mr. SMOOT. Does the communication refer to the destruction of useless papers or the disposition of them?

The VICE PRESIDENT. It is a communication asking what disposition shall be made of them.

Mr. SMOOT. In several cases in the last few years the Joint Committee on Printing of the two Houses have acted on this matter. I suppose it should go to the Committee on Printing, although I myself do not care to which committee it is referred.

The VICE PRESIDENT. The communication will be referred to the Committee on Printing.

### EXECUTIVE SESSION.

Mr. KERN. In accordance with an understanding had yesterday, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 23 minutes spent in executive session the doors were reopened.

### MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes, agrees to the conference asked for by the Senate on the disagreeing votes of the two Houses thereon, and had appointed Mr. MOON, Mr. FINLEY, and Mr. SAMUEL W. SMITH managers at the conference on the part of the House.

The message also announced that the House had passed the following bills with amendments, in which it requested the concurrence of the Senate:

S. 3206. An act for the protection of the water supply of the city of Baker, a municipal corporation of the State of Oregon;

S. 3454. An act authorizing the Secretary of Commerce to lease to the city of Port Angeles, Wash., certain property; and

S. 3742. An act to authorize the Hudson River Connecting Railroad Corporation to construct a bridge across the Hudson River in the State of New York.

The message further announced that the House had passed the joint resolution (S. J. Res. 90) to continue in effect the provisions of the act of March 9, 1906 (34 Stat. L., 56).

The message also announced that the House had passed the following bills and joint resolutions, in which it requested the concurrence of the Senate:

H. R. 9671. An act to appropriate $5,000 to erect a suitable monument on the battle grounds at the Horse Shoe, on the Tallapoosa River, in the State of Alabama;

H. R. 11751. An act authorizing the sale of certain land to the county of San Diego, State of California, for public watering purposes;

H. R. 12806. An act authorizing the Secretary of War to grant the use of the Fort McHenry Military Reservation, in the State of Maryland, to the mayor and city council of Baltimore, a municipal corporation of the State of Maryland, making certain provisions in connection therewith, providing access to and from the site of the new immigration station heretofore set aside;

H. R. 13091. An act to provide for drainage of Indian allotments of the Five Civilized Tribes;

H. R. 13365. An act to authorize the construction, maintenance, and operation of a bridge across the Tombigbee River near Old Cotton Gin Port, in Monroe County, Miss.;

H. R. 13545. An act to extend the time for constructing a bridge across the Mississippi River at the town site of Sartell, Minn.;

H. J. Res. 76. Joint resolution authorizing the Secretary of War, in his discretion, to accept the title to 4,000 acres of land at or near Anniston, Ala., and 5,000 acres of land in the vicinity of Tullahoma, in the State of Tennessee, for the purpose of establishing maneuver camps, rifle and artillery ranges, etc.;

H. J. Res. 204. Joint resolution authorizing the Secretary of Agriculture to make exhibits at Forest Products Expositions to be held in Chicago, Ill., and New York, N. Y.; and

H. J. Res. 217. Joint resolution to convey the thanks of Congress to the captain of the American steamer Kroonland, of the Red Star Line, and through him to the officers and crew of said steamer, for the prompt and heroic service rendered by them in rescuing 89 lives from the burning steamer Volturno in the north Atlantic Ocean.

### PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented petitions of sundry citizens of Battle Creek, Grand Rapids, and Jackson, all in the State of Michigan, praying for the adoption of an amendment to the Constitution to prohibit polygamy, which were referred to the Committee on the Judiciary.

He also presented memorials of Yorktown Branch, American Continental League, of Philadelphia, Pa.; of George Washington Branch, American Continental League, of Philadelphia, Pa.; of Commodore John Barry Branch, American Continental League, of Philadelphia, Pa.; of Patrick Henry Branch, American Continental League, of Philadelphia, Pa.; of Paul Revere Branch, American Continental League, of Leominster, Mass.; of George Washington Branch, American Continental League, of Danbury, Conn.; of Andrew Jackson Branch, American Continental League, of Butte, Mont.; and of George Washington Branch, American Continental League, of Minneapolis, Minn., remonstrating against the repeal of that part of the Panama Canal act exempting American coastwise shipping from the payment of tolls, which were referred to the Committee on Interoceanic Canals.

He also presented a petition of Lincoln Court, No. 20, Guardians of Liberty, of Cincinnati, Ohio, praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented a memorial of Gen. Francis Marion Branch, American Continental League, of Philadelphia, Pa., and a memorial of the Ancient Order of Hibernians, of Baltimore, Md., remonstrating against an appropriation for the celebration of the so-called "One hundred years of peace among English-speaking peoples," which were referred to the Committee on Foreign Relations.

He also presented a petition of the congregation of the Grace Congregational Church, of Cleveland, Ohio, praying for the adoption of an amendment to the Constitution, to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a memorial of Local Union No. 179, Carriage, Wagon, and Automobile Workers, of Cleveland, Ohio, and a memorial of Local Union No. 38, Ladies' Tailors and Dressmakers' Union, of New York City, N. Y., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. OLIVER presented petitions of the congregations of the Allegheny Seventh-Day Adventist Church, of Pittsburgh, and of the Gorman Seventh-Day Adventist Church, of Pittsburgh, and of sundry citizens of Pittsburgh, all in the State of Pennsylvania, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

271314

He also presented memorials of sundry citizens of Pittsburgh, Glenshaw, Etna, Sharpsburg, Indiana, Hampton, Duquesne, and Butler; of Local Union No. 272, Brass Finishers' Union, of Pittsburgh; of Local Union No. 115, Bartenders' League, of Pittsburgh; and of Local Union No. 317, Cigar Makers' International Union, of Wilkes-Barre, all in the State of Pennsylvania, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented petitions of Council No. 162, Order of Independent Americans, of Steelton; of Council No. 127, Order of Independent Americans, of Philadelphia; of Verona True Blues, No. 33, of Verona; of Duquesne Council, No. 394, Order United American Mechanics, of Duquesne; of Codorus Council, No. 135, Junior Order United American Mechanics, of York; of Blair Council, No. 15, Order of Independent Americans, of Juniata; of Washington Camp, No. 163, Patriotic Order Sons of America, of Reading; and of Castle No. 1, Knights of Luther, of Philadelphia, all in the State of Pennsylvania, praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

He also presented a memorial of the Chamber of Commerce of Pittsburgh, Pa., remonstrating against the enactment of legislation to provide an educational test for immigrants, which was referred to the Committee on Immigration.

He also presented a memorial of the Chamber of Commerce of Philadelphia, Pa., remonstrating against the enactment of legislation to provide for the Government ownership of telegraph and telephone lines, which was referred to the Committee on Post Offices and Post Roads.

He also presented a memorial of the Chamber of Commerce of Philadelphia, Pa., and a memorial of the Chamber of Commerce of Pittsburgh, Pa., remonstrating against the enactment of legislation to make lawful certain agreements between employers and laborers and persons engaged in agriculture or horticulture, and to limit the issuing of injunctions in certain cases, and for other purposes, which were referred to the Committee on the Judiciary.

He also presented a petition of the Chamber of Commerce of Pittsburgh, Pa., praying for the enactment of legislation to create a commission to have charge of patents, trade-marks, and copyright laws, which was referred to the Committee on Patents.

He also presented memorials of George Washington Branch, American Continental League, of Philadelphia; of the Robert Emmet Society, of Wilmerding; of Commodore John Barry Branch, American Continental League, of Philadelphia; of Yorktown Branch, American Continental League, of Philadelphia; and of Patrick Henry Branch, American Continental League, of Philadelphia, all in the State of Pennsylvania, remonstrating against an appropriation for the celebration of the so-called "One hundred years of peace among English-speaking peoples," which were referred to the Committee on Foreign Relations.

Mr. BRISTOW presented a petition of sundry citizens of Clay Center, Kans., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a memorial of Parsons Lodge, No. 293, International Association of Machinists, of Parsons, Kans., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. McCUMBER presented a petition of sundry citizens of Liberty, Watrous, Bentley, and Spring Butte, all in the State of North Dakota, praying for the enactment of legislation to provide a system of rural credits, which was referred to the Committee on Banking and Currency.

Mr. WORKS presented a petition of the Title Insurance & Trust Co., of Los Angeles, Cal., praying for the adoption of an amendment to the income-tax law to provide a method of information at the source in lieu of the present method of collection at the source, which was referred to the Committee on Finance.

Mr. CHILTON presented petitions of sundry citizens of Wellsburg, Reedsville, Clarksburg, Morgantown, Petersburg, Martinsburg, and Terra Alta, all in the State of West Virginia, praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which were ordered to lie on the table.

Mr. KERN presented a telegram in the nature of a petition from the Ministers' Association of Indianapolis, Ind., praying for the enactment of legislation to improve the chaplain service in the Army and the Navy, which was referred to the Committee on Military Affairs.

He also presented a telegram in the nature of a memorial from the Morrison & Thompson Co., of Kokomo, Ind., remonstrating against the inspection of grain in interstate commerce, which was referred to the Committee on Agriculture and Forestry.

He also presented a petition of sundry citizens of Terre Haute, Ind., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented a memorial of Local Union No. 73, Bartenders' League, of Elkhart, Ind., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. MYERS presented a memorial of sundry citizens of Miles City, Mont., and a memorial of sundry citizens of Helena, Mont., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. O'GORMAN presented a memorial of the Chamber of Commerce of New York City, N. Y., remonstrating against the enactment of legislation to create a Federal trade commission, which was referred to the Committee on Interstate Commerce.

He also presented resolutions adopted by the Legislature of the State of New York, favoring the enactment of legislation to make the maintenance of insane immigrants a national charge and to provide for the mandatory exclusion of mentally defective aliens, which were referred to the Committee on Immigration.

Mr. SHIVELY presented memorials of sundry citizens of Aurora, Hammond, and La Fayette, all in the State of Indiana, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. SMITH of Michigan presented memorials of sundry citizens of Escanaba; of Local Union No. 476, International Brotherhood of Electrical Workers, of Saginaw; and of the Federation of Labor, of Saginaw, all in the State of Michigan, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented memorials of John Tucker Post, No. 199, Grand Army of the Republic, of Ortonville; of Colonel E. H. Liscum Post, No. 343, Grand Army of the Republic, of Sault Ste. Marie; of Sedgwick Corps, No. 187, Women's Relief Corps, of Evart; of Peter A. Weber Post, No. 237, Grand Army of the Republic, of Rockford; of James F. Covell Post, No. 354, Grand Army of the Republic, of Palo, all in the State of Michigan, remonstrating against any change being made in the United States flag, which were referred to the Committee on the Judiciary.

Mr. BRANDEGEE presented a memorial of International Molders' Local Union No. 298, of Waterbury, Conn., and a memorial of sundry citizens of Bridgeport, Conn., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. PERKINS presented a petition of the congregation of the Presbyterian Church of Palo Alto, Cal., praying for the suspension for one year of the naval programs of the great powers, which was referred to the Committee on Naval Affairs.

He also presented a memorial of the Brotherhood of Leather Workers on Horse Goods, of Oakland, Cal., and a memorial of Local Union No. 673, Bartenders' League, of San Bernardino, Cal., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. POMERENE presented sundry memorials of citizens of Cleveland, Cincinnati, Columbus, Toledo, Dayton, Youngstown, Zanesville, Akron, Lima, Canton, Portsmouth, Sandusky, Norwalk, Lorain, Lancaster, Ripley, Fremont, Port Clinton, Wapakoneta, Lynchburg, Pomeroy, Alliance, Chillicothe, Nelsonville, Medina, Swanton, Minster, and Eaton, all in the State of Ohio, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. LODGE presented memorials of sundry citizens of Boston, Matick, Framingham, and Marlboro, all in the State of Massachusetts, remonstrating against the enactment of legislation compelling the observance of Sunday as a day of rest in the

District of Columbia, which were referred to the Committee on the District of Columbia.

He also presented a memorial of Major Howe Post 47, Grand Army of the Republic, Department of Massachusetts, of Haverhill, Mass., remonstrating against any change being made in the United States flag, which was referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Boston, Worcester, Cambridge, Malden, Winthrop, Winchendon, and Revere, all in the State of Massachusetts, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Cambridge, Boston, Somerville, Medford, Chelsea, Brookline, Hingham, and Newton, all in the State of Massachusetts, praying for the enactment of legislation to permit the wearing of uniforms by the Boys' Brigade of America similar to those worn in the United States Army, which were referred to the Committee on Military Affairs.

Mr. BURLEIGH presented resolutions adopted by Local Union No. 914, United Brotherhood of Carpenters and Joiners, of Augusta, Me., favoring an investigation into conditions existing in the mining district of Michigan, which were referred to the Committee on Education and Labor.

Mr. SMOOT presented memorials of Salt Lake Lodge, No. 83, Brotherhood of Railway Carmen of America; of Local Union No. 721, Bartenders' League; and of Local Union No. 815, Culinary Alliance, all of Salt Lake City, in the State of Utah, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. WARREN presented a petition of sundry citizens of Carpenter, Wyo., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a memorial of Local Union No. 820, Bartenders' League, of Sheridan, Wyo., and the memorial of H. O. Emery, of Douglas, Wyo., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. BRADLEY. I present resolutions adopted by the Board of Trade of Louisville, Ky., which I ask may be printed in the RECORD and referred to the Committee on the Judiciary.

There being no objection, the resolutions were referred to the Committee on the Judiciary and ordered to be printed in the RECORD, as follows:

Preamble and resolutions adopted by the board of directors of the Louisville Board of Trade at a meeting held February 25, 1914:

The Judiciary Committee of the House of Representatives is now considering a bill designed for the purpose of prohibiting and preventing monopolies and restrictions in interstate trade, and amending and defining the meaning of the existing antitrust law, and the committee is now giving hearings to those who may desire to submit their views on the subject, and the bill, when in shape to suit the views of the committee, will be presented to Congress for enactment into law.

This board of trade represents large business interests engaged in interstate trade which will be affected and which will have to conform to every requirement of the law when enacted.

The directors of this board believe the great mass of the business men of Louisville and of all sections of the country sincerely desire to conduct and carry on their business fairly and in conformity to the laws, and they fully realize that the growth of the country and of business has made necessary the adoption of Federal statutes regulating and controlling interstate trade. They believe the laws passed should be not only just, and so that business, both big and little, when fairly and honestly conducted may prosper, but that they should be plain and explicit and leave no doubt as to what business can do and what business can not do.

The directors of this board know from both observation and experience that the greatest drawback and hindrance to the satisfactory and successful conduct of business is the uncertainty as to the meaning of the law.

We are strong believers in the wisdom of the President in what he said on this subject in his address to Congress January 20, 1914. He then said:

"The business of the country awaits also, has long awaited, and has suffered because it could not obtain further and more explicit legislative definition of the policy and meaning of the existing antitrust law. Nothing hampers business like uncertainty. Nothing daunts or discourages it like the necessity to take chances, to run the risk of failing under the condemnation of the law before it can make sure just what the law is. Surely we are sufficiently familiar with the actual processes and methods of monopoly and of the many hurtful restraints of trade to make definition possible—at any rate, up to the limits of what experience has disclosed. These practices being now abundantly disclosed, can be explicitly and item by item forbidden by statute in such terms as will practically eliminate uncertainty, the law itself and the penalty being made equally plain."

In our judgment the legislation proposed in tentative bill No. 2, now being considered by the Judiciary Committee of the House, is far from meeting the suggestions and the well-considered opinions of the President as set out in his address of January 20, 1914, to the Congress. The bill as it is now before the committee does not "explicitly and item by item state in such terms as will practically eliminate uncertainty" what the law itself means and the penalty. We believe a number of the most important sections of the bill are plainly susceptible of more than one construction, and they are susceptible of constructions that, if so construed, would cause a great injustice to honorable business people and would prevent the practical and proper carrying on of business. For the reasons here set out be it

*Resolved*, That the directors of the Louisville Board of Trade hereby most earnestly protest against the passage by Congress of tentative bill No. 2, now being considered by the Judiciary Committee of the House, for the reason that it is indefinite and does not plainly state what business may do and what it may not do without violation of law, and because important provisions in said bill are plainly susceptible of different constructions, both by business men and by the courts, and for the further reason that the passage of the bill as it now is would result in greater confusion and uncertainty as to what business can do and what it can not do than exists at present, with the consequent loss to business and to the country.

*Resolved further*, That the Senators and Representatives in Congress from Kentucky be respectfully requested to vote against said bill as it now is and until it is so altered and amended as to conform in letter and in spirit to the views and recommendations of the President as expressed in his address to the Congress January 20, 1914.

Mr. BRADLEY. I have delivered to the Chief Clerk of the Senate 12,500 individual memorials from citizens of the State of Kentucky, remonstrating against the passage of the joint resolution proposing an amendment to the Constitution for the prohibition of the manufacture and sale of alcoholic liquors. I ask that the memorials may be received and referred to the Committee on the Judiciary.

The VICE PRESIDENT. The memorials will be received and referred to the Committee on the Judiciary.

Mr. BRADLEY presented a memorial of the Progressive Mutual Aid Society, of Covington, Ky., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a petition of Star Council, No. 56, Daughters of America, of Covington, Ky., praying for the enactment of legislation to provide an educational test for immigrants to this country, which was referred to the Committee on the Judiciary.

## REPORTS OF COMMITTEES.

Mr. POMERENE, from the Committee on Interstate Commerce, to which was referred the bill (S. 387) relating to bills of lading, reported it without amendment and submitted a report (No. 309) thereon.

Mr. BRADLEY, from the Committee on Claims, to which was referred the bill (S. 604) for the relief of Sarah A. Clinton and Marie Steinberg, reported it without amendment and submitted a report (No. 307) thereon.

## THE PACIFIC CREOSOTING CO.

Mr. LANE. I am directed by the Committee on Claims, to which was referred the bill (S. 690) for the relief of the Pacific Creosoting Co., to report it adversely, and I submit a report (No. 308) thereon.

The VICE PRESIDENT. What disposition does the Senator from Oregon desire shall be made of the report?

Mr. LANE. I ask for the regular procedure—for the adoption of the committee's report.

The VICE PRESIDENT. Then, does the Senator from Oregon move the indefinite postponement of the bill?

Mr. LANE. No; I do not so understand it.

Mr. BRYAN. I do, Mr. President.

Mr. LANE. I do not know what the custom has been in such cases.

The VICE PRESIDENT. The Chair understands the Senator from Oregon has made an adverse report on the bill?

Mr. LANE. Yes.

The VICE PRESIDENT. Does the Senator from Oregon move the indefinite postponement of the bill?

Mr. JONES. I hope the Senator will not make that motion, but will allow the bill to go to the calendar until I have an opportunity to examine it.

Mr. LANE. I ask for the present that the bill be allowed to go to the calendar, in order that the Senator from Washington may have an opportunity to investigate the matter.

The VICE PRESIDENT. The bill, together with the adverse report, will be placed on the calendar.

## HEIRS OF SIM HARRISON, DECEASED.

Mr. WILLIAMS. Mr. President, on February 20, during my absence, Senate resolution No. 276, to pay six months' salary to the heirs at law of a certain deceased employee of the Senate, was passed, and an error was made in the names of two of the beneficiaries. I ask unanimous consent for the reconsideration of the vote by which the resolution was passed, and I do so for the purpose of correcting the names.

The VICE PRESIDENT. Is there objection?

Mr. McCUMBER. Mr. President, on account of the disorder in the Senate Chamber, I did not hear the request of the Senator from Mississippi.

The VICE PRESIDENT. The request of the Senator from Mississippi is for a reconsideration of the vote by which Senate resolution 276 was passed, upon the ground that there was a mistake in the names of the persons to whom the allowance contained therein was proposed to be made. If there is no objection, the vote whereby the resolution was passed will be reconsidered, and the resolution is now before the Senate for amendment.

Mr. WILLIAMS. I propose the amendments to the resolution which I send to the desk.

The VICE PRESIDENT. The amendments proposed by the Senator from Mississippi will be stated.

The SECRETARY. In line 4, it is proposed to strike out the name "Richardson" and to insert the name "Harrison"; and, in line 5, to strike out the name "Annie S. Harrison" and to insert the name "Annie H. Richardson," so as to make the resolution read:

*Resolved*, That the Secretary of the Senate be, and he hereby is, authorized and directed to pay, out of the miscellaneous items of the contingent fund of the Senate, to James S. Harrison, of Hattiesburg, and Sallie G. Harrison and Annie H. Richardson, of Belzoni, Miss., children and heirs at law of Sim Harrison, late messenger, acting assistant doorkeeper, of the United States Senate, a sum equal to six months' salary at the rate he was receiving by law at the time of his death, said sum to be considered as including funeral expenses and all other allowances.

The amendments were agreed to.

The resolution as amended was agreed to.

### BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MYERS:

A bill (S. 4674) granting to the trustees of the Methodist Episcopal Church, at Wolf Point, Mont., lots 1, 2, and 3, in block 24, town site of Wolf Point, State of Montana, at the appraised valuation thereof; to the Committee on Public Lands.

By Mr. BORAH:

A bill (S. 4675) granting a pension to Thomas Ranahan; to the Committee on Pensions.

By Mr. BRISTOW:

A bill (S. 4676) granting a pension to J. J. Peate; and

A bill (S. 4677) granting a pension to James F. Hargett (with accompanying papers); to the Committee on Pensions.

By Mr. SHAFROTH:

A bill (S. 4678) to carry into effect the findings of the military board of officers in the case of George Ivers, administrator; to the Committee on Claims.

By Mr. THOMAS:

A bill (S. 4679) authorizing school district No. 1 in the city and county of Denver and State of Colorado to sell and convey block No. 143 in the east division of the city of Denver, Colo. (with accompanying papers); to the Committee on Public Lands.

By Mr. BURLEIGH:

A bill (S. 4680) granting a pension to Catherine J. Hills; to the Committee on Pensions.

By Mr. SHIELDS:

A bill (S. 4681) to amend section 162 of the act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911; to the Committee on the Judiciary.

### USE OF WATERS OF RIO GRANDE, COLO.

Mr. THOMAS. I introduce a joint resolution, and ask that it be read.

The joint resolution (S. J. Res. 117) to determine the rights of the State of Colorado and of its citizens in the beneficial uses of waters of the Rio Grande and its tributaries within the boundaries of Colorado, was read the first time by its title and the second time at length, as follows:

Joint resolution (S. J. Res. 117) to determine the rights of the State of Colorado and of its citizens in the beneficial uses of waters of the Rio Grande and its tributaries within the boundaries of Colorado.

Whereas the constitution of the State of Colorado provides that the water of every natural stream not theretofore appropriated is the property of the public dedicated to the use of the people of the State, and that the right to divert such waters to beneficial uses shall never be denied; and

Whereas this dedication and ownership was confirmed by the Federal Government when it admitted the State into the Union, on the 1st day of August, A. D. 1876; and

Whereas the Rio Grande and many of its tributaries have their sources in the mountains of that State, whose waters are needed and can be utilized for the reclamation of more than 1,250,000 acres of land within its boundaries, which without such waters must remain arid and unproductive; and

Whereas the Secretary of the Interior, on December 5, 1896, in disregard of this vested right and without notice to the State of Colorado, directed the Commissioner of the General Land Office to suspend action on any and all rights of way through public lands for purpose of irrigation by using the waters of the Rio Grande or any of its tributaries in the State of Colorado until further instructed by that department, which order has since been and is now in force, by reason whereof the citizens of the State have been unlawfully prohibited from appropriating said waters and applying them to beneficial uses, to the great and lasting injury of the Commonwealth; and

Whereas since said departmental order became effective many efforts to so appropriate portions of said waters by compliance with the requirements of the State and Federal statutes relating thereto have been made and defeated by the refusal of the Interior Department to approve and file the maps, plats, and description thereof; and

Whereas all efforts to secure the rescision of said order or a judicial determination of the rights of those directly interested in the use of said waters have been unavailing through inability to bring suit against the Federal authorities for such purpose without their consent: Therefore be it

*Resolved, etc.*, That authority is hereby conferred upon the State of Colorado in its own right and name, or in the right and name of any citizen or citizens directly interested, or both, as it may be advised, to institute and prosecute such action at law or in equity against the Secretary of the Interior or the Commissioner of the General Land Office, or both, as it may be advised is necessary or expedient to determine its right and the right of its citizens to appropriate and apply to beneficial uses the waters of the Rio Grande and its tributaries within its geographical boundaries. Such action may be instituted in any district court of the United States, and any judgment or decree therein shall be subject to review by writ of error or appeal, as provided by law in other cases.

Mr. THOMAS. Mr. President, I desire to give notice that at the close of the morning business on Monday, the 16th instant, I shall address the Senate on the subject of the joint resolution, and I should like to have it lie over until that time.

The VICE PRESIDENT. The joint resolution will lie on the table and be printed.

### AMENDMENTS TO APPROPRIATION BILLS.

Mr. PERKINS submitted an amendment proposing to appropriate $200,000 for the construction and equipment of a storehouse at Benicia Arsenal, Cal., intended to be proposed by him to the Army appropriation bill, which was referred to the Committee on Military Affairs and ordered to be printed.

Mr. BRANDEGEE (for Mr. LIPPITT) submitted an amendment proposing to appropriate $25,000 for the construction of a lighthouse and keeper's dwelling at Great Salt Pond, R. I., intended to be proposed by him to the sundry civil appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

Mr. OWEN submitted an amendment authorizing the Commissioner of Indian Affairs to pay out of the Creek tribal funds now on deposit in the United States Treasury and in the national and State banks of Oklahoma a sum sufficient to equalize the allotments of all persons enrolled under the original Creek agreement approved March 1, 1901, etc., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

### CREEK EQUALIZATION FUND.

Mr. OWEN. Mr. President, I have a memorial from R. C. Allen, national attorney of the Creek Nation of Indians with regard to the Creek equalization fund, giving the data and reasons why it should be disposed of by the Senate. I think the memorial ought to be printed as a Senate document for the information of the Senate. I do not know whether or no the Senate has adopted a rule requiring such matters to be referred to the Committee on Printing. If so, I should like to ask a reference of the memorial to the Committee on Printing and to request a prompt report on it, because the Indian appropriation bill is now before the Committee on Indian Affairs.

The VICE PRESIDENT. The memorial will be referred to the Committee on Printing for action.

### HOUSE BILLS REFERRED.

The following bills and joint resolution were read twice by their titles and referred to the Committee on Commerce:

H. R. 13365. An act to authorize the construction, maintenance, and operation of a bridge across the Tombigbee River near Old Cotton Gin Port, in Monroe County, Miss.;

H. R. 13545. An act to extend the time for constructing a bridge across the Mississippi River at the town site of Sartell, Minn.; and

H. J. Res. 217. Joint resolution to convey the thanks of Congress to the captain of the American steamer *Kroonland*, of the Red Star Line, and through him to the officers and crew of said steamer, for the prompt and heroic service rendered by them in rescuing 89 lives from the burning steamer *Volturno* in the north Atlantic Ocean.

The following bill and joint resolution were read twice by their titles and referred to the Committee on Military Affairs:

H. R. 12806. An act authorizing the Secretary of War to grant the use of the Fort McHenry Military Reservation, in the State of Maryland, to the mayor and city council of Baltimore, a municipal corporation of the State of Maryland, making certain

provisions in connection therewith, providing access to and from the site of the new immigration station heretofore set aside; and

H. J. Res. 76. Joint resolution authorizing the Secretary of War, in his discretion, to accept the title to 4,000 acres of land, at or near Anniston, Ala., and 5,000 acres of land in the vicinity of Tullahoma, in the State of Tennessee, for the purpose of establishing maneuver camps, rifle and artillery ranges, etc.

H. R. 11751. An act authorizing the sale of certain land to the county of San Diego, State of California, for public watering purposes was read twice by its title and referred to the Committee on Public Lands.

H. R. 13091. An act to provide for drainage of Indian allotments of the Five Civilized Tribes was read twice by its title and referred to the Committee on the Five Civilized Tribes of Indians.

H. R. 9671. An act to appropriate $5,000 to erect a suitable monument on the battle grounds at the Horse Shoe, on the Tallapoosa River, in the State of Alabama, was read twice by its title and referred to the Committee on the Library.

H. J. Res. 204. Joint resolution authorizing the Secretary of Agriculture to make exhibits at Forest Products Expositions to be held in Chicago, Ill., and New York, N. Y., was read twice by its title and referred to the Committee on Agriculture and Forestry.

### INSPECTION AND GRADING OF GRAIN.

Mr. McCUMBER. I gave notice yesterday that I would ask to have taken up the grain-inspection bill during the morning hour to-day, and I now ask that that bill be laid before the Senate.

The VICE PRESIDENT. Is there objection?

Mr. LODGE. Mr. President, I merely desire to ask the Senator a question. I presume the Senator does not intend to press for a vote on the measure this morning?

Mr. McCUMBER. No, Mr. President.

Mr. LODGE. It is a very important bill, on which there will be a great deal of debate.

Mr. McCUMBER. I expect that.

The VICE PRESIDENT. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 120) to provide for the inspection and grading of grain entering into interstate commerce, and to secure uniformity in standards and classification of grain, and for other purposes.

Mr. McCUMBER. Mr. President, I presume that at this time, as well as at any other, the bill might be read. I ask for the reading of the bill.

The VICE PRESIDENT. The Secretary will read the bill.

The Secretary read the bill, as follows:

*Be it enacted, etc.*, That the Secretary of Agriculture shall organize in the Bureau of Plant Industry of his department a section of grain inspection and grading, and shall, according to the rules of the civil service, appoint such experts and other employees as may be deemed by him necessary to carry out the provisions of this act.

SEC. 2. That said Secretary shall also appoint, in accordance with the rules of the civil service, at each of the following cities, to wit, Portland, Me.; Boston; New York; Philadelphia; Baltimore; Chicago; Minneapolis; Duluth; Superior; Kansas City, Mo.; St. Louis; New Orleans; Seattle; Tacoma; and San Francisco, and at such other important centers of interstate trade and commerce in grain as he may consider necessary or proper for carrying out the provisions of this act, one chief grain inspector and such assistants as may be required to inspect and grade grains as herein provided: *Provided, however*, That said Secretary may appoint a chief or deputy inspector at such important point of intrastate grain trade as shall furnish sufficient inspection service to fully pay the expenses of maintaining an inspection at such point, when the said Secretary is assured that the grain-trade interests at such point are desirous of securing Federal inspection; but in no case shall such inspector inspect or grade such intrastate grain, except upon request of the owner thereof or his agent.

SEC. 3. That said inspectors shall be paid a salary or compensation to be fixed by the Secretary of Agriculture, which shall correspond as nearly as possible to salaries and compensations paid other officers or employees of the Government performing similar duties.

SEC. 4. That the Secretary of Agriculture shall make all needful rules and regulations governing the inspection and grading herein provided for.

SEC. 5. That said Secretary of Agriculture be, and he is hereby, authorized and required, as soon as may be after the enactment hereof, to determine and fix, according to such standards as he may provide, such classifications and grading of wheat, flax, corn, rye, oats, barley, and other grains, as in his judgment the usages of trade may warrant and permit. In the inauguration of the work herein provided he may, if in his judgment the best interests of trade and commerce in said grains require it, adopt the standards of classification and grades now recognized by commercial usages or established by the laws of any State or by boards of trade or chambers of commerce, and may modify or change such classifications or grades from time to time as in his judgment shall be for the best interests of interstate and export grain trade.

SEC. 6. That when such standards are fixed and the classification and grades determined upon the same shall be made matter of permanent record in the Agricultural Department, and public notice thereof shall be given in such manner as the Secretary shall direct, and thereafter such classification and grades shall be known as the United States standard.

SEC. 7. That from and after 30 days after such classifications and grades have been determined upon and fixed, and duly placed on record as hereinafter provided, such classification and grading shall be taken and held to be the standard in all interstate commerce in grain.

SEC. 8. That it shall be the duty of any railroad company, steamship company, or other firm or corporation or private individual engaged in the transportation of grain destined to any State, Territory, or country other than that in which it is received for inspection, or received from any other State, Territory, or country than that to which it is consigned, to notify the chief grain inspector at the place of destination of any consignment of grain, within 24 hours after its arrival, that a shipment, cargo, or load of grain is in its, their, or his hands and the place of destination of said grain.

That it shall be unlawful for any person herein named to willfully unload or otherwise discharge any load, cargo, or consignment of grain which has been at any time during the period of its transit an article of interstate commerce and which has not been inspected in accordance with the provisions of this act until the same has been inspected as provided herein.

Upon the receipt of such notice the said chief inspector shall cause the said grain to be inspected and graded in accordance with the classification and standards fixed by said Secretary, and to issue and deliver a certificate of inspection showing such grade and classification in such form as may be provided by rules prescribed by said Secretary.

SEC. 9. That it shall be the duty of said inspectors to inspect and grade all grain which at the time of inspecting and grading of the same has been shipped from any other State, Territory, or country than the State, Territory, or country in which the same is inspected, or is intended for shipment into any other State, Territory, or foreign country before the same is unloaded from the car, vessel, or other vehicle in which the same was or is being transported, and to charge and collect from the owner thereof such fees for the inspection of said grain as may be fixed by the Secretary of Agriculture, who shall have the power to fix the rate of charges for the inspection of grain and the manner in which the same shall be collected, and which charges shall be regulated in such manner as will, in the judgment of the Secretary of Agriculture, produce sufficient revenue only to meet the necessary expenses of the inspection service, said fees to be covered into the Treasury of the United States as miscellaneous receipts in the same manner as for other miscellaneous receipts: *Provided, however*, That such inspector, upon request of the owner or agent of any grain at the point or place where an inspector may be located, whether or not the grain has entered into interstate commerce, shall inspect the same and deliver his certificate therefor in the same manner as other inspections are made and for the same charge; and whenever the owner of grain at such place shall request and furnish facilities therefor, said inspector shall also weigh such grain and deliver to the owner or his agent his certificate showing the gross and net weight of such grain, under such rules and regulations as may be prescribed by the Secretary of Agriculture.

SEC. 10. That no inspector or deputy inspector of grain shall, during his term of service, be interested, directly or indirectly, in the handling, storing, shipping, purchasing, or selling of grain, nor shall he be in the employment of any person or corporation interested in the handling, storing, shipping, purchasing, or selling of grain.

SEC. 11. That any person interested in any consignment of grain inspected under the provisions of this act may appeal from an inspection made by any assistant inspector to the chief inspector at the point where such grain is inspected, and from said chief inspector to the Secretary of Agriculture. Said Secretary shall make all needful rules and regulations to govern appeals

SEC. 12. That when any grain which having been inspected and certificate of inspection issued hereunder is mixed with any other grain not inspected or with grain which has been inspected and certified at a different grade, the same shall not be shipped out of the State where such mixing is done without being reinspected and graded; any such person or corporation shipping such grain as aforesaid without reinspection shall be deemed guilty of a misdemeanor.

SEC. 13. That the shipment or consignment of any grain aforesaid from any of the places mentioned herein to another State or foreign country without the same being inspected and graded as herein provided is hereby prohibited; but where grain has been once inspected hereunder, and remains unmixed with other grain, the same need not be reinspected at the place from which it is exported: *Provided, however*, That said Secretary may in his discretion reinspect any cargo of such grain before the same is exported.

SEC. 14. That it shall be the duty of the inspectors and assistants to investigate the handling and weighing of grain inspected by them, and to make such report thereon as the said Secretary may require; and it shall be the duty of every person or corporation weighing such grain to allow inspection of such weighing and handling by said inspectors.

It shall also be the duty of the inspectors and assistants to inspect and grade "samples" of grain and seeds when received for inspection and grading at any of the places named herein, and the inspector shall make a report specifying the grade and transmit the same to the owner or sender of such sample of grain.

SEC. 15. That any person or corporation who willfully does any act prohibited herein or who willfully refuses or neglects to do or perform the things required of him under the provisions of this act shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine in a sum not to exceed $5,000.

SEC. 16. That for salaries and for all other expenses in the city of Washington or elsewhere deemed necessary by the Secretary of Agriculture to carry out the provisions of this act there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, $850,000.

SEC. 17. That this act shall take effect and be in force from and after the 1st day of January, 1914.

The VICE PRESIDENT. The amendment reported by the committee will be stated.

The SECRETARY. The committee proposes to amend, at the end of the bill, by striking out the word "fourteen" and inserting in lieu thereof the word "fifteen," so as to make the section read:

SEC. 17. That this act shall take effect and be in force from and after the 1st day of January, 1915.

The amendment was agreed to.

Mr. McCUMBER. Mr. President, there are two important propositions in this bill, and only two. I wish to direct this statement to those who have letters in their pockets or in their desks from members of boards of trade and exchange, that they may understand the scope and purpose of the proposed measure.

The first proposition is for uniformity of grade. If I raise on a farm in my own State two carloads of a certain class of

grain and send one to Minneapolis and another to Chicago, I will necessarily receive two different grades and certificates of quality from those two places. And as the price of the product is fixed entirely upon the certificate, I will necessarily receive two different prices for the same kind of grain, irrespective of the influence of the freight charges in its transportation.

There are practically eight different species of grain raised in the United States in different sections of the country. Each one of those eight different species has its grades, such as Nos. 1, 2, 3, and 4. This bill does not attempt to make one common grade apply to all these species of grain in any way, but seeks only to make specific grades for the same species of wheat in whatsoever market it may enter. I assume, therefore, that no honest man—no honest dealer—can find any objection to a uniform system of grading as thus explained. That is the first proposition in this bill.

The second proposition is to secure an honest grade, a dependable grade, a grade that can not be manipulated, a grade that will be certified exactly the same when the grain goes out of an elevator as it was certified when it went into the elevator.

I ask those who have received these messages of opposition from those who are dealing in grain to ask themselves the single question, "Can any injury follow in the wake of legitimate business because of an honest certificate honestly placed upon a grade of grain?" That is all that is asked in this bill—uniformity of grades, honesty of grades.

No dealer can object to either of those two propositions unless he expects to get something out of lack of uniformity or out of lack of honesty of grade. He gets it out of the lack of uniformity to-day by reason of being able to juggle the grades and to make his contracts upon that basis. He gets it out of the producer and out of the ultimate consumer by being able to secure certificates upon the grain which do not truly record its character.

In other words, to-day he can take a certain amount of grain which he buys in at a certain grade and can regrade it out of his elevator at a different and a higher grade. That is possible under the present system. I want to make it impossible.

I wish I could speak on this subject to every Senator and could bring the hearings to the attention of every Senator here. If I could do that, after we had gone through those hearings I can not imagine that there would be a single Member of this body who would be opposed to legislating these two great fundamental elements into our grain trade. If my method of securing them is not in accordance with your views, and you believe in uniformity and believe in honesty of grade as the best method of securing the confidence of every purchaser, not only in the United States but elsewhere, then I invite you to meet me and attempt to secure the beneficent results that would follow from the establishment of these two great propositions.

Mr. President, I shall boil down as carefully as I can a few of the fundamental principles bearing upon this proposed legislation before I go into the details of the bill. Then I purpose to take up the provisions of the bill itself, and follow those provisions with the testimony taken before the Committee on Agriculture and Forestry, and show beyond any possible question the absolute necessity of some legislation of this kind.

Mr. TOWNSEND. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Michigan?

Mr. McCUMBER. I yield.

Mr. TOWNSEND. Is the Senator aware of the fact, if it is a fact, that the Agricultural Department and the various grain shippers or buyers of the country have been working to evolve some plan to accomplish the purposes which the Senator has in mind?

Mr. McCUMBER. I am thoroughly acquainted with that fact.

Mr. TOWNSEND. I speak about this because the Senator invited Senators to join him, and I was wondering if that work had assumed such a form as to have resulted in a report of any kind.

Mr. McCUMBER. It has not. After I first introduced this bill some years ago, and there was violent opposition on the part of boards of trade and exchanges that were dealing in grain, the matter was taken up by the department. It has been favorably reported on by the Agricultural Department. We have appropriated money for investigations along this line. The Department of Agriculture has reported that the plan is perfectly feasible.

There has been more or less of an honest attempt on the part of the several exchanges to get together upon uniformity of grades. The trouble has been that even when they have passed a rule and have had it in operation a little while it has had no binding force, and some one of the exchanges has broken loose whenever the conditions have been such in the movement of grain and in the speculative market as to make it possible for them to make more money by abandoning the arrangement. After making three or four ineffectual attempts, some of them have given up in despair, and others upon our seaboard have refused from the beginning to assist in the proposal.

Mr. TOWNSEND. I realize the earnest effort of the Senator from North Dakota to enact into law such a provision. I knew that was done when I was a Member of the House and a bill came before the committee of which I was a member.

I wish to say that I have a good deal of sympathy for the objects which the Senator has in mind. I have, however, of late been receiving a number of letters in opposition to this bill, which I have not been able to answer—first, because I have not gone into it carefully, and, secondly, because it was not then under consideration. I received a letter, which I handed to the Senator yesterday, which is typical of the letters which I have been receiving.

Mr. McCUMBER. Yes.

Mr. TOWNSEND. Has the Senator any objection to my introducing that letter in order that he may answer it if he sees fit?

Mr. McCUMBER. Inasmuch as I shall be rather set in my address, I would rather proceed now for a little while and have the letter come in later, when I will discuss it. It will then be made a part of my own remarks on that subject.

Mr. TOWNSEND. Very well.

Mr. McCUMBER. I answer the Senator now by merely saying that the opposition has been based upon the assumption, first, that it would be impossible to obtain uniformity. Now, that is not true. There is no reason upon the face of the earth why Scotch fife, we will say, pure Scotch fife, raised in any State and sent to Minneapolis, should not grade and be called the same as it would be if it were sent to Chicago.

Mr. SHERMAN. Mr. President——

Mr. McCUMBER. Many of those who have opposed this measure have had the idea that we want to obliterate the distinction between species of grain. There is nothing of that kind in the bill. On the contrary, by the provisions of the bill itself we should take our present commercial grades in every one of the centers, so that there will be no hiatus while the Secretary of Agriculture is establishing a uniform set of grades. In other words, the changes will be gradual and made as rapidly as prudence and full investigation would allow.

I will yield to the Senator from Illinois.

Mr. SHERMAN. I will ask the Senator if he has any information on the investigation made in the Department of Agriculture upon the grading of corn? For instance, that investigation, I believe, has been pursued at greater length and in more detail than any other of the seven or eight great Northwestern grains. I ask the Senator if the Department of Agriculture is not ready to report on a uniformity of grade for corn throughout the United States not later than the 1st day of July, 1914, and if grades for other grains, such as oats, wheat, flax, barley, rye, and the like, are not in course of investigation, so that ultimately there will be, as the result of it, by consent of the producers, the handlers, and the exchanges, a uniformity of grades?

Mr. McCUMBER. There would be no difficulty whatever in the Agricultural Department finding a uniform system of grades for corn. They have now no method of enforcing such system. I simply desire to answer the Senator now with the statement, first, that at present there is no method of enforcing it in any way, and, secondly, there can be no agreement as between the different sections of the country upon their grades. There is no reason why you can not have a uniformity of grade of every kind of corn as well as of wheat. But, remember, we are grading corn now. It is all sold by grades. If it is all sold by grades now, it can be sold by the same grades under Federal inspection. Each market now has its particular grades, and there is no reason why the same weight, the same dryness, the same characteristics that would give the corn a certain grade in Duluth should not give it exactly the same grade in Chicago and Baltimore. There could be no possibility of any ineffectual attempt to do that.

Mr. SHERMAN. If the Senator will permit me, Mr. President, the inquiry I was making is whether this investigation has not now produced that degree of information on which the Secretary of Agriculture or the department is prepared for uniformity in grades of corn, but is not prepared on other grains? This uniformity of grade made on investigation will extend over a period of something like seven years. When that definite information is had it is the basis for correct legislation. A bill is in process of being framed by the grain exchanges, by boards of trades, by farmers who are producers, and by elevator men in the country which will be a just bill and will not involve any radical losses in the State inspection, which prevails at all

points where there are not only primary markets but primary producers. I understand that the investigation has now reached the stage where legislation can be based upon ascertained conditions.

I quite agree with the Senator that some legislation will be necessary to establish a grade that will be uniform and will be obligatory at the same time. I will not engage in any controversy on that, but only say let this ascertained information be the basis of the legislation. The Department of Agriculture is not now ready to promulgate uniformity of grades because of the lack of knowledge. Of that I have information which I regard as trustworthy.

Mr. McCUMBER. If the Secretary of Agriculture, after seven years of investigation by the department, can not arrive at a system of uniform grading, it is quite evident to me that he has given very little consideration to the subject.

Mr. ROOT. May I ask the Senator a question?

Mr. McCUMBER. Certainly.

Mr. ROOT. Is there any communication from the Department of Agriculture regarding this bill?

Mr. McCUMBER. A late communication?

Mr. ROOT. Yes.

Mr. McCUMBER. Nothing very recent, but we have had information. First, we had a recommendation of the bill a few years ago, and, second, at the last hearing, a member of the Agriculture Department appeared and testified before the Committee on Agriculture. He stated that Federal inspection was feasible and that the department could carry out its provisions.

Mr. ROOT. May I ask one other question, because really I want information?

Mr. McCUMBER. Certainly.

Mr. ROOT. I have received a number of letters on this subject, some for and some against, most of them against the bill. I observe one statement in a letter from the Corn Exchange of Buffalo:

> The Department of Agriculture has already published standardized grades of corn effective July 1, 1914, and soon thereafter standards of all other grains will follow. In this regard practically a unanimous vote of approval has been rendered by the grain trade.

That carried to my mind the idea that the Department of Agriculture is proceeding in a practical way toward a remedy of the evils the Senator has referred to.

Mr. McCUMBER. How will the Department of Agriculture enforce those grades upon Buffalo, New York, Baltimore, Boston, Philadelphia, Chicago, or any other place?

Mr. ROOT. May it not be that it would be unnecessary that the grade should be enforced, but that the grade may be accepted? The course of business will enforce a grade that is accepted and is made the basis of reference in the contracts through which the business is carried on.

Mr. McCUMBER. All right, Mr. President, I will meet the Senator right there. If the boards of trade are willing that the Secretary of Agriculture shall fix this standard and if they are willing to enforce it, what objection have they that the power to fix the grade shall also enforce it?

Mr. SHERMAN. Mr. President, that is a very pertinent inquiry and I should like to inject there, with the permission of the Senator, the answer.

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Illinois?

Mr. McCUMBER. I yield.

Mr. SHERMAN. Wherever there is a primary grain market, as at St. Louis, Chicago, or Minneapolis, there exists already an inspection under the binding obligations of State laws. If it be said that these inspections are useless, either because of the inefficiency of the service or their dishonesty, then it is a wholesale indictment of every State in the Union that contains a primary grain market. I am not prepared to accept the truth of that charge. In the warehousing and inspection of grains in Chicago I believe there is an honest inspection. There are controversies——

Mr. McCUMBER. If the Senator wants an answer, I will answer him right now. I do not believe there is an honest inspection, and before I get through with my discussion I will show to the Senate that there is not an honest and reliable inspection there. There has never been an inspection agreeable either to producer or miller, and to-day your millers dare not buy your Chicago wheat on your inspection certificates, they so write to me, but they must send their private inspector to inspect every carload that they purchase for milling purposes.

If the Senator simply wants to make a defense of the Chicago Board of Trade, I would invite him to wait until at least I have preferred my charge. Then I will take issue with him. I will take my evidence from those who are members of that board and who have done business as such. I am not challenging at present the honesty of any of these boards or their good intentions, but I will show that there are gross abuses under the methods adopted in your city.

Mr. SHERMAN. I will not undertake to answer the inquiry the Senator propounded, because I take it he propounded it in order that he might answer it himself.

Mr. McCUMBER. I did not propound it that I might answer it myself, neither did I propound it for a speech in my time, but for a real direct answer.

Mr. SHERMAN. I was——

Mr. McCUMBER. If the Senator wants to answer it, let him answer it. If his answer is that the Chicago Board of Trade is very honest and conscientious, that is no answer, and I will not accept it as such. That is merely a conclusion.

Mr. SHERMAN. I was purely on a fishing expedition to find out whether the Senator intended to answer his own query or permit me to do it. If he wanted me to do it, I did not want to pass it unchallenged.

Mr. McCUMBER. I will bring the Senator to the fishing grounds before I have finished.

Mr. SHERMAN. It is the same old controversy that has been had from time immemorial with the Chicago Board of Trade. Certain men and elements of the Northwest have been for 20 years entirely familiar with the controversy that exists. I do not challenge the honesty of those who insist that the grades are not properly made or are not trustworthy. I challenge the correctness of their information. I will wait until the proper time to be heard and then I wish to be heard at length.

Mr. McCUMBER. The Senator will be heard. He will get the charges before I get through so that he can answer them specifically; but there is no use fishing now, at least, until we get to the water. Then I will give the Senator just as lively fishing as he desires.

Mr. HITCHCOCK. Will the Senator yield for an inquiry or two?

Mr. McCUMBER. Certainly.

Mr. HITCHCOCK. I am seeking merely information and I am not designing to get into a controversy. I should like to know whether the Senator intends or contemplates that the system of grain inspection by the Federal Government shall supersede the grain inspection system now in force.

Mr. McCUMBER. Naturally.

Mr. HITCHCOCK. It is to supersede the State and the exchange inspections that are now in existence?

Mr. McCUMBER. Certainly.

Mr. HITCHCOCK. They are not to operate together?

Mr. McCUMBER. Certainly not.

Mr. HITCHCOCK. I should like to know whether the Senator has made any estimate of the amount of machinery which will be necessary to accomplish this object?

Mr. McCUMBER. I have.

Mr. HITCHCOCK. Will the Senator state about how many inspectors and what amount of machinery would be required?

Mr. McCUMBER. I think in the neighborhood of 500 inspectors would be required.

Mr. SHERMAN. I should like to make another inquiry on that point.

Mr. McCUMBER. If the Senator will allow me, I will answer one at a time.

Mr. SHERMAN. The Senator can answer both at once and save time.

Mr. McCUMBER. Very well; if the Senator specially desires.

Mr. SHERMAN. Does the Senator know how much it will cost to make a double inspection or derange the machinery of the existing inspection of some three or four of the largest States in the Union that now maintain an inspection service?

Mr. McCUMBER. Yes; and every one of them has been thought out and worked out by the Department of Agriculture. I have the figures. If the Senator will read the hearings, possibly he will find the cost without asking me to go back and depend entirely on my memory in quoting them. I will say now there will be no double inspection.

Let us start out with the proposition that in the Federal inspection provided by the bill we will take the same force that we have at work now, with no changes at all. We will take the same inspection system to start with that we have now. There will be no hiatus; so that there will be no disarrangement of business. We can gradually make the changes to conform with the uniformity of grades. We will charge the same prices that are charged to-day for inspection at all the grain terminals, for, mark you, the farmer pays for all this inspection. It will not cost the Government one cent. The farmer at the present time pays the inspection at all the points, so much a carload, or it is charged back to him in his account with the commission man. There will be no change whatever in this respect. The charge for grading ranges from 35 cents a car to 75 cents a car. If we would make the charge 40 cents a car, or thereabout,

that 40 cents would more than pay the entire expense of carrying on the system.

Mr. President, I will read some of the testimony from some of the members of the Board of Trade of Chicago and other places before I get through, but I will undoubtedly not have time to do that this morning. At present I desire to declare some general principles and make an explanation of this bill and its necessity. Then I purpose to go into the details, and I will hold myself responsible to answer any legitimate criticism of the bill.

Mr. HITCHCOCK. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Nebraska?

Mr. McCUMBER. I yield.

Mr. HITCHCOCK. Following out my other inquiry, I should like to inquire what would then become of the various inspection systems which have been put into effect by the States of the Union in accordance with laws which they have enacted?

Mr. McCUMBER. They would all be very glad to have the Government do that work for them; and I am positive there would be no State inspections of grain any more than there are State inspections of meat. When we adopted a national system of meat inspection it did away with all other inspections. To-day the Government is inspecting interstate and intrastate meats, no matter where they are to go, and the meat concerns are very glad to have the Government certificate as to the character and quality of meat. When you introduce this system, you will not be able to get people, in my opinion, who would buy under any other system. They would all demand Federal inspection certificates because of their confidence in them, and if grading was done at other points than at terminals mentioned in the bill or fixed by the department, the Federal inspection rules would, without question, be adopted.

Mr. HITCHCOCK. The Senator estimates that 500 grain inspectors or other employees would be necessary to carry out the purposes of the bill?

Mr. McCUMBER. The same number we now have.

Mr. HITCHCOCK. I was going to ask the Senator, Will 500 cover all the inspectors now employed by the various States?

Mr. McCUMBER. It will.

Mr. HITCHCOCK. And also those employed at present by the various stock exchanges and otherwise in the inspection of grain all over the United States?

Mr. McCUMBER. Yes. The figures I present are those furnished by the Secretary of Agriculture some years ago. You might have to add to them a little now, but that would be no material difference. If more inspectors are needed, it will be because there is more grain, and because there is more grain there will be greater returns from the inspection. There are probably over 2,000,000 carloads of grain inspected each year.

Mr. HITCHCOCK. The Senator figures that this would be no expense to the Federal Government, because the charges for the inspection would cover all the expense of maintaining the system?

Mr. McCUMBER. Certainly, just exactly as there is no expense now to the exchanges, because the charges made for inspection by the exchanges cover their expenses.

Mr. HITCHCOCK. So the real change would be depriving the States, either with their consent or without their consent, of this function and depriving the grain exchanges of this privilege, which they now exercise, and adding it to the powers of the Federal Government?

Mr. McCUMBER. It would be Federal inspection not only for interstate grain between the States, but for grain for the export trade, which is a very important feature, as I will show.

Mr. HITCHCOCK. I was not able to hear the question propounded to the Senator from North Dakota [Mr. McCUMBER] by the Senator from New York [Mr. ROOT], and possibly he covered the same ground; but I should like to ask the Senator from North Dakota whether the same purpose could be attained by requiring the various inspectors of grain now in existence to conform to standards imposed by the Agricultural Department in order that the grain might be shipped in interstate traffic?

Mr. McCUMBER. That is the first proposition in this bill—uniformity of grades.

Mr. HITCHCOCK. Might not that be accomplished in that way without involving the transfer to the Federal Government of the employment of grain inspectors? It would simply be requiring the inspectors, whether of the State or of the local exchanges, to conform to the standards imposed by the Agricultural Department.

Mr. McCUMBER. Mr. President, I understand the question of the Senator; I understand the circular letters that have been sent out advising that instead of having national inspection we should have national supervision. The same boards just as ardently, and with a great deal more ferocity than now indicated, were opposed to national interference in any way, shape, or form only a few years ago. After I introduced this bill they had several of their national meetings, in which it was pressed by some of their members that unless they found some way under their present unsatisfactory method of dealing, or, as one of their members put it, unless they stopped being dishonest—because that is really what he meant—and did business in an honest manner Federal inspection was sure to come. So gradually they are approaching toward the idea of Federal inspection; but still the people who oppose this measure want to have some grip whereby they can carry on the present manipulations in the different grades. I can assert boldly that no honest dealer can complain that we have uniformity of grades; that no honest dealer can complain that the grades should be made certain, so that every purchaser will have confidence that the certificate truly represents the character of the grain. If the Senator from Nebraska would read over the methods by which the grain trade is manipulated to the advantage of those engaged in it and to the disadvantage of the miller and the buyer, and also to the disadvantage of the producer, he would then understand why these people do not wish to let their grip loosen upon the system under which they could continue to carry on the same character of manipulations.

Mr. HITCHCOCK. Mr. President, I do not know that the Senator from North Dakota fully understands my question. I want to say to him that I am approaching his bill with an open mind.

Mr. McCUMBER. I am certain of that, Mr. President.

Mr. HITCHCOCK. But I want to ask him plainly the question, whether Government supervision of all grain permitted to go into interstate traffic could be made strong enough to accomplish the objects which he seeks?

Mr. McCUMBER. No, Mr. President; it could not.

Mr. HITCHCOCK. Will the Senator state why?

Mr. McCUMBER. I was just about to answer why.

Mr. HITCHCOCK. If the Government imposed a standard and the inspectors failed to conform to the standard, and the Government then prohibited the shipment of the grain, why would not that be an effective restriction?

Mr. McCUMBER. It could be so done, Mr. President, if there were just as many Government agents as there were inspectors and persons engaged in the trade; in other words, if the Government employed one man to watch constantly the one man who was doing the work. The Government can just as well employ the inspector to do the work as to employ somebody else to see that the inspector makes his inspections correctly.

Again, the Government officials would be under civil service; they would owe no allegiance to any appointive power; they would have no interest in making wrong certificates; nor would the Government, which appointed them, unlike the dealer, be an interested party. When I deal with the testimony Senators will understand this better than many of them understand it at the present time.

Mr. SMITH of Michigan. Upon what does the Senator base his statement that these inspectors would be under the civil-service system?

Mr. McCUMBER. The bill so provides.

Mr. SMITH of Michigan. I know it does; but there is no surety that the bill will be signed in that form. All the other bills which have created officials this year have exposed them to the spoils system. I do not know that we can have any assurance of the correctness of that statement. I think it is rather a reckless statement in view of what we have been passing through.

Mr. McCUMBER. Well, Mr. President, if the bill passes in its present form, of course the employees will be under the civil-service regulations. I can not say to-day in what form the bill may pass. I can not answer that question until the Senate has given us an opportunity to discuss it and there is a vote taken upon it.

Mr. SHERMAN. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Illinois?

Mr. McCUMBER. I yield.

Mr. SHERMAN. If the Senator means to say that the provisions of this bill only contemplate that the employment be brought under the existing civil-service law, that necessarily means that the existing administration of those laws will be operative.

Mr. McCUMBER. Well, I can not accuse the administration of entirely abandoning the civil-service rules and refusing to put them into operation. I think the President—I think the administration, upon the whole—is trying to carry out the

spirit and the policy of the civil-service law. There may be those in the departments who are attempting to evade them, but I must assume that the civil-service laws as a whole will not be overthrown.

Mr. SHERMAN. I do not question the effort of the Chief Magistrate to do so, but it is the hiatus between the effort and the effect with which I am concerned. I want to make the further inquiry of the Senator from North Dakota——

Mr. SMITH of Michigan. Mr. President, I did not understand the Senator from Illinois. Did he say that he did not question the Chief Magistrate's attitude on that question?

Mr. SHERMAN. His effort.

Mr. SMITH of Michigan. There have been more people put into the civil service by suspending the law during the last year than during any four years preceding since the civil-service law was enacted. It has been done recklessly and indifferently. I am not a civil-service advocate, particularly; I never have been; and it would have been much more appropriate if I had taken the course that seems to have been the recognized policy of the administration than that one who was committed absolutely to the merits of the civil-service system should do it. There never has been such disregard of the system.

Mr. SHERMAN. I am giving the Chief Executive the benefit of the doubt for the purposes of this inquiry.

Mr. SMITH of Michigan. That is the trouble; everybody gives him the benefit of the doubt. By and by that is all we will have—doubt.

Mr. SHERMAN. I have no objection to increasing the doubt as much as possible.

With the Senator's permission, I will proceed with the inquiry I was undertaking to make.

Mr. ROOT. Mr. President——

The VICE PRESIDENT. The Senator from North Dakota has the floor.

Mr. McCUMBER. I will yield to the Senator from New York in a moment.

Mr. SHERMAN. In order to clear the way so that we may intelligently discuss this matter later on, I wish to inquire if the contemplation of this bill is an entire absorption of both the supervision and inspection now exercised by the several States of the Union?

Mr. McCUMBER. The idea is that all the inspection at the great terminal points shall be carried on by the Government; that the Government will do the weighing; that the Government will do the inspecting; and that the Government will fix the standards of grades. Now I yield to the Senator from New York.

Mr. ROOT. As I commenced, Mr. President, a question to the Senator from North Dakota, I should like to complete it by asking the Senator if in his further remarks upon this bill he will meet—and I have no doubt he will endeavor to meet it—this statement, which follows what I have heretofore read from the letter of the Buffalo Corn Exchange? This is the statement in the letter from the exchange:

> The grain trade, embodying practically all sectional, State, and National grain associations, farmers' associations, farmers' granges, and grain exchanges, as well as the individual grain interests of the United States, are agreed that Federal supervision of the standardized grain grades will result in a thorough and efficient uniformity of application.
>
> The grain interests of the Buffalo market approve of the plan of the Government in its determination to supervise the inspection of grain on standards determined by the Government. We submit that the physical inspection of grain should be operated under the present modus operandi, and that the correctness of the grades of grain determined upon Government standards should be subject to the supervision of the Government. We believe the attitude of the Government, through the Department of Agriculture, is correct in adhering to the policy of supervision rather than Government inspection, thereby placing all responsibility for correct grading of the grain upon others and reserving to the Government the right of criticism and determining whether such inspection has been properly done.

That points to the question, in my mind, regarding this measure, whether the system, which, apparently, is the system approved by our Department of Agriculture, of supervising the inspection and grading of grains is not the wise, and would not be the effective, system, instead of wiping out all the present practice and substituting for it a great Government machine under the bill of the Senator from North Dakota. That seems to me to be the clear line of distinction.

Mr. McCUMBER. Mr. President, the Senator, I am sure, is too good a lawyer to fail to see a very patent weakness in the assertion that is made in this letter.

> The grain interests of the Buffalo market approve of the plan of the Government in its determination to supervise the inspection of grain on standards determined by the Government.

They were just as bitterly opposed to that a few years ago and made their objections just as firmly against it as they do now against the other feature.

> We submit that the physical inspection of grain should be operated under the present modus operandi, and that the correctness of the grades of grain determined upon Government standards should be subject to the supervision of the Government.

Why, Mr. President, should the physical inspection of grain be operated under the present modus operandi? What reason is given in the communication for insisting that the physical inspection shall be done by the same agency that is doing it to-day, but that a Government inspector must stand by to see that the present agency does it right? If the Government is to superintend, what reason can you urge against the Government doing the thing which it superintends? Why is it necessary to have two men do the same thing? It is apparent to every one who understands the grain trade and the methods of operation why these men fear the Government doing the physical work. It will be done right, and the grain will be graded the same when it comes in as it is when it goes out. They can not influence the Government officials. They know that Government inspection carried to the extent of having the Government itself oversee every man who is doing the inspecting is an impossibility without doubling the corps of men. There is no straight, honest reason upon the face of the earth, if the Government employs an inspector who must be proficient, who must know how to inspect, how to weigh, and know when a grade is wrong and when it is right, why it can not itself do the same work that some one else is doing. But there is a valid reason why any man who wishes to manipulate a grade when an inspector is not there should have a man under him who will do the manipulation for him.

I say there is not a single reason on the face of the earth why they should make a division between the physical inspection and the physical presence of the individual who is to control the inspection.

Mr. GRONNA. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to his colleague?

Mr. McCUMBER. I yield.

Mr. GRONNA. I think I can see a difference between Federal supervision and Federal inspection. A Federal supervision simply would mean that the Federal Government would see that the grain was inspected according to the rules of a certain board of trade or according to the rules of a State, whereas Federal inspection, an inspection made by Federal inspectors, would mean uniformity. It would mean, first, the standardization of all sorts of grain, and then would follow a uniform inspection.

Mr. STERLING. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from South Dakota?

Mr. McCUMBER. I yield.

Mr. STERLING. Would not efficient supervision itself involve seeing the grain inspected and graded?

Mr. McCUMBER. Why, certainly. You could not have supervision in any other way.

Mr. ROOT. Mr. President, this argument would destroy all supervision. It is not true that there can not be effective supervision without having the supervisor do the work over again. All the history of administration of government shows the contrary. Effective supervision is the most potent agency to secure good administration.

The proposal which the Department of Agriculture appears to favor, according to these statements, is that through Government supervision of inspection, based upon Government standards, this business shall be regulated, without undertaking to substitute the Government of the United States for the governments of all the States and all the private enterprises and associations in the conduct of this business.

It may be that the Department of Agriculture is wrong. It may be that the natural way of regulating commerce, which is by supervision, will not be effective. It may be that it is necessary that the Government of the United States here, as in a hundred other directions, shall step in and push aside all State government and all private enterprise and do the business itself; but the burden of proof is on those who undertake to establish the necessity for any such substitution of the Government of the United States.

Mr. McCUMBER. The same plea that is made by the Senator from New York was made by every one of our great meat packers against Federal inspection of meat—that it was interfering with States' rights; that it was interfering with the rights of individuals in carrying on their business; but notwithstanding their objections, we did provide for Federal inspection of our meats in interstate commerce and in the commerce of the world, and it gave to our meats a value and standing that increased our market threefold in the foreign countries of the world. It met every objection that had been made against our meats. That interference by the Government in those private affairs has been a mighty blessing, not only to the people them-

selves, not only to every purchaser and seller of meat, but to the great commerce of the world; and the meat packers who so ardently opposed it are to-day strongly in favor of it. Not one of them is now opposed to it.

The difference between this case and that, however, is that the meat dealers, the great packing houses, are able to filch out of the Government several million dollars a year by making the Government pay for the inspection, while the farmer will be mighty well satisfied to pay for it himself, out of his own pocket, if you will give him the opportunity to have the Government do for his grain just exactly what the Government is doing for the meat packers' meat. He has a right to demand the same thing. The Senator would not favor the repeal of the meat-inspection law.

Mr. ROOT. Certainly not, Mr. President; but it is no argument at all, it does not approach the character of an argument, to say that inspection by the Government of the United States as to the quality and healthfulness of meat is a reason why the Government of the United States shall take the place of State governments and individual enterprise in every field of activity in which some single interest or any number of interests may think they could find benefit through its doing so.

Mr. McCUMBER. Mr. President, the Federal Government has authority over interstate commerce. Having that authority over interstate commerce, it fixes the rates that are to be charged for carrying grain from one State to another. It says that those rates shall be reasonable and fair. That is done in the interest of producer and consumer. On the same principle that the Federal Government fixes the rates, so that we may receive fair compensation for our product, it has authority to govern the method under which we deal in that product, so that we may not be defrauded of a single grade in our grain. It is just as important that I shall not be defrauded out of the honest grade to which my grain is entitled as that I shall not be defrauded in buying a barrel of pork through a false certification of its character or purity. The only difference in the world is that one is the meat packers' meat and the other is the farmers' grain.

Mr. SHERMAN. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Illinois?

Mr. McCUMBER. I yield.

Mr. SHERMAN. I question the right of the Senator from North Dakota to attack the inspection under which all the corn and oats of my State, for instance, is produced. I represent just as many producers as the Senator from North Dakota does, and I question his right to criticize the system of inspection under which all the corn and oats produced in Illinois is now inspected and sold in a primary market.

The Senator attacks that inspection, and impliedly says that it is dishonest. I reply to that that the producers in Illinois are satisfied with that inspection, and that they have been for many years selling their product in the largest primary market of the Northwest without complaint from those same producers; and they are equal in number and in valuation of their product on the market to the constituency the Senator from North Dakota represents.

Mr. McCUMBER. Mr. President, before I get through with this argument I will have read the resolutions of the Senator's own constituents, the farmers' cooperative organizations, vehemently condemning that very system.

Mr. SHERMAN. I am entirely familiar with them.

Mr. McCUMBER. Then, if the Senator is entirely familiar with them, he has no right to say that the producers in his State are thoroughly satisfied with the methods under which their grain is graded and sold.

I will meet all of these challenges one after the other. I have studied this subject for some time, and I think I am fairly well acquainted with every feature of it. And I know there is very serious and widespread dissatisfaction on the part of the farmers and independent grain dealers of his State with the Chicago and other State and board systems of grading.

Mr. BANKHEAD. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Alabama?

Mr. McCUMBER. I yield.

Mr. BANKHEAD. Does the Senator from North Dakota say that it is the duty of the Government to place an inspector at every furnace that makes pig iron, and every mine that mines coal, and every factory that makes shoes, and go through all the list with the purpose in view of causing a standard to be maintained, and requiring everything that is manufactured and sold to come up to the standard that they claim to be their standard when they put their goods on the market? If not, why not? Why should not that be done all along the line?

Mr. McCUMBER. I will answer the Senator right now. I have had the same argument put up to me before, and I am ready to answer any such suggestions that the Senator makes. If the man making shoes in his particular section wants State inspection, if it is necessary, he can have it under his State laws; but because inspection may not be necessary in producing a yard of calico or silk or a pair of shoes or a pig of iron is no reason why we should not have Federal inspection in great commodities sold under a certificate of inspection in the trade, and where the present system of certification has proven unworthy and unreliable. Let me say to the Senator, however, that 90 per cent of the wheat raised in the State represented by the Senator from Nebraska is not sold in Nebraska. It must have its market entirely out of the jurisdiction of that State. Ninety-five per cent of the wheat grown in my State is sold outside of the State. That is true of every great agricultural State in the Union. It is sold upon a grade. Its value in the terminal market, or in the markets of the world, in the great consuming centers of the world, depends upon that grade. The man who produces the wheat in Nebraska, or North Dakota, or Iowa, or Kansas has not the slightest thing to say as to how the grade shall be made when made out of his State.

He has no voice in it. He has no representative on his part. He must depend entirely upon the good will of a little clique of wheat buyers in Chicago or in Duluth or in Buffalo, who handle his grain, who fix the grades, and who determine the method of handling. If that system is unjust, he has no method of remedying it. If, however, the Federal Government has control over that subject, then, under his American citizenship, he has his representatives in the Congress of the United States. He will have a forum in which his complaints can be heard.

Why, every little town in the Senator's own State has public scales on which the farmer who comes in with his load of hay or oats or whatever it may be can have it weighed, and the man purchasing the load of hay or other product purchases it according to the certificate that is issued by the independent weigher. The party purchasing would not be satisfied if the farmer should say, "I weighed that hay at home, and it weighs so much." He would say, "I can not take your weight, because you are interested in it." The man in the city who buys our wheat, however, says to us, "You shall not see us inspect. You shall not have anything to do with our inspection. You shall not have your voice heard in the matter of the method under which the grades are made. We will weigh it and sell it and give you what we think is right. We will fix the dockage and deduct whatever we think is proper."

The Senator would agree that that is wrong; he would not submit to it in the case of a load of hay; and yet when we are disposing of 700,000,000 bushels of wheat annually and much more of other cereals he says that that system is all right.

Mr. BANKHEAD. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota further yield to the Senator from Alabama?

Mr. McCUMBER. I yield.

Mr. BANKHEAD. My experience in business is that nearly everything that is manufactured in this country is sold on grades, or something to take the place of grades. Sawmills doing a large business in a State and sending their products all over this country and Europe make their inspections and have their grades. It is supposed that the customer buys on those grades, and the merchant or manufacturer sells on those grades.

I do not know of anything that is manufactured in this country and goes into interstate commerce that does not go in on grades of some kind. Coal, pig iron, shoes, and every other article, so far as I have any knowledge, are sold by the manufacturer or producer on grades. All the States have inspection laws.

The Senator from North Dakota makes reference to Alabama. We have our inspection laws. We have our coal mines inspected; or we have the product inspected when it goes on the scales, when it is weighed for shipment into interstate commerce. The pig iron is all graded at the furnace. It is sold on grade. The inspector grades it. The merchant who buys it does so on that grade. Our laws require it. I can not understand, therefore, why there should be an exception in the case of wheat.

Mr. McCUMBER. Is the Senator ready for an answer? I have only two minutes to make it in. Will the Senator give me an opportunity to answer his question in the next two minutes, before 2 o'clock?

Mr. BANKHEAD. Oh, yes.

Mr. McCUMBER. Mr. President, I will answer just in this way: You had your State inspections and your board-of-trade inspections of cotton. You had some 15 or 20 different kinds of grades. Your farmers were defrauded by reason of the ma-

nipulation in your many grades. To-day you have a Federal standardization. The grades have been reduced to four primary grades, if I remember rightly, and that has been the greatest blessing that has happened to the cotton-growing States of the Union for 25 years. Under a Government standard, reducing the many discordant kinds of grades that allowed the purchaser to manipulate them, you are or will be greatly benefited.

Now, Mr. President, we are reaching——

Mr. BANKHEAD. Mr. President, in the minute remaining, if the Senator will permit me, I should like to say that his suggestion that the cotton grower, the man who makes and sells cotton, is vastly benefited by the Government standardization is entirely a mistake. The Senator from North Dakota has not had much experience with cotton raising and cotton selling. The man who raises cotton and puts it on the market and sells it as a producer is not affected at all by the Government standardization. The Government standardization may be invoked when the cotton goes on the wholesale market somewhere in New York or New Orleans or in other places, but the man who raises 5 or 10 bales of cotton on his farm and hauls it to town and sells it from his wagon does not know any more about standardization than the Senator from North Dakota does—not a bit. It is never invoked. The merchant goes out and takes his knife and samples the cotton and says, "I will give you so much for this cotton," without reference to the Government standardization. Of course if it is of a very low grade anybody can see it, and the price is different from the price of a high grade.

Mr. McCUMBER. Without yielding further, I will have to disagree with the Senator from Alabama. I wish to say now, before 2 o'clock, that I shall wish to proceed with my real address on this measure as soon as we dispose of the unfinished business, and if we do not dispose of it to-day I will proceed in the morning after the close of the morning business.

### WOMAN SUFFRAGE.

The VICE PRESIDENT. The morning hour having expired, the Chair lays before the Senate the unfinished business, which is Senate joint resolution No. 1.

The Senate resumed the consideration of the joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

The VICE PRESIDENT. The bill is in the Senate and open to amendment.

Mr. CLAPP. Mr. President, it might be urged, in passing upon the question as to whether the two Houses of Congress should permit a constitutional amendment to be submitted for ratification by the requisite number of States, that the merits of the subject itself do not enter into the question whether or not the people should be allowed to vote upon it. But I realize that it is impossible to discuss the question of submitting a constitutional amendment without involving more or less a discussion of the real question to be submitted to the voters for their consideration, and therefore this morning I propose to submit some remarks upon the joint resolution from the viewpoint of the merit of the ultimate question itself.

The men who framed our Constitution were so fearful of the powers of the Nation that they finally took out of the draft of the proposed Constitution the word "nation" wherever it occurred; but they did leave in the body of the Constitution one of the elements of a proposed national existence, and that was that all the people of this country should have the right, so far as the organic law of the land is concerned, to pass upon amendments to that law, with one single exception, and that was with reference to the number of Senators which each State should have.

So the argument that this proposed amendment, if it should pass, might not meet the approval of any section of the Union, has no more force than if there were no State lines known to the Nation. The objection that a condition may be imposed by the constitutional amendment against the opposition of any portion of the Union has no more foundation in the spirit and theory of our Government than if it were proposed to pass a law for a State or to change a State constitution and it should be urged that some section of that State was almost solidly opposed to the proposed change.

Mr. President, I think that everyone will agree with me that human progress has developed just in proportion as activities and the right to participate in activities have developed with the rank and file of the people. In other words, democracy in its broader significance is synonymous with the term "human progress." If that be true—and I do not think anyone can gainsay it—then the final triumph of democracy must depend upon the final extension to its ultimate of the participation and the right of participation of all in the activities of government.

I think it will be agreed or conceded that taking humanity at any point in history according to the then standard of civilization an overwhelming majority have been in favor of the right and only a small minority in favor of the wrong. Yet, despite this condition, that numerically small minority has ever been able to retard the growth and development of progress as indicated by the attitude, the purposes, and activities of the many.

It would be interesting, if we had time, to consider the forces, the processes, and the instrumentalities with which at all times a small minority have been able to retard human progress; but it is so self-evident that it requires no discussion. Desirable, agreeable as liberty is, and appealing, as liberty always has, to mankind, nevertheless at every point, until the establishment of our Government, a small minority was able not only to retard its progress, but to cause the great, overwhelming majority of mankind in sympathy with the cause of progress to almost literally wade through seas of blood to establish free government.

My purpose in making this illustration is to show that in proportion as we can enlarge and broaden the activities of humanity we attain nearer and nearer to the final goal of democracy, which, by the way, we are still far from having attained. At every step there has been an element of humanity, good in itself, bearing all the attributes of respectability, that has ever stood in the way of this progress. Of all the causes, forces, and instrumentalities which the wrong, considered as an impersonal spirit, has been able to invoke against human progress there has been none so potent as the respectability of a small class of people who have ever stood in the way of progress, and behind whose respectability were the sinister forces, whatever they were, that were opposed to that particular step in progress and served as a shield to them in their struggle against progress itself.

The present situation is no exception to that rule. The effort to extend the suffrage to man was met at every step by the false cry of alarm raised by those who stood as the exponents of respectability itself, that it would not do to enlarge the suffrage. When this Government was founded, men who in their own character were the very type of the highest patriotism, men who had sacrificed upon the field of battle for free government, viewed with alarm the extension of the suffrage to the people generally, and they undertook to safeguard against that false alarm by preventing the American people from voting for President or for Senators, believing in their blindness that it was safer for the institutions of this country that the election of President and Senators should be filtered through a representative body first selected by the electorate itself, and that, too, notwithstanding the fact that they were founding a government based upon the principle of free government, a government by the people, founding a government which was the outgrowth of a struggle of ages, that had proved at every step in that struggle that liberty expanded just in proportion as democracy expanded in the struggle between right and wrong.

I shall speak a little more of those two particular phases later in my remarks. If my analysis of democracy is correct, if it is true that the welfare of a people, if it is true that the cause of human liberty has depended upon the broader extension and expansion of human activity, then it follows as a fundamental principle that in free government, when it is proposed to extend or limit suffrage, the burden is upon those who are the advocates of free government to show that the persons of whom the inquiry is addressed ought not to be clothed with the power rather than to show or attempt to show that they should be clothed with the power. All human history throws upon those who would stand against the extension of suffrage the burden of showing that that extension is hostile to the best interests of those who compose the Government, where the proposition to extend the suffrage is made rather than the burden being upon those who, through the extension of suffrage, seek to participate in government itself.

This is so true that, as applied to male suffrage, every exception to the right where the right is withheld is based upon some natural, clearly defined law or rule. As the child, in the first instance, becomes by nature the ward of the parent, so the parent exercises the function of declaring at what age the child shall reach the point where it can join the ranks of those who hold the ballot in their hands. There are the insane and those who lose their reason and those who by their own criminal acts forfeit their right to participate. No man in the length and breadth of this land to-day would attempt to justify the exclusion of the suffrage from males except he could give some good reason not why they should be allowed to vote, but why they should not be allowed to vote. I do not believe that that point can be too much emphasized.

I say again, at the risk of repetition, that when the question arises as to the extension of suffrage, in the light of the history of

human progress, the burden is upon those who refuse the right rather than upon those who would seek to secure the right.

One phase of this discussion has come into the Senate here, and I propose to refer to it briefly. In the first place, in passing, let me say that the objections which have been suggested here to women having the right to vote would be amusing if it were not the subject itself that is so serious. On the one hand, it is urged that she ought not to have the right because she will vote with her husband, and consequently you will gain nothing. On the other hand, it is urged that she ought not to have the right because she will not agree with her husband politically, and consequently you have engendered domestic broils and difficulties.

The fact that two brothers growing up under the same roof and under the political teachings of the same father are inclined to belong to the same political party would never be urged as a reason why the right of suffrage should not be vested in both those brothers. The fact that those brothers might disagree no man would urge as a reason, on the other hand, why they should not each have the right of suffrage.

Free government is based upon the fundamental principle that no matter how kind, altruistic, and generous I may be, if you are going with me into the association which we call government, the only way in which you can be absolutely sure of your rights, your benefits, moral and material, which may flow from that association, is to be vested with the same power of participation and voice in the policies of that association that I am vested with. That is the fundamental difference in principle between the basis of democracy and the old theory of the king who was the trustee for all. Centuries of experience have demonstrated that no purely human man is good enough or safe enough to be the self-constituted, intellectual, political, or financial trustee of another.

Recognizing this basic principle, then the ballot being the only weapon known to free government in time of peace, the only way in which woman can be sure of her rights in the benefits, moral and material, that flow from free government, is to be equipped with that instrument, that weapon of free government. That is fundamental, and is not affected and can not be affected by the side questions as to what she will do with the ballot, whether she will agree or disagree with her husband.

In the first place, like all side issues, when you come to analyze them they do not meet the case at all, because the question whether a good husband will sufficiently guard the welfare of his wife is not involved in the case of women who have no husbands, who may have been bereft of their husbands, who may never have had husbands, and yet who are vitally interested in the question of their property rights as well as the broader question of morals, which I will now proceed to refer to.

We have been asked to show some specific gain that has come from the right of suffrage being accorded to women.

The questions we are discussing are fundamental or they are not worth discussing. One thing is certain, that womanhood, taken in its entirety, has more of good than bad within its ranks. We believe that it has immeasurably more of good than it has of bad. No man will be found to challenge that statement. If that, then, is true, we would bring into the electorate of this country a force that is conceded to include more of the good than of the bad. That we would gain thereby is so fundamentally right that it is a waste of time to ask for specific instances of the result of the bringing in of that force.

The moral force of this country never has and never can be measured in its fullness by specific acts of legislation, because back of legislation, in the twilight zone of the administration of law, lies the danger point in free government, and it is in that twilight zone that the moral force of the country, from community to nation, must be felt.

But we all agree that there has been a marked influence, a marked improvement, during the last few years. My good friend, the great-hearted, generous, whole-souled, genial Senator from New Jersey [Mr. MARTINE] suggested yesterday that Congress had passed a red-light law for the District of Columbia, although women are not represented in Congress. But I would remind my good friend from New Jersey that no red-light law ever passed Congress until the women in several States of the Union participated in the election of those who represent those States in the American Congress. It never passed Congress until this movement for woman suffrage had become nation-wide in its influence and in its effect.

So while it is true that the red-light law passed Congress before there were women Senators or Representatives, it is equally true that it never did pass Congress until the influence of woman suffrage in the morals of the Nation began to be felt and experienced.

Mr. SHAFROTH. Will the Senator yield to me for a minute?

Mr. CLAPP. Most cheerfully.

Mr. SHAFROTH. Yesterday, while addressing the Senate, I referred to the fact that a number of laws had been passed the passage of which had been influenced by women in Colorado. After enumerating one I was interrupted by a colloquy with some other Senators and did not finish the list. I should like right here, as the Senator is talking upon that great subject, to give the list of laws that have been added to the statutes of the State of Colorado largely through the influence of women.

First. The establishment of a juvenile court and a code for the treatment of juvenile delinquents, and for the punishment of those who contribute to their delinquency, and for the redemption of offenders.

Second. The establishment of a State industrial school for girls.

Third. Of a State school for dependent children.

Fourth. Of a State home for mental defectives.

Fifth. Compulsory education for all children from 8 to 16 years of age.

Sixth. Preventing child labor during terms of school.

Seventh. Establishing parents as joint heirs of deceased children.

Eighth. Making it a misdemeanor for adult children to fail to support aged or infirm parents.

Ninth. Increasing the age of consent of girls and protecting them by criminal statutes. (The age of consent of girls in some States is as low as 12 years.)

Eleventh. Creating a State traveling library commission of women.

Twelfth. Establishing a pure-food bureau and providing for the enforcement of laws as to pure food.

Thirteenth. Preventing husbands from mortgaging household goods without signature of the wife.

Fourteenth. Providing for examination of teeth, eyes, and ears of school children.

Fifteenth. Creating a bureau for prevention of cruelty to dumb animals.

Sixteenth. Abolishing the sweat box in getting confessions from prisoners.

Seventeenth. Authorizing punishment for prisoners so that by good conduct and work they can obtain their liberty in much shorter time.

Eighteenth. Establishing a board of charities for the supervision of all public prisons and eleemosynary institutions, and prohibiting men from taking any earnings of immoral women.

I want to say right here that every moral law or movement has had the support of the women. It was the Interparliamentary Union which declared that Colorado has "the sanest, most humane, most progressive, most scientific laws relating to the child to be found on any statute books in the world."

Of course, the legislature during this period has always had some women in its bodies, but the influence of women has been very largely by reason of the fact that they are voters and by reason of the fact that, being voters, legislators listen to them when they appeal for the passage of such laws.

Mr. OWEN. Mr. President, I also would like to supplement what the Senator from Colorado [Mr. SHAFROTH] has said by pointing out that the Senator from California [Mr. WORKS], in his memorial submitted yesterday in the RECORD, at page 4437, gave a long list of humane statutes affecting the welfare of women and children and public purpose of a similar nature, which may be considered also as an evidence of the service they are rendering in bringing about the passage of desirable laws.

Mr. CLAPP. It is very agreeable to me to have both these suggestions made at this time, although, without lessening the value of the suggestions, to be candid about it, I never argue a fundamental cause where I have to depend upon specific instances. Either the broad fundamental principle is right, either the force behind it is right, or it is wrong. There is not a human being in this land to-day who will not admit that during the last few years there has been a wonderful change in our political system and in the broad, humane spirit of our laws, and that system has been accompanied by a very broadening influence of womanhood, partially in having the electorate granted to her, partially in the discussion of the effort to extend the right, and partially in the influence of both upon the entire moral tone of this country. It stands to reason that the very moment you admit that, taking womanhood as an entirety, the good overwhelmingly predominates over the evil, that moment you admit that the closer contact of womanhood, the closer the participation of womanhood, in our political and legislative policies, the better will be the result of it. It is because of that recognized fact we find so many sinister forces arrayed against it.

Take the question with reference to girlhood. There was a time when a girl could not dispose of the simplest piece of property until she had reached the age of 18, and yet there was a time when she could barter her soul to the devil when she had just passed the age of 10. In other countries and in this

country in those States where woman has received the right to vote, where the agitation has been the strongest, the age of consent has constantly been raised until now in many States it is above the age at which she could barter her personal property. It is not necessary even to rely upon that as a specific fact.

Again, I say the concession that in any vast body of persons to whom it is proposed to grant the electorate the good overwhelmingly predominates over the evil there can be but one result, and, in the main, that a good result.

I spoke a few moments ago of the fact that a minority in all ages has been able to retard the progressive forward tendency of the majority. They have used divers and sundry weapons and instrumentalities. One is the fact that the wrong is always ready to subordinate every consideration to the one thought of interest, due to the fact that it never separates and divides its forces, while the right, never seeking that to which it is not entitled, feels no such allegiance to a purpose, and its forces are ofttimes divided; but, as I said before, the most potent instrumentality the spirit of Toryism in all the ages has employed has been to use the respectable element opposed to progress as the cloak and shield behind which the sinister forces mask themselves. There are to-day in this country unnumbered thousands of good women, true and Christian women, who are opposed to woman suffrage. They live in surroundings where the love—I might almost say the homage—of husbands and sons shields them not only from danger but even from a knowledge of the dangers that sometimes beset others. In that home and with that environment they stand opposed to woman suffrage. They would scorn an alliance with the forces underneath the surface which without a positive alliance are all arrayed in hostility to woman suffrage.

You take a man who is adding to his millions the millions that he can not count, see, feel, nor use, but simply seeks the possession of more, and adding to that on the toil of childhood, poisoned morally and physically by its surroundings, and that man, as a rule, is opposed to woman suffrage, and well he may be. The man who is opposed to shorter hours of woman labor is opposed to woman suffrage. If there is a vital question that confronts the American people it is this question of its childhood, of overworked women. True to the instinct of maternity that ever dominates a true woman's nature, she is bringing into existence children unfitted to be a part and parcel of a great and vigorous citizenship. If there is a man thriving upon the toil of overworked women, you will find, almost without exception, a man opposed to woman suffrage. The man who thrives by the white-slave traffic is opposed to woman suffrage, and well he may be; the man who thrives through the prostitution and the pollution of the very sources of American political activities is opposed to woman suffrage, and well he may be; the man who thrives upon a traffic that drags down manhood and destroys it is opposed to woman suffrage, and well he may be; and yet these forces are all moving to the same purpose to which these good people move, namely, opposition to woman suffrage.

As I said before, these good people would scorn the suggestion of alliance with these classes; they would scorn the very presence of these classes; and yet they can not escape the eternal fact that every sinister force in this country is opposed to woman suffrage; and well it may be, because without any hair-splitting discussion, without any inquiry as to what specific legislation woman suffrage has brought, every sinister influence and force in this country recognizes that in the womanhood of this country is the overwhelming preponderance of good, and they dread the bringing in of that force as a part of the electorate of this Republic.

I want to say this to these good people: It is to be regretted that the better the man or woman is who stands against human progress the more thoroughly he or she stands, unintentional though it be, as a foil for the evil forces that always have been against progress.

One thought more and then I will yield the floor. I want to say to those who are interested in the passage of this resolution providing for the submission to the States of a constitutional amendment, that while at one time I thought it might be passed by the requisite majority, I am now inclined to think that it can not secure the requisite majority; but on that account they should not lose hope; they should remember that there is a law operating upon human nature as resistless as the law under which Niagara's flood plunges over Niagara's crest, and that is that despite every attempt at checks and balances, despite every effort to thwart or abate or sidetrack the cause of free government, in its last analysis it is bound to be popular government, and sooner or later it will embrace the entire population of our country without reference to sex.

Even though this joint resolution be defeated to-day—that is, though it fail to receive the requisite number of votes—there are fewer opponents to this joint resolution now than there were, when I entered the Chamber, to the joint resolution to amend the Constitution so as to provide for the direct election of United States Senators by the people. Our forefathers, wise in their day and generation, feared the people, and they sought to set up certain barriers, certain checks and balances; they decreed that the American people should not vote directly for their Senators; but under this resistless law of human purpose, that sooner or later breaks down every barrier in free government that stands against the final and ultimate triumph of the people, the final making of free government as absolutely a democracy as is possible to exist in a dense population and an extended area, that barrier had to give way; and even before we amended the Constitution many of the States of this Union had made provision whereby Senators, for all practical purposes, were elected by the people.

Again, our forefathers refused to concede to you and to me the privilege and the capacity to vote directly for a President of the United States. So they conceived the filtering process by which we might vote for presidential electors, and they, in turn, as absolutely independent as we in the inception, vote for whomsoever they saw fit for President; but here was another effort to dam the current that flows eternally on until it reaches the last analysis of free government, which is popular government. So, without changing a line in our Constitution to-day, we practically vote as absolutely directly for President as though there were no presidential electors on our ballots.

So I want to say to those who have been interested in this cause, who have spent much time here in the effort to secure the favorable recognition of this joint resolution, even though it fails of the requisite majority of the Senate, there is no occasion for being discouraged or disheartened. By the eternal logic of sequence, which through 19 centuries worked its way to the form of free government, the same resistless force, the same logic of sequence, will in time make free government in form free government in fact.

Mr. BORAH. Mr. President, before the Senator from Minnesota takes his seat, I will say that I have been interested, as I know the Senate has been, in the line of argument of the Senator; and, so far as the principle of woman suffrage is concerned, I am in thorough accord with what the Senator has said; but the Senator has argued that the question of extending democracy must go on and on and be enlarged from time to time, and the power of the Government be distributed more generally among the people. Does the Senator believe that if this amendment is passed it will have the effect of giving suffrage to the colored women of the South? Will it be in force for an entire race now disfranchised?

Mr. CLAPP. I do not know; but I know one thing—that if my argument is right, it is right to give suffrage to women. With the sequence I have no concern or interest in connection with the right itself. The sequence is a matter for later consideration.

Mr. BORAH. Mr. President, the proposition is this—and I raise this question in all sincerity, because I feel very earnest about it—I do not believe in putting into the Constitution of the United States another hypocritical clause to be disobeyed. Fifty years ago we gave to the negro the right to vote. Now, instead of democracy increasing it has been decreasing and receding ever since the hour when we did that thing. The negro is to-day a disfranchised man under the American flag—disfranchised by one portion of the country, and his disfranchisement connived at and consented to by another portion of the country. Does the Senator believe therefore that we are living up to our teaching of popular government and of democracy when we as a people consent to that disfranchisement without ever raising our voice in the negro's behalf, except with a little lip service? I feel that whatever we put into the Constitution ought to be observed, and it ought not to be put in unless we are prepared to enforce it.

Mr. CLAPP. That is another question.

Mr. BORAH. It is a pretty big question.

Mr. CLAPP. I can answer that very promptly, no; but because we fall short in one respect, because those who went before us fell short or those who come after us may fall short, is no reason why we should fall short in the discharge of our duty.

Mr. BORAH. Well, Mr. President, we are going to do just precisely what our forbears did. They gave to the negroes the right to vote, but the right has not been delivered to them. We are going to give to the southern woman the right to vote, but we are not going to enforce that proposition; we are simply going to write it into the Constitution, there to demoralize a

whole race by tantalizing it with an ideal which it will never be able to realize.

Mr. CLAPP. Mr. President, I would differ from the Senator from Idaho in this: I do not think it can be said that we give the right of suffrage; we merely, if this amendment should be adopted by the requisite number of States, prohibit the withholding of suffrage in any State simply upon the ground of sex. We did the same with reference to color. I do not know—I would not concede, quite so far as the Senator does, the disfranchising of the negro. I have received letters of late from men throughout the South who say that a great many white men are disqualified, because some of the statutes in those States aim to prevent voting by, as I understand, imposing educational requirements. If the right of suffrage is granted, as we say, although, in fact, it is simply a prohibition against its being withheld on account of sex, what they may do with reference to the degree of education requisite to vote in a State still remains a question for each State to decide for itself.

Mr. BORAH. Mr. President, I am not raising or discussing at this time any other proposition than that we are putting into the Constitution something that we do not propose to enforce. I am not at this time quarreling with the South as to the position which it has taken with reference to negro suffrage. but I am saying that we are proposing to insert an amendment into the Constitution when we know it will have precisely the same effect as the other amendment to the Constitution to which I have referred, and that it will be equally ineffective. Would it not be wiser, therefore, to proceed through the States?

Mr. CLAPP. Well, Mr. President——

Mr. BORAH. Let me read here an extract from the constitution of Oklahoma. and I will ask the Senator if he thinks it has any other purpose or effect than to evade the clause of the Constitution guaranteeing the right of suffrage, without discrimination on account of color:

> No person shall be registered as an elector of this State, or be allowed to vote in any election herein, unless he be able to read and write any section of the constitution of the State of Oklahoma.

Now, there it stops. If that were universal, no one could complain, but it proceeds:

> But no person who was on January 1, 1866, or at any time prior thereto, entitled to vote under any form of government, or who at that time resided in some foreign nation, and no lineal descendant of such person, shall be denied the right to register and vote because of his inability to so read and write sections of such constitution.

Everybody knows that that is an evasion of the constitutional amendment which we adopted some 50 years ago, and everyone knows that the same provision will go into the constitutions of those States with reference to the proposed constitutional amendment now before the Senate and cut out the same race of people. This provision of the Oklahoma constitution is before the courts, and I do not care to discuss it, but I feel that it is not improper to say that, whatever may be its legal effect, its prime object was and is to disfranchise the negro.

Mr. CLAPP. Well, Mr. President, I may be a little slow of comprehension this morning——

Mr. BORAH. I do not think so.

Mr. CLAPP. But I can not see what that has to do with the question of giving the women of Ohio, Indiana, Michigan, and Illinois the right to protect their homes, their property, and, so far as law can be a protection, to protect the children in their homes; and, so far as law can be the adjunct of moral force, to develop the moral force of their States. Either it is wrong or it is right, and that is all there is to the argument.

Mr. BORAH. Mr. President——

Mr. CLAPP. The fact that some people in some portions of this country may negative the right is no reason, to my mind, why I should withhold the right.

Mr. BORAH. Well, Mr. President, that is not the proposition.

Mr. CLAPP. Then, I do not know what the proposition before the Senate is.

Mr. BORAH. If the people of a certain portion of this country negative the constitutional provision by our consent or by our connivance, then we are a party to the transaction. When you establish the vote for the woman in Ohio and deliver it to her, you are under the same obligation, if you establish that vote for the woman of Mississippi, to deliver it to her.

Mr. CLAPP. Mr. President, that does not follow at all. I am not responsible for what is done in one of those States. The fact that I am powerless to give a fair interpretation to a law in every part of this country is no reason why I should withhold my support of a law that in itself is right. I can not understand the attitude of the Senator from Idaho on that subject.

Mr. BORAH. Well, Mr. President, possibly I can make myself a little plainer. The Senator was advocating the proposed constitutional amendment for the reason that it would carry to the voters of the country more power; that it would give a wider scope to the action of democracy and would treat all alike, giving all an equal opportunity to enjoy the franchise; and yet we simply grant it to those who now have it or can have it without the constitutional provision. Ohio can adopt woman suffrage if they wish it; Illinois can adopt it if they wish it; but as to those who will not be permitted to adopt it and can not adopt it we are not undertaking to enforce the provision of the Constitution at all, and, therefore, our hope is perfectly vain, because those States where they may adopt it may do so without this constitutional provision, while in those States where they can not the constitutional provision will do them no good.

Mr. CLAPP. Still, Mr. President, I do not see the force of the argument. Will not the Senator admit that there is more democracy in this country than if we had no suffrage at all? Will he not admit that there is more democracy in this country than if we only had the suffrage limited to a self-selected and self-constituted trusteeship of the political activities of the country? Suppose it is true that certain people in certain States have been disfranchised; it is also true that that same race in other States have the franchise. It was either right or wrong to give it to them, and those men who passed upon the concrete question of whether it was right or wrong discharged their duty as to that question when they made their decision upon it. If they, in turn, themselves be responsible for the subsequent failure as the result of that decision, then the blame is upon them in their subsequent inability or lack of purpose to carry forward the spirit of the first decision; but that can not affect the righteousness or the unrighteousness of the first decision. You can not measure this by the mere fact that it may be said that, if you finally prohibit the exclusion of suffrage to women throughout the country, there will be States where the women will not vote, and if they do not vote you have not enlarged the sphere of democracy. That will not be our fault. The question is whether in the spirit of democrocy, in the analysis of the growth of democracy, it is not true at all times that in proportion as participation in political activity is expanded there is more progress. If that is true, then there is no answer to the proposition that democracy in the last analysis rests upon government by the people.

Mr. BORAH. Mr. President, I am not arguing that question with the Senator.

Mr. CLAPP. Well, that is what I am arguing.

Mr. BORAH. I agree with the Senator perfectly upon that proposition; but I do not agree with him that we have discharged our duty when we give the mere shell of the principle, and as a people do not undertake to see that the proposed beneficiaries enjoy the right which we profess or pretend to give them.

Mr. CLAPP. I did not say we had discharged our whole duty.

Mr. BORAH. That is what I wanted the Senator's opinion upon.

Mr. CLAPP. What I said was that, in deciding one question, if we decided it right, we discharged our duty as to that question. If that involves as a sequence other questions and we do not discharge our duty as to the other questions, then we fall short upon these other questions; but it can not affect the fundamental question of whether in the inception the one thing was right or wrong.

Mr. BRYAN and Mr. SHERMAN addressed the Chair.

The PRESIDING OFFICER (Mr. REED in the chair). Has the Senator from Minnesota concluded?

Mr. CLAPP. I have concluded, unless the Senator from Illinois or the Senator from Florida desires to ask a question.

Mr. BRYAN. No; I desire to secure the floor in my own right, and I thought I had done so.

The PRESIDING OFFICER. The Senator from Florida has the floor.

Mr. SHERMAN. I should like to ask the Senator from Minnesota a question.

Mr. CLAPP. That is what I supposed, and that is why I retained the floor.

Mr. BRYAN. I yield to the Senator.

Mr. SHERMAN. I will ask the Senator from Minnesota if it would not be as logical to abandon the extension of suffrage proposed by the pending joint resolution because in certain States there are gross frauds in the election? There is an investigation going on in the city of Chicago now through which it has been disclosed that some ten or twelve thousand ballots had been inserted in a box in a way unknown to our election laws. I inquire whether, because of that failure in that particular, whereby ten or twelve thousand voters have been disfranchised by having that many fraudulent votes balanced against their lawful votes, it would not be just as sensible to abandon

the struggle against popular government because of the opinion in certain States as to the right of suffrage which we do not approve?

Mr. CLAPP. Of course, if we are going to rest our judgment upon the weakness and not the strength of humanity then I for one am ready to throw up my hands and quit the struggle for better things. It is in this broad equation of humanity that embraces the best and the worst that we have to find the solution for our problems.

That reminds me, Mr. President, that we often hear it said that those of us who advocate the extension of the instrumentalities of the Government want for the evils of democracy more democracy. That is not true. The evils that exist in spite of democracy can only be cured by democracy. You might as well say that because men are profane in spite of the church the cure for the evils of the church is more church. Profanity is not an evil of the church, it is an evil in spite of the church. In proportion as the spirit that moves the church increases and develops profanity will cease naturally; and the evils that exist in this country, although we have in form, but not yet in fact, a government by the people, exist in spite of democracy and are not evils of democracy. Of course the cure for the evils that exist in spite of democracy must be more democracy.

Mr. BRYAN. Mr. President, I am one of those who believe that the privilege of voting ought to be controlled by each State. This is a big country of diversified interests, composed of people of very different ideals and conditions. I believe it is wholly wrong for Arizona to say to Maine who her voters shall be; for Massachusetts to impose upon Idaho her peculiar beliefs and doctrines; for Florida to say to Oregon, "We believe only in manhood suffrage, and, therefore, we want to take away from you the right to grant women the privilege to vote"; for Georgia to say to Wyoming, "We, 3,000 miles away, without any familiarity with the conditions that confront you, propose, with not a single voter of our State ever having known of the conditions in your remote State, undertake to lay down the rules by which your people in Wyoming should govern themselves"; for Virginia, on the Atlantic coast, to say to Washington, on the Pacific coast, what treatment ought to be accorded to the Asiatics in the matter of voting; for Tennessee to say to Colorado what people ought to be allowed to vote for Representatives in Colorado.

The Senator from Minnesota [Mr. CLAPP] says that we ought not to take away a right which Ohio wants, because negroes are not allowed to vote in Mississippi. That is not the proposition the Senator from Minnesota is advocating here to-day. Ohio has said that she does not want women to vote, and the Senator from Minnesota wants to force woman suffrage upon that great State against her will.

Mr. CLAPP. Mr. President, at that point, if the Senator will pardon an interruption, I think his remarks might perhaps be misleading to those who are not thoroughly familiar with the conditions under which alone the Constitution can be amended. This limitation against the restriction of suffrage could not be forced upon Ohio unless three-fourths of the States in the Union said so. Of course, the Senator understands that and so does the Senate, but I wanted it in the argument.

Mr. BRYAN. Mr. President, that does not make it right. Of course, I realize that, under our system of adopting constitutional amendments, three-fourths of the States govern; but three-fourths of the States could pass this amendment over the will of the majority of the people of this country, and yet the Senator from Minnesota calls that democracy!

Every now and then some statesman arises who, in his own modest opinion, could vastly improve upon the Constitution under which we have lived for more than 100 years, and under whose beneficent provisions this has risen to be the greatest Government ever known among men. Senators speak as if the doctrine should be accepted that whatever a majority wants is right—"the greatest good to the greatest number." Our Constitution was not framed upon any such theory as that. It undertook to give, so far as human machinery could do so, equal and exact justice to all men.

At the risk of being tedious, I propose to read from Baron de Montesquieu's work, "Spirit of Laws," of which Maine, in his "Popular Government," said:

> Neither the institution of a Supreme Court nor the entire structure of the Constitution of the United States were the least likely to occur to anybody's mind before the publication of the "Spirit of Laws."
>
> If a Republic be small, it is destroyed by a foreign force; if it be large, it is ruined by an internal imperfection.
>
> To this twofold inconvenience democracies and aristocracies are equally liable, whether they be good or bad. The evil is in the very thing itself, and no form can redress it.
>
> It is therefore very probable that mankind would have been at length obliged to live constantly under the government of a single person had they not contrived a kind of constitution that has all the internal advantages of a republican, together with the external force of a monarchical government. I mean a confederate Republic.
>
> This form of government is a convention by which several petty States agree to become members of a larger one which they intend to establish. It is a kind of assemblage of societies that constitute a new one capable of increasing by means of further associations, till they arrive at such a degree of power as to be able to provide for the security of the whole body.
>
> The associations of cities were formerly more necessary than in our times. A weak, defenseless town was exposed to greater danger. By conquest it was deprived not only of the executive and legislative power, as at present, but, moreover, of all human property.
>
> A Republic of this kind, able to withstand an external force, may support itself without any internal corruption; the form of this society prevents all manner of inconveniences.
>
> If a single member should attempt to usurp the supreme power, he could not be supposed to have an equal authority and credit in all the confederate States. Were he to have too great an influence over one, this would alarm the rest; were he to subdue a part, that which would still remain free might oppose him with forces independent of those which he had usurped, and overpower him before he could be settled in his usurpation.
>
> Should a popular insurrection happen in one of the confederate States, the others are able to quell. Should abuses creep into one part, they are reformed by those that remain sound. The State may be destroyed on one side, and not on the other; the confederacy may be dissolved, and the confederates preserve their sovereignty.
>
> As this Government is composed of petty republics, it enjoys the internal happiness of each; and with regard to its external situation, by means of the association, it possesses all the advantages of large monarchies.

The Senator from Minnesota speaks of popular rule. The system outlined by Montesquieu was written into our Federal Constitution, and there were thrown around it two devices, admirably defined and illustrated by Mr. Tucker in his work on the Constitution. I ask leave to insert, without taking the time to read, what Mr. Tucker has to say upon this subject.

The PRESIDING OFFICER (Mr. MYERS in the chair). Without objection, it will be so ordered.

The matter referred to is as follows:

> In all cases where power is in the hands of any class or interest which is antagonistic to others, whether the others have a minority representation or none, the result is tyranny. History is full of this truth, speaking by numberless examples.
>
> How, then, is this most difficult problem in political science to be solved? Representation protects constituencies from false representatives; but how shall we protect the minority constituency from a majority constituency, which, acting in legislative body, are represented in proportion to their numbers? Our representative principle may save the majority from the domination of the few, but how shall we save a minority from the tyranny of a majority? Two devices may be suggested:
>
> First, in the machinery of the Government, give to each class or order a separate and distinct organism through which its will may be voiced and require a concurrence of each to all action. Thus each will check the hostile action of the others, and all must concur in order to any action.
>
> This device is often called "the checks and balances in government," or by Mr. Calhoun, in his acute analysis of the science of government, in his Disquisition on Government, "A Government of concurrent majorities." The substance of his view is this: So organize your Government that each interest shall act independently of the other, and instead of allowing that one which has a preponderance of numbers to govern that which has the minority, require a majority of each to concur in the political measures proposed, and thus give to neither any power over the other but by that other's consent, and allow no action in either unless both concur in the consent. Power and right are thus wedded and tyranny is prevented.
>
> Government under this device represents each and every interest. It voices not a numerical majority of the whole, but the concurrent majority of each and all its members. Each is thus potential for his own defense against others, but impotent for offense to others. It prevents injustice to any and enforces justice to all. Out of the conflict of these distinct orders liberty emerges and is secured. In their unification under mere numerical majority liberty dies and tyranny is inevitable.
>
> Second. The second device which may be adopted is this: Let any peculiar and distinct interest be regulated and controlled exclusively by that order or class in society which holds it—by them alone—excluding other heterogeneous elements entirely from any vote in respect to them, and letting all regulate homogeneous interests together in one government. Under this each order of society, under a separate governmental organism, would regulate its own distinct interests with which other orders, having nothing in common, would have nothing to do in the way of regulating them.
>
> The mode in which these two devices have been applied in the history of the race will be now explained, and but for these two devices, which have saved liberty in all the ages, political history would be a dreary rehearsal of unbridled despotism as the destroyer of man-right. In illustration of these two devices some striking examples may be cited:
>
> (a) In the first stages of the Republic of Rome, in the *comitia centuriata*, where suffrage was based on property, patricians and plebeians were admitted to its deliberations, but the patricians had a majority, and the oppression of the plebeian minority gave rise to the celebrated secession of the plebs to the sacred hill, as their only protection from the government, which had become an exclusive aristocracy. The patricians used every means to persuade them to return. A treaty was made between them as between two distinct nations, and resulted in the establishment of the office of tribunes, who were the representatives of the plebeians alone, by the plebeians with the power of veto upon the action of the patricians. This tribunitian power, which was exclusively in the hands of the plebeians, was a check upon patrician power, and was maintained throughout all the subsequent history of the Roman Republic. In other words, no law or act could be passed to the detriment of the plebeians to which their concurrent majority did not consent; and, on the contrary, the plebeians could exercise no power against the patricians without the concurrence of the patricians. Rude and imperfect as this device was, it was effectual in the protection of each order from the oppressive action of the other. The doctrine of concurrent majorities saved the liberty of the members of each order from destruction by the other.

(b) In the history of the English Revolution a great contest arose during the reign of the Stuarts as to the power of the King to take a subject's property without his consent, expressed through a vote of the House of Commons. Taxation had previously been held by the people of England to be unlawful, unless with the popular assent in the House of Commons. If the King could tax the people without the assent of the House of Commons, power would have been alien to right. The great case of the ship money exacted by the King of John Hampden in 1636, decided against him by a venal judiciary, for the time divorced the power of taxation from the right of the taxpayer. English freemen did not tamely submit. The Revolution was the result, and resulted in the constitutional monarchy of 1688–89, by which the power of taxation was secured to those who paid the tax. This wedded power to right, which the house of Stuart had attempted to divorce.

(c) The American Revolution of 1776 turned upon the same pivotal issue. Parliament had in a preamble asserted the right of taxation of the Colonies by the Parliament of England, in which the Colonies were not represented at all, and in which, if they had been represented in proportion to their numbers, the representation would have been a mockery, because their representation would have been a minority only, subject to be overborne by the majority of English representatives. This called forth the splendid eloquence of Edmund Burke in his speech on "American taxation," in which he used this language:

"Could anything be a subject of more just alarm to America than to see you go out of the plain high road of finance and give up your most certain revenues and your clearest interest merely for the sake of insulting your colonies? No man ever doubted that the commodity of tea could bear an imposition of 3 pence; but no commodity will bear 3 pence, or will bear a penny, when the general feelings of men are irritated and two millions of people are resolved not to pay. The feelings of the Colonies were formerly the feelings of Great Britain. Theirs were formerly the feelings of Mr. Hampden when called upon for the payment of 20 shillings. Would 20 shillings have ruined Mr. Hampden's fortune? No; but the payment of half 20 shillings on the principle it was demanded would have made him a slave. It is the weight of that preamble, of which you are so fond, and not the weight of the duty, that the Americans are unable and unwilling to bear."

A statement of the grounds of this revolutionary conflict will not be out of place. Each Colony had substantially conceded that Parliament might properly legislate for the general welfare of the Empire of which each was a part. The Colony did not even make a point of its representation in the Parliament as to matters which concerned the whole Empire. As to these, it was content that, as the welfare of all was the interest of all, the power might safely be vested in the general council, acting for the general welfare of all and the common defense of each and every part.

But when the local interests of each Colony, when its internal policy, its home rights, were to be regulated, its people felt that these interests and rights and this internal polity could only be safe when under the exclusive control of the political power which represented the people of the Colony, who held these interests and rights and were concerned in this polity. This was self-government. The admission of any other influence was to allow their rights to be controlled by aliens. This exclusive power was wedded to the personal right. If any alien to the right was to participate, it *pro tanto* divorced political power from personal right, destroyed real self-government, and subjected personal and home right to the influence and government of real aliens.

In vain did British sophistry plead that the English voter was a fellow subject of the colonist and not an alien. The colonist replied, *quoad hoc:* As to my home interest, my home right, my internal polity, you know nothing and care less; your interest is not mine—nay, may be antagonistic to mine—and to allow you an equal voice with me—or worse, a major voice to mine—in your Parliament would be to give up my personal liberty to the control of real aliens and make my condition one of servitude to your mastery.

And hence, when some suggested colonial representation in Parliament, the fathers answered that it was a delusion and a snare to subject internal polity to a Parliament of 500 members in which the Colonies would have 50 and England 450 votes. The hands which wield the power must be the hands that hold the interest; home rule is essential to home liberty and the safety of home rights and the integrity of home polity. The home rule they needed was a real, not formal, representation; an absolute authority and not a barren scepter.

In the case of the Colonies the evil of domination was aggravated by its sectional character; Great Britain, the government, was 3,000 miles away from the interest to be regulated. The worst form in which this alien government can be presented is when the rights and interests are in diverse localities, separated by a geographical line, and the growth of social conditions in the section separated by that line. Sectional tyranny is unmitigated by presence and sympathy. Class over class may be so mitigated. In the one case the oppressor never hears, and hence never heeds the cry of the oppressed. In the latter he may do so.

Government by one man often fails to understand the government, but it usually defers. Government by a foreign people neither understands nor defers; it has no adaptation to the wants or temper of the governed. It is therefore about the worst government that can be imagined.

The government of a localized minority by a localized majority is, in substance, the government of one people by another people—by a foreign people. The alien hand of power governs the distant right without sympathy and unalleviated by the presence of its victims. Alien tyranny is not only an intolerable foe to human liberty, but the destroyer of human happiness. The sectional majority is an alien despot.

(e) In the Federal system of our Union both of these devices are finely illustrated. In the construction of the legislative department of the Federal Government we have a bicameral Congress, composed of the Senate and House of Representatives. The Senate is composed of two Senators from each State without regard to population. The House of Representatives is composed of Members elected by the voters of each State in the main in proportion to numbers. The Senate represents the equipollency of States; the House mainly the power of States according to numbers.

If the numerical majority of the whole country in the House of Representatives should seek to invade the statehood of the Members of the Union, it could only be done by the concurrence of a majority of the States in the Senate. On the other hand, if the States should attempt to invade the rights of the populations of the country, it could not be done but with the concurrence of the House, which represents the populations. The concurrent majority of the two Houses is thus essential to all legislation.

But, lest this concurrence should be brought about to the injury of any interest or right of the people, the veto power in a qualified form is vested in the President, who is elected on a basis which combines both the equality of the States and numbers in each of the States. His veto may be overcome by a two-thirds vote in each of the Houses concurring. Thus all legislation is dependent upon the concurrence of the majorities of population, of States, and of population and States combined in the election of the President.

And if this threefold concurrence were obtained in any legislation which violated the Constitution of the United States, the judicial power is armed with authority to declare such legislation in effect to be null and void. So that in order to any legislation having full effect under our Federal system, it must have the concurrent sanction of the two Houses of Congress, of the President, and of the judiciary. The legislative power of the Federal Government is, however, by the terms of the Constitution limited to such matters as are delegated to it by the Constitution, and all legislative power not so delegated is reserved to the States. If, therefore, the legislative department of the General Government should undertake to exercise the function of lawmaking upon any subject thus reserved to the States, such action would be wholly null and void and would be so declared and enforced by the judicial power of the United States.

The respective States, as to their reserved legislative power, have vested this power in bicameral legislatures, without whose concurrence no law can be passed, and very often with a grant of veto power to the governor. And, in the State systems of government, the same power in their judiciary to declare void any legislation which is contrary to the State constitution is fully recognized; so that no State law can be effectual which has not the concurrent sanction of both houses of the legislature, the governor, and the judiciary.

It will be seen that in this Federal system, embracing the Federal Government and the various State governments, the device of the concurrent majorities is in full force, and the second device is brought into operation by leaving to each State, without any interference in its legislation by any other State, the exclusive lawmaking power as to all interests which exclusively belong to that State.

This wonderful combination of these two devices presents an example in which the guards to the personal rights and liberties of the people are better defined and more effectual than under any system of government known among men. The full explanation of the principles of this system will be reserved for future consideration.

How majestic is this essential unity of the people's will and purpose through diverse and independent agencies for their expression! How true a unity is obtained by not taking the will of the whole without reference to the parts, but the will of each distinct part in order to attain the will of the whole! How superior this to a government based on the majority of numbers! The government of the numerical majority is the mechanism of brute force; ours is the resultant of the moral forces of intelligent popular will over brutal selfishness.

Mr. BRYAN. The first of these devices is that of giving to each class in the machinery of government a separate and distinct organization through which its will may be voiced, and requiring the concurrence of each in all action. This is called by John C. Calhoun a government of concurrent majorities. The second device is where local interests only are affected, where the interests are homogeneous, to let those people decide the questions for themselves.

Mr. President, this constitutional amendment is not needed to enable any State or every State to have woman suffrage, but it is desired in order to force upon unwilling States the arbitrary opinion of a few States.

The Senator from Arizona [Mr. ASHURST] seems to believe Congress should propose any amendment and let the people settle it, no matter how vitally it may affect the right of a homogeneous people, with their interests identical, to govern their own affairs. I wonder if the Senator from Arizona, who desires to place Arizona's election laws in the Federal Constitution, would vote for an amendment to limit the right or the privilege of suffrage to men, and let the people decide that? I apprehend he would not, nor should he, because if Arizona desires to have women vote, it is her privilege. If other States do not, why do Senators who have what they want in their own States assume a greater familiarity with the States that have not woman suffrage, and undertake to impose upon Congress and upon those States their ipse dixit as to who shall constitute a voter?

The United States have no voters. The voters are the voters of the States. The reference made by the Senator from Idaho in his question to the Senator from Minnesota develops the inability of Congress to force upon an unwilling people a provision adopted at a time when men's passions were aroused, and a provision many times regretted by men of all parties and of all sections. California has no more right to say to Georgia that negro women shall vote than Georgia has to say to California that the Asiatics shall vote.

Mr. LANE. Mr. President——

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). Does the Senator from Florida yield to the Senator from Oregon?

Mr. BRYAN. I do.

Mr. LANE. I should like to call the attention of the Senator from Florida to the fact that the Asiatic, if he be native born, does vote.

Mr. BRYAN. I was aware of that. I am obliged to the Senator.

Mr. President, nine States have full woman suffrage. Wyoming adopted it in 1869, Colorado in 1893, Idaho and Utah in 1896, Washington in 1910, California in 1911, Oregon, Kansas, and Arizona in 1912. More than one election has been held only by people in States in which the total population was 2,621,000 in 1910; and yet that 2 per cent of the people of this

country think that the other 98 per cent ought to accept their will because they have found it to work fairly well for 1 or 4 or 10 or 18 or 20 years.

Mr. President, I do not like to discuss the negro question, and I shall not do so any more than is necessary to present the thought expressed by the Senator from Idaho. The Senators from the Pacific coast are experts as to what should be done with the negro in the South. There are nine suffrage States put together, including those which have adopted full suffrage. In 1912 they contained 100,717 negroes.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from Idaho?

Mr. BRYAN. I yield.

Mr. BORAH. I understood the Senator from Florida to say that Senators from the Pacific coast were experts as to what should be done with the negro vote. I wish to state to the Senator from Florida that the Senators from the Pacific coast have offered no suggestion on that point, so far as I know.

Mr. BRYAN. I do not refer to the Senator from Idaho.

Mr. BORAH. I wish to state further to the Senator from Florida that the only reason why I hesitate to vote for this resolution is because of the condition which confronts the people of the South. If the southern people feel that they want this amendment, and it will not accentuate the present condition of affairs there, and will be lived up to, it will have very much to do with the Senator from Idaho in casting his vote.

Mr. BRYAN. I hope the Senator from Idaho did not understand that I referred to him, for I did not.

In those nine States, then, there are 100,717 negroes in a total population of 7,831,541. The city of Washington has 94,000 negro citizens, within 6,000 of as many as these nine States put together. Of the 100,000 total negro population of suffrage States, Kansas has 54,000, leaving the other eight States only 46,000. In Dallas County, Ala., there are 43,511. In Jefferson County, Ala., there are 90,617. In four counties in Florida there are 86,000. In two counties in Georgia there are 101,000—more than in the whole nine suffrage States put together.

In the nine Western States that have woman suffrage there are 115,040 Asiatics. California has 36,248 Chinese and 41,356 Japanese. Yet California would plunge this country into a war before she would concede the right of this Government to regulate her own internal affairs.

I ask leave to incorporate into the RECORD, without reading, some of the tables I have here.

The PRESIDING OFFICER. Without objection, it will be so ordered.

The matter referred to is as follows:

| States. | Total population. | White. | Negro. | Chinese. | Japanese. |
|---|---|---|---|---|---|
| Kansas | 1,690,949 | 1,634,352 | 54,030 | 16 | 107 |
| Idaho | 325,594 | 319,221 | 851 | 859 | 1,363 |
| Wyoming | 145,965 | 140,318 | 2,235 | 246 | 1,596 |
| Colorado | 799,024 | 783,415 | 11,453 | 373 | 2,300 |
| Arizona | 204,354 | 171,468 | 2,009 | 1,305 | 371 |
| Utah | 373,351 | 366,583 | 1,144 | 371 | 2,110 |
| Washington | 1,141,990 | 1,109,111 | 6,058 | 2,709 | 12,929 |
| Oregon | 672,765 | 655,090 | 1,492 | 7,363 | 3,418 |
| California | 2,377,549 | 2,259,672 | 21,645 | 36,248 | 41,356 |
| Total | 7,831,541 | 7,439,230 | 100,717 | 49,490 | 65,550 |

Mr. BRYAN. Mr. President, the race question is one we shall have to face. It is not true, as has been suggested here, that in all of the Southern States the negroes are defrauded of their votes. In my own State, for instance, if they can vote an Australian ballot they have as easy access to the polls as the white men. In Mississippi they have practically the same constitutional provision as that read by the Senator from Idaho from the constitution of Oklahoma.

Mr. WILLIAMS. No; the senator is very much mistaken. Mississippi never had the "grandfather clause" at all.

Mr. BRYAN. It was Alabama.

Mr. WILLIAMS. Yes; Mississippi never had it.

Mr. BRYAN. I meant Alabama.

It makes no difference where a man is born, Mr. President. In one way or another the white man will rule in the South, in the East, in the West, and in the North; and you can no more stop him than you can change the immutable laws of God Almighty.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from Colorado?

Mr. BRYAN. I do.

Mr. THOMAS. Assuming that statement to be correct, I should like to inquire of the Senator from Florida wherein the proposed amendment in any way menaces, as he so much fears, this institution?

Mr. BRYAN. It adds to the difficulty of dealing with the situation; that is all. It just increases it. I have no more idea that the white women of the South would go to the polls alongside of the black women of the South than I have that they would do so in Colorado, if the numbers were equal or approximately so.

Mr. President, there visited this country in 1830 or thereabouts a gentleman who had no interest in this question and who wrote a work that has become a classic. I read from De Tocqueville on "Democracy in America" upon this question.

> The danger of a conflict between the white and the black inhabitants of the Southern States of the Union—a danger which, however remote it may be, is inevitable—perpetually haunts the imagination of the Americans. The inhabitants of the North make it a common topic of conversation, although they have no direct injury to fear from the struggle; but they vainly endeavor to devise some means of obviating the misfortunes which they foresee. In the Southern States the subject is not discussed; the planter does not allude to the future in conversing with strangers; the citizen does not communicate his apprehensions to his friends; he seeks to conceal them from himself; but there is something more alarming in the tacit forebodings of the South than in the clamorous fears of the Northern States.
>
> * * * * * * *
>
> The negro race will never leave those shores of the American continent to which it was brought by the passions and the vices of Europeans, and it will not disappear from the New World as long as it continues to exist. The inhabitants of the United States may retard the calamities which they apprehend, but they can not now destroy their efficient cause.
>
> I am obliged to confess that I do not regard the abolition of slavery as a means of warding off the struggle of the two races in the United States. The negroes may long remain slaves without complaining, but

If they are once raised to the level of free men they will soon revolt at being deprived of all their civil rights, and as they can not become the equals of the whites they will speedily declare themselves as enemies. In the North everything contributed to facilitate the emancipation of the slaves, and slavery was abolished without placing the free negroes in a position which could become formidable, since their number was too small for them ever to claim the exercise of their rights. But such is not the case in the South. The question of slavery was a question of commerce and manufacture for the slave owners in the North; for those of the South it is a question of life and death. God forbid that I should seek to justify the principle of negro slavery, as has been done by some American writers. But I only observe that all the countries which formerly adopted that execrable principle are not equally able to abandon it at the present time.

In conclusion of that chapter the writer says:

If it be impossible to anticipate a period at which the Americans of the South will mingle their blood with that of the negroes, can they allow their slaves to become free without compromising their own security? And if they are obliged to keep that race in bondage in order to save their own families, may they not be excused for availing themselves of the means best adapted to that end? The events which are taking place in the Southern States of the Union appear to me to be at once the most horrible and the most natural results of slavery. When I see the order of nature overthrown, and when I hear the cry of humanity in its vain struggle against the laws, my indignation does not light upon the men of our own time who are the instruments of these outrages, but I reserve my execration for those who, after a thousand years of freedom, brought back slavery into the world once more.

Whatever may be the efforts of the Americans in the South to maintain slavery, they will not always succeed. Slavery, which is now confined to a single tract of the civilized earth, which is attacked by Christianity as unjust and by political economy as prejudicial, and which is now contrasted with democratic liberties and the information of our age, can not survive. By the choice of the master or by the will of the slave it will cease, and in either case great calamities may be expected to ensue. If liberty be refused to the negroes of the South, they will in the end seize it for themselves by force; if it be given, they will abuse it ere long.

Not all of these dire prophecies have come true. The southern people are working out that problem to the benefit of the race formerly in slavery. I dare say that the people as a whole get along with the negroes of the South better than American citizens in other portions of the country get along with the aliens that come to their shores. They have lived together so long that they understand each other pretty well.

Mr. President, somebody who confounded civil rights with political rights undertook to confer upon this class of people just out of slavery the privilege of voting. Why should these people, with no civilization behind them, suddenly become the political equals of the white man, with thousands of years of civilization? Why have they, without any civilization behind them, become fitted to exercise the privilege to vote, while the Asiatics, with thousands of years of civilization behind them, would not be permitted to vote by the white people of California, nor even to own land? The answer, it seems to me, is to be found in the history in the case both of the negro and of the Asiatic. The Asiatic is bright, educated, intelligent, industrious; the negro, good-natured, lazy, without much ambition. They have one element in common, and that is they have loose morals in the home. They do not know what home life is as we understand it. The suffragettes may be able to abolish the home and home conditions in America and substitute something better. Nobody else has ever been able to do it. American civilization is what the American home has made it.

Mr. President, this movement for woman suffrage is pushed forward in every section of the country. Resolutions to submit it to the people of the various States are presented. If under that demand a State adopts it and it proves satisfactory and beneficial, the State would undoubtedly maintain it. If, upon the other hand, it should prove greatly to their disadvantage, if it should injure some of the very classes of people to whom it is sought here to give the right of suffrage, the State would have the power to repeal it. But under this resolution the States would be powerless. It would be a condition thrust upon millions of people of great sovereign States of this Union against their will. The Senator from Minnesota [Mr. CLAPP] may call that democracy, but if that is not forcing an institution upon a free people without its consent I do not know how to describe it or in what it would consist.

The South is not the only part of the country that has its troubles. In the chief city of the Nation hordes of aliens are being brought in, put into the hopper to be turned out as American citizens. Will the Senator from Arizona [Mr. ASHURST] by his resolution say that he knows better the conditions obtaining in New York than the people of that State? Each part of this country has its own provincialisms, its own methods of doing things. I can very easily understand how it is in a State like Idaho, that has a white population of 319,221, a negro population of only 651, Chinese to the number of only 859, and Japanese to the number of only 1,363. There the undesirable vote is a negligible quantity; it is not of enough importance to be given consideration. But when you take 100,000 as against 8,000,000 people, then I appeal to the Senators from the West to consider the difference.

You call it the "yellow" peril on the Pacific coast. What would you say of the people of the rest of the country if they should undertake to tell those coast States what they should do about the ownership of land, much less the right to administer the governmental affairs of a great people?

Mr. President, these reasons are sufficient for me not to vote to enter into the internal affairs of sections or States. But, sir, because nobody else has been so foolhardy as to discuss the proposition upon its merits, I believe I will venture for only a few moments to do it. It is most appropriate, if this privilege of suffrage is to be forced upon unwilling people, it should be done in the identical language in which it was undertaken to make voters out of slaves or people who had just been freed. The arguments proceed as if these women were slaves. They call themselves the slave half of humankind.

The Senator from Arizona [Mr. ASHURST] spoke of the extended hearings given by the Committee on Woman Suffrage, and said that every member of the committee was in favor of submitting the amendment, and he spoke of the great discussion and consideration given to the question. I have examined the hearings, and I see that nobody came along to question the propriety of doing a thing like that. I find in the printed hearings that there were brought to convince the committee in favor of the resolution only those who favored it themselves. So the women actually convinced the committee, who already believed with them.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from Colorado?

Mr. BRYAN. I do.

Mr. THOMAS. I am sure the Senator does not desire to state what the record does not bear out. As a matter of fact the hearings were extended so as to cover both sides of the question, and as much time was given to the opponents as to the proponents.

Mr. BRYAN. Will the Senator show me where anybody appeared against the proposition?

Mr. THOMAS. I will not undertake to show anything from the document which the Senator hands me, it bearing date April 19, 1910.

Mr. BRYAN. I have another document here.

Mr. THOMAS. If the Senator will take the report of the proceedings of the committee which were held early in April, as I remember, 1913, he will find that what I state is correct. Full hearings were given to both sides.

Mr. BRYAN. Did anybody appear in opposition?

Mr. THOMAS. Certainly; they had a full day of very interesting discussion.

Mr. BRYAN. Was that report printed?

Mr. THOMAS. Yes, sir.

Mr. BRYAN. I have not been able to obtain it.

Mr. THOMAS. I am very sorry, but I will furnish the Senator with a copy.

Mr. BRYAN. The Senator from Arizona [Mr. ASHURST] lays down the proposition that every citizen has a right to vote. Mr. President, the right of suffrage is a misnomer. Only those people have a right to vote or ought to be permitted to vote who are intelligent, who are interested, and who will exercise the power.

If a man can not control himself, why should he be permitted any power to govern the State?

Mr. LANE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from Oregon?

Mr. BRYAN. I do.

Mr. LANE. I ask the Senator right here who is going to decide that? Who is going to set himself up in judgment, in other words, upon it?

Mr. BRYAN. The Senator from Oregon, I suppose, would like to set himself up in judgment over the capabilities and qualifications of the people who exercise the privilege of the elective franchise three or four thousand miles away, about whom he knows absolutely nothing.

Mr. LANE. Mr. President, I would like to state that I do not set myself up in judgment on any body or any thing. I do not feel particularly well qualified in this case to do that, and I do not pretend to be. I am not opposing the Senator. I presume he has down in his part of the country a problem which I little understand. But when he sets up the theory that a man, woman, or child shall not do a thing until the person becomes qualified to do it, becomes intelligent enough, then I want to know who is to set himself up in judgment to determine that.

Mr. BRYAN. The State in which the citizen lives; the people of the State who know something about it.

The best argument in behalf of woman suffrage is supposed to have been written by John Stuart Mill. The occasion of his

writing upon the subject was that the property rights were not then extended to women in England. But on the question whether suffrage for woman is right he said:

I forego any advantage which could be derived to my argument from the idea of the abstract right as a thing independent of utility. I regard utility as the ultimate appeal for all ethical questions. There must be utility in the largest sense, grounded on the permanent interest of man as a progressive being.

Mr. SHAFROTH. Will the Senator yield to me for a question?

Mr. BRYAN. Certainly.

Mr. SHAFROTH. If some State now were to say, "We want to elect our United States Senators by the legislature," would it have been right for a constitutional amendment to impose upon that State that they should elect their representatives to this body in accordance with what Congress should say? Is not that parallel with the position the Senator takes with respect to forcing, as he may term it, woman suffrage upon a State?

Mr. BRYAN. It may be, Mr. President, but I do not think so. I think I can point out to the Senator why it is not.

Mr. SHAFROTH. I should like to hear the Senator on that point.

Mr. BRYAN. It is because Senators here are voting upon the interests of the whole country. While a Senator is elected from a particular State, his vote affects the interests of the entire country. The voters are best qualified to vote for the election of an officer, such as a Senator or Representative to Congress, who has shown his fitness by his ability to select men to run the affairs of the State government.

Mr. SHAFROTH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from Colorado?

Mr. BRYAN. I do.

Mr. SHAFROTH. That electorate also would have the right to determine who should be the President of the United States, who has an influence upon the legislation of the entire United States.

Mr. BRYAN. The Senator is entering upon an argument that I do not see has anything to do with this question, because there are no national voters.

Mr. SHAFROTH. Yes; but there is a national vote in effect for President and Vice President.

Mr. BRYAN. Not at all.

Mr. SHAFROTH. It seems to me to be as much in point as the distinction the Senator tried to make and the illustration he gave.

Mr. BRYAN. I have found people in certain sections of the country who answer one question by asking another. Let me ask the Senator would he vote to submit a resolution to the people of the United States to limit suffrage to men only?

Mr. SHAFROTH. If I believed in the proposition, I unquestionably would, but I do not believe in it, and consequently I believe that the division in the Senate is not on the question that the Senator has selected, namely, as to forcing that upon a State, will determine whether each individual Senator believes in equal suffrage or not. That is the reason that I think ought to control his action. I should like to ask the Senator another question.

The PRESIDING OFFICER. Does the Senator from Florida yield further to the Senator from Colorado?

Mr. BRYAN. I do.

Mr. SHAFROTH. Does the Senator believe that a constitutional amendment should not force upon a people prohibition on the ground that a State has the right to determine what laws should control its people?

Mr. BRYAN. Mr. President, let us take up one question at a time.

Mr. SHAFROTH. But the ground of the objection which the Senator is making is not upon the question of equal suffrage, but as to the right of the National Government to adopt a constitutional amendment which would determine questions which he says the State alone ought to determine. Consequently, it is just as much in point, it seems to me, as to forcing prohibition upon each of the States of the Union as it would be in forcing, as he terms it, equal suffrage upon them.

Mr. BRYAN. Mr. President, I think it is better to discuss one question at a time.

Of course there are many arguments; I am not undertaking to touch upon them all, but the next argument is that not to allow women to vote is taxation without representation, and therefore it is tyranny. That slogan has been used by the proponents of this measure in an attempt to show that there was an injustice being done if a woman should pay taxes and had no right to vote.

Let it be remembered that when the Colonies raised that question with the mother country it was not taxation without votes, but without representation; and that point went further. It meant that in so far as the internal affairs of the Colonies were concerned they were entitled to be supreme. They were willing to concede to the British Government the right to pass laws that affected the Colonies along with the other British possessions, but they were not willing to concede the government of their local affairs by a foreign power without some representation.

As to representation, Great Britain offered to let them have 56 out of 500 in Parliament. If the application of the principle here contended for was good, that would have been satisfactory. The Colonies would not accept that.

If it is taxation without representation not to allow a woman to vote who owns property, why is it not as to minors or as to nonresidents, as to unnaturalized persons, as to aliens, or as to people who own property in several States?

The argument here and the literature of these people is based upon taxation without representation. Let us test it. They want to vote, but they would not be willing to limit the privilege of voting to those only who pay taxes. So that branch of this argument, that shibboleth, disappears.

Again, if by the declaration that taxation without representation is tyranny our forefathers meant that women who own property, and there were, of course, women in this country then who owned property, should be entitled to vote, they, by their acts, would have shown themselves to be insincere in that declaration, because in the Virginia Bill of Rights adopted June 12, 1776, the declaration was made that all men should be entitled to vote, and in the constitution of Massachusetts, adopted in 1780, it was provided that every male person being 21 years of age should be permitted to vote.

But, again, in every State there is uniformity of taxation. Every time a piece of property owned by a woman is taxed a piece of property owned by a man is also taxed; and it is so arranged that a man could not do injustice to the property of women by taxation.

Mr. President, there is a difference between civil rights and political rights. The deprivation of a civil right is unjust, but the nonpossession of a political right may be a benefit.

I was much interested to read in some of this literature that the Senator from California [Mr. WORKS] had proposed that unless women voted a fine should be assessed against them. I do not know whether he said it or not. It is published in some of these hearings. In Belgium they impose penalties for a failure to vote. The trouble in this country is not that we have too few voters, but that the voters we already have do not take enough interest in their Government. Too often a voter wants to be carried to the polls. Too often he thinks to vote is not to exercise the bounden duty he owes to the Government, but to confer a favor upon the candidate.

Mr. President, the third argument is that women will improve the laws. The Senator from Colorado [Mr. SHAFROTH] upon yesterday attributed to women a list of laws which to-day he has repeated. When I asked him if he attributed the adoption of the juvenile courts to women he was ready enough to say he did. Then, when some Senator asked him whether some other desirable legislation had not been defeated, and appealed to the Senator from Colorado, I think it was the Senator from Minnesota [Mr. CLAPP], who said, "Oh, well, there were more men in the legislature than there were women." Yes, and of course the men beat that, and the same men passed the juvenile court law that beat the other law.

It was said that Judge Lindsay was the product of the votes of women. Does he say, then, that they improve all laws? No, Mr. President; he recognizes that human nature is pretty much the same; that it runs through women and men alike. I give my authority as Mr. Hinman, chairman of the assembly judiciary committee of the New York Legislature, in the following quotation from a letter from Judge Lindsay:

I have found that women in politics are no better and no worse than men. Do not forget that when a question narrows itself down to the bread line and selfish interests both sexes follow the same line of action. They look out for No. 1. If a woman wants to get a political job, she will stand for any ticket. If she is afraid of losing her job, she will do the same thing.

In what respect is it claimed that the participation by women in voting will improve laws? In the first place, it is said they will get their property rights.

Mr. President, I think it ought to be admitted in all fairness that at least at this day the restrictions upon the separate property of married women is in favor of the women. The constitution of my State, for example, will not recognize a married woman's contract as to the disposition of her property unless it be executed with all the solemnity of a deed, and if the material is furnished the man who furnishes it can not rely upon her agreement to pay, but he must be able to prove that it benefited her separate estate.

But concede now that they ought to own their own property, it is almost universal that they do, in woman suffrage States and in States in which they do not vote.

The next proposition is that wages will be increased by law, and the hours of labor fixed. Mr. President, men vote and nobody increases their wages because of that fact. Inasmuch as Mr. Mill is cited as a great advocate of woman suffrage, and that that argument may not continue to be made, I desire to read a paragraph from him upon that point. He says:

It would be possible for the State to guarantee employment at ample wages to all who are born. But if it does this it is bound in self-protection, and for the sake of every purpose for which government exists, to provide that no person shall be born without its consent. If the ordinary and spontaneous motives to self-restraint are removed, others must be substituted. Restrictions on marriage, at least, equivalent to those existing in some of the German States, or severe penalties on those who have children when unable to support them, would then be indispensable. Society can feed the necessitous, if it takes their multiplication under its control, or (if destitute of all moral feeling for the wretched offspring) it can leave the last to their discretion, abandoning the first to their own care. But it can not with impunity take the feeding upon itself and leave the multiplying free.

Again, he says in another place, that of course the question of wages is governed by the law of supply and demand.

Mr. President, it is said under this branch of this question that the child-labor laws as passed by the woman suffrage States are better than those in other States; but upon that subject I ask to insert, without reading, the argument and the contention that no such condition in reality exists.

The PRESIDING OFFICER. Without objection permission is granted.

The matter referred to is as follows:

WOMAN-SUFFRAGE AND CHILD-LABOR LEGISLATION.

The question of child labor, from the standpoint of the State, is not a question of sentiment, but one of racial deterioration and industrial effectiveness.

A free government demands an intelligent citizenship for its support, and its industrial and commercial superiority depends upon the mental, physical, and moral worth of its people. It is the province, therefore, of the State to enact laws to protect children from the demoralizing effects of premature labor and insure to them that physical, mental, and moral development which is required to produce the efficient adult citizen.

During the last 20 years nearly all of the States of the United States have taken practical measures for the protection of minors who are wage earners. Where it was found that labor interfered with the mental development of the child the State passed laws to insure that child his right to the educational advantages which the State furnishes as its safeguard from illiteracy and ignorance. When it was found that labor stunted the physical development of the child the State interfered on the broad principle of the physical welfare of the race and passed laws restricting the age at which children could be employed as wage earners. Compulsory education laws have been passed in every State but 12, and in 3 of these States certain counties and cities are subject to compulsory school-attendance laws. Child-labor laws have been passed in every State of the United States but two.

These laws were in the beginning meager and but slightly protective, but wherever the general public became awakened to the fact that child labor existed here in America, that young children were to be found in our coal mines, in glass factories, cotton mills, etc., public opinion demanded better and more efficient laws for their protection, and each year has seen the tide rising. States hitherto indifferent are constantly joining the ranks, and the laws are gradually becoming more inclusive and stringent. Last year shows the most remarkable progress in our history. Among 41 States which held legislative sessions in 1911, 30 enacted child-labor laws and 59 bills bearing on child labor (some of these compulsory education laws) were passed.

It has been claimed by those who see in the enfranchisement of women the solution of all the ills of our body politic that legislation for the protection of children would be more easily secured if women had the franchise. On the other hand, those of us who oppose woman suffrage believe that women can and have accomplished more along this line by creating public opinion against injustice to the child and influencing legislation toward the conservation of the race than if they worked through the ballot as men do.

The ballot can do nothing. The organization in all States of child-labor committees, with the sole object of promoting remedial legislation for the children who work, the fact that these committees are composed not only of women but of men who vote answers conclusively the claim. These committees have done more to promote child-labor legislation than all other influences combined, and the women members have influenced the result as much as the men, and the fact that the latter had the ballot has not increased either their influence or their effectiveness.

Moreover, a study of the laws for children which exist in suffrage and nonsuffrage States further refutes the theory, for the best child-labor laws are found not in States where women vote, but in those States where men only have the franchise.

In the following comparison of laws California and Washington are not included as suffrage States, because no child-labor legislation has been enacted in either since women have had the ballot. On the other hand, since the labor laws of these States were passed under manhood suffrage, they are included in what we term "nonsuffrage" States.

Reference to child-labor laws discloses, first, that the ages below which child labor is prohibited varies from 12 to 18 years. Second, that the number of employments varies greatly from all work to mine work only. Obviously, the States which prohibit labor in several occupations have more effective legislation than those which prohibit work in only one or two, even though the age limit is the same. Wyoming and Utah prohibit work in mines only, while the neighboring States of North Dakota, Oregon, and Nebraska, with practically identical conditions, prohibit the employment of children in 29 specified employments and all children under 14 years, without exception, during school hours.

In reference to night work, 25 States set an early closing hour for children under 16, New York leading all the rest by setting that hour at 5 p. m.; but none are later than 8 p. m. Children have no positive immunity from night work unless the hours are explicitly stated between which it is unlawful to employ them. Colorado and Idaho are the only suffrage States in the 25, and in Colorado no prohibition of night work for children was enacted until the winter of 1911, although women have voted for 19 years in that State, and Wyoming, where women have voted for over 40 years, sets no time limit whatever for the work of children of any age.

Then, again, no child-labor laws are effective unless placed in the charge of public officials clothed with adequate authority to enforce them. At present there are seven States having no department intrusted with this duty, and Utah and Wyoming are two of them. In Idaho the enforcement of the law is in the hands of the truant officer (if there be one), whose obligations terminate with school hours and apply only to children of compulsory school age.

During the winter of 1911 the Legislature of Utah strengthened the child-labor laws of that State somewhat by prohibiting certain dangerous occupations to children under 14, but these restrictions were practically nullified, since a child of any age may be employed by presenting a school certificate from the school authorities stating that he has attended school 100 days the previous year and can read and write. (Utah child-labor act of 1911, secs. 23 and 24.)

Previous to the winter of 1911 Colorado, where women have voted for 19 years, had practically no child-labor legislation, but during the winter of that year an entire new child-labor law was enacted. The best feature was the 8-hour provision for children; yet an 8-hour law had been in force for years in 11 male suffrage States. Moreover, under the Colorado law girls of 10 and over may engage in any street trade, and children of any age may be employed in any concert or theatrical exhibition, though the male suffrage States of Massachusetts, Illinois, Louisiana, Ohio, and Oregon have banished children from the stage. (Colorado child-labor laws of 1911, c. 95, in effect Aug. 28, 1911.)

Much has been said of the report of the Inter-Parliamentary Union that Colorado had the sanest and most progressive children's law in the world. This statement has reference to the juvenile court law of Colorado and referred especially to the provision which makes a parent responsible for the delinquency of a child. But there are 19 States where women do not vote which make the parent responsible for the child and the penalty is equal if not greater than in Colorado. The only difference is a difference of method with the advantage against Colorado. In the latter State a boy must be pronounced delinquent and get into court before the parent is obligated, while in the 19 States mentioned the parent is held responsible if the child is sent to work before he is of legal age. It is true this constitutes delinquency in the Colorado law, but unfortunately in the latter State no proof of age is required other than the affidavit of the parent or guardian, though 25 male suffrage States require documentary proof in the form of birth or baptismal certificates.

Mr. Owen Lovejoy, secretary of the national child-labor committee, in his report of the proceedings at Birmingham, Ala., in March, 1911, says:

"The States which do not require proof of the child's age, or at least any proof worthy the name, are Colorado, Florida, Louisiana, Nevada, South Dakota, Texas, Utah, Virginia, Wyoming, Alabama, Arkansas, Georgia, Idaho, Wisconsin, Mississippi, North Carolina, South Carolina, and Tennessee.

"Our agents have frequently found 8, 9, and 10 year old boys applying for work in these States upon affidavits certifying them to be 14 or 16 years of age.

"When we lay upon the greedy parent the temptation to deceive in order to secure employment for a child, we are guilty of placing the burden upon the weak, where it does not belong, and promoting perjury by process of law."

It will be noticed that the four equal-suffrage States are all in Mr. Lovejoy's list. The truth is that the suffrage States, far from being in the van of remedial legislation for children, have been laggards in the work. Not one of them has been a pioneer in the movement, but they have always followed the lead of other States in child-labor laws and usually long after these laws have been incorporated in the statutes of adjoining States.

The juvenile court law of Colorado is deservedly famous, but it was not the first court of its kind established in the United States. The law establishing a juvenile court in Illinois was passed some time before the Colorado law, and its features were practically the same. It was the juvenile court law of Illinois that formed the basis for the Colorado law, and Chicago had a juvenile court some years before the Denver court was established.

The national child-labor committee has prepared a model child-labor law for uniform legislation. It has followed the principle of embodying in the text the best provisions contained in the laws of the various States. The bill contains 49 sections, and the following table shows the number of these model provisions already enacted in the suffrage States, and those of similar locality and conditions. Of 49 provisions of this model law we find the law of Wyoming contains none, Idaho contains none, Colorado contains 7, Utah contains 8, California contains 12, Oregon contains 14, Oklahoma contains 15, North Dakota contains 15, Minnesota contains 20, Nebraska contains 25, and Wisconsin contains 27.

These facts are not given with any intention of disparaging the work of the four equal-suffrage States, but merely to disprove the claim of the suffragists that if women were given the ballot they would bring about better laws for the protection of children than exist under male suffrage. Neither can they claim that the inadequacies of the law are due solely to the conditions of life and labor in a western and chiefly agricultural community, for we find Montana, Nebraska, Oregon, and Oklahoma with better provisions and more inclusive laws.

Mrs. Florence Kelley, secretary of the National Consumers' League, says:

"It is perhaps not surprising that the State with the most sweeping provision that no child below the age of 16 years shall be employed in any gainful occupation is Montana, which has no occasion for employing children except as telegraph or messenger boys, and is subject, therefore, to less temptation than the rest of us," and she adds, "next best perhaps after Montana comes a great industrial State."

"In Ohio after 6 o'clock at night no girl under 18 years old and no boy under 16 can be employed in gainful occupation. If we take down the receiver of a telephone in Cleveland or Cincinnati at night it is not a young girl's voice that answers any more than it would be in New Orleans. Louisiana and Ohio share, I believe, alone the honor due to their humane provision that all night work to which elsewhere we are so cruelly accustomed shall be done not by young girls, not by any young person—a boy under 16 or a girl under 18 years old—but by older people, who do not suffer so cruelly from loss of sleep." Would women with the ballot have accomplished more for child labor in these States than they have accomplished without it? The experience of equal-suffrage States disproves it.

Judge Lindsay says that inadequate labor laws in Colorado no more prove that women should not vote than that men should not vote. Perhaps that is true, but Judge Lindsay utterly mistakes the purpose of their citation, which is to show that women have not bettered things in these respects where they have had the opportunity to vote; that the ballot has had no influence whatever upon child-labor legislation.

Mr. OWEN. Mr. President, I should like to ask the authority to which the Senator refers?

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from Oklahoma?

Mr. BRYAN. Yes.

Mr. OWEN. By whom is the paper to which the Senator refers issued?

Mr. BRYAN. It is issued by the National Association Opposed to Woman Suffrage.

Mr. OWEN. Who is the author?

Mr. BRYAN. I say it is printed under the auspices of that association.

Mr. President, it is hardly necessary to be argued that you can not by law control the wages which men shall receive in their private affairs, but those who say that wages will be increased, and that the law will do this and that, until finally it will support all of us, are mild in comparison with the Senator from Arizona [Mr. ASHURST] when he reported this joint resolution. He then said:

Mr. President, a contest to be met in the future, indeed one of the greatest constructive works remaining to be accomplished, is the abolition of poverty. This will not be done by force or violence, but by that progressive and forward-moving spirit which has always animated the American people.

Proceeding, he said:

I realize, of course, that there are many profound thinkers who believe that poverty is a thing inseparable from mortal life and human destiny; that it is an insolvable problem; and that the abolition of poverty is Utopian or phantasmagorial; but just so surely as at midnight there is busy a centrifugal force which in due time will whirl the world into the gladsome presence of the morning, just that surely in the fullness of time will poverty be abolished. Sweatshops, crowded slums, and starving children will some day be only a horrid memory. The extension of the ballot to women will be a helpful influence in assisting to solve this great problem of the future.

Here is how we are going to do it now:

Let the United States Government annually acquire, by purchase, if necessary, 50,000 small farms throughout the various States—

I presume that would be necessary, for I do not suppose anyone would give 50,000 farms to the United States—

as may be most suitable and practicable, build commodious dwelling houses thereon, and each year place 50,000 citizens, without any expense or cost to such citizens, into actual possession of these farms, carefully providing that these "home-reserve farm lands" shall not be alienated, hypothecated in any way, or transferred under any pretext by the citizen inducted therein. It would be necessary carefully to provide that the citizen installed in to such tract of land and home could not be divested thereof under any pretext or pretense whatever, but would hold the same for his or her lifetime, and upon his or her death the same would revert to the Government home-reserve lands, again to be utilized for like home-reserve purposes.

Mr. President, the politicians who promised the negroes of the South, immediately after the war, that they, each one, should have 40 acres and a mule were pikers alongside the Senator from Arizona [Mr. ASHURST]. [Laughter.] All that is to be done without any labor, without any trouble, if this great movement succeeds; and, sir, not only are all the mistaken laws written upon the statute books by man to be corrected, but it no longer can be said to be true that by the sweat of your brow shall you earn your daily bread.

Extravagant as are those statements, Mr. President, much support has been given to this movement because people have actually believed that the Government will fix the wage they shall receive; that the independent, upstanding citizen, who has heretofore relied upon his own intelligence and brawn and muscle, and asked no favors of the Government or of anybody else, will pass away, and, instead, the State will support everybody and will fix the wages by law!

Mr. SUTHERLAND. Who will support the State?

Mr. BRYAN. I do not know. These abolitionists of poverty will doubtless provide for that.

Mr. WILLIAMS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from Mississippi?

Mr. BRYAN. I do.

Mr. WILLIAMS. I wish to ask the Senator from Florida a question.

Mr. BRYAN. I yield to the Senator for that purpose.

Mr. WILLIAMS. I notice that in this provision to abolish poverty the Government is to give the man the land.

Mr. BRYAN. Yes.

Mr. WILLIAMS. But they do not give him any mule, and they do not give him any meat to eat while he is working it.

Mr. BRYAN. All that will come later, I suppose. Of course we have to proceed with these things gradually.

Mr. President, the Senator from Minnesota [Mr. CLAPP] said that the people opposed to good government are fighting this joint resolution. I think, sir, that that is a cruel charge to make against the woman who yet believes that the home and the child are her sphere and that politics and business are the sphere of man.

Mr. CLAPP. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from Minnesota?

Mr. BRYAN. I do.

Mr. CLAPP. The Senator's interpretation or criticism is not warranted by anything that I said. I said that there were thousands of good people who were opposed to this movement. I then said that the sinister forces of the country were opposed to it. I do not believe that the Senator will seriously challenge the latter statement.

Mr. BRYAN. If the Senator from Minnesota said that——

Mr. CLAPP. I did.

Mr. BRYAN. I do not deny that the Senator did say that the people opposed to the enforcement of laws that would provide a better government were opposed to this movement. I do not know about that. I will now read from the House hearings a statement by Mrs. Frank Goodwin, of the District of Columbia, before the Committee on Rules, in which she says:

One promise held out to many conscientious women was this: "Give the ballot to women and in six months they will wipe out the liquor traffic." Many of you remember that. Believing before proof was possible, many adherents to equal suffrage were won upon this point alone. The Woman's Christian Temperance Union gave its indorsement as an organization solely because it welcomed any legitimate aid toward its desired end—the abolition of the liquor traffic. It is quite fair to ask what has been done by the ballot in the hands of women to modify, control, or abolish the sale of intoxicants, now costing the American people over $1,000,000,000 a year?

The suffragists charge openly and by written word that the antisuffragists are in league with the liquor interests. We recognize that some of the liquor publications and organizations are opposed to woman suffrage. That neither throws them into our camp nor constitutes us their allies. Their opposition is rapidly dying out. They no longer fear that which has proven itself harmless to them. The United Brewers' Association, in a letter to the Plainfield (N. J.) Courier-News, signed by Hugh Fox, secretary, states that the antisuffragists have never received nor asked for contributions from them, although, he adds, "We have had appeals from the other side."

Then she says:

The Equal Franchise League of Denver, Colo., so feared an infringement of this "personal liberty" that it protested in March, 1913, to the council of the city and the county of Denver against the passage of a bill known as the "O'Driscoll bill," making it a misdemeanor to sell liquor to a woman. The fact that this form of legislation was designed primarily for the protection of the child failed of apprehension by the league. The secretary of the Knights of the Royal Arch, a Pacific coast liquor organization, stated in the San Francisco Examiner:

"We long ago made a thorough investigation in the States where woman suffrage has been tried and we learned that the liquor business has not been hurt in the least by the women's vote."

In November, 1912, prohibition was submitted to the voters of Colorado. The Denver Post stated that the most ardent workers for the saloons were women. The saloon won by a large majority.

In Boise City, Idaho, in June, 1912, local option was voted on, and the saloon won by 2,800.

In 1912, in 156 elections on local option in California, 57 were in incorporated cities, and of these 37 voted for the saloon.

In Los Angeles the vote in favor of the saloon was three to one in some districts where registered women voters were in the majority.

Wyoming, the oldest equal-suffrage State, had then not even local option.

Mr. WARREN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from Wyoming?

Mr. BRYAN. Certainly.

Mr. WARREN. Perhaps I ought to say as to the State of Wyoming that, while the laws in relation to liquor have been made very stringent, it is true that State-wide, absolute prohibition does not prevail. It is also true, however, that no saloon is permitted to exist outside of an organized corporate city or town, in which proper police force, and so forth, are provided; and the saloons are there restricted to a small number in certain locations, and subject to very high license and strict rules, which system, of course, is a very great improvement over that prevailing in earlier times, when everything was unrestricted and wide open.

Mr. BRYAN. Mr. President, I will state that the purpose I had in reading from that testimony was not to criticize the laws of any State, but, inasmuch as the charge was made, I thought it was only fair that a woman who undertook to meet that charge should have read into the RECORD out of the hearings her side of the case.

I have not yet seen it claimed anywhere that the divorce evil would be lessened if women were given an equal opportunity to vote with men. In the 20 years from 1887 to 1906 there were 12,832,044 marriages. In the same period of time there were 945,625 divorces. The compiler of the census says:

The divorce rate based on total population was almost three (or, more accurately, two and five-eighths) times as great in 1905 as it was in 1870. The contrast may perhaps be more effectively presented as follows: If the number of divorces in proportion to population had been the same in 1905 as it was in 1870 the absolute number of divorces reported in 1905 would have been only 24,000, whereas it was, in fact, 67,791. In 1906 the actual number was 72,062, while the ratio of 1870 would have resulted in only 24,398.

* * * * * * *

The divorce rate in 1900 was 200 per 100,000 married population, or 2 per 1,000 married population. It may be assumed that 1,000 married

people represent approximately 500 married couples. If there were no absentee husbands or wives, they would represent exactly that number. The divorce rate per 1,000 married couples, therefore, is approximately 4; that is to say, 4 married couples out of every 1,000 were being divorced annually at the period represented by the figures for the year 1900. Ten years before that the divorce rate was 148 per 100,000 married population, or approximately 3 per 1,000 married couples. In 1880 the rate was 107 per 100,000 (estimated) married population, or about 2 per 1,000 married couples; in 1870 it was only 81 per 1,000 (estimated) married population, which is equivalent to about 1½ divorces per 1,000 married couples.

* * * * * * *

Almost exactly two-thirds—66.6 per cent—of the total number of divorces granted in the period covered by this investigation were granted to the wife. In other words, the divorces obtained by the wife are twice as numerous as those obtained by the husband.

* * * * * * *

The range of variation for the Northern and Western States extends from a percentage of 59 for North Dakota to a percentage of 78.2 for Rhode Island. For the Southern States, exclusive of the District of Columbia, the percentages range from 41.6 for Mississippi to 66.4 for Tennessee. The percentage is higher than that for Tennessee in every Northern and Western State except Missouri (65.6), New York (65.4), New Jersey (63.4), South Dakota (60.9), and North Dakota (59). The percentage is lower than that for North Dakota in every Southern State except Texas (60.3), Indian Territory (61.4), Oklahoma (63), Maryland (63.4), Delaware (64.9), Tennessee (66.4), and District of Columbia (72.8).

* * * * * * *

The most common single ground for divorce is desertion. This accounts for 38.9 per cent of all divorces (period 1887 to 1906); 49.4 per cent, or almost one-half, of those granted to the husband, and 33.6 per cent, or one-third, of those granted to the wife.

Mr. CLAPP. Mr. President——

The VICE PRESIDENT. Does the Senator from Florida yield to the Senator from Minnesota?

Mr. BRYAN. I do.

Mr. CLAPP. Does the document which the Senator has in his hand give the summary by States of the percentage of divorce?

Mr. BRYAN. It does.

Mr. CLAPP. Would the Senator have any objection to inserting that in the RECORD as a part of his remarks?

Mr. BRYAN. No. I was coming to that in a few moments.

Only 15.4 per cent of the divorces granted (1887 to 1906) were returned as contested, and probably in many of these cases the contesting was hardly more than a formality, perhaps not extending beyond the filing of an answer, which often has the effect of expediting the process of obtaining the divorce.

Mr. President, I am trying to find the table asked for by the Senator from Minnesota. I ask permission at this point to insert Tables 10, 11, and 12 from Census Bulletin No. 96, on this subject, which, I think, will give the data he desires.

The VICE PRESIDENT. In the absence of objection, permission is granted.

The tables referred to are as follows:

TABLE 10.—*Divorces classified by cause and by party to which granted: 1887 to 1906.*

| State or Territory. | Divorces, 1887 to 1906. | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | For all causes. | | | For adultery. | | | For cruelty. | | | For desertion. | | |

[1] Per cent not shown where base is less than 100.

Mr. CLAPP. Mr. President, it is not germane to this argument, but I know the Senator's speech will be read very widely, and there are some very instructive lessons to be drawn from the table to which I have referred, and that is the reason why I should like to have it inserted in his remarks.

Mr. BRYAN. There are, indeed, Mr. President; and I am very glad, indeed, to put the tables in the RECORD.

Mr. SUTHERLAND. Mr. President, will the Senator give us the percentage in the suffrage States?

Mr. BRYAN. It is divided in the tables by the various grounds for divorce. For instance, take desertion; in Utah the percentage of divorces on the ground of desertion is only 11; and in none of the surrounding States, except Colorado, is the percentage below 27 on that particular ground.

Mr. THOMAS. Does that include Nevada?

Mr. BRYAN. Yes.

Mr. THOMAS. What is the percentage there?

Mr. BRYAN. On the ground of desertion?

Mr. THOMAS. Yes.

Mr. BRYAN. In Nevada on the ground of desertion the percentage is 66.1; that is, the percentage of divorces granted to the husband on that account.

Mr. WARREN. We do not understand over here what the grounds of divorce are referred to.

Mr. BRYAN. Desertion.

Mr. THOMAS. Then, Mr. President, I infer, if the Senator will yield for a moment——

Mr. BRYAN. Just a moment. I gave to the Senator the percentage in Utah of divorces granted to the wife on the ground of desertion. Divorces granted to the husband for desertion in Utah were 67.5 per cent; in Colorado those granted to the husband for desertion were 59 per cent, and to the wife 10 per cent.

Mr. THOMAS. What was the figure for Nevada?

Mr. BRYAN. Of divorces granted to the husband in Nevada, 66 per cent were on the ground of desertion and 22 per cent of those granted to the wife were on the same ground.

Mr. SUTHERLAND. I do not know whether the Senator has studied the tables sufficiently to answer my question, but my understanding is that the lowest percentage of divorces granted for all causes in the United States is in my own State.

Mr. BRYAN. In the United States?

Mr. SUTHERLAND. Yes.

Mr. BRYAN. No; the average in the United States is 200 to 100,000 married population. In the Senator's State it is 274.

Mr. SUTHERLAND. That is for all causes?

Mr. BRYAN. In the States adjacent to the State of Utah the proportion of divorces to 100,000 married population is: For Montana, 497; Idaho, 347; Wyoming, 361; Colorado, 409; New Mexico, 193; Arizona, 344; Utah, 274; Nevada, 315; Washington, 513; Oregon, 368; and California, 297. I make no point about it, but the fact is that in all the equal-suffrage States the percentage is in excess of the average in the United States. That will appear from Table 7, which I ask to incorporate in my remarks.

The VICE PRESIDENT. In the absence of objection, permission is granted.

The table referred to is as follows:

TABLE 7.—*Divorce rates based on (1) married population, 1900 and 1890; (2) total population, 1900, 1890, 1880, and 1870.*

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Florida yield to the Senator from Colorado?

Mr. BRYAN. I do.

Mr. THOMAS. I assume the Senator reads from the census of 1910. Is that correct?

Mr. BRYAN. I am reading the statistics for the years 1887 to 1906.

Mr. THOMAS. Well, I want to call the attention of the Senator to the fact that up to that time, 1906, a number of the States, the divorce percentage of which he says was so high, were not equal-suffrage States at all. To make it plain——

Mr. BRYAN. Wait just a moment. Colorado was.

Mr. THOMAS. Yes; Colorado was.

Mr. BRYAN. Idaho was; Washington was.

Mr. THOMAS. Wyoming was.

Mr. BRYAN. Utah was.

Mr. THOMAS. Yes; and I think those are all up to the compilation of the document from which the Senator has been reading.

Mr. BRYAN. That is correct.

Mr. OWEN. Mr. President, would the Senator object to my making a suggestion with regard to the matter?

Mr. BRYAN. Not at all. I would be very glad to have the Senator do so.

Mr. OWEN. I merely want to suggest that the fact that of the divorces granted to men in Nevada 66 per cent were on the ground of desertion and of the divorces granted to women 22 per cent were on the ground of desertion does not necessarily prove anything. It might only appear to follow from that that in the one case the men were so bad they could not be lived with and in the other case they ran away from their honorable wives.

Mr. BRYAN. Now, Mr. President, as to the grounds of divorce——

Mr. WARREN. Before the Senator leaves that matter I should like to ask him a question. He gives the statistics for Utah and then refers to the surrounding States. I notice he does not give Nevada and he does not give South Dakota. I should like to have the figures for those two States.

Mr. THOMAS. The Senator gave the figures for Nevada.

Mr. WARREN. I did not hear the Senator give them.

Mr. BRYAN. The number of divorces per 100,000 of married people in Nevada was 315. South Dakota and North Dakota are given separately. The counties of the Territory of Dakota that fell into the present State of South Dakota are credited to that State, and likewise the counties that fell within the present State of North Dakota are credited to North Dakota. In North Dakota the number of divorces per 100,000 of married population was 268 and in South Dakota 270.

Mr. GRONNA. Mr. President, if the Senator will permit me——

Mr. BRYAN. I yield to the Senator.

Mr. GRONNA. I want to say to the Senator that at the time the Territory of Dakota was divided into the States of North and South Dakota we had very liberal divorce laws, and a great many people came West for the purpose of getting divorces. I believe if the Senator had the statistics for the divorces granted since the Territory of Dakota was divided into North and South Dakota, or for the last 10 years, he would see that the percentage was much lower.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Florida yield to the Senator from Colorado?

Mr. BRYAN. I do.

Mr. THOMAS. I think perhaps it is well, in that connection, to say that the same is true of quite a number of the States concerning which this comparison is sought to be made, and the figures therefore include divorces of people who have come there from the nonsuffrage States for the purpose of taking advantage of and securing the benefits of a more liberal divorce law.

Mr. WILLIAMS. That proves the existence of very liberal divorce laws, does it not?

Mr. THOMAS. Yes.

Mr. WILLIAMS. And that proves the existence of a very loose state of public opinion.

Mr. THOMAS. Certainly it does; but it can not be attributed to a freedom of political voting which was instituted subsequently.

Mr. BRYAN. The granting of woman suffrage was not subsequent in all the cases.

Mr. THOMAS. No; but in most of them it was. In South Dakota it has not been granted at all as yet.

Mr. BRYAN. The average percentage of divorces granted in the United States for neglect to provide is 5.5. In many of the States that is not considered a ground for divorce. I can imagine no other ground, even including desertion, which can be taken advantage of so easily as that. Collusion is almost invited. Neglect to provide for a year gives a right to a divorce. No State can be very proud of its divorce laws; but, in my judgment, the States that have not that as a ground of divorce have better laws, in that respect at least, than the States that allow it as a ground.

In each of these suffrage States the percentage of divorces is higher than the average in the United States. I do not desire to attack the laws of any State; but when the argument is made here that by passing this resolution we shall do great things, not only in the way of furnishing a living for everybody, but in the protection of the home, I think it is only fair and just that the actual facts shall be placed before the Senate.

Mr. McCUMBER. Mr. President——

The VICE PRESIDENT. Does the Senator from Florida yield to the Senator from North Dakota?

Mr. BRYAN. I do.

Mr. McCUMBER. I wish to correct two statements made by Senators from the West to the effect that the divorce laws are less liberal in those States than they were formerly. I think if those Senators will examine their own statutes they will find that they are just exactly the same in every one of those States, the only difference being with reference to the length of residence necessary to secure a divorce. The laws in my State have not been changed in any respect whatever as to the causes for divorce. I find that Colorado, I think, and practically all of the Western States, have essentially the same laws that we have relative to the causes of divorce.

The statistics given by the Senator are applicable as bearing upon the number of divorces in a particular State, but the question whether or not the laws are more liberal has nothing to do with the causes for divorce.

Mr. BRYAN. Mr. President, as I say, no State can be very proud of its divorce laws; but would the passage of this resolution tend to decrease the granting of divorces? Many good women giving it their support undoubtedly believe it would. One of the leaders of this movement, who undertakes to speak for this association, said only a few days ago that pretty soon after woman suffrage came divorce would be as respectable as marriage.

Mr. President, as the number of voters increases, the responsibility of each voter diminishes. No body of persons ought to be admitted to vote unless they want to vote. It is a disputed question here as to whether or not women want to vote. Upon the one side, those advocating the passage of this resolution say that there are 8,000,000 of them; upon the other side, those who deny that the people of this country want this amendment adopted say that after all efforts had been made, those who were favorable to the proposition could get only 167,000 names on the petitions. I have seen it stated that in Massachusetts it was left to the women as to whether or not they wanted to vote, and not 4 per cent of them wanted to vote. That was some years ago. A year or two ago the legislature offered to pass a measure leaving it to the women of Massachusetts to say whether or not they wanted to vote; and the suffragettes withdrew the resolution upon the ground that people who had not studied the subject as they had would not be familiar with the reasons for suffrage.

Women opposing the forcing of suffrage by the United States upon them and upon the States say they have more political influence now, as the wives and the sisters and the mothers and the daughters of men, than they will have when they become politicians.

Mr. President, you can not point to every good law and say: "That law is good because women voted." In what community of this great country of ours is it not true that the best and the highest influence is always exerted by women? These people talk as if woman has no rights. They speak of her as a slave among humankind. They go around agitating and talking about the "enfranchisement of women" as if there were any slaves in the United States. Some of the leaders more frank than others concede that it is not the ballot that is desired, but it is the right to hold office, to be judges, to sit in the legislatures, to sit in Congress, and so forth.

Here is what one of them wrote to President Wilson at the time he was elected:

> Accept my congratulations. In making up your Cabinet please consider the women of the 10 suffrage States. As a member of your Cabinet a wise, scholarly woman would bring to your councils great assistance.

Mr. THOMAS. Mr. President, I should like to ask the Senator right there whether he disputes the truth and correctness of that suggestion?

Mr. BRYAN. The women I know would not help the President of the United States by filling an office in the Cabinet half so well as they would serve this country in their homes. There may be some sufficiently acquainted with political matters——

Mr. THOMAS. I merely wanted to get the opinion of the Senator on that point.

Mr. BRYAN. Does the Senator believe that a woman ought to be a member of the Cabinet?

Mr. THOMAS. I should be very glad to see a woman in the Cabinet of the President of the United States.

Mr. BRYAN. I should not.

Mr. THOMAS. And the time is coming, if the Senator lives the allotted period of life, when he will see it.

Mr. BRYAN. All right; possibly so.

Mr. President, that is what these agitators say about the condition of women in the United States. I read from the same volume what the great Frenchman, De Tocqueville, said when he was in this country:

> Thus the Americans do not think that man and woman have either the duty or the right to perform the same offices, but they show an equal regard for both their respective parts; and though their lot is different, they consider both of them as beings of equal value. They do not give to the courage of woman the same form or the same direction as to that of man, but they never doubt her courage; and if they hold that man and his partner ought not always to exercise their intellect and understanding in the same manner, they at least believe the understanding of the one to be as sound as that of the other and her intellect to be as clear. Thus, then, whilst they have allowed the social inferiority of woman to subsist, they have done all they could to raise her morally and intellectually to the level of man, and in this respect they appear to me to have excellently understood the true principle of democratic improvement.

Mr. CLAPP. I will ask the Senator from whom he is reading?

Mr. BRYAN. De Tocqueville on "Democracy in America."

Mr. CLAPP. And he pays American manhood the compliment of raising woman to the standard of manhood?

Mr. BRYAN. He pays woman a compliment right following that.

Mr. CLAPP. Yes; he had better, I think.

Mr. BRYAN (reading):

As for myself, I do not hesitate to avow that, although the women of the United States are confined within the narrow circle of domestic life, and their situation is in some respects one of extreme dependence, I have nowhere seen woman occupying a loftier position; and if I were asked, now that I am drawing to the close of this work, in which I have spoken of so many important things done by the Americans, to what the singular prosperity and growing strength of that people ought mainly to be attributed I should reply—to the superiority of their women.

Mr. President, if the Senator thinks that article is intended to debase or can be construed as debasing woman, he has a right to put that construction upon it. The Senator ought to know that this book was written in the early part of the nineteenth century, and that woman has made much progress from that time to this, mostly due to increased educational facilities.

Mr. CLAPP. I was not criticizing the quotation as any reflection on women, except that it reflected upon the author's knowledge of American institutions when he said the men of America had raised the women to the standard of the men of this country.

Mr. BRYAN. We will see how the Senator from Minnesota likes this quotation from Mr. Bryce. I will read from Bryce's American Commonwealth.

Mr. CLAPP. Mr. Bryce is not an authority for me on American institutions, any more than the other author is. I think the women of America have done more to raise the moral tone of this country than the men have.

Mr. BRYAN. They have not done it in politics. They have done it by attending to their own affairs.

Mr. CLAPP. If "their own affairs" are the raising of the moral standard of this country, leave them at the task and give them the additional equipment of the ballot to sustain their efforts.

Mr. BRYAN. They do not need it.

Mr. CLAPP. The Senator says that. What do they say about it?

Mr. BRYAN. The Senator from Minnesota says, "Can we not trust our own sisters and wives and mothers?" Let me ask him, Can not the mother trust the son? Can not the wife trust the husband?

Mr. CLAPP. I will answer that by asking, Can not the son trust the mother and the husband trust the wife? [Applause in the galleries.]

Mr. BRYAN. Yes; but the Senator asks me a question without answering mine.

The VICE PRESIDENT. Just one moment. Under a recent rule of the United States Senate, all applause is forbidden in the galleries; and it is the duty of the Chair to clear the galleries if it is repeated.

Mr. BRYAN. Mr. Bryce says:

Americans are fond of pointing, and can with perfect justice point, to the position their women hold as an evidence of the high level their civilization has reached. Certainly nothing in the country is more characteristic of the peculiar type their civilization has taken.

I ask permission to incorporate in my remarks without reading several extracts from Bryce's American Commonwealth.

The VICE PRESIDENT. Without objection, that may be done.

The matter referred to is as follows:

American women take less part in politics than their English sisters do, although more than the women of Germany, France, or Italy. That they talk less about politics may be partly ascribed to the fact that politics come less into ordinary conversation in America (except during a presidential election) than in England. But the practice of canvassing at elections, recently developed by English ladies with eminent success, seems unknown.

* * * * * * *

One hears of attempts made to establish political "salons" at Washington, but neither there nor elsewhere has the influence of social gatherings attained the importance it has often possessed in France, though occasionally the wife of a politician makes his fortune by her tact and skill in winning support for him among professional politicians or the members of a State legislature. There is, however, another and less suspicious sphere of political action into which women have found their way at the National Capital. The solicitation of members of a legislature with a view to the passing of bills, especially private bills, and to the obtaining of places has become a profession there, and the persuasive assiduity which had long been recognized by poets as characteristic of the female sex has made them widely employed and efficient in this work.

* * * * * * *

In no country are women, and especially young women, so much made of. The world is at their feet. Society seems organized for the purpose of providing enjoyment for them. Parents, uncles, aunts, elderly friends, even brothers, are ready to make their comfort and convenience bend to the girls' wishes. The wife has fewer opportunities for reigning over the world of amusements, because, except among the richest people, she has more to do in household management than in England, owing to the scarcity of servants; but she holds in her own house a more prominent, if not a more substantially powerful, position than in England or even in France. With the German hausfrau, who is too often content to be a mere housewife, there is of course no comparison. The best proof of the superior place American ladies occupy is to be found in the notions they profess to entertain of the relations of an English married pair. They talk of the English wife as little better than a slave, declaring that when they stay with English friends or receive an English couple in America they see the wife always deferring to the husband and the husband always assuming that his pleasure and convenience are to prevail.

The European wife, they admit, often gets her own way, but she gets it by tactful arts, by flattery or wheedling or playing on the man's weaknesses; whereas in America the husband's duty and desire is to gratify the wife and render to her those services which the English tyrant exacts from his consort. One may often hear an American matron commiserate a friend who has married in Europe, while the daughters declare in chorus that they will never follow the example. Laughable as all this may seem to English women, it is perfectly true that the theory as well as the practice of conjugal life is not the same in America as in England. There are overbearing husbands in America, but they are more condemned by the opinion of the neighborhood than in England. There are exacting wives in England, but their husbands are more pitied than would be the case in America. In neither country can one say that the principle of perfect equality reigns, for in America the balance inclines nearly, though not quite, as much in favor of the wife as it does in England in favor of the husband. No one man can have a sufficiently large acquaintance in both countries to entitle his individual opinion on the results to much weight. So far as I have been able to collect views from those observers who have lived in both countries, they are in favor of the American practice, perhaps because the theory it is based on departs less from pure equality than does that of England. These observers do not mean that the recognition of women as equals or superiors makes them any better or sweeter or wiser than English women, but rather that the principle of equality, by correcting the characteristic faults of men, and especially their selfishness and vanity, is more conducive to the concord and happiness of a home. They conceive that to make the wife feel her independence and responsibility more strongly than she does in Europe tends to brace and expand her character, while conjugal affection, usually stronger in her than in the husband, inasmuch as there are fewer competing interests, saves her from abusing the precedence yielded to her. This seems to be true, but I have heard others maintain that the American system, since it does not require the wife habitually to forego her own wishes, tends, if not to make her self-indulgent and capricious, yet slightly to impair the more delicate charms of character; as it is written, "It is more blessed to give than to receive."

A European can not spend an evening in an American drawing-room without perceiving that the attitude of men to women is not that with which he is familiar at home. The average European man has usually a slight sense of condescension when he talks to a woman on serious subjects. Even if she is his superior in intellect, in character, in social rank, he thinks that as a man he is her superior, and consciously or unconsciously talks down to her. She is too much accustomed to this to resent it, unless it becomes tastelessly palpable. Such a notion does not cross an American's mind. He talks to a woman just as he would to a man, of course with more deference of manner, and with a proper regard to the topics likely to interest her, but giving her his intellectual best, addressing her as a person whose opinion is understood by both to be worth as much as his own. Similarly an American lady does not expect to have conversation made to her. It is just as much her duty or pleasure to lead it as the man's is, and more often than not she takes the burden from him, darting along with a gay vivacity which puts to shame his slower wits.

* * * * * * *

The better bred women do not presume on their sex; and the area of good breeding is always widening. It need hardly be said that the community at large gains by the softening and restraining influence which the reverence for womanhood diffuses. Nothing so quickly incenses the people as any insult offered to a woman. Wife beating, and indeed any kind of violence offered to women, is far less common among the rudest class than it is in England. Field work or work at the pit mouth of mines is seldom or never done by women in America; and the American traveler who in some parts of Europe finds women performing severe manual labor is revolted by the sight in a way which Europeans find surprising.

* * * * * * *

Three causes combine to create among American women an average of literary taste and influence higher than that of women in any European country. These are the educational facilities they enjoy, the recognition of the equality of the sexes in the whole social and intellectual sphere, and the leisure which they possess as compared with men. In a country where men are incessantly occupied at their business or profession, the function of keeping up the level of culture devolves upon women. It is safe in their hands. They are quick and keen witted, less fond of open-air life and physical exertion than English women are, and obliged by the climate to pass a greater part of their time under shelter from the cold of winter and the sun of summer. For music and for the pictorial arts they do not yet seem to have formed so strong a taste as for literature, partly, perhaps, owing to the fact that in America the opportunities of seeing and hearing masterpieces, except, indeed, operas, are rarer than in Europe. But they are eager and assiduous readers of all such books and periodicals as do not presuppose special knowledge in some branch of science or learning, while the number who have devoted themselves to some special study and attained proficiency in it is large.

* * * * * * *

Some one may ask how far the differences between the position of women in America and their position in Europe are due to democracy; or, if not to this, then to what other cause?

They are due to democratic feeling in so far as they spring from the notion that all men are free and equal, possessed of certain inalienable rights, and owing certain corresponding duties. This root idea of democracy can not stop at defining men as male human beings any more than it could ultimately stop at defining them as white human beings. For many years the Americans believed in equality with the pride of discoverers as well as with the fervor of apostles. Accustomed to apply it to all sorts and conditions of men, they were naturally the first to apply it to women also; not, indeed, as respects politics, but in all the social as well as legal relations of life. Democracy is in America more respectful to the individual, less disposed to infringe his freedom or subject him to any sort of legal or family control than it has shown itself in Continental Europe, and this regard for the individual enured to the benefit of women.

* * * * * * *

What have been the results on the character and usefulness of women themselves?

Favorable. They have opened to them a wider life and more variety of career. While the special graces of the feminine character do not appear to have suffered, there has been produced a sort of independence and a capacity for self-help which are increasingly valuable as the number of unmarried women increases. More resources are open to an American woman who has to lead a solitary life not merely in the way of employment, but for the occupation of her mind and tastes, than to an European spinster or widow, while her education has not rendered the American wife less competent for the discharge of household duties.

How has the Nation at large been affected by the development of this new type or womanhood, or rather, perhaps, of this variation on the English type?

If woman have on the whole gained, it is clear that the Nation gains through them. As mothers they mold the character of their children, while the function of forming the habits of society and determining its moral tone rests greatly in their hands. But there is reason to think that the influence of the American system tells directly for good upon men as well as upon the whole community. Men gain in being brought to treat women as equals rather than as graceful playthings or useful drudges. The respect for women which every American man either feels or is obliged by public sentiment to profess has a wholesome effect on his conduct and character and serves to check the cynicism which some other peculiarities of the country foster. The Nation as a whole owes to the active benevolence of its women and their zeal in promoting social reforms benefits which the customs of Continental Europe would scarcely have permitted women to confer. Europeans have of late years begun to render a well-deserved admiration to the brightness and vivacity of American ladies. Those who knew the work they have done and are doing in many a noble cause will admire still more their energy, their courage, their self-devotion. No country seems to owe more to its women than America does, nor to owe to them so much of what is best in social institutions and in the beliefs that govern conduct.

Mr. BRYAN. Mr. President, I have no idea that the rank and file of the women would be upon the side of the adoption of this amendment and approve the things that are being done and said by the leaders of the movement. The women of America, the women of the home, never originated this movement. Let us see, now, what the leaders say.

Of course, when women have equal rights with men they must assume some burdens. They want to go out and compete with men in every walk of life; and the first thing they propose is that the State shall care for the child. They advocate establishing by law some sort of an arrangement for the care of children smaller than a kindergarten will accept.

Let me read what is said by an Englishman by the name of W. L. George, who claims to be a leader in this movement. I have not seen any of the great leaders in this country repudiate what he has said any more than we saw the leaders repudiate the position of the militants of England. On the contrary, when Mrs. Pankhurst was here they crowded to the doors to get a chance to see her and to welcome her.

This gentleman says:

To put the matter less obscurely, the feminists base themselves on Weininger's theory, according to which the male principle may be found in woman and the female principle in man.

* * * * * * * *

The methods are to have revolutionary results, are destined to be revolutionary; as a convinced but cautious feminist, I do not think it honest or advisable to conceal this fact.

* * * * * * * *

As promoters of a sex war, they should not hesitate to declare it, and I have little sympathy with the pretenses of those who contend that one may alter everything while leaving everything unaltered.

* * * * * * * *

They have no use for knightliness and chivalry.

Therein lies the mental revolution—while the suffragists are content to attain immediate ends, the feminists are aiming at ultimate ends. They contend that it is unhealthy for the race that man should not recognize woman as his equal; that this makes him intolerant, brutal, selfish, and sentimentally insincere. They believe, likewise, that the race suffers because women do not look upon men as their peers.

* * * * * * * *

His [the feminist's] case against the treatment of women covers every form of human relations—the arts, the home, the trades, and marriage. In every one of these directions he proposes to make revolutionary changes.

* * * * * * * *

They complain, too, that the home demands of woman too great an expenditure of energy, too much time, too much labor; that the concentration of her mind upon the continual purchasing and cooking of food, on cleaning, on the care of the child, is unnecessarily developed; they doubt if the home can be maintained as it is if woman is to develop as a free personality.

With marriage, lastly, they are perhaps most concerned. Though they are not in the main prepared to advocate free union, they are emphatically arrayed against modern marriage, which they look upon as slave union.

He further says that—

The gaining of the vote is nothing but an affair of outposts; that the intention is that women shall vote as women and not as citizens; that they propose to sell the female vote en bloc to the party who bids highest for it in the economic field; that they will hold up trades and, when they are strong enough, hold up society itself. In the main they are opposed to indissoluble Christian marriage. That there should be established a state of society where man will not figure except as the father of her child.

So these are the ultimate aims of this propaganda. If the good judgment of the American people, men and women alike, will not furnish a ready answer to these morbid sentiments, it is useless for me to undertake to do so, and our case is hopeless.

Sir, these people seem to believe that their purpose in life is to hold political positions and places of honor, forgetting that the citizen best performs his duty to the Government and to his kind who busies himself with the daily duties about him.

I do not know any better sentiment with which to close my argument against this resolution than that of the immortal Lee:

There is a true glory and a true honor—the glory of duty done and the honor of the integrity of principle.

Mr. McCUMBER. Mr. President, I shall not take more than 10 minutes in giving the reasons which shall govern my vote in this particular case. I shall not discuss the merits of equal suffrage. My reason for not discussing it here is that it has not the slightest bearing upon what my vote shall be upon this particular proposition before the Senate. The only subject I shall discuss is where the inherent right to fix suffrage should be located, whether in the State or in the Federal Government. I have strong convictions upon the subject of equal suffrage; but those convictions should always be subservient to the right of my own State, in acting in its sovereign capacity as a State, to fix the standard of suffrage. Therefore my vote will be based entirely upon that.

Yesterday I asked a question of the Senator from Colorado [Mr. SHAFROTH] which was a pertinent question, and one which was scarcely answered. I wanted to get his idea as to where this power should be justly located; so I asked him the question whether or not, if there were a proposition before the Senate to provide for male suffrage only in his State, he would contend that the Federal Government had a right to determine that question. He did not answer it, Mr. President; but to-day, in a colloquy, I noticed that he did answer it, stating that it would depend on just how he felt. If he was in favor of woman suffrage, he would be against such a proposition; if he was against it, he would vote the other way.

Mr. President, that is not meeting the question at all. The inherent right—not the mere legal power, but the inherent right—to fix the suffrage in any State either belongs in the Federal Government or it belongs in the State. There can not be two sovereignties. There can not be the equal jurisdiction of two sovereigns over the same territory. Either the Federal Government has the right to fix this matter in its entirety, or it has no right whatever to deal with it. Those who believe the Government should determine the right of suffrage naturally should vote in favor of the exercise of this right whether it was for or against equal suffrage, and those who believe the States have the exclusive right as an inherent right, not a mere legal power, should necessarily vote that the States should determine the question whether the State was for or against it.

Mr. President, in November next the qualified electors in my own State of North Dakota will vote on the question whether or not suffrage in that State shall be extended to the women of the State. If I remember correctly, the same question will be submitted, in some form, in one or more of the other States in the Union.

Have the people in my State the inherent right to determine that question for themselves, irrespective of the view of the majority of the States? If they have that inherent right, then the United States Government ought not to have the same right of sovereignty over the same question. There can not be two coequal sovereigns, as I have stated, over the same territory, and there can not be an inherent right upon the part of the Federal Government if there is an equal right upon the part of the States. One or the other must have the exclusive right, according to the conditions and the necessities of the case.

If the question is of such a nature that it should be controlled by the Federal Government and not by the State, then the State of North Dakota should not have the right to determine the qualifications of its citizens for suffrage. On the other hand, if the State has full right in the premises the Federal Government can not have or exercise the same right. If the Federal Government should have the right or authority to pass on this question of qualifications as to sex, then it must also have the same authority to pass on other qualifications, such as length of residence, citizenship, and like subjects.

Under our form of government, with its 48 sovereign republics, all these questions of age, length of residence, and sex, which qualify the individual as an elector, are, in my opinion, properly and inherently State questions and not Federal questions. If the Federal Government has the right to say that equal suffrage shall be extended whether a State favors it or not, then the Federal Government has the right to say that equal suffrage shall not be extended whether the State favors it or not; and I deny that proposition. If my State votes in favor of the extension of suffrage to the women of that State, it has the full power to do so, and the Federal Government has no inherent moral right to say that it shall not extend the suffrage to the women of that State.

Mr. GALLINGER. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from New Hampshire?

Mr. McCUMBER. I yield.

Mr. GALLINGER. I have been detained on official business during the afternoon and have been denied the privilege of listening to this interesting discussion, and very likely the question I am going to ask the Senator has been asked before. I will ask the Senator how he squares his contention with the fifteenth amendment to the Constitution?

Mr. McCUMBER. I shall touch upon that before I get through in my 10 minutes. I agreed not to take any longer time than that.

Let us suppose, Mr. President, that the majority of the people whom I represent say that the elective franchise shall not be extended. Would I have the right, as a representative of that State, to say that her will should be overruled? I do not care which way she votes, I will take exactly the same position. Or, placing the matter in another view, has the State of North Dakota the right, with her 700,000 people, to say to the State of New York, with her nearly 10,000,000 people, "We know better than you what suffrage is for the best interests of your State; we know better than you how long a residence one should have in your State before he is entitled to vote; we know better than you how long a person must remain a citizen of the United States before voting in your State?"

I insist, Mr. President, that New York has no right to speak for my State, and I have no right to speak for New York. If New York has not the right to speak for my State, then 20 States or 40 States have not the right to determine that question for my State. When I speak of a right I am speaking always of a moral right and not the legal power, because there is no question but that we can amend the Constitution so that three-fourths of the States shall govern all the States in relation to this question. The only proposition is whether it ought to do it, not whether it has the power to do it.

It seems to me that these questions answer the whole proposition. So, Mr. President, without prolonging the debate with the many more illustrations which could be given, I shall record my own conclusions in my vote on this amendment to the effect that every question concerning the qualifications of voters, the limitations and the extensions of the elective franchise, is a question that ought to be left to the State itself.

I now purpose to answer the proposition of the Senator from New Hampshire. I am aware, Mr. President, of the amendment to the Constitution which prohibits any State from depriving any citizen of the right of suffrage because of color or previous condition of servitude. This is not an analogous case in any respect. A great war between the States had been fought to its bitter end, a war that grew out of the question of human slavery. The race prejudice, supplemented by the bitterness of that war, was so great that to protect those whom the Nation had made citizens of the country in their citizenship rights the Federal Government under those conditions demanded the amendment. Without that amendment the emancipation of the colored man would have been a dead letter.

Mr. OLIVER. Mr. President——

Mr. McCUMBER. In just a moment. It was accepted as a condition of reinstating the old relation between the State and the Federal authority. But even with all that prejudice and all of the bitterness growing out of that conflict, it never occurred to the Congress of that day to infringe upon the right of the State to determine every question relative to the elective franchise with the exception of that one great question of the complete denial of the rights of citizenship on account of race or color or previous condition of servitude.

I now yield to the Senator from Pennsylvania.

Mr. OLIVER. I suggest to the Senator from North Dakota that in addition to what he says our experience in connection with the fourteenth and fifteenth amendments has not been a very happy one, the fifteenth amendment being disregarded by a very great number of the States and the principal part of the fourteenth amendment being altogether disregarded by Congress.

Mr. McCUMBER. Mr. President, no such question as this arises as the reason for that amendment in the consideration of this subject. There is no race hatred, there is no race prejudice within its possible scope. There is no bitterness of war that affects it. The manhood of the country has no prejudice against the womanhood of the country. The father or son has no prejudice against the wife, the mother, the daughter, or the sister.

Mr. GALLINGER. Mr. President——

Mr. McCUMBER. Just let me finish this statement.

Mr. GALLINGER. Certainly.

Mr. McCUMBER. On the contrary, the manhood of the country has a reverence and respect more deeply rooted, stronger, and more effective than in any other country in the world.

I now yield to the Senator from New Hampshire.

Mr. GALLINGER. I think I will, with the Senator's permission, put into the RECORD the fifteenth amendment to the Constitution:

> The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

The Senator treats that as of little account because it was passed shortly after the Civil War. The Senator from Pennsylvania [Mr. OLIVER] thinks it of little account because it has not been observed or enforced. I will ask the two Senators if they are ready to vote——

Mr. McCUMBER. I shall not allow the Senator to so state my position, that I treat this fifteenth amendment as of little account. On the contrary, I treat it as of great account. It was absolutely necessary for the protection of the citizenship rights of the colored people. The Senator has no warrant to assert that I treat that as of little account.

Mr. GALLINGER. I interpret the Senator's language in my own way. If I misinterpret it, of course I stand corrected. The Senator from Pennsylvania more particularly seemed to treat it lightly because it has not been observed or enforced, and I suppose the Senator from Pennsylvania is ready to vote to repeal it.

Mr. OLIVER. Mr. President, I am not ready to vote to repeal it, but I am ready to vote for legislation that will enforce the amendment. My purpose in alluding to it was to call attention to the way in which these two amendments to our fundamental law have been treated, one by Congress in failing to enforce the decrees of the Constitution, and the other by a large number of States in failing to pay any attention to an important part of that fundamental law.

Mr. GALLINGER. Of course the Senator himself has a duty to perform in the matter. He is a Member of the legislative body, and it is competent for him, and perhaps it is his duty, to introduce a bill covering this point.

The point I wish to make, and the only point I intended to make, was that in view of the fact that the fifteenth amendment does prescribe that the States shall not by any means at their command prohibit a certain class of people from voting in a State, the Senator's argument that we have no right, as the National Government, to make an inhibition in regard to the right of women to vote, it seems to me, falls to the ground. I may be mistaken.

Mr. McCUMBER. It may seem to the Senator that it falls to the ground, but I can see a vast difference between determining that the citizenship of the country which we created after the war should be protected in the rights of citizenship and in a declaration that we shall go into every State and exercise a control over the elective franchise of the State and every matter that pertains to it.

Mr. GALLINGER. Mr. President——

Mr. McCUMBER. I will yield in just a moment. One proposition was based upon a great necessity to protect the rights and liberty of a people just emancipated from slavery, and it was necessary. My claim is that this is not necessary to protect the citizenship or liberty of the people of any State. The people of the State of North Dakota can and will determine that question for themselves, and they will determine it by their vote next November. I have no doubt but that their vote will be an intelligent one, and whether it agrees with mine or does not agree with mine, it will be binding upon me as a citizen of that State, and it will be my duty to conform to it whichever way it is decided, and seek through the franchise adopted by the State to promote the progress and welfare of all its citizens.

Mr. GALLINGER. Nobody questions the right of the individual State to act in this matter. It never has been challenged. The Senator says that the fifteenth amendment to the Constitution was adopted to protect the rights of certain men who had been made citizens or who had been given the right of suffrage in consequence largely of the war. The proposition involved in this amendment is to protect the rights of citizens who have been citizens from the foundation of the Government, and I think it is quite as important that their rights, if they have rights, should be protected as that we should protect the rights of men who became citizens by the proclamation of emancipation.

Mr. McCUMBER. I have not the slightest doubt in the world but that the people of the State of New Hampshire will be able to protect the citizens of the State of New Hampshire. I have not the slightest doubt in the world but that the citizens of the State of North Dakota will be able to protect the citizenship of that State. But, Mr. President, had I lived during the war period and understood the questions of that time I probably would have agreed with the men of that day that it would have been impossible to have secured the citizenship rights of

the colored people without the Government insisting upon that amendment.

Mr. BORAH. I wish to ask the Senator a question. If it be true that the State of New Hampshire can protect the citizenship of the women of the State, must we not then concede to the South the proposition which it makes, that they are quite as capable of taking care of the citizenship of the South, whether it be white or black? If we assert the one proposition, are we not compelled to concede the other?

Mr. McCUMBER. Mr. President, I have answered that question. I have said that due to a race prejudice, due to the bitterness of the war and a bitterness that still exists against the colored people of the South, I do not think that those States do protect them in their citizenship or that they are able to protect them in what I regard as their rights under the fifteenth amendment.

Mr. BORAH. Then we come to the other proposition that, although we passed a constitutional provision, the National Government does not protect them. We make a promise and we do not make that promise good.

Mr. McCUMBER. Oh, Mr. President, the Senator can get into no dispute with me upon that proposition. I am in favor of the National Government enforcing that provision to the limit and every law under the Constitution. I simply oppose the National Government reaching beyond and going into my State and determining what the elective franchise in my own State shall be, which I think in my State belongs to that State. The Senator and I do not disagree upon the duty of Congress to enforce the fifteenth amendment.

Mr. BORAH. I will say very frankly I am one of those who believe that it was a mistake to bestow upon the colored people at that particular time the right to vote. It would have been better for them had it come later and when they had had time to prepare for the responsibility.

Mr. McCUMBER. Well, that may have been the case. I am inclined to think, however, that if it had not been granted then it never would have been granted, and we would have had in this day a large population that were not citizens of the country. If it had not been granted at that time it never would have been granted afterwards.

Mr. BORAH. The Senator is now referring to the question of citizenship, I presume—to the fourteenth amendment. I do not take that view with reference to the fourteenth amendment, which bestowed citizenship upon people; but the fifteenth amendment was designed simply to protect them in their vote. I do not believe that it was wise to undertake to lift the race out of a thousand years of barbarism and 300 years of slavery into the duties and responsibilities of citizenship under a republic. Whatever may be our duty now, it having been granted, and after 50 years of experience it was a greater rôle than those people could carry at that time. No race in the history of the world could have been equal to the obligation which we placed upon the colored people. The question with me is whether or not we are here to-day contemplating the putting into the Constitution of another provision which, so far as that race is concerned, will be the same thing exactly. I am a firm believer in the proposition that whatever is in the Constitution should be obeyed and lived up to by us as a people. I hesitate to insert in it a provision which I know in advance will be ignored or defied. Especially do I hesitate when those States which want equal suffrage can secure it in their respective States.

Mr. McCUMBER. Neither the Senator nor myself can change what has been done. We have those amendments; they are part of the law of the land; and I do not believe in having a constitutional provision that is not enforced. I believe that greater evils will grow out of the nonenforcement of that amendment, even though it might have been a mistake, than would follow as the result of its enforcement. We ought either to enforce that law or we ought to wipe it out of the Constitution and the laws of the land. I can not agree that we should leave it in a position where we know that it is the Constitution and yet wink at its violation year in and year out. I think the intelligence of the South will always take care of the vote of the South, and I do not believe that the colored voters of the South would rule if everyone of them went to the polls. I still believe they would be ruled and governed by the white people of the South. I am quite strong in that conviction.

Mr. WILLIAMS. May I ask the Senator how he can say that, in view of the historical fact that for 8 or 10 years after the war the negroes did rule us, under a saturnalia of crime and corruption unprecedented in the history of the world?

Mr. McCUMBER. Mr. President, because during a certain period people who had had no training whatever in self-government, people who had become intoxicated with the power that they thought belonged to them, used it as an intoxicated man will use his strength, is no reason why, after 50 years of education, education by the white man, that the same conditions would result. The Senator from Florida [Mr. BRYAN] just now said that in his own State the colored man does go to the polls; that there is nothing to prevent his going there and voting as he sees fit.

Mr. WILLIAMS. Yes; in the State of Florida there is a very substantial white majority.

Mr. McCUMBER. Mr. President, with the present increase—and I have made a computation of the number of white people in the States of the South—with a comparison of the increase in the negro population in the South, in 25 years there will not be a State in which the white population would not be greatly in excess of the colored population.

Mr. WILLIAMS. The Senator will pardon just one more remark, which has nothing to do with this debate, but somehow or other here, now and then, we get off on the question——

Mr. McCUMBER. I was drawn into it further than I intended to go.

Mr. WILLIAMS. There may be absolute negro rule in a State without a negro majority, provided there is a comparatively large negro vote. That grows out of the fact that the negro votes solidly. During the time immediately after the war he was not solid, by virtue of the intoxication of new freedom, at all; he was solid by virtue of his ignorance and an alien leadership and domination of white men who had gone down there for the purpose of utilizing his vote for their own pocketbook advantage.

Mr. McCUMBER. I agree with the Senator entirely.

Mr. WILLIAMS. With some of them it was with the idea that they could lift him up. So, whether there shall be a majority or not in every Southern State would not cut so much figure as the fact that the negro vote remains solid, as it always has done and always will where it is principally ignorant. Then there is a holding of the balance of power between two separated white factions which necessitates negro rule. But the point I rose to at first was just simply to correct what the Senator had said, that if every negro went to the polls in a Southern State he could not rule that State. If every negro went to the polls in the State of Mississippi to-morrow and if their votes were counted—and back in the time before we adopted the new constitution people resorted to absolutely revolutionary methods, either not counting their votes or intimidating them so as to keep them from the polls—if they went to-morrow they would rule Mississippi; and there is not an intelligent man in the State of Mississippi, there is not a man who has brains enough to shake in a mustard shell who would not, if he knew it was going to continue, sell everything he had and leave the State.

Mr. McCUMBER. Now, Mr. President, I will answer both propositions of the Senator. The foreign importation of leadership has passed away.

Mr. WILLIAMS. But it will come again.

Mr. McCUMBER. The carpetbagger is no longer in Mississippi.

Mr. WILLIAMS. He would come again.

Mr. McCUMBER. The Senator said that all those elements which were responsible for the conditions which followed have gone, and I said, then, that I agreed with the Senator that they had got rid of those conditions. Now the Senator is assuming that if a colored man votes in Mississippi, every colored man will necessarily vote on the wrong side of every question. I can not believe that.

Mr. WILLIAMS. I am only assuming that he will vote solidly, that is all.

Mr. McCUMBER. And that he will vote en bloc, and that it will be a vote against the white man. I do not think that that is true in any sense. In most States of the Union this fact prevails, that after all it is the few that influence the many. Our campaigns are campaigns of education, and it is this education and this influence of the few upon the many that makes self-government really safe. What is true in other States in the Union is equally true, I believe, in the Southern States. I believe that with the white man's superior education and with his superior intelligence he will be able to always rule and have a white man's government; and that if there is now a close vote between the colored and the white, the increasing population of the white in excess of the colored will soon make the colored vote a negligible quantity in every State in the Union.

If it were a question strictly between black and white, even upon that your dark man would still vote into office the white man, but he might have a voice in saying which white man. Whatever weakness there may be in it—and I admit that there must necessarily be some weakness—nevertheless, greater injury in the end would befall a denial of the citizenship rights guaranteed by the Constitution.

Mr. President, in closing I will state that I have avoided the expression of my own views upon the merits of this subject,

because I have not had the opportunity for preparation which one should have to present the other features of the case. It is sufficient for this vote to say that I regard the right of the States to pass upon the question of the suffrage limitation as inherently superior to the right of the Federal Government to pass on it for them, and I shall not vote to give either the Federal Government or three-fourths of the States of the Union the right to overrule the judgment of the citizens of my State on a question that inherently and rightly belongs to the citizens of that State. They will vote, as I have stated, upon that question this fall. What we do here will not affect their rights in the slightest degree. Their votes will and should govern.

Mr. WILLIAMS. Mr. President, I intend to vote against this joint resolution proposing this constitutional amendment. It seems proper, therefore, that some explanations of my reasons for doing so should be given. In giving them I shall say nothing about the "superiority" of man to woman or the "superiority" of woman to man. Neither is superior to the other; they are simply different, that is all; and I do not want that difference obliterated. As to the difference between them, I thank God for its existence. Both sexes have their place in the economy of life; they both have their place in building upon the past a future brighter than anything we have ever seen. Nor do I believe that that difference, such as it is—man being superior to woman in some respects, and woman superior to man in some other respects, and each inferior to the other in certain respects—affects the ability or fitness of a woman to cast a ballot; I do not believe a word of that.

I do not know that I am opposed to woman suffrage at all, provided it is brought about in the manner in which I think it ought to be brought about, if at all, namely, by separate and voluntary State action. On the contrary, when the good ladies of my State who are in favor of woman suffrage have written to me upon the subject I have replied that I saw no inherent reason why a woman should not vote. I do not see any now; I never have seen any. I have never taken any stock in the idea that woman was incapacitated by her very nature to cast a ballot as intelligently as I or anybody else not individually her mental superior. But I have replied to them by saying that "the chief thing that I want to know is whether or not you—as a class, as a body—want to vote, because if you do not want to vote, you are not fit to vote; if you do not want to vote, then if the privilege be conferred on you you are not going to vote; and if you are going to have only a small part of the sex to vote, then you had better postpone the day of reckoning." I have replied "that is a question that I propose to leave to you as a body. Let the white women of the State of Mississippi petition the governor of the State to let them hold a white woman's primary in the State of Mississippi and let only the women go to the polls, and say in that primary whether or not they want to vote." That has been my uniform answer, and I have never yet received a rejoinder to the reply from one of those ladies.

An unwilling class of voters is a great misfortune to any country. To give a class of people the suffrage when only a small fraction of them will exercise it or really want it and have interest enough in it and knowledge enough about it to want it is a misfortune for the whole community, themselves included.

I lay down that proposition at the beginning. But although I am not in favor of woman suffrage, although I go further and say that I do not think that the results of woman suffrage will be of the importance that either side to the controversy attach to it, I still do not countenance this constitutional-amendment way of arriving at it; and even if I were ardently in favor of it, which I am not—I am indifferent to it—I would not countenance this way of reaching it. I am indifferent to it, because I think it is largely a tempest in a teapot, so far as the results to be expected are concerned. I do not arrive at that conclusion solely by a priori argument; I arrive at it also by a posteriori argument. I look out into the States that have had woman suffrage, and I look into the States with similar populations—not with dissimilar populations—which have not had it, and I do not find that woman suffrage has improved government particularly or hurt it materially. I take no stock in the phrases of those on the one side who say that woman suffrage would "break up the home," and that it would "degrade womanhood," and all that. Why, bless your heart, it would take more than a ballot box to degrade the sweet womanhood of the State of Mississippi, whatever might happen elsewhere. I do not think it a scarecrow; it does not frighten me; but, upon the other side, it is not a panacea, either. It is not going to bring about any great "moral uplift"; it is not going to bring about any millennium; it is not going to add very materially to the acceleration of the progress of the human race. Where it has already been tried it has not done it. There is as good government in States without it as in States with it.

The line of cleavage, moral and mental, in society is not a sex line at all. Keep that in your mind. When you get into a bad population the women are bad with the men—and a bad woman is worse than a bad man, just as a good woman is better than a good man—and when you get into a good population the women are good with the men. I have in mind now a State—I am not going to mention it, of course—where they had excellent government, and afterwards adopted woman suffrage, and still have excellent government. I have in mind another State where they had bad government, somewhat corrupt at all times. They established woman suffrage, and they still have exactly that sort of government. I dare say if you go into the population on the east side of New York you would not find political society elevated much by giving women suffrage any more than it has been elevated by giving it to the men. To take what many consider the other extreme, I fancy you would experience no greater change if women voted in the Back Bay section of Boston. It depends upon the family, the population, and not the sex. As the man is, so is the woman, and vice versa, when it comes to whole communities. So I do not go crazy about the question either way. I am perfectly willing to do whatever the good women of the State of Mississippi want me to do. I want them to tell me, only I want them to tell me in an unmistakable way.

The point of objection to this resolution with me is this: I do not want the balance of the Union to tell Mississippi what she shall do. I would be just as much opposed, if Mississippi wanted woman suffrage, to have the balance of this Union tell her that she should not have it as I would be, if she did not want it, to permit the balance of this Union to tell her that she must have it. It is her affair within her borders, and within her borders it is not your affair—you people from Wyoming, Colorado, and Oregon, and elsewhere, on the one side, or from New York, or Ohio, or Alabama, or elsewhere, on the other side.

Some Senator said—it was the Senator from Minnesota [Mr. CLAPP], I believe—that it will take three-fourths of the States to adopt this proposed amendment. I do not care whether it takes three-fourths or seven-eighths. If three-fourths of the States said to Mississippi, "You shall not have woman suffrage" when she wanted it, I would say she had a right to have it. If three-fourths of the States said to her, "You shall have it," when she did not want it, I would say that she had a right not to have it. I do not care if every State in the Union, except Mississippi, says either of the two things, my position would still be the same.

I tell you, you are too much losing sight of local self-government and its value and the right of communities to regulate themselves. You are undertaking too much every day to put the American people into a dull uniform caste. There are parts of this Union which differ from each other just as much in traditions, ideals, daily life, thought, sympathies, and sentiment as Alsace-Lorraine does from a county in Norway, and there is no more reason why they should be governed in the same manner, except in Federal affairs and international relations.

The framers of our Constitution were very wise when they did not delegate to the Federal Government and thereby left to the States the authority to determine who should be the electors in the States when they provided that those Federal officers elected in the States should be elected by those electors qualified by State law to vote for the most numerous branch of the State legislature, reserving to the Federal Government certain powers in regard to the manner and time of elections, but leaving to the State to determine who should vote for the Federal officials, provided only that the State took the medicine that she gave the Federal Government, to wit, that the same people who voted for the Federal officials should be those who voted for the members of the most numerous branch of the State legislature.

We have had one mistake of that sort already—and I am not going to get off into an argument of the endless "nigger" question—but we have had one mistake too many already, to wit, the fifteenth amendment. It was not a crime; it was worse than a crime; it was a blunder. It ought to be repealed. Of course I am not moon struck and barking at the moon; I confess I do not now imagine that I can get it repealed; I am not saying that is a thing for your present consideration or my present hope in practical politics, but I say it would be infinitely better to-day if every State in this Union were left free to fix its own limitations of the suffrage in every respect without regard to sex, color, race, previous condition of servitude, or anything else. I tell you who imagine that you are the Federal Government that whenever you get to the point where you can not trust the States you can not trust yourself. When I get to the point

where I can not trust my heart or my legs or my arms or my eyes, which make me up, then I am arrived at the point where I can not trust myself, for they constitute me and must forever constitute me. I can not live outside of them any more than they can live outside of me.

I do not know why this question was brought in in this way anyhow. Woman suffrage in the several States has been traveling along nicely. Just in proportion as women take interest in it and want to vote, they will vote. I will make this assertion here, and I believe my colleague [Mr. VARDAMAN] and other Senators from the cotton States, will bear me out in the statement that women have more influence in regard to public measures in Mississippi and those States to-day than they have in any suffrage State in this Union. I do not care what the women put themselves behind in the State of Mississippi, that thing the men vote for, and the politician who dares oppose it gets defeated by the other men. Let it be prohibition; let it be anything else; if the women of Mississippi say to the men of Mississippi in sufficient tones, so that the men can understand them, "We want this thing," the men give it to them; and I have never yet seen a public man in Mississippi brave enough—if you call it courage; unchivalrous enough, I would rather call it, although in these modern days the word, like its counterpart, has grown into disrepute—to refuse them what they wanted. If they want the suffrage there now, they can have it; they can have a white women's primary to say whether or not they want it; and the minute they say so, in that way or clearly otherwise, there will not be 300 men in the State of Mississippi who would vote against it at the polls. But I do not want you to take Mississippi, pry her mouth open, and drench her with medicine of your own preparation. Even if it is good medicine, even if it is going to cure her—granting that she is sick—she has a right to take her own medicine, to send for her own doctor, and trust her doctors who are her chosen State representatives to prescribe for her.

Something was said to-day about "rights." Suffrage is not a right, and never was a right. It is a privilege granted to the individual by society in the interest of society. Therefore society does not admit idiots to exercise it, nor lunatics, nor paupers, nor men under 21, and in Mississippi those who are so ignorant that they can not read or write to exercise it, nor do we permit those who have so little civic righteousness as not to pay the State their taxes to exercise it. If they do not think enough of the State of Mississippi and of their own citizenship to pay what they owe to the State in taxes, then they can not vote. In the interest of society we say that if they have been convicted of any crime involving moral turpitude they shall not vote.

They have no right to vote. Mississippi has the right to determine whether they shall or shall not vote, and, in determining that matter, to consider Mississippi's interest, the interest of society, which far overbalances the interest of the individual who is seeking suffrage.

Coming back to the appeal that is made to the Senate to pass this resolution, and summing up all I have said in one sentence, my opposition to it is not because I am opposed to what is sought, but because I am opposed to the method pursued in seeking it, to the forum to which it is sought to send the question.

Mr. SHIVELY. I move that the Senate adjourn.

The motion was agreed to; and (at 5 o'clock and 43 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, March 4, 1914, at 12 o'clock meridian.

## CONFIRMATIONS.

*Executive nominations confirmed by the Senate March 3, 1914.*

UNITED STATES MARSHAL.

James E. McGovern to be United States marshal for the eastern district of Washington.

REGISTER OF THE LAND OFFICE.

Oliver C. Harper to be register of the land office at Independence, Cal.

POSTMASTERS.

CONNECTICUT.

Daniel J. Teevan, Shelton.

IOWA.

Jacob H. Bahne, Sibley.
J. W. Cannon, Elma.
E. F. Douglass, Dysart.
William A. Keithley, Springville.
Charles E. Lynch, Waucoma.
John R. Mattes, Odebolt.
Arthur O. Reinhardt, Van Horn.
Henry S. Rosecrans, Oskaloosa.
P. H. W. Schippmann, Holstein.

LOUISIANA.

Ada A. Smart, Leesville.

MICHIGAN.

A. P. Benedict, Lawrence.
Ernest W. Brown, Farwell.
Fred Carroll, Manistique.
Sylvester Doremus, Lake City.
Thomas J. Dundon, Ishpeming.
Seymour C. Eslow, Homer.
Lloyd C. Feighner, Litchfield.
Robert D. Jenkinson, Vicksburg.
Edwin F. W. Neidhold, Wakefield.
Edward F. Riley, Mendon.
John P. Roberts, Sandusky.

MINNESOTA.

Gerrit F. Akin, Farmington.
George G. Allanson, Wheaton.
H. E. Kent, Sanborn.
P. H. Kifer, Barnesville.
E. C. Kiley, Grand Rapids.
J. W. New, Floodwood.
William L. Poseley, Renville.
O. W. Ramsdell, Akely.
John R. Serrin, Glenwood.
Joseph Wolf, Staples.

MONTANA.

J. E. Swindlehurst, Livingston.

## HOUSE OF REPRESENTATIVES.

TUESDAY, *March 3, 1914.*

The House met at 11 o'clock a. m.

Rev. Paul Robinson Hickok, pastor of Metropolitan Presbyterian Church, Washington, D. C., offered the following prayer:

Almighty and everlasting God, we acknowledge Thee to be Lord, sovereign over us and all our doings. We confess our weakness save as Thou dost make us strong, and our insufficiency save as Thou dost make us perfect and complete in Thee. In Thine infinite goodness, pardon Thou the iniquities we confess before Thee and take away all sin from our hearts.

Permit Thy gracious blessing to rest upon this Nation and all its people and upon their Representatives here assembled. Have in Thy loving care the President and all gathered with him in authority; the Speaker of the House and his associates. Direct and control our entire citizenship, holding in check all suspicion and bitterness and evil passions, and manifesting Thyself in all our relations with those within and without our borders.

And in all our serving and our labor may we glorify Thee by showing forth Thine enternal and ineffable glory. Amen.

The Journal of the proceedings of yesterday was read and approved.

WITHDRAWAL OF PAPERS—SARAH ANN HEPPS.

By unanimous consent, leave was granted to Mr. DYER to withdraw from the files of the House without leaving copies the papers in the case of Sarah Ann Hepps, H. R. 4824, Sixty-second Congress, first session, no adverse report having been made thereon.

AGRICULTURAL APPROPRIATION BILL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

The SPEAKER. The question is on the motion of the gentleman from South Carolina that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the Agricultural appropriation bill.

Mr. MANN. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The Chair will count. [After counting.] Thirty Members present—not a quorum. The Doorkeeper will close the doors, the Sergeant at Arms will notify absentees, and the Clerk will call the roll.

The question was taken; and there were—yeas 242, nays 0, answered "present" 4, not voting 186, as follows:

YEAS—242.

So the motion was agreed to.

The Clerk announced the following pairs:

For the session:

Mr. METZ with Mr. WALLIN.

Mr. ADAMSON with Mr. STEVENS of Minnesota.

Mr. SCULLY with Mr. BROWNING.

Mr. HOBSON with Mr. FAIRCHILD.

Until further notice:

Mr. FOSTER with Mr. AUSTIN (commencing February 6, until return from Colorado).

Mr. TAYLOR of Colorado with Mr. HOWELL (commencing February 6, until return from Michigan).

Mr. BYRNES of South Carolina with Mr. SUTHERLAND (until return from Colorado).

Mr. BURNETT with Mr. GRIEST.

Mr. GOEKE with Mr. VARE.

Mr. PALMER with Mr. CALDER.

Mr. EVANS with Mr. SWITZER.

Mr. TAYLOR of Alabama with Mr. HUGHES of West Virginia.

Mr. BELL of Georgia with Mr. BURKE of South Dakota.

Mr. DALE with Mr. MARTIN.

Mr. BURGESS with Mr. TREADWAY.

Mr. KITCHIN with Mr. LINDQUIST.

Mr. KORBLY with Mr. MCKENZIE.

Mr. LEVY with Mr. MANAHAN.

Mr. MCCLELLAN with Mr. MERRITT.

Mr. MCCOY with Mr. MILLER.

Mr. MURRAY of Massachusetts with Mr. MONDELL.

Mr. POU with Mr. MORIN.

Mr. REILLY of Connecticut with Mr. MOSS of West Virginia.

Mr. RUCKER with Mr. MOTT.

Mr. SABATH with Mr. MURDOCK.

Mr. SAUNDERS with Mr. NELSON.

Mr. SHARP with Mr. NORTON.

Mr. SMALL with Mr. PATTON of Pennsylvania.

Mr. SMITH of Texas with Mr. PETERS of Maine.

Mr. TAYLOR of Arkansas with Mr. PLATT.

Mr. TOWNSEND with Mr. PLUMLEY.

Mr. TUTTLE with Mr. PORTER.

Mr. WATKINS with Mr. PROUTY.

Mr. WATSON with Mr. ROBERTS of Massachusetts.

Mr. WEBB with Mr. SHREVE.

Mr. WHALEY with Mr. SELLS.

Mr. CROSSER with Mr. SMITH of Minnesota.

Mr. AIKEN with Mr. TEMPLE.

Mr. BLACKMON with Mr. VOLSTEAD.

Mr. BROWN of West Virginia with Mr. WINSLOW.

Mr. BULKLEY with Mr. WOODRUFF.

Mr. CANDLER of Mississippi with Mr. WOODS.

Mr. CANTOR with Mr. ANTHONY.

Mr. CANTRILL with Mr. AVIS.

Mr. CARLIN with Mr. BARCHFELD.

Mr. CASEY with Mr. BARTHOLDT.

Mr. CLAYTON with Mr. BURKE of Pennsylvania.

Mr. COADY with Mr. BRYAN.

Mr. CONNOLLY of Iowa with Mr. CAMPBELL.

Mr. CLANCY with Mr. HAMILTON of New York.

Mr. CONRY with Mr. COOPER.

Mr. COVINGTON with Mr. COPLEY.

Mr. CULLOP with Mr. CURRY.

Mr. HOUSTON with Mr. KREIDER.

Mr. DENT with Mr. DANFORTH.

Mr. DIFENDERFER with Mr. DILLON.

Mr. DOUGHTON with Mr. EDMONDS.

Mr. FLOOD of Virginia with Mr. GRAHAM of Pennsylvania.

Mr. GEORGE with Mr. GUERNSEY.

Mr. DUPRÉ with Mr. DUNN.

Mr. FINLEY with Mr. DYER.

Mr. FLOYD of Arkansas with Mr. FARR.

Mr. GARRETT of Tennessee with Mr. GREEN of Iowa.

Mr. GOLDFOGLE with Mr. FREAR.

Mr. GOODWIN of Arkansas with Mr. GREENE of Massachusetts.

Mr. GORDON with Mr. HAWLEY.

Mr. GORMAN with Mr. HELGESEN.

Mr. GRIFFIN with Mr. HINEBAUGH.

Mr. GUDGER with Mr. HULINGS.

Mr. HAMILL with Mr. KELLY of Pennsylvania.

Mr. HAMMOND with Mr. KIESS of Pennsylvania.

Mr. HENRY with Mr. J. R. KNOWLAND.

Mr. O'SHAUNESSY with Mr. LAFFERTY.

The result of the vote was announced as above recorded.

A quorum being present, the doors were opened.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 13679, the Agricultural appropriation bill, with Mr. HAMLIN in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the purpose of further considering the bill H. R. 13679, the title of which the Clerk will report.

The Clerk read as follows:

A bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. LEVER. Mr. Chairman, at breakfast this morning I happened to overhear a remark made by one of those two-by-four know-it-alls which set me thinking. It was this: "No class of people in this country except the farmer and the criminal can get any money from the Federal Government for any purpose." Continuing he said, "Do you know that there are appropriated $50,000,000 a year for the farmers of this country?" He had a good face, was well dressed, and seemed to be a man of intelligence, but his asinine display of ignorance, uttered with the arrogance of apparent information, made me propound to myself the query, "Is it possible that such gross ignorance is prevalent generally among the people with reference to what the Federal Government is doing for agriculture?" Mr. Chairman, instead of expending $50,000,000 a year for the agriculture of this Nation, the fact is that the expenditures of the Department of Agriculture, which go in direct aid to the farmer, and to him alone, amount to only $9,690,000 annually.

The bill which we are about to consider appropriates in round numbers $25,000,000, including permanent annual appropriations. The annual appropriation carried in this bill is $18,947,232, an increase of $960,287 over the appropriation for the present fiscal year, an increase of about 5 per cent, which is less than the average annual increase for the past four years. Those who criticize the Committee on Agriculture for its so-called liberality in appropriating for the Department of Agriculture can not be familiar with the growing and accumulating lines of activity imposed upon the Department of Agriculture from year to year by mandates of Congress. The Department of Agriculture was created for the purpose of collecting and disseminating information on subjects relating to agriculture in the most comprehensive sense of that word, but the Congress from time to time has placed upon this department other burdens than those contemplated in the fundamental act. For example, we are spending something like $1,668,000 for the support of the Weather Bureau, which was created to aid commerce and navigation as well as agriculture. We are appropriating more than five and a half million dollars in this bill for the protection of our national forests, and surely this can not be charged against the expense account of agriculture. We are spending more than three million dollars a year for the meat inspection service to protect the people of the country from diseased meats. We are expending more than half a million dollars a year through the enforcement of the pure food and drugs act for the protection of the health of the people of the country.

The fact is that by congressional enactment the Department of Agriculture has been made to become the great police functionary of the Government, and the necessary increases in appropriations for this feature of its work must be the basis for the criticism of those who complain of the increasing appropriations for this department.

Without derogating from the importance of this line of work, it is only just to say that it has largely overshadowed in the minds of Members of the House, I fear, the fundamental constructive research, investigational, and demonstration work which formed the original concept of the department.

But Congress has placed upon this department these burdens, and they can not be effectively carried without sufficient appropriations. You can not enforce laws without means and money, and Members will be surprised to know how little is being appropriated in this bill for the promotion and encouragement of agriculture as such. The Assistant Secretary of Agriculture has prepared for me a statement as to the amount of money being expended by the Government in direct aid of agriculture, and it shows this: Of the $25,461,000 of permanent and annual appropriations for the Department of Agriculture, only $9,690,000 is devoted to work in direct aid of the farmers. This, worked out in percentages, means that 62 per cent of the appropriation for the department is used in its regulatory, police, and quarantine work, while only 38 per cent is used in aid of the greatest occupation of the people of this country. [Applause.] In the face of such facts and with an understanding of what the research and demonstration work of this department means to the people of the country, is there one bold enough to repeat the charge that this committee has been unduly liberal in its attitude toward this work? For myself, I have no apologies to make; I am prepared to defend every item in this bill as a wise investment of public funds.

The appropriation provided in this bill is a mere bagatelle, inconsequential in comparison with our appropriations for other purposes. What are the facts? What will a comparison show? You will appropriate for the support of the Army this year in round numbers $94,000,000. This means that every time you appropriate $1 to aid in the development and encouragement of the greatest occupation and the oldest occupation of mankind you are appropriating $10 for the maintenance and support of the Army. You are spending more this year to maintain this little square of 10 miles in the District of Columbia than you are appropriating for the agriculture of the entire country. You are spending more for the maintenance of the wards of this Nation, the Indians, this year than you are appropriating in this bill for the encouragement of the agriculture of the country. You will appropriate very likely this year in round numbers $140,000,000 for the support of the Navy, and this means that every time $1 is expended to help the farmers of this country to keep their cornerib and smokehouses full and to feed the people of this Nation you are spending fifteen and a half dollars for your Navy. And I want to say in this connection, my friends, that the greatest security that this Nation can have against foreign invasion and foreign war does not lie in the strength of its Navy or Army but in the contentedness, prosperity, and happiness of its agricultural classes. [Applause.]

I should ten thousand times prefer to see the approach of a foreign fleet to our shores than to see the time when the American people are not self-sustaining in their meat and food supply. Give me a well-fed, well-clothed, prosperous people in city and on farm and I fear not the armies and navies of the world. [Applause.] What else, gentlemen? You will spend $180,000,000 for pensions this year. What does that mean? Every time you appropriate $1 for the promotion of this great American industry you appropriate $20 for pensions. I shall not continue the comparison, but ask to call your attention to the fact that the total appropriations for all purposes for the present fiscal year amount to $1,105,000,000, of which amount the paltry sum of only $9,690,000, or nine-tenths of 1 per cent of the total, goes to the development of the basic business of the country. Is the criticism of this committee, that it is overliberal to the Department of Agriculture and the farmers of this country, to be continued in the face of such facts? I should like to commend to such critics the fact that the total agricultural capitalization of this country is more than $42,000,000,000.

The farmers are producing annually more than $9,000,000,000 of products.

But, Mr. Chairman, I do not ask that the appropriation recommended by the committee in this bill shall stand upon invidious comparisons. I am content to have each item rest solely upon its own merit and the character and importance of the work contemplated under it. Unless I am prepared to show that every dollar recommended for the work of the Department of Agriculture is an investment which will bring returns to the people in the way of improved and more profitable methods of agriculture, better living conditions, and a larger food and clothing supply, I am not justified in the recommendations contained in this bill. My study of the economic situation in this country and the unmistakable tendencies clearly apparent to students of these conditions furnishes the justification for this bill. I ask your indulgence while I call your attention to certain tendencies, certain danger signals which bid us "Stop, look, and listen."

In 1880 70.5 per cent of the population of the United States was classified as agricultural. In 1910 only 53.7 per cent of that population was so classified. And even these figures are misleading, for the fact is that only 28 per cent of our people actually live upon the farm. The drift of population from farm to city is unmistakable, and if the tendency continues unchecked, 50 years hence the number of people living on the farm will be negligible in comparison with the total population.

I venture into the field of prophecy to the extent of saying that 50 years hence less than 20 per cent of our people, unless present tendencies are arrested, will be called upon to feed and to clothe the remaining 80 per cent of the people. It is a stupendous task. Can they do it?

Mr. Chairman, statesmanship is not concerned alone with the present, but looks with equal care to the future, watches the birth and development of tendencies, and interprets their meaning and ultimate effect upon posterity, and I submit that the facts just presented are of such a character as to commend

themselves to the most earnest consideration of the wisest statesmanship of this generation.

But why this drift of population from farm to city? Why are our boys and girls leaving the farm, turning their backs upon the old homestead, with its tender memories and hallowed associations, to cast their lot among strangers in our great unsympathetic cities, where competition is keen and pressing and where they often hear "the cry of Hope in wild, merganser flight"? They are leaving because the opportunities for intellectual, social, and financial well-being furnished by the cities are better than can be had in the country, because the educational facilities of the city are better than those in the country, because communication in cities is easier, quicker, and better than it is in the country, because they believe that city life affords greater remuneration for labor, and because country life is thought to be monotonous, irksome, and ill rewarded.

Shall we exert ourselves to check this tendency or shall we stand by and permit it to go on until our cities have become crowded and our rural communities deserted? To me the deserted homestead presents the evidence of a tragedy, and is sufficient incentive to arouse my utmost enthusiasm and effort in behalf of the betterment of rural conditions. We can afford to neglect our towns and cities, we may dispense with the building of a battleship or the equipment of a regiment of soldiers, but we can not afford to neglect that class of our people whose brain and energy give us our food and clothing supply and whose patriotism is the Nation's greatest asset.

I would commend to you the beautiful lines of Goldsmith in The Deserted Village:

> Ill fares the land, to hast'ning ills a prey,
> Where wealth accumulates and men decay;
> Princes and lords may flourish, or may fade;
> A breath can make them, as a breath has made:
> But a bold peasantry, their country's pride,
> When once destroy'd can never be supplied.

[Applause.]

Mr. Chairman, the Department of Agriculture is the great constructive conservation department of the Government and deals in the most intimate and fundamental way with the most important and vital problems of the Nation. Its activities ramify in every direction. It touches almost every man in the country, and it touches him for the purpose of trying to help him. I do not propose to discuss the details of this bill, but I want to call the attention of the committee to certain other tendencies that have forced themselves upon my notice in the consideration of agricultural conditions. No problem can be so vital to a people as their meat and bread supply, and the people of this country, and you especially, gentlemen, need to awake to a realization of the true situation in this respect, that you may know to what end we shall be brought by a continuation of present conditions and methods.

What are the facts? In 1907—and these figures have been verified by the Bureau of Statistics—the number of beef cattle in the country amounted to 52,000,000, while in 1913, six years later, the number had decreased to 36,000,000, or a decline of nearly 30 per cent. Remember that these are beef cattle. In the fiscal year 1906 we exported 584,000 head of beef cattle and in 1912 we exported only 106,000 head, or a decline in our exportation in that time of 82 per cent. In the fiscal year 1906 we imported into the United States only 29,000 head of beef cattle, but in 1912 we imported 318,000 head, or an increase in our importation in six years of more than 1,000 per cent.

Do these figures mean anything? Do they bring a lesson or a thought to the people of the United States and to you, the custodians of their present and the guardians of their future here assembled?

In a bulletin issued by the Department of Agriculture on the 7th of February this statement is made:

> With regard to meat animals, our estimates indicate an accumulated shortage since the census year of approximately 19.2 per cent, or 8,536,000 head, of cattle; 11.6 per cent, or 6,509,000 head, of sheep; and 5.2 per cent, or 3,214,000 head, of swine. The indicated total shortage of meat animals since the census of 1910 is therefore approximately 18,259,000 head, or nearly 9 beef cattle, 7 sheep, and over 3 hogs for each 100 of the total estimated population in January, 1914.

More than that, it will help to understand the import of these numbers if they are compared with the population for the years mentioned:

> The animals under consideration are cattle on farms other than milch cows. There was 0.49 of 1 animal per capita of the population in 1850 and 0.54 of 1 animal in 1860. This average was not surpassed until 1890, when the per capita ratio was 0.55 of 1 animal. The highest point reached, as far as is known, is 0.67 of 1 animal per capita of the population in 1900, from which time the ratio declined rapidly and strikingly to 0.45 of 1 animal per capita in 1910 and 0.36 of 1 animal in 1914, or but little more than half as much as the ratio or 1900. The figures may be found in Table 1.

TABLE 1.—*Number and per capita number of horses, mules, cattle, sheep, and swine on farms, according to the census June 1, 1840, to 1900, and April 15, 1910, and Department of Agriculture estimates, January 1, 1914.*

NUMBER OF ANIMALS.

| Year. | Horses. | Mules. | Cattle. | | | Sheep (not including spring lambs 1840 to 1890). | Swine. |
|---|---|---|---|---|---|---|---|
| | | | Total cattle. | Milch (dairy) cows. | Other cattle. | | |
| 1840 | [1]4,335,669 | [2] | 14,971,586 | [3] | [3] | 19,311,374 | 26,301,293 |
| 1850 | 4,336,719 | 559,331 | 17,778,907 | 6,385,094 | 11,393,813 | 21,723,220 | 30,354,213 |
| 1860 | 6,249,174 | 1,151,148 | 25,620,019 | 8,585,735 | 17,034,284 | 22,471,275 | 33,512,867 |
| 1870 | 7,145,370 | 1,125,415 | 23,820,608 | 8,935,332 | 14,885,276 | 28,477,951 | 25,134,569 |
| 1880 | 10,357,488 | 1,812,808 | 35,925,511 | 12,443,120 | 23,482,391 | 35,192,074 | 47,681,700 |
| 1890 | 14,969,467 | 2,295,532 | 51,363,572 | 16,511,950 | 34,851,622 | 35,935,364 | 57,409,583 |
| 0190 | 18,267,020 | 3,264,615 | 67,719,410 | 17,135,633 | 50,583,777 | 61,503,713 | 62,868,041 |
| 1910 | 19,333,113 | 4,209,769 | 61,803,866 | 20,625,432 | 41,178,434 | 52,447,861 | 58,185,676 |
| 1914 | 20,962,000 | 4,449,000 | 56,592,000 | 20,737,000 | 35,855,000 | 49,719,000 | 58,933,000 |

PER CAPITA NUMBER OF ANIMALS.

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 1840 | [1]0.25 | [2] | 0.88 | [3] | [3] | 1.13 | 1.54 |
| 1850 | .19 | 0.02 | .77 | 0.28 | 0.49 | .94 | 1.31 |
| 1860 | .20 | .04 | .81 | .27 | .54 | .71 | 1.07 |
| 1870 | .19 | .03 | .62 | .23 | .39 | .74 | .65 |
| 1880 | .21 | .04 | .72 | .25 | .47 | .70 | .95 |
| 1890 | .24 | .04 | .82 | .26 | .55 | .57 | .91 |
| 1900 | .24 | .04 | .80 | .23 | .57 | .81 | .83 |
| 1910 | .22 | .05 | .67 | .22 | .45 | .57 | .63 |
| 1914 | .21 | .05 | .57 | .21 | .36 | .50 | .60 |

[1] Including mules. [2] Included with "Horses." [3] Not given separately.

What do these figures mean, gentlemen? I want to call your attention to some more of them as to meat production and meat consumption in the United States, as follows:

AMOUNTS EXPRESSED IN DRESSED WEIGHT.

It has been estimated by this bureau that the production of meat in 1900 amounted to 16,052,000,000 pounds, as customarily expressed in dressed weight, but including lard. This does not include the extra edible parts, such as heart, liver, tongue, etc.

Of this production, 2,433,000,000 pounds were exported, so that the consumption amounted to 13,619,000,000 pounds, dressed weight. The consumption of beef in 1900 disposed of 5,853,000,000 pounds; of veal, 758,000,000 pounds; total beef and veal, 6,611,000,000 pounds; of mutton and lamb, 587,000,000 pounds; of pork, excluding lard, 5,405,000,000 pounds; of lard, 1,017,000,000 pounds; total pork, including lard, 6,422,000,000 pounds.

An estimate of the production of meat in 1909, partly resting on the method previously adopted by this bureau, but taking advantage of additional information provided by the census, was made by Mr. John Roberts, of the Bureau of Animal Industry, and published in the annual report of that bureau for 1911. In this estimate the production of meat in 1909, on the basis of dressed weight, including lard, was 16,863,000,000 pounds, or 811,000,000 pounds more than in 1900.

The exports, however, declined to 1,263,000,000 pounds, or almost exactly one-half the exports of 1900, and the meat remaining for consumption, as expressed in dressed weight, was 15,600,000,000 pounds, or 1,981,000,000 pounds more than in 1900.

The consumption of beef increased during the nine years to 7,276,000,000 pounds, or 1,423,000,000 pounds more than in 1900, but the consumption of veal fell to 683,000,000 pounds, or 75,000,000 below the amount of 1900.

The mutton and lamb consumption in 1909 is estimated at 596,000,000 pounds, or an increase of 9,000,000 pounds above the consumption of 1900.

The pork and lard consumption for 1909 presents an increase of 612,000,000 pounds for 1909 as compared with 1900 and amounted to 7,034,000,000 pounds. An estimate of the consumption of goat meat in 1909 results in 11,773,000 pounds.

PER CAPITA RATIOS.

Still bearing in mind that the foregoing figures stand for dressed-meat weight and exclude the many extra edible parts that go into consumption, a comparison of 1909 with 1900 may be made with regard to per capita production and consumption of meat that is embraced in the description "dressed weight."

By a rough and very imperfect computation, the production and consumption of meat in 1914 are estimated, and these estimates in per capita form of expression are introduced for expanding the comparison.

The per capita production of dressed-weight meat declined from 211.2 pounds in 1900 to 186.2 pounds in 1909 and to 160.6 pounds for 1914, and the per capita exports of meat declined from 32 pounds in 1900 to 14 pounds in 1909 and to 8.7 pounds in the fiscal year 1913.

The consumption of meat, dressed weight, per capita, declined from 179.2 pounds in 1900 to 172.3 pounds in 1909, and then to 151.9 pounds for 1914.

Comparison of 1909 with 1900 with regard to different kinds of meat is not extended to 1914. For beef there was an increase of per capita consumption from 77 to 80.3 pounds, but the consumption of veal declined from 10 to 7.6 pounds, so that the per capita consumption of beef and veal increased almost 1 pound, or from 87 to 87.9 pounds.

The per capita consumption of mutton and lamb fell from 7.7 pounds to 6.6 pounds from 1900 to 1909, and the per capita consumption of pork, including lard, declined from 84.5 to 77.7 pounds. Goat meat was consumed to the extent of 0.13 of 1 pound per capita in 1909.

Mr. Chairman, if these figures mean anything at all they mean that we are face to face with one of two propositions: Either the American people must learn to eat less meat or produce more, or else they must depend upon foreign nations for

their future meat supply. Is it a pretty picture? Does it look good? Does it make you think? Where are we to get our beef cattle? From Australia? From Argentina?

Assuming that we can get sufficient meat from those countries to supply the demands of our people, who is going to pay for it? Where are we going to get the money with which to pay for it? The burden must fall upon the productive capacity of your farmers.

Your timber supply is going. It can hardly be replenished. Your coal supply is rapidly diminishing. It can not be replenished. All of the mineral resources of the country are going, and going rapidly, and when gone once they are gone forever. The only hope of the future of the country lies in the proper handling of its soil. It is the one great asset that we have which replenishes itself from year to year if properly treated, and we are brought to the conclusion inevitably that the prosperity, the happiness, and the security of this great Nation will rest in the future upon the shoulders of its farmers, who in the past have made it the great Nation it is to-day. [Applause.]

Let us take a look into the future 50 years hence, a short period in the life of a nation, less than the span of a human life, and see what is before us. And when we have done that and reached our conclusion, what shall be our provision for the children who are to come after us? The population of the United States during the last census period increased 21 per cent. If that increase continues—and there is no reason why it will not continue—the population of the United States in 1960 will be 238,000,000, an increase of 159 per cent.

Now let us see. In 1910, each man, woman, and child in this country had available 91 pounds of beef. If the ratio of decrease continues for 50 years as it has done during the past 10 years, then each man, woman, and child in the country will have available only 61 pounds of beef, or a decrease of 33 per cent. In 1910, the per capita supply of pork available was 89 pounds. If the decrease for the next 50 years in pork production continues as great as it has been during the last 10 years, the available per capita amount of pork at the end of 50 years will be 34 pounds, or a decrease of 61 per cent of available pork. We had available of mutton, in 1910, 7 pounds per capita, but, if the decrease continues, at the end of 50 years we shall have only 3 pounds of mutton per capita, or a decrease of 48 per cent.

In that connection, gentlemen, I want to call your attention to the fact that among the nations of the world the people of the United States rank second in the amount of meat consumed. We are essentially a meat-eating and white-bread-eating people. The only other nation in the world which consumes more meat per capita than we are the people of the Australian Commonwealth, with a total annual consumption of meat per capita of 262.8 pounds, as against 185.8 pounds for the people of the United States.

What shall we do? Shall we exert ourselves to stop this tendency of decreasing meat production, or shall we face the inevitable, which means that we must eat less meat, or shall we admit our dependence on foreign nations to furnish it to us? Yet gentlemen complain that we carry in this appropriation bill a few hundred thousand dollars to encourage the people of the country to eradicate disease from meat-producing animals and to encourage sections of this country which are not producing beef and pork and mutton to go into the production of those commodities. Is it a wise complaint? Is it a just criticism? Why, my friends, we appropriate something like $600,000—I am speaking from memory—for the eradication of diseases in animals. Listen! The loss from animal diseases in this country, as estimated by the Agricultural Department, annually amounts to $212,850,000, divided as follows:

*Loss from animal diseases.*

| | |
|---|---|
| Hog cholera | $75,000,000 |
| Texas fever and cattle ticks | 40,000,000 |
| Tuberculosis | 25,000,000 |
| Contagious abortion | 20,000,000 |
| Blackleg | 6,000,000 |
| Anthrax | 1,500,000 |
| Scabies of sheep and cattle | 4,000,000 |
| Glanders | 5,000,000 |
| Other diseases | 22,000,000 |
| Parasites | 5,000,000 |
| Poultry diseases | 8,750,000 |
| Total | 212,850,000 |

Two hundred and twelve million dollars a year lost from diseases in the meat-producing animals of this country, and yet gentlemen complain that the Committee on Agriculture is ramming its hands into the Treasury up to the elbow, drawing out money for the support of the Department of Agriculture. It makes me weary. [Applause.] You could afford, if you could save that $212,000,000 of annual loss, to spend your $35,000,000 a year building railroads in Alaska or your $140,000,000 a year for your big Navy or your $94,000,000 a year for your big Army. Again I say it makes me weary, because I necessarily feel that the critics of this bill either have never studied the facts or can not distinguish between an investment and an expenditure. [Applause.]

So much for the meat supply of this country. The facts with reference to the bread supply are equally positive and convincing. Meat and bread are the staffs of life, the two things that we must have above all other things. The food supply of a nation is the most vital factor of its existence and is a most important element in the social and moral well-being of its people. Our standard of living is high; it must be maintained, but we can not afford to sleep if it is to be so maintained.

I am going to take another peep and look into our cupboard 50 years hence. Remember, now, that during that period the population of the United States has increased from 91,000,000 to 238,000,000, an increase of 159 per cent. Let us see whether the acreage and production of corn, wheat, and potatoes upon which we depend for our bread-food supply will show an increase in proportion to the increased population.

From 1900 to 1910 there was an increase in acres in corn of 3.7 per cent only.

If that ratio of increase continues until 1960—and it is doubtful if it will do so—the increase in acreage at the end of that period will be only 20 per cent, as against an increase of 159 per cent in population; or, to put it in another way, in 1910 we had a per capita acreage of 1.7 acres of corn. If the disparity in the ratio of acreage to population is not checked, we shall have in 1960 only 0.49 of an acre per capita planted in corn, or a decrease of 54 per cent.

What about wheat? From 1900 to 1910 there was a decrease in acres planted in wheat of 15.8 per cent; so if that decrease continues in the same ratio, we shall have a decrease of acres planted in wheat in 1960 of 58 per cent. In 1910 we had 0.48 of an acre per capita planted in wheat. In 1960, if nothing intervenes in the meantime to change the tendency, we shall have only 0.08 of an acre planted in wheat, or a decrease of 84 per cent.

The only hopeful sign I see is in potatoes. There was an increase of 24.8 per cent planted in potatoes from 1900 to 1910, which would show, at that ratio, an increase in 1960 of 203 per cent in potatoes. But the per capita acreage of potatoes in 1910 was 0.04 and in 1960 it will be only 0.047, or an increase of only 18 per cent in the per capita acreage of potatoes, while the increase in population in the meantime will have been 159 per cent. The tendency is to increase the number of mouths to be fed and to decrease the food supply, meat and bread, with which to feed them. What is to be the result? We shall be forced, in respect to our bread supply, as with our meat supply, to produce more ourselves or to depend upon foreign nations to supply us. Oh, but you say acreage will increase. Where are you going to get your land? There is practically no more available public land to be had free, and this means that if we are to produce our own supply of bread and meat we must make the soil—our acreage—yield more.

Mr. FOWLER. Will the gentleman yield there?

Mr. LEVER. With pleasure; yes.

Mr. FOWLER. There are 75,000,000 acres of swamp land which have not been drained, in America, and more than 400,000,000 acres of unimproved farm land on the continent.

Mr. LEVER. That may be true; but where are your people to reclaim your land and to work it after you have reclaimed it? Do not forget that people are leaving the farm in order to escape its drudgery and hardships.

But, to continue. Let us see what the situation will be 50 years hence with respect to corn. I am taking these figures from the census.

In 1909 we produced 2,500,000,000 bushels of corn. We had 98,000,000 acres planted. In 1960, at the rate of increase the past 10 years have shown for corn, we would have only 118,000,000 acres. We should need, in 1960, 6,500,000,000 bushels of corn in order to maintain the present per capita supply for the Nation. Now, with 118,000,000 acres planted and a needed supply of 6,500,000,000 bushels, how much shall we have to produce per acre at that time to meet the need for corn? We shall have to produce 55 bushels to the acre. The average production per acre of corn in the United States for 1913 was 23.1 bushels. In other words, if we are to meet the necessities of the occasion in 1960, as far as corn is concerned, we shall have to more than double the production per acre of corn in this country. With these facts in mind, is this committee to be laughed at or its enthusiasm in the work of promoting and encouraging corn production through the boys' corn clubs and by the better methods of farming to be sneered at by the unthinking? We see a

problem which is worthy of the most earnest thought and consideration of this House.

What about potatoes? In 1960 we shall need 1,017,000,000 bushels of potatoes to keep up our present available per capita supply. The necessary per acre production, in order to produce that amount in 1960, will be 92 bushels. The production of potatoes per acre in 1913 was 90.4 bushels. I say again that the only bright spot in the future is in potatoes, and yet it is not very bright.

What about wheat? As I said a moment ago, our people are a white-bread-eating people. White bread measures somewhat the standard of civilization among a people. In 1909 we produced 683,000,000 bushels. In 1960, with the reduction in acreage, if the average of the last 10 years continues and even if the production per acre is increased to 35 bushels, the amount produced in Germany, where the production has reached the highest point in the world, we shall be producing only 630,000,000 bushels, or 53,000,000 bushels less than at present, to feed a population that will have increased from 91,000,000 to 238,000,000.

In order to maintain our present per capita supply of wheat we shall have to produce, in 1960, 1,796,000,000 bushels, and this means that unless acreage is very materially increased we shall have to produce 95 bushels per acre as against our production to-day of only 15.2 bushels per acre.

Mr. GOULDEN. Will my friend from South Carolina permit an interruption?

Mr. LEVER. Certainly.

Mr. GOULDEN. I think the distinguished chairman of the Committee on Agriculture is oversensitive, perhaps, about the criticism he has referred to. I speak as a city member, but also as an agriculturist. I have heard nothing but the most favorable and complimentary comments upon the work of the Committee on Agriculture. I have heard it in the free lecture course of my city frequently alluded to as the great constructive department in the Government that was doing good for this country and was most essential to its future welfare. But I wanted to ask the gentleman if he does not think the bill recently passed by this House, which came from his committee, giving practical demonstrations in the various States throughout the country to the farmer, will not be productive of excellent results in the direction in which he is aiming now, namely, to increase the food and meat supply on the farms of this country to meet the increasing population?

Mr. LEVER. I think my friend is exactly right in his conclusions. That has been the purpose of the bill to which he refers, and it affords a reason for my activity and enthusiasm in its behalf, and, as for that matter, for my authorship of it.

But I want to go on. I will reduce this wheat problem to loaves of bread. That may bring home the proposition a little more strikingly than anything else.

The production of wheat in 1910 was sufficient to make about 39,000,000,000 loaves of bread, or 424 loaves per capita. At the same rate of yield per acre in 1960, and with 18,732,000 acres, the production would be sufficient for only about 17,500,000,000 loaves, or about 73 loaves per capita on the basis of 238,500,000 people.

In other words, gentlemen, if we do not check, through the Department of Agriculture and other agencies, notably the operation of the Lever extension bill, the tendency to which I have been calling attention, our people will be called upon to eat only 73 loaves of bread per annum per capita as against 424 loaves of bread they are now consuming, or they will eat one loaf of bread where they now eat six. Is this a pretty picture?

Mr. BOWDLE. Will the gentleman yield?

Mr. LEVER. Certainly.

Mr. BOWDLE. Does not the gentleman from South Carolina know that much of the evil of the modern situation grows out of the fact that so many people are leaving the country and rushing into the city to live?

Mr. LEVER. I made that statement at the beginning of my remarks.

Mr. BOWDLE. Does the gentleman know of anything in the bill that will tend to correct that tendency?

Mr. LEVER. Every item of this bill has for its fundamental purpose the teaching of better methods of agriculture, which means in the end more profit to the farmer, better living, more conveniences at home, and more education for his children.

Mr. GOULDEN. Will the gentleman pardon an interruption right there?

Mr. LEVER. Certainly.

Mr. GOULDEN. Does not the gentleman think the good-roads bill which the House has passed recently and for which as a city Member I voted, with the telephones, daily mails, and other up-to-date improvements and comforts, will tend very much to make people in the country happier, more comfortable, social conditions better, and, in addition to that, will not the farms be made more profitable?

Mr. LEVER. Undoubtedly that is true, and yet it is going to require all the thought, all the energy, all the work, and the most progressive leadership of this country to bring about such a result as suggested by the gentleman to stop the drift of population from the country to the town and to make rural life attractive.

Mr. KELLEY of Michigan. Will the gentleman yield?

Mr. LEVER. I will.

Mr. KELLEY of Michigan. I understand that there has been a considerable amount of importation of foodstuffs during the last few months into this country.

Mr. LEVER. I think that is true.

Mr. KELLEY of Michigan. What, in the judgment of the gentleman, will be the effect of these increased importations on the production of our farmers?

Mr. LEVER. That would lead me into a discussion of the tariff somewhat. I will say that I do not think the time is ever coming when the farmers of this country are going to be forced to sell their products for much less, if any, than they are now receiving, for increasing consumption coupled with decreasing production will maintain a high standard of prices. In other words, I do not believe the importation of meat and other foodstuffs is going to affect materially the situation one way or the other. Now, can we check that tendency, can we raise more wheat, more corn, and more potatoes per acre?

Mr. BOWDLE. Will the gentleman yield again?

Mr. LEVER. Yes.

Mr. BOWDLE. Does not the gentleman believe that in modern civilization we are working at cross purposes? For illustration, does not the gentleman know that in many large cities we have booster clubs, whose business it is to invite people to come from the country into the town, and then we have philosophers standing around inviting them to go from the town to the country.

Mr. LEVER. I think those people ought to be put into an insane asylum.

Mr. GOULDEN. Will the gentleman yield again right there?

Mr. LEVER. Yes.

Mr. GOULDEN. I never heard of a boosters' club in any city, except, perhaps, to boost the idle or employed population that we have in the city into the country, and make them earn their living on the farm, where they are needed.

Mr. BOWDLE. What is the gentleman's town? [Laughter.]

Mr. GOULDEN. It is a little town on the Hudson River called New York. Perhaps the gentleman from Cincinnati has heard of it.

Mr. NORTON. Will the gentleman from South Carolina yield to me?

Mr. LEVER. I will yield to the gentleman.

Mr. NORTON. Does the gentleman maintain in his argument and in his reply to the gentleman from Michigan that the rapidly increasing importation of foodstuffs from foreign countries will tend more and more to induce the population of this country to go upon the farms of the country?

Mr. LEVER. Let me call my friend's attention to the fact that values of meat, corn, wheat, oats, and potatoes have been steadily going up from year to year and, in my judgment, will continue to go up from year to year, because we are consuming now practically all we produce.

Mr. NORTON. I want to get the gentleman's argument and the direction of it.

Mr. LEVER. The argument is this: That unless we adopt better farm practices, and unless we force the soil to give up more than it is giving now, both of meat and of bread, in 1960 your children and my children will be up against a mighty hard proposition for food. [Applause.]

Mr. NORTON. The gentleman appeared to argue that the importation of foodstuffs from abroad was tending to increase the price. I can not understand that kind of an argument.

Mr. LEVER. The gentleman is unfortunate in not following my line of thought.

Mr. NORTON. There are a great many farmers in this country that are likewise unfortunate.

Mr. ALEXANDER. Will the gentleman yield?

Mr. LEVER. Yes.

Mr. ALEXANDER. The gentleman from Ohio [Mr. BOWDLE] said that there were booster clubs in the cities that were advising men from the country to come into the city, while the philosophers in the city were advising men to go into the country.

The gentleman asked what about them, and the gentleman from South Carolina said they ought to be put into a lunatic asylum. I desire to ask which ones—the philosophers who

advise this surplus population to go from the city to the country, or the boosters' clubs in the cities that desire to get people from the country to the city?

Mr. LEVER. Oh, the folks who are trying to get the people from the country to the city.

Mr. ALEXANDER. That is what I thought the gentleman intended.

Mr. LEVER. Let me proceed. Can we increase the yield of wheat, potatoes, corn, and the like of that? I need only call attention of gentlemen to the fact that the committee had before it boys from all over the United States who were sent here by their States and communities as representing champion corn growers in their separate communities, and their yields of corn ran anywhere from 55 bushels an acre in the State of North Dakota to something like 235 bushels an acre in the State of Alabama. These boys in the North, East, South, and West have demonstrated to the satisfaction of every one, I think, that we can more than double the yield of corn per acre in the United States. I do not think there is any question about that.

What about wheat? The average yield of wheat in the United States per acre in 1913 was 14.3 bushels. In Germany, although they have been tilling their soil for more than a thousand years, and in its virginity it was no more fertile than our soil, they are producing 35.1 bushels per acre. In Austria they are producing 20 bushels per acre, and in Hungary proper 18.4, and in the United Kingdom 32.8 bushels per acre. With respect to potatoes, our average yield per acre in 1913 was 96 bushels. In Russia the average was 104 bushels per acre; in Germany, 196; in Austria, 142; in France, 129; and in the United Kingdom, 202½ bushels per acre.

Of course, gentlemen will understand that the system of agriculture in the countries to which I have referred is of the most extreme intensive character, and it can not be hoped that their method of intensive farming can be reached soon in this country, and yet it is a mark to which we should set our efforts. I know that the better practices of agriculture, the better preparation of seed beds, intelligent cultivation, and fertilization inaugurated in the South under the able leadership of the late Dr. Seaman A. Knapp is proving that the yields of staple products can be increased anywhere from 50 to 100 per cent.

And, Mr. Chairman, I am one of those people who believe that the people of the United States, when they are face to face with the necessity, are just as capable of doing these things, or anything as far as that is concerned, as the people of any other country, and I believe that there is no reason why we should not double the productivity of our soil without causing our farmers to suffer by any depreciation in price on account of the enlarged supply. The heavy demand for farm products can be counted upon to continue for all time to come.

Mr. HARDY. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. HARDY. Does not the gentleman rather think that in view of the fact that some of the questions asked seem to indicate a desire simply to increase the price of corn, wheat, meat, and other such things for the benefit of the farmer the gentleman is advocating a bad policy, because the price is likely to be affected by the quantity? If you can succeed in doubling the quantity raised, will you not also lower the price?

Mr. LEVER. I think not at all. I think the rapid increase in population in this country will take up at good prices everything that we are able to produce in the future, and more than we are able to produce, as I have been trying to show.

Mr. HARDY. Then the gentleman has some other motive in view than simply raising the price higher and higher?

Mr. LEVER. Yes; I am looking at this matter from the broad national standpoint.

Mr. GOULDEN. Mr. Chairman, will the gentleman yield once more?

Mr. LEVER. Yes.

Mr. GOULDEN. Three years ago I retired, voluntarily, from this body and went abroad. I there witnessed the cultivation on the farms, especially the crops of corn, wheat, and potatoes, in the various countries, and I want to say that four words define the true situation—higher fertilization, better cultivation. Those four words cover the whole thing, so far as my observation went. That is what we need in this country to accomplish what the chairman is so ably advocating.

Mr. LEVER. My friend from New York is a pretty good farmer, even if he does farm in a skyscraper.

Mr. GOULDEN. Oh, I farm some other things nearer the ground than that, and not a hundred miles from this Capitol, where I was born.

Mr. LEVER. Mr. Chairman, I want to ask those who may complain about this bill and about what the Federal Government is doing for the farmer, if they have ever stopped to consider the other side of the question, namely, what the American farmer is doing for this Government? Has that proposition ever occurred to these gentlemen? I want to say that the perpetuation of representative government, the continuance of our present system, depends more upon the prosperity, happiness, wealth, education, conservatism, and the patriotism of the American farmer than upon any other factor. [Applause.] In the past he has been the Nation's greatest defense. In the future he must be the bulwark which is to protect it against the unrest and the anarchy of your great city centers. I stood in the gentleman's home city one morning, and looking across Madison Square I saw hundreds and hundreds of people who had spent the night in the open, some of them lying on the rustic benches, some underneath, with nothing but an evening newspaper for a pillow, and I said to myself that if the red flag of anarchy ever goes up in this country it will go up from the idle classes of our great cities; that if this Nation is to be preserved, if our flag is still to float in majesty, it will have to be preserved and kept floating by the boys and the girls and the men and women back down in the hills and in the valleys of South Carolina and on the farms throughout the length and breadth of this great land of ours. [Applause.]

With everything to face—climate, changing conditions of soil, insects, pests, the bulls and bears of the New York Cotton Exchange and the Chicago Board of Trade—with no control over the price of what he produces, hauling his products into town and letting the other fellow set the price, this quiet American citizen, with no lobby in Washington to take care of his interests, with no skilled lawyers to plead his cause, continues heroically, patiently at the task of feeding and clothing the people of the world—a task which in the great plan of civilization has been mapped out for him. I ask again: What is the farmer doing for the Government? We are bound to consider his side of the question.

I shall insert in the RECORD at this point some figures showing, for instance, that the total losses through insects annually in the United States is conservatively estimated at $1,000,000,000, and that of this amount $795,000,000 is charged against loss to farm products through the work of insects.

This loss amounted to over 10 per cent of the total value of all crops raised in the United States; yet when we appropriate money in this bill to check the advance of the boll weevil, to take care of tobacco insects, to take care of the gypsy and brown-tail moth in the New England States, somebody complains that somebody is ramming his hand into the Federal Treasury. It is estimated that we are losing at least 10 per cent of the value of our crops on account of diseases of plants and forest trees. This makes up an annual loss, as estimated here, of $500,000,000.

LOSS FROM INSECTS.

The total money loss through insects annually in the United States is conservatively estimated at $1,000,000,000, and of this amount $795,000,000 is charged against loss to farm products through the work of insects. This loss amounts to something over 10 per cent of the total value of all crops raised in the United States.

THE ANNUAL LOSSES FROM TREE AND PLANT DISEASES.

On account of the wide variation in the prevalence of the destructiveness of plant diseases no exact determination of the annual loss is possible. Observation and experience indicate, however, that such losses may be conservatively estimated as amounting to at least 10 per cent of the value of the crops, taking the fluctuation one season with another. The value of the crops as reported by the census of 1910 is given at $5,500,000,000, indicating a monetary loss of approximately $500,000,000.

The most keenly felt losses are those in which an important crop is practically destroyed in a season or succession of seasons, as sometimes occurs, but the heaviest losses to the people at large result from the economic disturbance from the alternation of over large and insufficient production in the case of crops that are destructively attacked by diseases.

The development of methods of control of plant diseases steadily tends toward the steadying of production in that it enables the farmers to forecast much more intelligently than they could otherwise the area required to produce an amount which the market will take at a fair price. This reduces uncertainty and steadies the agricultural industry, making possible a more economical production. The effective control of plant diseases therefore removes one of the most important uncertainties and reduces speculative opportunity, thus steadying prices and making possible economic distribution which eventually results in benefit to the producer and consumer.

Estimates of the annual losses due to certain important crop diseases are appended.

The estimated annual losses to fruits from fungous and bacterial diseases is from $20,000,000 to $25,000,000. In addition to these heavy annual losses to the crop in certain districts and certain years, still heavier total losses, due to the destruction of orchards and vineyards occur from time to time, with the result that very large investments of capital are wiped out. Pear blight has practically wiped out pear culture in many communities, and peach yellows has temporarily eliminated the peach industry from some important districts. In cases where particular diseases are persistent the culture of certain fruits is practically suppressed in regions where trees and vines succeed. Thus one disease has nearly suppressed the cultivation of sweet cherries and the European plums in the eastern United States except in a few localities in the North or at considerable elevation above sea level, and the cultivation of the grape south of the Potomac River is very greatly restricted by the black-rot fungus.

The annual loss due to forest-tree diseases is not even approximately determinable. It may be noted that a single disease of forest trees—the bark disease of the chestnut tree—as thus far considered may be estimated with fair accuracy to be about $45,000,000.

Losses resulting through the ravages of diseases caused by parasitic organisms which prey upon the cereal crops may for convenience be classified as preventable and nonpreventable. Cereal diseases now known to be preventable were in some instances regarded as nonpreventable only a few years ago. Such a disease, for example, is the loose smut of wheat. Diseases of cereal crops now regarded as nonpreventable will probably in time yield to the efforts of the trained investigator in his endeavor to discover an effective fungicide or devise means of control at once practicable and effectual in the hands of the farmer.

The preventable diseases and estimated annual losses resulting from each are as follows:

| Name. | Bushels. | Dollars. |
|---|---|---|
| Bunt, or stinking smut of wheat | 16,000,000 | 15,000,000 |
| Loose smut of wheat | 4,500,000 | 3,500,000 |
| Smut of oats | 7,000,000 | 4,000,000 |
| Covered smut of barley | 3,300,000 | 1,900,000 |
| Naked smut of barley | 3,300,000 | 1,900,000 |
| Kernel smut of sorghum | | 100,000 |
| Total | 34,100,000 | 28,400,000 |

The nonpreventable diseases and estimated annual losses resulting from each are as follows:

| Name. | Bushels. | Dollars. |
|---|---|---|
| Wheat rust | 12,000,000 | 11,000,000 |
| Oat rust | 20,000,000 | 8,000,000 |
| Corn smut | | 60,000,000 |
| Miscellaneous: | | |
| Scab | | |
| Ergot | | |
| Barley stripe disease | | 15,000,000 |
| Blade blight of oats | | |
| Root parasites, etc | | |
| Total | 32,000,000 | 94,000,000 |

These estimates, based on crop statistics and on the observations of the members of the Office of Cereal Investigations, represent the average losses borne during the last 10 years by grain growers in the United States and are believed to be conservative.

The estimated losses from potato diseases are more definitely known than many others. The late blight is estimated to cost the country annually $36,000,000. The loss from this disease in the State of New York in 1904 was set at $10,000,000 after a careful computation. The total average loss from all potato diseases in the United States is set at $60,000,000 per annum, which is believed to be under rather than over the truth.

A number of cases in which the estimate is based on a fairly careful examination of the conditions are cited below:

Estimated annual loss from all sweet-potato diseases throughout the country, $8,000,000.

Bean pod-spot, or anthracnose, $2,000,000 annual loss in the State of Michigan alone. This disease not infrequently destroys 50 to 75 per cent of the crop of green beans in certain southern localities.

The late blight of celery, $50,000 in 1912, in the Kalamazoo area in Michigan.

The lettuce drop frequently destroys 10 to 15 per cent of the crop on infected fields in Florida.

The tomato-leaf blight cost Delaware $50,000 in 1913, and the loss in New Jersey was much greater.

The annual loss from cotton wilt and root knot is estimated at $10,000,000, and that from cotton anthracnose, rust, and other diseases at $20,000,000.

The loss from flax wilt was $3,000,000 in North Dakota in 1911 and $400,000 in Minnesota.

The loss from ginseng blight was $50,000 in Michigan in 1911.

The loss from sugar beet leaf spot in Colorado in 1910—when the disease was worse than usual—was $640,000.

Now, my friends, I have presented to you this problem from the Nation's viewpoint. I do not believe there is any more important problem to come before this Congress than that of the encouragement of the production of our meat and bread supply and the preservation of the same. But I do not want gentlemen to misunderstand me. It is not my thought, nor is it in my line of argument, that I expect the farmer of this country in his capacity as the furnisher of its food and clothing supply to do this from the standpoint of pure philanthropy. I believe that it would be criminal, absolutely so, for this Congress to give to the farmer the means and the encouragement for increased production unless at the same time we give him the means and the encouragement for a more economic distribution of his products; give him the means and the encouragement to produce and the knowledge to understand how to get the intrinsic value of what he produces. It is estimated that 57 per cent of all the farm products of this country is lost between the producer and the consumer. I noticed in a statement the other day in one of the Wisconsin papers that more than 57 per cent of the value of the cheese of that State was lost somewhere between the producer of that cheese and the man who ate it. The Committee on Agriculture has not been neglectful of this, the economic phase of agriculture. We are aware that the time has come when the subject of market economy should be approached as a great big economic proposition, and hence we have allowed an appropriation of $200,000 in order that the Department of Agriculture may make investigations and assemble and disseminate information on the business of farm marketing and distribution.

Mr. HUMPHREYS of Mississippi. Will the gentleman yield for a question?

Mr. LEVER. I will yield.

Mr. HUMPHREYS of Mississippi. Just what does the gentleman mean by the statement that 57 per cent of the value of the farm product is lost between the producer and the consumer?

Mr. LEVER. I mean this: We will take a bushel of potatoes. If the consumer pays $1 for a bushel of potatoes, the farmer, the man who produces the potatoes, gets only 43 cents of that amount, the other 57 cents disappearing somehow between the producer and the consumer. This is a condition that must be corrected. It is one of the big problems before us.

Now, I have detained you too long. I want to close——

Mr. HARRISON. Will the gentleman yield?

Mr. LEVER. I will yield.

Mr. HARRISON. I am very anxious to know, because I believe greatly in this Bureau of Markets that the committee has established; what is that division doing now, how far have they gone along in their work?

Mr. LEVER. The gentleman, I think, understands that the division has been at work only about five months, due to the fact that appropriations for that purpose did not become available until late last summer, and most of the work so far done has been in the way of organization for work in the future, but the plans they have in mind—the gentleman was before the committee at the time and heard the statement of Mr. Brand—impressed me as being in the right direction. I believe great good is to come from the work of that division, and I believe it ought to be very liberally supported, and I am proud to be the author of the language under which it is operating.

Mr. HAY. Will the gentleman yield for a question?

Mr. LEVER. I will.

Mr. HAY. I would like to ask the gentleman from South Carolina how much is appropriated in this bill for soil surveys?

Mr. LEVER. Well, I had not intended to discuss the details of the bill, but the amount carried for that work is $359,235.

Mr. HAY. Now, I would like to ask the gentleman how many surveys can be made with that appropriation?

Mr. LEVER. I do not recall, I am frank to say to the gentleman, but I will have that information when we take up the bill under the five-minute rule.

Mr. HAY. I will say to the gentleman that it is impossible to get anything done at the Agricultural Department in the way of soil surveys in the counties in my district, although I have been trying to do it for a year or two.

Mr. LEVER. I know there is great pressure in the department for that work.

Mr. HAY. Not only do I not get anything done, but I do not even get an answer to my communications.

Mr. BUCHANAN of Illinois. Will the gentleman yield for a question?

Mr. LEVER. Yes.

Mr. BUCHANAN of Illinois. Has the gentleman any definite information as to how much money is used in the Bureau of Animal Industry?

Mr. LEVER. Yes; there is quite a large sum of money used for that purpose, namely, $2,245,000.

Mr. BUCHANAN of Illinois. That includes everything?

Mr. LEVER. That includes everything, except the meat-inspection work, which is in a separate appropriation. Now, gentlemen, I shall close.

Mr. GARRETT of Texas. Will the gentleman yield? I have not read the bill, but I would like to know if it carries an appropriation to investigate the question of the marketing of farm products?

Mr. LEVER. It carries $200,000 for that purpose.

Mr. GARRETT of Texas. I will ask the gentleman if he has any statistics on the question of the difference between the price received for cotton by the farmer and the price paid by the spinner? My information is that the cotton crop for 1912 was sold by the farmer at an average of about 11 cents per pound, and that the cost to the spinners of the country was somewhere around 15 cents per pound. There is a difference of about $20 per bale, and I was wondering whether the gentleman had elucidated that subject.

Mr. LEVER. I do not have the figures here, but the statement was made before the Committee on Agriculture by Arthur R. Marsh, at one time president of the New York Cotton Exchange, and, in my judgment, the ablest defender it has, that the people of the State of Texas, on account of a lack of information as to the value of their low grades of cotton, had lost during the year 1913 more than $40,000,000.

Mr. GARRETT of Tennessee. And that is all the gentleman has on that particular subject?

Mr. LEVER. Yes; at this time.

Mr. KINDEL. Will the gentleman yield?

Mr. LEVER. I will.

Mr. KINDEL. I was going to ask you if, in your estimate as to cost, you have figured on transportation—freight, express, and parcel post?

Mr. LEVER. All of that; yes, sir.

Now, I have tried to point out what to my mind appear to be most dangerous tendencies of our time and to warn the Members of the House that we have reached a point where we must take some note of them. I want to quote from an address delivered by Mr. James J. Hill before the Farmers' National Congress at Madison, Wis., on September 24, 1908. He said:

> After all it is to the next generation mainly that we must look for the transformation of our greatest and most vital industry, though something may be done with this. In both fields, the man who assumes to be the farmer's friend or hold his interests dear will constitute himself a missionary of the new dispensation. It is an act of patriotic service to the country. It is a contribution to the welfare of all humanity, and will strengthen the pillars of a government that must otherwise waver in some popular upheaval when the land shall no longer sustain the multiplying children that its bosom bears. It is a high commission that is offered to you. By accepting it you will confer new dignity, worth, and satisfaction upon the calling in whose name you are gathered here, and help to garner health and comfort and happiness and an opportunity greater than our own for the coming millions, who are no strangers or invaders, but our own children's children, who will pass judgment upon us according to what we have made of the world in which their lot is to be cast.

I commend that thought and those sentiments to the members of this committee, and I thank you for your courtesy and patient attention. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield one hour to the gentleman from Nebraska [Mr. SLOAN]. [Applause.]

Mr. SLOAN. Mr. Chairman, the Agricultural appropriation bill presented to the House reflects especial credit upon the chairman and subcommittee. The committee membership having labored in its preparation can view with general satisfaction nearly all of its terms and provisions as being calculated to encourage agricultural enterprise and activity and to furnish in some degree a palliation for the wrongs and injustice to which the food and clothing producers of this country have been subjected by adverse legislation not fairly forecasted to them, but inflicted with a remorseless disregard for the rights of the producer unparalleled in American legislation. [Applause.]

I agree with the distinguished chairman of this committee in doing all we can for agriculture, but the last means which I would expect to use to exalt agriculture and give the farmers of America a chance to advance would be to place the farmers of Nebraska and the farmers of the other States of the Union on a basis with the farmers of China, with the farmers of Argentina, and the posterity of the ticket-of-leave men of Australia. [Applause.] So that when the boys of the South, that are to raise 250 bushels of corn to the acre, are placed upon the basis of the boys of Argentina, whose lands are worth one-third of what they are in better agricultural sections, and the wages of their employees just one-half, and the transportation from Buenos Aires to New York only one-fourth of what the transportation of the Middle West is to New York, I think it is the one best means conceived by the men who perpetrated this adverse legislation not to bring men to the farms but to drive them into the cities to buy cheaper the product of the toilers of the farms. [Applause.]

The bill contains much to encourage food production for the Nation. It also contains much to furnish food for reflection to the producer. The Agricultural Committee, whose work should be essentially constructive, is obliged to perform the service of a legislative Red Cross corps to minister to the sick, heal the wounded, quarantine the diseased, and bury the dead, resulting from the onslaught of the Ways and Means Committee of the House, the Finance Committee of the Senate, and the higher authority which seems to direct the course of each.

The bill provides $5,000 for importation of Corriedale sheep from New Zealand for breeding purposes. This is in the nature of first aid to injured woolgrowers. Forty thousand dollars is provided for study of corn improvement and production, besides being a salve for the suffering corn growers. It is expected by those who do not know to aid our producers in meeting in competition the enormous imports from Argentina. For additional meat and live-stock inspection at our ports, arising out of the relinquishment of our duties, about $50,000 is appropriated. This amounts to a quarantine against the spread of disease. Forty-one thousand four hundred and ninety-five dollars is set aside for sugar-beet investigation and promotion. This is an application of a pulmotor in an attempt to revive a sore-stricken industry, and the beet grower is to be thereby armed with a feather to battle against the sword of the Refiners' Trust, which trust is the only industry which the papers have recently announced as starting up on full time and with full complement of employees. [Laughter.] Fifty thousand dollars is appropriated for live-stock demonstrations in the congressionally devastated Louisiana cane fields. This is the Red Cross' sad duty—to bury the dead. [Laughter.] The Ways and Means Committee, like a destroying army, tries now to palliate its cruelties by showing that it is followed by an efficient hospital corps—the Agricultural Committee.

During the history of the world and throughout the civilized nations generally, agriculture has been deemed an honorable profession and its votaries accorded special consideration. Under early Roman law and practice mechanic arts was largely confined to the unfavored and servile class. Work on the farm was considered the only kind of manual labor worthy of Roman citizenship.

It was said of Horace "when cloyed with pleasures in the imperial state—to journey to his farm, well fitted for its tenants' habitation, with food for all, and containing secluded spots for the poet's dreams." It is related that visitors to the Old World "still journey with increasing interest to the Horace farm."

Gibbon quotes Artaxerxes as follows:

> The authority of the prince must be defended by military force. That force can only be maintained by taxes. All taxes must at last fall upon agriculture and agriculture can never flourish except under the protection of "justice and moderation."

Bancroft, speaking of France, said:

> The great employment of France was tillage of the soil, than which no method of gain is more grateful in itself or more worthy of preferment or more happy in rendering service to the whole human race. "No occupation is nearer heaven."

The farmers of Germany, Austria-Hungary, and the Scandinavian countries all receive first consideration at the hands of their respective Governments when levying duties to be collected at their ports, the levying of which will give the producers first and favored opportunity to resort to and control the home market.

More people in the United States are engaged in agriculture than in any other occupation. The following gives estimated numbers engaged in the several leading lines of activity:

| | |
|---|---|
| Agriculture and animal husbandry | 12,500,000 |
| Manufacturing and mechanical industry | 10,500,000 |
| Domestic and personal service | 3,800,000 |
| Trade | 3,500,000 |
| Transportation | 2,700,000 |
| Clerical service | 1,700,000 |
| Professions | 1,600,000 |
| Minerals | 900,000 |

The character and ability of its members are the highest, whether measured by a low rate of illiteracy, the source of the

Nation's students, few infractions of the penal code, or the moral tone pervading their home life and business practices. This industry ministers to the first great wants of American citizens—food and clothing. Moreover, it is the one great industry whose members are by the nature of their isolation and limited individual participation in business affairs unable to combine and become factors of oppressive organizations against which politicians inveigh, political parties denounce, legislatures resolute, and executives back and fill.

While agricultural pursuits in America have not been exalted in dignity above other lines of activity because of our general recognition of equality, yet for more than a quarter of a century, with but a brief interregnum—between 1894 and 1897—the direct and indirect products of the soil have been protected in the laying of national revenues. This has been for two reasons: First, they are entitled to it as a matter of right, which all civilized nations recognize, save the United Kingdom alone; second, the self-interest of our great people to encourage soil culture, conservation, and improvement, which never can or will be done if farmers are treated as mere peasants and discriminated against by our own people in favor of foreign farmers.

The present Congress, advised and directed by our Executive, under the whip and spur of caucus lash enacted a tariff law which had for its basic purpose the cheapening of American farm products to the enormous loss of our farmers and the sacrifice of millions to our National Treasury, and with the deliberate admonition by the Ways and Means Committee to our producers that to thrive they must go beyond our national borders. This was perpetrated on the agricultural people of the country without notice and without authority.

Upon this question the American people had largely and fairly expressed themselves. The Republican platform adopted at Chicago in 1912 said:

> The products of the farm and of the mine should receive the same measure of protection as other products of American labor.

The Progressive national platform adopted at Chicago in 1912 said:

> We believe in a protective tariff which shall equalize conditions of competition between the United States and foreign countries, both for the farmer and the manufacturer, and which shall maintain for labor an adequate standard of living.

There were cast in support of these platforms for unsuccessful presidential candidates 7,604,518 votes. There were cast for the successful minority candidate for President only 6,293,454 votes. There were lacking 1,311,064 votes of a majority. And, moreover, of all candidates for the present House of Representatives the expression of the voters on this great subject of legislation if carried into effect would have elected 211 Democrats and 224 Members favoring reasonable protection to the products of farm, factory, and mine. [Applause on the Republican side.]

Further, the two great agricultural organizations of this country have not been silent on this subject. The National Grange, speaking upon this subject, said:

> We confirm the position of the Grange upon the tariff question as passed by the forty-second session of the National Grange, namely, "That whatever the policy of the Government may be, the farmers of the United States demand that, as far as possible, such measures of direct benefit therefrom as is given to manufacturers or any other industries of the country shall also be accorded to agriculture."

The Farmers' National Congress, in its last formal deliverance on this subject, said:

> A fair and equal measure accorded to all industries of the country needing protection. Any legislative discrimination will be opposed by our influence and resented by our votes. We will never submit to selling in a free-trade market and buying in a protected market.

Upon the other hand, no farmers' organization has demanded free or substantially free trade in farm products.

Neither does the Democratic national platform convey any warrant by its terms for free trade in American farm products. The utmost which could be fairly construed from that platform in this particular was that there should be a reduction of duties. The plank of the platform relating to this is as follows:

> We favor the immediate downward revision of the existing high and in many cases prohibitive tariff duties, insisting that material reductions be speedily made upon the necessaries of life.

Speedy reductions of duties can not be tortured by any honest interpretation into meaning a removal of duties. The idea involved in the word "reduction" indicates a lessening, but a continuance in form and substance of the original factor. So farmers may have been warned that duties on farm products would be reduced in case of Democratic success, but no one was given to understand, or had a right to understand, that the duties would be removed and farm products placed on the free list.

However, further on the platform states:

> Articles entering into competition with trust-controlled products and articles which are sold abroad more cheaply than at home should be put upon the free list.

The products of the American farm do not enter into competition with trust-controlled products and have not been sold abroad more cheaply than at home. The wheat, corn, rye, cattle, hogs, sheep, poultry, eggs, potatoes, and other products of the farm are neither sold cheaper abroad than at home, nor are they sold by our farmers in competition with any trust.

The only other provision of the Baltimore platform which related to duties on farm products is where it says:

> We denounce the action of President Taft in vetoing the bills to reduce the tariff in the cotton, woolen, metal, and chemical schedules and the farmers' free list bill.

It will be recalled that the farmers' free list bill as it passed Congress and was presented to President Taft did not contain a single article produced upon the farm. The articles, including meats and cereals, which had been in the free list bill when originally introduced, had been by the deliberate action of a Democratic House and a Republican Senate cut out of that bill. So that all any farmer had reason to fear if fairly dealt with by the successful party was a reduction of the rate of duties upon his products, and he was in nowise warned that any of them would be placed upon the free list. In fact, the Democratic platform, fairly construed, assures him of that degree of protection.

The American farmer represents somewhat varied sentiment as to the degree of protection demanded for farm products, but few of them are willing that the product of any foreign field or pasture shall enter our ports without bowing to the American flag and paying tribute to our Treasury. They all agree there should not be protection for the manufacturers, who work and produce under a roof which shields them from summer sun, winter cold, and stress of storm; while the farmer, to be successful, must toil under burning sun, through winter frosts, through long daily hours. He must combine the training of an engineer to manipulate his now complex machinery with the study of the scientist to understand preparing the soil, seeding, harvesting, and garnering.

Moreover, he must be a financier to know when, how, and under what circumstances to market his product that best results may follow. They might regard an ultra high protection upon their products as not wise; they might consider a low tariff as not unwise; but a tariff that protected those with whom they deal and which does not protect them in a reasonable advantage for the home markets they regard as unjust and infamous. Further, the producers of the grains and the food animals of the North and West did not agree nor will they long tamely submit to a revenue measure which protects the agricultural products of the South and discriminates against similar or related products of the North.

A division in the ranks of the friends of agriculture in 1912 allowed a House, Senate, and Executive unfavorable to the interests of the farmer and prejudiced in favor of the large cities of the East and the interests of the South to come into power. They saw their duty to deal fairly with the agricultural classes in their proposed important tariff legislation, and knew that neither by the authority of the people nor as a matter of justice should the producers of this country be discriminated against. But while seeing their duty they also recognized the opportunity clamored for by the great cities of the East and the interests of the South to retain substantial protective duties upon articles in those sections and place upon the free list or at ridiculously low rates of duty northern farm products. Further, where duties were to be laid on agricultural products and a possible discrimination could be effected between the North and the South the South should be favored.

Following these considerations and with these purposes in view, the Underwood-Simmons tariff bill became a law.

Of the great agricultural products of the North and West bearing a reasonable duty under the old law, the following were placed upon the free list: Corn, wheat, rye, cattle, hogs, sheep, meats, flour, eggs, poultry, potatoes, and wool. Agricultural products, including raw wool, constituted 80 per cent of the value of all the articles free listed under the Underwood-Simmons law. There was retained upon the dutiable list, however, the southern products—rice, peanuts, tobacco, mica, and the hair of the Angora goat, whose champion has just left the Hall.

Moreover, 80 per cent of the products of the State of New Jersey was retained on the dutiable list, while only 35 per cent of Nebraska's was so retained. The average per cent of dutiable articles retained in the States west of the Mississippi River is 36. The average per cent of the following States, New Jersey,

New York, Pennsylvania, Maryland, Delaware, Connecticut, Rhode Island, Massachusetts, New Hampshire, Vermont, Maine, Virginia, North Carolina, South Carolina, Kentucky, Tennessee, Georgia, Alabama, Mississippi, and Florida, is 56. Add to this the rates upon the articles left in the dutiable list in the States west of the Mississippi are, on an average, less than half those retained in the eastern and southern group, giving tariff advantage to East and South fully 5 to 1 as against the North and West.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. SLOAN. I will yield briefly.

Mr. HUMPHREY of Washington. I was going to ask whether, in considering that, you took into your calculations the extreme Northwest—the Northwest Pacific States?

Mr. SLOAN. I included those; I included them all. I would not forget the gentleman's State.

Mr. HUMPHREY of Washington. I think you will find it even less in that State than you gave it.

Mr. SLOAN. As they got away from the home territory of the majority of the Ways and Means Committee the harder they hit the producing classes of the country.

Mr. HUMPHREY of Washington. In the far Northwest they did not leave us anything.

Mr. SLOAN. They did not seem to know there was a Northwest.

For this unjust discrimination a cause is naturally demanded by the inquiring mind. Especially so by those among the injured. If a line were drawn from Canada to the Rio Grande River, leaving three-fifths of the area of the United States to the West and two-fifths to the East, there would be found residing within two-fifths area every Democratic member of the Ways and Means Committee credited with drafting the tariff bill. Moreover, 9 of these 14 were residents of the South or of some large eastern city. When we consider that the majority of the Ways and Means Committee appoints all the majority membership of all other standing committees and thus controls the legislation of the House, its ability to reach unjust ends will be readily recognized.

Mr. J. M. C. SMITH. Will the gentleman yield?

Mr. SLOAN. Yes, sir.

Mr. J. M. C. SMITH. I was wondering if the gentleman forgot rice.

Mr. SLOAN. I have rice in there. I remember eggs and rice. They are both favored by the Chinese, and I will discuss them later.

It has been pertinently inquired, however, why the other branch of this Congress, which has not yet ceased to be a deliberative body, should have sanctioned this outrage by the House. It is properly suggested that that body has not a large Democratic majority and that there are a number of Democratic Members from the Northwest. These considerations appealed strongly to me. I could not understand why Members of that body representing the great northwestern producing States should allow their party colleagues to trample upon the rights and interests of the States and peoples whom they were in duty bound to defend. A careful reading of the Congressional Directory, however, reveals the fact that some half-score Members of that body from the Northwest found their nativity in the South in States where at the time they left were devoted to the ultra doctrines and theories of John C. Calhoun. Migrating into the Northwest they carried with them their prejudices and held the same apparently superior to the interests of the States whose legislatures had granted them commissions. They were confronted with the question in their party caucus whether they would defend the interests of their States or blindly follow the prejudices they had carried into those States. They were further asked to support legislation which Members of that body from the South would not now support when applied to the products of their own States; so that we have southern Members of that body standing against free peanuts, free mica, free sugar, free tobacco, free rice, and free angora goat hair. The wonder is that this half-score men did not boldly face their pressing colleagues and say: "True we came from your section. We love it and all its traditions and history. We carried to our new homes and our new people the economic and political beliefs which we absorbed in our childhood and youth, but we will not now be party to the perpetration of a sectional wrong, especially if that wrong is to be inflicted upon the people whose commissions we hold. When we left your section of the country these new people became our people, and their interests our interests."

Parliamentary rules forbid more definite statement as to name and act, but upon suitable occasion I shall publicly state specifically to whom I have referred and make other pertinent comments thereon.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. SLOAN. Certainly.

Mr. HUMPHREY of Washington. I would like to call the gentleman's attention to the fact that there was one Senator who did not belong to the Democratic Party, but it suits his description, who voted for the bill.

Mr. SLOAN. If my blanket is larger than I figured, let it cover that with which it comes in contact.

Mr. GARDNER. Will the gentleman say what party the Senator belonged to?

Mr. HUMPHREY of Washington. I have not the floor.

Mr. SLOAN. I would like to proceed. The gentleman from Washington has already pretty well set forth as to whom the description applies.

Mr. HUMPHREY of Washington. If the gentleman will permit, I do not think it will be very hard to identify him. There are but three parties in the Senate, and only one man belongs to one of those parties.

Mr. SLOAN. Let no man complain of sectionalism in this speech. That it is charged is true. But the issue was not made on this side of the Chamber; it was made by the authors and supporters of the Underwood bill in this House, the Senate, and the White House. Let him who would remove sectionalism rise in the place of power and cause to be repealed that part of the law affecting farm products and substitute a fair schedule in harmony with the favored schedules of the new law. Until you do so do not complain of sectionalism. You made it. Until you remove it you must answer for it. [Applause.]

If this injustice could have been excused by pressing revenue necessities, it might be tolerated, but the revenue effect of the Underwood-Simmons law amounted to a willful and deliberate diversion of revenues from the United States Treasury.

I submit the following tables, showing the dutiable goods entered at our ports for the period for the fiscal years beginning with 1897 and closing 1912; also separate table for 1913, which, by reason of the foreshadowed tariff action, is given a place by itself.

*Imported dutiable merchandise entered for consumption: Values, duties collected, and ad valorem rates, 1897 to 1912, by schedules of the respective tariffs in force in the years named.*

| Year ended June 30— | Schedule A.—Chemicals, oils, and paints. | | | Schedule B.—Earths, earthenware, and glassware. | | | Schedule C.—Metals, and manufactures of. | | | Schedule D.—Wood, and manufactures of. | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Values. | Duties collected. | Average ad valorem rates. | Values. | Duties collected. | Average ad valorem rates. | Values. | Duties collected. | Average ad valorem rates. | Values. | Duties collected. | Average ad valorem rates. |
| | | | *Per cent.* | | | *Per cent.* | | | *Per cent.* | | | *Per cent.* |
| 1897 | $19,003,638 | $5,440,024 | 28.63 | $21,166,515 | $7,605,169 | 35.93 | $23,603,665 | $8,955,132 | 37.94 | $1,485,479 | $339,974 | 22.83 |
| 1898 | 19,513,037 | 6,146,884 | 31.50 | 15,192,178 | 7,387,433 | 48.63 | 18,847,123 | 8,454,289 | 44.86 | 5,241,083 | 1,205,278 | 22.57 |
| 1899 | 21,570,616 | 7,009,695 | 32.50 | 17,244,220 | 8,863,349 | 51.40 | 18,152,727 | 7,809,281 | 43.02 | 7,568,420 | 1,671,048 | 22.08 |
| 1900 | 26,955,991 | 8,184,044 | 30.36 | 20,090,172 | 10,106,541 | 50.31 | 29,089,333 | 11,280,853 | 38.78 | 11,711,446 | 2,351,940 | 20.08 |
| 1901 | 26,414,360 | 7,415,496 | 28.07 | 20,166,399 | 10,301,486 | 51.08 | 28,631,743 | 10,922,077 | 38.15 | 10,635,183 | 2,049,457 | 19.27 |
| 1902 | 29,991,974 | 8,499,709 | 28.34 | 21,424,011 | 11,365,381 | 53.05 | 38,870,207 | 14,973,244 | 38.52 | 14,556,267 | 2,572,527 | 17.67 |

***Imported dutiable merchandise entered for consumption, values, duties collected, and ad valorem rates, by schedules, of the existing tariff, during the fiscal year 1913.***

| | Values. | Duties collected. | Average ad valorem rates. |
|---|---|---|---|
| Schedule A: Chemicals, oils, and paints | $49,386,692 | $13,017,094 | 26.36 |
| Schedule B: Earths, earthenware, and glassware | 24,862,282 | 12,340,456 | 49.64 |
| Schedule C: Metals, and manufactures of | 64,299,772 | 20,513,674 | 31.90 |
| Schedule D: Wood, and manufactures of | 27,851,295 | 3,408,228 | 12.24 |
| Schedule E: Sugar, molasses, and manufactures of | 91,447,552 | 53,481,801 | 58.48 |
| Schedule F: Tobacco, and manufactures of | 32,437,743 | 26,748,125 | 82.46 |
| Schedule G: Agricultural products and provisions | 99,798,484 | 27,754,576 | 27.71 |
| Schedule H: Spirits, wines, and other beverages | 22,372,476 | 19,475,562 | 87.05 |

***Imported dutiable merchandise entered for consumption, values, duties, collected, and ad valorem rates, by schedules, of the existing tariff, during the fiscal year 1913*—Continued.**

| | Values. | Duties collected. | Average ad valorem rates. |
|---|---|---|---|
| Schedule I: Cotton manufactures | $25,036,975 | $11,061,373 | 44.14 |
| Schedule J: Flax, hemp, and jute, and manufactures of | 116,587,611 | 48,911,883 | 41.95 |
| Schedule K: Wool, and manufactures of | 45,335,616 | 25,833,028 | 56.98 |
| Schedule L: Silks and silk goods | 29,224,018 | 14,811,561 | 50.68 |
| Schedule M: Pulp, papers, and books | 24,899,335 | 5,091,232 | 20.45 |
| Schedule N: Sundries | 126,157,230 | 29,803,424 | 23.62 |
| Total dutiable | 779,717,079 | 312,262,215 | 40.05 |

An examination of the foregoing statistics will show the following facts:

First. That Schedule G, in 1897, in point of view of dutiable imports, ranked No. 5, while in 1912 it was first.

Second. That Schedule G as a revenue producer among the schedules in 1897 ranked ninth, while in 1912 it had risen to third.

Third. That Schedule G in 1897 showed dutiable importations of only $33,716,958, in 1912 it had risen to $117,711,156; and Schedule G in 1897 produced only $8,613,987 revenue, increased in 1912 to $34,146,071.

Fourth. That while Schedule G in 1897 had but 8 per cent of all the dutiable importations, in 1912 it had risen to 14 per cent.

Fifth. That while Schedule G in 1897 produced only 5 per cent of the import revenues, in 1912 it produced 11 per cent.

Sixth. It will be noted that while the revenues of Schedule G in 1897 were less than those of Schedule C (metals), in 1912 they were twice as great. While the revenues from Schedule G in 1897 were less than one-half those of Schedule F (tobacco), it now exceeds Schedule F by nearly $9,000,000. While approximately equal to Schedule H (spirits) in 1897, Schedule G now doubles it in the revenue production. While Schedule G was less than Schedule I (cotton), it now produces three times Schedule I's revenue. That Schedule G in 1912 produced more revenue than Schedule I (cotton manufactures), Schedule K (wool—raw wool amounting to $14,000,000 eliminated), and Schedule D (lumber) combined.

Seventh. The dutiable importations of Schedule G have increased more between 1897 and 1912 than any other schedule, and Schedule G has increased as a revenue producer more rapidly than any of the other grade schedules, its percentage of increase in that period being 296 per cent.

As a schedule for "tariff for revenue only," viewed under the 1909 law, it is certainly ideal. From a competitive tariff standpoint it is the most nearly perfect schedule of the list, and from a protective basis it has been satisfactory. Yet this is the schedule from which the free list received its most numerous recruits, and the reductions on its remaining articles have been the most drastic of all the schedules.

Now let us see. The general fund of our Treasury on February 28, 1913, had a balance of $147,036,682.68 and on October 4, 1913, the day before the tariff bill went into effect, a balance of $123,694,624.96. Since then it has been falling with increasing speed until now the balance is only $92,866,547.85, and for the last month it has been going down at the rate of $68,000 for every hour the Treasury is kept open.

Objections to these discriminations and injustices, and the sacrifice of the Treasury's rights, made on the floor of the House and Senate fell upon dull and scornful ears. The substantial answer given was: "The caucus had decreed that the deed be executed. The majority of the House was simply executing caucus decrees. Let the Northwest tell its troubles to the police."

The tariff bill has been in effect for nearly all of October and the full calendar months of November, December, January, and February, and this period is pertinent for consideration. I submit the following table showing farm-product importations for those months, together with importations for corresponding months of the preceding fiscal year:

*Imports into United States of certain farm products, for October, November, December, 1912, and January, 1913, under 1909 tariff act, together with those for October, November, December, 1913, and January, 1914, under 1913 tariff act.*

[a] Total for four months, $4,766,370.

The facts of this table may be comforting to the farmers. That is comforting to the people who want to be spurred to competition by the chairman of our committee.

I remember how that side laughed when I insisted that we were entitled to keep at least a part of the duty on corn. The increase in corn importation was 3.224 per cent for the four months under the new law over the full year under the old law.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. SLOAN. Yes.

Mr. MADDEN. What effect did that have on the price of corn?

Mr. SLOAN. Corn has gone down, according to the estimate of men who are competent to judge, from 10 to 15 cents a bushel.

Mr. MADDEN. Is the average corn crop this year up to the standard of other years?

Mr. SLOAN. It is not up to the standard, and notwithstanding our reduced amount of production, the price went down, when the Argentine cargoes came in sight, from 10 to 15 cents a bushel.

Now, in oats the increased importation was 46,000 per cent.

Mr. FESS. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Nebraska yield to the gentleman from Ohio?

Mr. SLOAN. Yes.

Mr. FESS. How much reduced in price is the manufactured article made out of corn to the consumer by the cheapening of the product to the farmer?

Mr. SLOAN. Well, it would take a market microscope and the imagination of the chairman of the Committee on Ways and Means to discover it. [Laughter on the Republican side.]

Mr. WINGO and Mr. MOORE rose.

The CHAIRMAN. To whom does the gentleman yield?

Mr. SLOAN. I will yield to the gentleman from Pennsylvania [Mr. MOORE].

Mr. MOORE. If the prices of corn, potatoes, and so forth, have gone down on the farm, and we still pay the same for them in the cities, will the gentleman explain who gets the benefit of this reduction in price?

Mr. SLOAN. The importers get the benefit. The men who financed the Democratic campaign in 1912 obtain the advantage.

Mr. GOULDEN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. SLOAN. Yes.

Mr. GOULDEN. I thought I heard the gentleman state that the price of corn and potatoes had gone down?

Mr. SLOAN. I spoke of corn.

Mr. GOULDEN. I want to say, so far as the East is concerned, that that is not correct. I sold a thousand bushels of corn and quite a quantity of potatoes in the last few weeks at exactly the same price that I received last year for them.

Mr. SLOAN. The gentleman's comparison is imprope.. If he has noticed the imports coming from Argentina, he will have noticed that the price fell 10 or 15 cents a bushel in January and February. The gentleman should not compare the price with what it was last year because that would not be fair either to himself or to myself. I deal and have dealt in corn myself.

Mr. MADDEN. Mr. Chairman, will the gentleman yield again?

The CHAIRMAN. Does the gentleman yield?

Mr. SLOAN. Yes.

Mr. MADDEN. If the price of corn and wheat and oats and potatoes goes down, what will happen in the fall?

Mr. SLOAN. The Democrats will also. Then there will be justice in the land. [Laughter on the Republican side.]

Mr. WINGO. A moment ago the gentleman from Ohio [Mr. FESS] asked the gentleman if the price of corn products—that is, the articles that the consumer gets, manufactured out of corn—had gone down, and the gentleman from Nebraska said it had not. Will the gentleman tell us what particular corn product he had in mind?

Mr. SLOAN. I had occasion to look all over that, and the gentleman knows how varied they are, and the price lists are available to him. I went into the matter before I made that statement, because I was satisfied that the inquiring mind of the gentleman from Arkansas or of somebody else would raise the question.

Mr. MOORE. With reference to the question of the gentleman from New York [Mr. GOULDEN], does not the gentleman from Nebraska think that inasmuch as the colonel's corn is produced near to a city market and he knows what the city market is, he would ask the market price when he takes it there?

Mr. SLOAN. Yes; but I do not want to step on the gentleman's corn. [Laughter.]

Mr. GOULDEN. The gentleman is in error, as he usually is when he speaks of such things.

Mr. SLOAN. Of these cattle 271,387 came from Mexico. That immediately after our duty was removed the enterprising statesman-soldiers of that country levied an export duty on these cattle running from $2 to $10 per head. It may be a matter of comfort to the farmers of this country to know that while cattle are shipped into the United States to compete with the products of their fields and pastures, there has been paid export duty of at least $542,774, which, instead of going into the Treasury of the United States, has gone to swell the war chests of the bloody Huerta or fill the girdle of the villainous Villa. Thus is pillage, brigandage, and war continued south of

the Rio Grande while on the north "watchful waiting" goes somnolently on. [Applause.]

Mr. MADDEN. Mr. Chairman, will the gentleman permit an interruption there?

The CHAIRMAN. Does the gentleman yield?

Mr. SLOAN. Yes.

Mr. MADDEN. Does the gentleman contend that because of our present tariff policy we are furnishing the funds with which to carry on the slaughter in Mexico?

Mr. SLOAN. I am not a master of English, but I thought I was able to say that, and I think I did. If I did not make it plain, I do it now. The present tariff policy is furnishing them funds, because it gave them an opportunity to put on an export duty on cattle the minute we took off the import duty, and William Benton knew it, and because Benton would not pay it he lost his life.

Now, Mr. Chairman, I submit figures to show the enormous increase of the importations into this country from Argentina. Argentina is our great competitor, actual and potential. The table shows importations from Argentina of 4,102,598 bushels of corn during three months, which had the effect of reducing the price of corn to our farmers. The corn crop of Argentina just ripening is about 900,000,000 bushels as against 500,000,000 one year ago. There will be for export at least 500,000,000 bushels as against 90,000,000 bushels a year ago. Last year Argentina shipped to the United Kingdom 13,464,204 bushels; the United States to United Kingdom 7,834,599 bushels, and Argentina will this year wrest the United Kingdom markets from the American corn producers, as it has in the last few years taken the United Kingdom beef markets from the Americans, as the following table will demonstrate. United States export of corn for 1912 was 41,000,000; for 1913, 46,000,000.

*Exports of corn from United States and Argentina to the United Kingdom for certain years.*

| 1912 | 6,111 | 6,813,578 |

Corn is shipped from Argentina to our coast cities at about 3 cents per bushel. To ship corn from the Missouri River to the Atlantic seaboard the producer must pay an average of 12 cents per bushel. When we consider that the Argentina laborers get less than one-half what our farm hands receive, and that their lands sell for less than one-half what our lands sell for, we can readily see what disadvantage the western farmer will have in competing with the Argentine producer for the Boston, New York, Philadelphia, Baltimore, and New Orleans markets. It is probably owing to this fact that this Government is so interested in Argentina, and the fact that Argentina is taking our markets from us, that Democratic leaders are now engaged in the delightful task of raising Argentina from a ministerial rank to an ambassadorial rank.

Mr. SELDOMRIDGE. Mr. Chairman, will the gentleman yield for a question?

Mr. SLOAN. Yes.

Mr. SELDOMRIDGE. Does not the gentleman think it is a good thing for the United States to import foodstuffs?

Mr. SLOAN. No; I do not think it is a good thing for the United States to import foodstuffs, because I believe that you who live here and pay the taxes should be allowed to build up your soil and produce your meat and flour and everything of that kind, so that you will have a staple product upon which the country may rely in time of war as well as peace. I am not in favor of permitting the producers of Argentina, Canada, and Australia to fix the New York, Boston, Philadelphia, and Baltimore price of our meats and cereals.

Mr. SELDOMRIDGE. Let me ask the gentleman another question, and then I shall be through. Does not the gentleman think it a good thing for the United States that Argentina has so much corn and cattle to sell us, in order that Argentina may buy our manufactured products, which statistics show are increasing to a great extent?

Mr. SLOAN. I understand that is the policy of the party that is very much enamored of what Argentina is doing——

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. SLOAN. Just wait a moment. It is probably owing to this fact that this Government is so interested in Argentina, and the fact that Argentina is taking our markets from us, that Democratic leaders are now engaged in the delightful task of raising Argentina from a ministerial to an ambassadorial rank. [Laughter on the Republican side.]

Mr. HUMPHREY of Washington. I want to call the gentleman's attention to the fact that since Argentina has been selling more largely to us, instead of our going down there and capturing her markets, the figures are the other way. We are selling less abroad and buying more abroad.

Mr. SLOAN. That is the way it goes, of course.

Mr. HUMPHREY of Washington. The gentleman from Colorado [Mr. SELDOMRIDGE] evidently has not examined the figures.

Mr. KELLEY of Michigan. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. SLOAN. Yes.

Mr. KELLEY of Michigan. If the statement of the gentleman from Colorado were true—and it appears not to be—does not the gentleman from Nebraska think it would be simply trading the farmer for the benefit of the manufacturer?

Mr. SLOAN. Yes; that is what they have been doing all along. I suppose it will comfort the gentleman from Colorado and his constituents to know this fact: That the corn shipped from Argentina to New York is shipped in bottoms, costing 3 cents a bushel. His corn, shipped from Omaha to New York and other Atlantic ports in competition with Argentina corn, would have to pay 12 cents a bushel for transportation.

Mr. SELDOMRIDGE. Mr. Chairman, I do not like to interrupt the gentleman again, but does not the gentleman know that the reason for the importation from Argentina of farm products in such large quantity is largely the failure of the corn crop in certain sections of the Middle West?

Mr. SLOAN. I know nothing of the kind. I know it is simply because we removed last summer the 15 cents per bushel duty which the old law placed upon corn. [Applause on the Republican side.]

Mr. FESS. If the gentleman from Colorado had taken the right position, and if that were true that they are shipping here because of the failure of crops in this country, what becomes of the argument on that side of the House that we ought to buy at all times in foreign markets?

Mr. SLOAN. Oh, they have not any argument on the other side except the law of force and caucus decree. [Applause on the Republican side.]

Mr. WINGO. Will the gentleman yield?

Mr. SLOAN. I do.

Mr. WINGO. I only want some information, and do not ask this question in the spirit of controversy. I understood the gentleman a moment ago to say that the rate from Argentina was 3 cents a bushel and the rate from Colorado to New York was 12 cents.

Mr. SLOAN. From Omaha to New York it is 12 cents.

Mr. WINGO. The old tariff rate under the Payne-Aldrich bill was 15 cents, was it not?

Mr. SLOAN. It was 15 cents.

There has been shipped in beef from Argentina into the United States ports from October 3 to January 1, 6,606,886 pounds. This is placing the American pastures in competition with those of Argentina and American unshipped corn in competition with the Argentina unshipped corn.

It has been recently boasted by Josephus C. Daniels, Secretary of our Navy, that he had purchased a large cargo of Argentine beef to feed our Navy rather than pay the American price. He paid 11.9 cents a pound—the American bid was 12½ cents. He saves a little more than half a cent on the pound for the Treasury. If the enterprising Argentinians who had been shipping to us considerable under the old law had brought into America the same meat under the former tariff law they would have paid 1½ cents a pound into the United States Treasury. Our genial Secretary of the Navy has to his mind saved one-half

cent to our Treasury where the Ways and Means Committee on the same pound of beef lost to the Treasury 1½ cents, a net loss to the United States Government and its now rapidly depleting Treasury of nearly a cent a pound. It reminds me of the North Carolinian farmer in the ante bellum days, whose servant was asked if his master was a good farmer. He said, "Of co'se he is. In the fall he sells the corn what the cattle needs and makes money once, and in the spring he sells the hides of cattle what died for the want of corn and makes money twice." [Laughter on the Republican side.] Then one might wonder how much additional patriotism, bravery, and fighting qualities would be instilled into our jolly sailor boys by having the Secretary of the Navy announce to them that he was feeding them upon Argentine beef instead of that America produced.

Mr. MADDEN. Does the gentleman know whether the standard of beef raised in the Argentine Republic is as high as the standard of the beef raised in the United States, and whether or not it brings a less price in the European markets than American beef?

Mr. SLOAN. I have made a careful study of that subject, and what the gentleman indicates by his question is absolutely true. Argentine beef does bring a less price in European markets than American beef. If cheapness is all that our naval officers have in mind, the fine glorious silken national emblem, with all the colors of the rainbow within its folds, might be displaced and a cheaper flag bought from some country with a surplus. [Applause.]

Wheat is on the free list, except where the exporting country charges a duty, yet Argentina, our great competitor, actual and potential, has recently so adjusted her tariffs that wheat and its products can all enter our ports free. Every morning paper brings an account of heavy shipments of butter from Belgium, Canada, Argentina, and elsewhere. The farmers of the Northwest, who during recent years have invested freely in dairy cattle, in response to American demand for butter, now find the cow values reduced. Every farmer and housewife in the Northwest who have been finding the means to meet their grocery and clothing bills from butter or butter-fat sales have now the opportunity to see the concrete realization of the free-trade predictions with which the country has been recently regaled.

In Nebraska our egg products have for the last several years exceeded the vaunted gold output of Alaska. One of the principal sources of the farmers' wealth, especially those of small holdings, has been the poultry yard. This source of northwestern prosperity did not escape the vigilant eye of an adverse administration. The impatience of the party in power and its supporters to wreck the poultry and egg industry was shown in a movement during the month of December here at the National Capital, aided and abetted by the wives of those in high places, in a well-organized egg boycott, where cheaper eggs were demanded or the market be closed. While this was going on great ships laden with eggs purchased at from 7 to 10 cents a dozen in China were speeding their way to American ports. In every great market of the United States these cargoes have for several weeks past been discharged, and the price of eggs has been going down like the general fund of the National Treasury. [Laughter on the Republican side.]

Mr. MADDEN. I should like to inquire of the gentleman if the hens in China work at the same rate of wages as the men in China?

Mr. SLOAN. Relatively the same, I think. [Laughter and applause on the Republican side.]

A tariff argument is being presented to the poultry people of the United States which if not gratifying is undoubtedly convincing. When the administration supporters, under a boycott and an adverse tariff law, join hands across the great seas with the Chinese against the interests of American producers, then will egg prices go down; but I do not think Democratic tariff doctrine will go down much longer with the poultry people. [Applause on the Republican side.]

Mr. J. M. C. SMITH. Will the gentleman yield?

Mr. SLOAN. Yes; if the gentleman will be brief.

Mr. J. M. C. SMITH. Has the gentleman taken into consideration that the wages paid for farm labor in those foreign countries are not more than one-fourth what the farmers in the United States pay for their farm help?

Mr. SLOAN. I made that statement, but I did not make it quite so strong. I said one-half as much. I have made a careful study of that matter, especially in the Argentine.

Mr. Chairman, the boycott is an un-American system of attaining an economic end. The producers of this country view it with abhorrence. But if the boycott is to be used or countenanced by those in authority, might it not be well to consider what would be the effect if the American producers should resent this unjust and unwarranted discrimination against themselves by producing for a season only that which they required for their own necessities and left the consuming public, which to some extent seems behind this legislation, to depend upon the prices the foreign importers would see fit to fix upon their supplies?

Nearly every foreign freighter coming to our shores tells the story of increased importation of products to compete with the northwestern farmer. The depression in foreign countries is being relieved; but in being relieved it is communicated to this country. One of the strongest evidences of this is the idle freight cars. The surplus freight cars on December 1, 1912, were 26,135, while on the same date in 1913 they were 67,466. On February 1, 1913, they were 62,045; February 1, 1914, they were 211,960.

A large portion of this idleness is attributed to the fact that during the first nine months of 1913 the freight cars toiled their way from the country districts to the great cities bearing farm products to our ports for consumption. Now the great ocean freighters coming from all quarters of the globe, each carrying many trainloads of products, are delivered in the great cities and dispense with the use of the freight cars.

The additional imports of live stock and food products carried to our shores in foreign vessels since the enactment of the Underwood law over that of the corresponding period of one year ago, reduced to carload loads, would have set in operation 50,000 cars. It would have given employment to many thousand railroad men, freight handlers, and others. There would be many less idle cars, many less idle men; much more paid to the railroads, much less to the foreign shipowners; more wages to American laborers, much less to the foreign producers, dock men, and shipping interests.

Never, perhaps, was the simple tariff doctrine of Abraham Lincoln more clearly indorsed than in the commercial movement of the present time—that if we bought from the foreigners we would have the goods and the foreigners would carry away the money, but if we buy from our own people we retain the goods and keep the money. The currents of the Atlantic are taking on a decidedly tawny hue. Large gold shipments are leaving our ports for the foreign shores. On the 12th of February, Lincoln's birthday, an admiring supporter of our honored President, rhapsodizing his chief, compared him to the great Lincoln. Our President has manly qualities and distinguished ability.

The student may find points in common as well as of difference between him and the martyred President. But in seeking similarities I have heard none of them start out with the tariff. They were alike in this, both were elected by a minority of the American people. Lincoln was personally in favor of freeing the slaves, but only a minority of the American people so voted. However, a majority did vote to support the Union. Lincoln saw his opportunity and also his duty. He made his first consideration the support of the Union, and never pressed his special personal object until it was used as an incident to support the main proposition which was close to the hearts of the American people. President Wilson, confronted by an adverse majority vote and supported by only a minority in favor of sectional free trade, saw his opportunity and used it rather than following the line of duty as pointed out by a majority of the American voters. Lincoln, as a blow in behalf of the Union, liberated from involuntary servitude more than a million able-bodied men. They called the act the Emancipation Proclamation. President Wilson liberated more than a million able-bodied men from voluntary well-paid service. And they called the act the "New Freedom." [Laughter and applause on the Republican side.]

At Chicago, recently, Secretary Daniels called attention to President Wilson's following statement made some months ago in that city:

> I am trustee for the prosperity of the United States in council.

I think a great deal of our President and am very patient in matters which challenge criticism. But permit me to say there are many million of farmers watching their falling prices, as well as one and one-half million laborers with a great deal of leisure on their hands who are examining their trustee's accounts, inspecting the form of his bond, and ascertaining the responsibility of the sureties. [Applause.]

In my opening remarks I criticized the lack of frankness of the Democratic platform in its assurance to the farmers of the country. I can not charge lack of frankness to the authors and supporters of our new tariff law. With a frankness almost brutal there is indicated on page 3 of the report filed by the Ways and Means Committee in support of the Underwood bill the following statement, the remedy for which is the principal object of the Underwood bill.

TABLE 1.—*Relative wholesale prices and per cent of increase over 1897.*

| Commodity. | Price, 1897. | Price, 1900. | Increase over 1897. | Price, 1910. | Increase over 1897 |
|---|---|---|---|---|---|
| Farm products | 85.2 | 109.5 | 28.5 | 164.6 | 93.2 |
| Food | 87.7 | 104.2 | 18.8 | 128.7 | 46.7 |
| Clothing | 91.1 | 106.8 | 17.2 | 123.7 | 35.8 |
| Metals and implements | 86.6 | 120.5 | 39.1 | 128.5 | 48.2 |
| Drugs and chemicals | 94.4 | 115.7 | 22.5 | 117.0 | 23.9 |
| House furnishing goods | 89.8 | 106.1 | 18.1 | 111.6 | 24.2 |
| Miscellaneous | 92.1 | 109.8 | 19.2 | 133.1 | 44.5 |
| All commodities | 89.7 | 110.5 | 23.1 | 131.6 | 46.7 |

At the head of the list and charged as principal offender is the high price of farm products, which demands a lowering remedy. This is made despite the fact that farm products in 1897 were relatively much lower than were the other classes of articles at that time, and the tariff bill delivered its most deadly blow against farm-product prices. The committee, on page 38 of its report, concentrated the meaning of its whole measure within the limits of a single sentence which expresses now its obvious effect. This is the committee's deliverance:

In our judgment the future growth of our great industries lies beyond the seas.

Of all our industries, agriculture is and has been the greatest. It has been the belief of most Americans that the growth of our industries should be within our own national borders and not "beyond the seas." Yet this measure, by its terms calculated and by the quoted statement, professes the purpose to locate the growth of our greatest industries beyond our national borders. Most of us would rather see prosperous wheat fields this side of the Canadian line than beyond it. Somehow or other, I have not been especially interested in the special prosperity of our wheat, oats, and barley in Canada, beyond the "unsalted seas."

A fierce attack was recently made in the Senate of the United States upon a publisher of my State for advertising the advantages, prospects, and the benefits of Canadian lands. His means of inducing the migration from the United States to Canada was severely censured. How slight his offense was compared with the deliberate statement of the great Ways and Means Committee, which, over the signatures of 14 members out of 21, tells every American citizen interested in the production of meats and cereals that growth in that industry does not lie within the American borders, but does lie "beyond the seas." I think that a vast majority of the American people would rather see rich waving fields of corn all the way from the Lakes to the Gulf and from ocean to ocean than its large source of production "beyond the seas" upon the slopes of Argentina. [Applause on the Republican side.]

The Ways and Means Committee directs the attention of the young farmer to the grassy plains of Australia, Argentina, and Canada for the production of cattle and sheep, and bids the enterprising citizen go hence to mingle and participate. I would rather keep this class of citizens at home and build up our flocks and herds here, so that the American people in time of war as well as peace can depend on American sources for American meat and American clothing.

The people of the Northwest are now observing the workings of the new tariff. Beautiful theories of prospect have given way to the grinding, crushing realities of fact. They have seen increasing competitions, decreasing prices.

These facts are not only admitted, but gloated over by Hon. W. C. Redfield, Secretary of Commerce, in a recent speech at Wheeling, W. Va., following which he says that the Government intends to help and not hinder legitimate business. Thus the farming industry receives from the head of the Department of Commerce its first official brand of illegitimacy.

The Secretary contends "climatic conditions, not business depression, is responsible for the number of unemployed in New York and other industrial centers." A great defense. Almost ingenious, nearly desperate. I would suggest that the next tariff bill be referred to the Weather Bureau instead of the Ways and Means Committee. I suppose the 211,960 idle freight cars on the 1st day of February, 1914, would be accounted for by the precession of the equinoxes, and the one and a half million idle men due to the precise position of the southern cross upon the date of the summer solstice. [Laughter and applause on the Republican side.]

When the tariff bill was under way the Ways and Means Committee, to silence the protest of the farmers and northwestern Congressmen, set forth in its report a statement claimed to be based on legitimate Treasury information showing probable importations during the first year's operation under the proposed law. The following shows forecast for a full year and the actual imports for the first four months under the new law:

| | Forecast for year. | Imports for 4 months. |
|---|---|---|
| Cattle | $5,570,000 | $10,110,948 |
| Horses | 612,500 | 993,624 |
| Eggs | 210,000 | 612,760 |
| Butter | 325,000 | 1,031,759 |
| Oats | 945,000 | 5,628,405 |

Those proposed for the free list had no accompanying prophecy. Some of the above articles were on the dutiable list when the bill passed the House, but were free listed in the Senate.

These estimates are in keeping with the general lack of accuracy of Democratic forecasts. On cattle I figure it they came within 300 degrees of hitting the mark. That kind of aim directed at the Gatun Dam in the Panama Canal would have hit the round house on the new Alaska Railroad. [Laughter.] The guess on the importation of oats shows more imported in the month of January than forecasted for a full year under the bill. The aim and hit recalls the juvenile couplet, "Alexander, great commander, shot a goose and killed a gander." Compared with many of these forecasts the lurid and discredited free-silver predictions of 1896, at which the world has been laughing for 18 years, would appear as unerring certainties. I commend to the Republicans and Progressives of this country the report of the Ways and Means Committee of the House on the Underwood bill as an effective campaign document.

This illustrates the unreliability of the now dominant party to grasp the large economic facts of our national revenue, industries, and commerce, and to frame legislation in accordance therewith. It is also an illustration of government by imagination that Democratic function which, unlimited by latitude, longitude, altitude, or depth, divorced from reason, unhampered by rule, untrammeled by law, unencumbered by logic, uncontrolled by history, regardless of equity, in violation of right, expecting to miss, but hoping to hit, disregarding consequences, says, "We are in now for once; it can not be for long; we will do our worst." Following this rule, they drafted and passed Schedule G of the Underwood bill.

It is related of a western Member of this House who voted for the Underwood tariff bill that when confronted by an incensed farmer constituent who saw his sale prices on the toboggan and his buying prices remaining on the old level, and a reason demanded for it, the Member said, "We concluded in the caucus that that bill was all right, but we are like the Arkansas vigilantes who had lynched a man charged with horse stealing, and no sooner was the man dead than proof of his innocence was presented. They carried the body to the cabin of the disconsolate widow; the leader pushed it through the door saying, 'Here's your husband, marm, we thought he stole a horse and we hung him. It's our mistake, and the laugh is on us.'" The producers of this country, like the widow, must at present accept this flippant excuse. Wait, however, until her separated brothers and faithful father get together to avenge the wrong. [Applause on the Republican side.]

What could you expect of a legislative body which takes deliberation away from the floor of the House and transfers it to an unconstitutional body called a caucus? Further, what can you expect of a system which takes legislation to the Executive for his approval before its passage instead of carrying it to him after passage, as the Constitution prescribes? [Applause on the Republican side.]

The producers of this country are Constitution upholders, law abiders, and believe in compliance with the expressed will of the people. Not only do they believe in it, but they insist upon it. They are willing to bear burdens if they have corresponding benefits. But they refuse to be made burden bearers for burden beneficiaries. They have intelligence to see injustice; they have the courage to resent it; and that resentment will be effective. The perpetrators of the injustice to them in the Underwood bill will ere long feel the weight of their hands. Because a burden, if fraught with equity, is light, indeed; discipline tempered with justice is readily tolerated; but injustice, though feather-weighted, bears down like a plummet of lead, and unwarranted discrimination will meet with emphatic rebuke. [Applause on the Republican side.]

Mr. HAUGEN. Mr. Chairman, I yield two minutes to the gentleman from Washington [Mr. HUMPHREY].

Mr. HUMPHREY of Washington. Mr. Chairman, the gentleman from Colorado [Mr. SELDOMRIDGE] asked the question

a while ago if it was not a good policy for us to buy from Argentina so that Argentina would buy from us. That has always been a favorite Democratic theory. The facts, however, do not fit it. Our Democratic friends should look at the figures of the imports and exports for the last few months—since they have enacted their theory into law. I hold in my hand the statistics for the months of December, 1912 and 1913, and I find that under the present Democratic tariff law we bought in December, 1913, $2,034,581 more from Argentina than we did in December, 1912. I find also that instead of Argentina buying more from us under this free-trade law she bought $145,131 less in December, 1913, than she did in December, 1912. These statistics show that every country of North America, South America, and Europe under the new tariff law have sold us more and we have sold them less than we did under the Payne law. This is the way we are now capturing the markets of the world. [Applause on the Republican side.]

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from Pennsylvania [Mr. MOORE].

Mr. MOORE. Mr. Chairman, the problem of the high cost of living continues to agitate the public mind. It is a live issue in the large cities, where, despite the revision of the tariff downward, the price of food supplies continues to increase. Instead of the "high" it has become the "higher" cost of living.

The lowering of the tariff has not afforded the relief expected by the people. The distance from the farm in Iowa to the consumer in Philadelphia is just as great to-day as it ever was, and the hens, in proportion to their number, do not favor us with any more fresh eggs in January than they did 100 years ago.

We do not get our clothes any cheaper because the duty has been taken off wool, nor are we paying any less at retail for underwear or hosiery made of cotton. We are still paying freight to the transportation companies, and the department stores are still performing the benevolent function of introducing the producer to the consumer, at a reasonable commission.

It is not to be expected that any of these middle-of-the-road agencies between the farmer and the ultimate consumer are to go unpaid for the service they perform. The only question is, Are they being paid unduly high for the service rendered?

Agitators who do not lay the blame to the tariff have been in the habit of charging it up to cold storage, transportation, advertising, middlemen, and the like. They usually omit the labor charges along the line that are indispensable to distribution, but they never overlook the railroads. Railroads are held to a strict accounting and are easily assailed. Even those who advocate the improvement of waterways to afford competition for commerce sometimes fall into the mood of criticizing the railroads with exceptional severity.

THE RAILROAD VIEWPOINT.

It is therefore refreshing to have the railroad viewpoint frankly stated. Those who have given close attention to the question of distribution as it bears upon the cost of food supplies are fully aware that the railroad is not "the only culprit" in advancing the price to the ultimate consumer. Many of them believe the freight rates upon coal or farm products might be brought down if water routes were generally available to the people and rail and water lines were coordinated, but even those who so believe are not unmindful of the many subsidiary agencies that add their mite and portion to the breakfast-table cost.

They know that distribution is an umpire in the game between the producer and the consumer, and that according as it operates the food-supply costs advance or decrease.

I am thus taking the time of the House to introduce into the RECORD an unusual statement relating to distribution costs. It indicates that the railroads get only 5 cents out of 20 cents' worth of transportation for food supplies for which the consumer pays $1, and is best explained by the following letter from the president of the Lehigh Valley Railroad Co.:

LEHIGH VALLEY RAILROAD CO.,
*143 Liberty Street, New York, February 27, 1914.*

Hon. J. HAMPTON MOORE,
*House of Representatives, Washington, D. C.*

DEAR SIR: Some time ago the Lehigh Valley Railroad began an investigation for the purpose of tracing the cost of farm products of various kinds from their source to the ultimate consumer. In other words, we looked for every element and agency which enters into the cost of food from the farmer to the kitchen.

Our statistical experts followed the commodities from their actual sources to their final destination in the consumers' hands, securing accurate selling prices in every instance.

Because of your investigations into the so-called high cost of living and because the Lehigh Valley Railroad, like yourself, serves the people of Pennsylvania, we believe the result of our investigations will be of interest to you and we are sending herewith a summary of our statistical sheets.

Very truly, yours,

E. B. THOMAS, *President.*

The cost analysis to which Mr. Thomas refers is a valuable contribution to one of the great economic questions of the day, and I shall present it in full. It is especially interesting at this time in view of the many legislative restrictions confronting the railroads and because of the railroad contention that progress and improved industrial conditions depend largely upon an increase of rates. The statement will also have its interest for the farmer and the distributor, as well as the consumer, since analyzed it shows that of the consumer's dollar invested in food supplies hauled 1,500 miles—

| | |
|---|---|
| The farmer gets | $0.50½ |
| The middleman, including the packer, the local shipper, the distributor, the retailer, etc., get | .44½ |
| And the railroads, for transportation, get | .05 |
| Total | 1.00 |

I submit the statement, as follows:

A RAILROAD ANALYSIS OF THE TRANSPORTATION AND DISTRIBUTION COST OF FOOD SUPPLIES FROM THE FARM TO THE BREAKFAST TABLE.

The Lehigh Valley Railroad has made a compilation of the most commonly used farm products showing how much the farmer, the middleman, the railroads, and the retailers receive for their services.

Using the consumer's dollar as a basis, the figures obtained indicate that the farmer gets an average of 50½ cents, packers, local shippers, distributors, and retailers combined get 44½ cents, and the railroads get 5 cents. For an average haul of 1,500 miles the railroads get only one-twentieth of the retail price.

These figures are based on the varieties of food that go to make up about nine-tenths of every family's grocery bill. Meat is not included on account of the difficulty in arriving at a fair figure. But on such commodities as butter, eggs, milk, rice, potatoes, onions, sugar, tea, and the many kinds of canned, dried, and prepared fruits and vegetables it is entirely feasible to arrive at comparatively accurate figures. Any variation in the selection of the list will, of course, make some difference in the relative position of the producers and distributors, but the railroads' share remains the same. That can be figured to a certainty. For a 1,500-mile haul the railroads get only 5 cents.

Confining the inquiry to the haul over the Lehigh Valley Railroad itself, products from the large farming districts in western New York are brought to New York City, an average of nearly 400 miles, for a trifle over 2½ cents out of the consumer's dollar. While this is considerably less than the average haul, it shows that the butter, eggs, apples, poultry, and vegetables produced in all that rich and productive section are taken to their best market—New York City—for one-fortieth of what the city family pays for them.

The accuracy with which these figures have been obtained can be shown by comparing them with the figures of the Department of Agriculture. For instance, the Lehigh Valley gets half a cent out of a dollar's worth of western New York eggs sold in New York City, the farmer getting 50 cents and the 49½ cents being divided among shippers, producers, and retailers. The Yearbook of the Department of Agriculture for 1910, which takes up the question of freight rates, gives the average freight rate on a dollar's worth of eggs as six-tenths of 1 cent, a trifle more than the Lehigh Valley charges.

The Department of Agriculture says "when the farmer receives 50 per cent of the consumer's price the freight charge on butter is about one-half of 1 per cent of the consumer's price." The railroad's figures show the railroad also gets only half a cent out of each consumer's dollar, even when the farmer gets as high as 65 cents.

On butter, eggs, and sugar, however, the railroads receive the least share of the consumer's dollar. On commodities which are worth less in comparison to bulk the freight charge is naturally higher. On canned peas it is 3 cents; canned tomatoes, 4 cents; potatoes, 5 cents; and on such vegetables as turnips and cabbages, 6 cents. But canned salmon is brought all the way from the Pacific coast to New York—3,000 miles—for 7 cents out of the dollar for which it is sold. The highest rate the railroads get on a food product is 11½ cents of the consumer's dollar for bringing oranges in refrigerator cars, which are iced five times, from California to New York. All of which would tend to show that the railroads are being paid very little for the service they perform and are not in any way responsible for the high cost of living.

Their charge is so low, in fact, that if the railroads are granted the 5 per cent increase in freight rates for which they have petitioned the Interstate Commerce Commission it will only make a difference of 20 cents to each household a year. This does not refer to food alone, but to every article of food, clothing, furniture, or fuel that enters the house during the year. At the outside the additional cost for food to each household, based on an increased freight rate, will be 15 cents a year. A much more important item to the cost of living is the cost of city traffic.

It costs three times as much to haul farm produce from the water front of New York City to the stores where it is sold as it costs to haul it three or four hundred miles over the railroads that bring it to the city. Out of every dollar the consumer pays for fruits and vegetables the railroads get an average of only 5 cents, while the actual cost of cartage within the city is 15 cents. This means that the railroads get only 1 cent for carrying a dollar's worth of produce 100 miles, while the retailers and distributors charge 3 cents for hauling a dollar's worth of produce 1 mile.

These figures on street traffic have been secured by the Lehigh Valley Railroad, which has been conducting an investigation into the cost of living with the purpose of showing that the railroads receive a very small return for the important service they perform. The figures are based on the cost of bringing farm products from the rich districts about Geneva, N. Y., to New York City, a distance of 344 miles. On potatoes, onions, carrots, cabbages, apples—in fact, all manner of farm produce—the railroad charges less than 5 cents for hauling a dollar's worth the 344 miles to Jersey City and for transferring the car to a float and delivering it in New York or Brooklyn. But as soon as that dollar's worth of produce leaves the wharf the cartage charges begin to climb.

The distributors take for themselves out of that dollar's worth of produce 15 cents, 5 cents of which is charged against cartage. The retailer gets 30 cents out of the dollar, and 10 of this must also be charged against cartage.

Out of every dollar, then, which the city man pays for farm produce 20 cents is chargeable against transportation; but the railroads, which

do the most important piece of transportation, get only one-fourth, and the distributors for their comparatively trifling service get three-fourths.

An investigation of a similar character conducted by Bailey B. Burritt, director of department of social welfare of the Association for Improving the Condition of the Poor, shows that the cost of distributing farm produce in New York as figured by him varies from the Lehigh Valley Railroad's figures by only seven-tenths of 1 per cent.

STORM EFFECTS ON FOOD SUPPLIES.

Mr. Chairman, the great storm which has swept the Atlantic coast during the last two days adds a new interest to this railroad analysis of the factors entering into the higher cost of living. It is reported that the holding up of certain trains carrying milk and other provisions threatened a temporary food famine in the city of New York. This may or may not be true, but if a storm of such severity should continue for a week or a month, or if the railroads were held up that length of time for other cause, it is evident that much distress would fall upon nearly 5,000,000 people in that great city. Apparently their dependence for food supplies is not so much upon the steamships which bring foreign provender into the port of New York as it is upon the railroads that bring the supplies in from the farms and storehouses of the United States. Such supplies as have come in from abroad because of the removal of the tariff, like eggs from China, potatoes from Europe, and beef from the Argentine, have neither met the demand for food nor reduced the cost to the consumer.

IMPORTS NOT LESSENING COSTS.

Mr. GOULDEN. Will the gentleman yield?

Mr. MOORE. Yes.

Mr. GOULDEN. These importations that the gentleman speaks of were in negligible quantities, not sufficient to permit of a statement by percentage of the total amount required by the population in New York State.

Mr. MOORE. They have not been of sufficient quantity apparently to reduce the retail price to the consumer, because the consumer in New York, Philadelphia, and Boston is paying as much, if not more, for foodstuffs to-day as he did before the tariff bill was passed.

Mr. J. M. C. SMITH. Will the gentleman yield?

Mr. MOORE. Certainly.

Mr. J. M. C. SMITH. There were 14,000,000 bushels of potatoes imported; does the gentleman call that a negligible quantity?

Mr. MOORE. That would not be, but the imports may be negligible in the sense that the gentleman from New York puts it. They would not be negligible to the American farmer who has potatoes to sell, but no matter what the volume of imports, they have not been effective in reducing the price the consumer pays for potatoes. The people of New York City are paying just as much for their food supplies to-day or more than they did before these importations came in. What the gentleman from Nebraska said in answer to the gentleman from New York a little while ago is the truth—the importer is the chief beneficiary of whatever difference there is in the cost by reason of the lowering of the tariff. Neither the producer nor the consumer gets the benefit of it.

Mr. GOULDEN. Is not the farmer getting just the same price as he always got?

Mr. MOORE. The testimony of those who speak for the farmer is that they are not. In the grain case spoken of a little while ago by the gentleman from New York it is probable that he was shrewd enough to get the price at Baltimore, near to his farm. There are plenty of farmers next door to the big cities who do not sell at the Nebraska price. They sell at the price the city people are paying. If there are any fresh eggs being laid in the vicinity of Washington just now, the farmer who sells them will not let them go for the Nebraska price in April. He wants the Washington price to-day.

EFFECT OF ARGENTINE CORN IMPORTS.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. MOORE. For a question. My time is short.

Mr. HUMPHREY of Washington. Is it not true that the price of grain went down 12 cents a bushel on the arrival of corn in New York from Argentina?

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MOORE. I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Without objection, it is so ordered.

Mr. MOORE. Mr. Chairman, in answer to the gentleman from Washington I would say that it may be true that the arrival of grain from Argentina caused the American farmer's price to fall. I find nothing for congratulation in that incident, nor have I seen any evidence that the American consumer benefited by it. Just as it is in the matter of factory labor, the new tariff seems to have operated more in the interest of the foreign countries than it has in favor of our own. We are sending our gold to Argentina for cattle and corn when we might be sending it to the farmers of the United States. Meanwhile, the consumer is paying the same old prices for his food supplies, despite the fact that he has less business and less money to go upon. We are a mighty generous and self-sacrificing people under the free-trade habit.

PLIGHT OF THE NEW YORKERS WITHOUT STORAGE.

But to return to the plight of the New Yorkers. Mr. Chairman, it requires a vast quantity of foodstuffs to meet the needs of 5,000,000 human beings who are not themselves the producers of food supplies. In New York, as in other large cities, the people are housed up in long rows of brick and mortar, with only an open space here and there sufficient to raise a few flowers. Without communication with the farming sections of the country their position would be serious, even more so than that of the farmer who desires to sell his product to so profitable a market; the farmer would at least provide for himself. Therefore if a two days' storm is sufficient to give concern to the inhabitants of a great city, it follows that ample provision must be made for entire winters in the cities when the farms are not productive.

Anyone who has examined the subject of production and distribution knows that such provision has been made; that it had to be made long ago to meet the requirements of the ever-increasing urban population. Had it not been made on a large scale to care for just such a situation as is presented by the storm of the last two days, dire consequences would long since have overtaken many communities. There may be temporary embarrassment with regard to milk or similar daily needs, but the country's supplies have been stored up for just such an emergency. The economic conditions have demanded it, and each year the stores have been laid by against the day of need, to be drawn upon by large communities, just as the original farmer, who had no market in the wintertime, would draw for his own use upon his corn bin or the reserve stock of potatoes in the cellar, or the ham or shoulder in the smokehouse.

The problem of the larger supply than the individual farmer's stock would afford has been met by the warehouse and the cold-storage establishment. They draw upon the farm in times of plenty and store away for the consuming public in times of need. A process of such importance to producer and consumer may properly be subjected to legal regulation, but it is certainly not without its compensations, and these should always be considered.

PENDING BILLS AND NEED OF CAUTION.

There are now before Congress a number of bills the purpose of which is to regulate this system of storing and preserving food supplies. We are told they are not to be pressed for action by Congress until the administration has disposed of other measures which it deems of more importance. Whether these bills are pressed at this session or not, they should be carefully scrutinized and ample opportunity should be given for hearing those who are interested in the questions involved.

If it is true, as pointed out by the Lehigh Valley Railroad experts, that the producer gets only about 50 per cent of the consumer's paying price, and the railroads get only 5 per cent for transportation from the producer to the consumer, it is fair to assume that the remaining 45 per cent is earning its way in cold storage or in distribution or labor cost, in one form or another, somewhere along the line. There may be inequalities which should be adjusted, and regulation may be necessary to prevent corners in the market or other unscrupulous dealing, but any sumptuary legislation with regard to prices or distribution within the United States may be found to fall more heavily upon the producer and the consumer than upon the manipulator, who is presumed to operate between the two. If there is any crookedness in transportation, in storage, or in distribution, we should reach out for the crook and punish him; but the chief difficulty now, as it has been since the era of investigation first overwhelmed us a few years ago, is to find the crook. In the quest for this disturbing element much legislation has been passed, with no very great number of malefactors being exposed and brought to earth. Incidentally business has suffered, as it is still suffering, so that whatever legislation is still to come should be so framed as to do the least injury to the legitimate and long-suffering carriers, distributors, and business men, upon whom, after all, the producers and consumers, in large measure, depend for the market and the commodities they enjoy.

Mr. LEVER. Mr. Chairman, I yield to the gentleman from New York [Mr. GOULDEN.]

Mr. GOULDEN. Mr. Chairman, I am deeply interested in the consideration of this splendid bill brought out by the committee. As an old member of the Patrons of Husbandry, taking

an active interest in the organization, I desire to express my gratitude, and that of the organization, to the committee, and especially to the chairman, for the splendid work they have accomplished. The country is proud of you.

Mr. Chairman, with many others in this House, I was deeply interested this morning in the splendid address of the able chairman from South Carolina [Mr. LEVER].

The Committee on Agriculture and its chairman are to be complimented and the country, too, upon the satisfactory measure now under consideration.

As an old member of that magnificent organization, the Patrons of Husbandry—Grangers—I desire to extend their congratulations and mine upon the work being done by Congress for the farmers of this country.

You may rest assured that your efforts are highly appreciated and will not be forgotten by the men and women on the farms—the bone and sinew of the Republic—who are keenly alive to the needs of the consumers of the Nation.

The farmer of to-day, with daily mail service, telephone, good schools, commodious churches, free circulating libraries, and with better social relations, is more contented, happier, and more prosperous than ever before.

These advantages, largely due to the Congress, and encouraged by the Agriculture Committee, are being more appreciated from year to year by the good, patriotic people on our farms.

It is also having the effect of keeping the young men and women, the sons and daughters of the farmers, at home and opening their eyes to the advantages and benefits of country life over that of the city. They are learning slowly, but surely, of the differences, and in 75 per cent of the cases of the young man or woman who emigrated from the country to the city only a bare living is made. I could enumerate scores of cases of this character that have fallen under my personal observation.

The one out of four from the farm who succeed in the city is somewhat like the man on Wall Street who makes a lucky strike. The world hears of it, while the large class of suckers—lambs—who lose their all, no one either hears or sympathizes with them. I have a case to the point: A young man with a nice little family came here eight years ago and has enjoyed a decent income of more than $1,200 yearly. Now he voluntarily is returning to a farm which he left in 1906 with less money than he had then. I have congratulated him upon his wise decision. He is not alone, as I personally know a score or more of farmer boys now in the cities who are anxious to follow the example of the young man mentioned, and are only waiting an opportunity to do so.

As one approaching the allotted sphere of man and who has had ample opportunities to try out both the country and the city life, with a fair modicum of success, I feel deeply that the Nation needs more farmers, and that, taken all in all, the chances of acquiring a competency in old age and of enjoying a life of greater comfort, better living, and contentment are in favor of those on the farm. The producing element, especially those on the farm, where the necessaries of life are obtained, must be increased.

The soil must be improved and better cultivated, so that the fruit of the soil may be doubled. In an examination of agriculture abroad, in 1911, I found that this condition universally prevailed, and that the crops—wheat, corn, rye, oats, potatoes, and so forth—were double that of our own country per acre.

I stated this morning in a colloquy with the distinguished chairman of the committee, the gentleman from South Carolina [Mr. LEVER], that four words explained this matter, "higher fertilization, better cultivation."

In Carroll County, Md., less than 70 miles distant, in the district of Mr. TALBOTT, of that State, the county grange have tried to stimulate the growing of an increased yield of corn, with partially satisfactory results. The sons of farmers, by faithfully following the four words, "higher fertilization, better cultivation," added from 40 to 60 per cent increase over the crop of their fathers, with a net gain in profit of from $4 to $8 per acre. Last year two boys of a tenant of mine in the county named raised on the average ground of the farm 115 and 135 bushels, in the ears, of excellent corn, while the father averaged less than 100.

These and girls' canning clubs should be encouraged by all those who love their country.

If the committee and the Congress can bring these things about—and I admit that the present bill and others recently passed tend in that direction—great good will be accomplished.

The farmer is a responsive, an appreciative being, fully realizing the importance of his place in the life and prosperity of the Nation, and I am confident that he will measure up to the demand.

Carry the good news to him through the newspapers, which create public sentiment, through the splendid bulletins issued by the Agricultural Department, by the well-conducted farmers' colleges, institutes, associations, and clubs, of the demands made on the people living on the farm by the Nation.

Let the committee continue its excellent work, confident that the members are meeting the almost unanimous approval of the American people and doing a splendid patriotic duty. [Applause.]

Mr. LEVER. Mr. Chairman, I yield to the gentleman from New York [Mr. TAYLOR], a member of the committee.

Mr. TAYLOR of New York. Mr. Chairman, there is no pursuit more important to the people of this country than that of agriculture. There is no industry or a pursuit in life that is not dependent upon agriculture.

We must first till the ground, plant, and harvest the wheat, before we can manufacture the flour, cereals, and bake the bread. The ground must be tilled, the cotton planted and harvested before the cotton goods can be manufactured, placed upon the market, and sold. The calf and the pig must be raised by the farmer and fattened by the products of the farm before it can be slaughtered and sent to market to be consumed for food. Agriculture is the foundation of our wealth and prosperity.

The tillers of the soil have always been the backbone and sinew of our country. This is necessarily so, as the farmer lives upon the best that the land can produce, pure, wholesome foods, and his business requires him to be out in the open, where he breathes into his lungs the fresh, pure air that keeps not only his body but his mind in a healthy and active condition.

When this country was first settled by the white man he found the soil in a virgin condition, filled with soluble plant foods, containing quantities of nitrogen, phosphorus, potassium, lime, and sulphur. These chemicals are absorbed by the plant and taken from the soil in the process of growing, and in return, by a process of evolution, plants when consumed by the human being or beast reimpart these chemical properties to the consumer.

Recently it has been discovered that no plant can thrive above earth unless smaller plants, known as bacteria, are growing in the earth. In other words, a lower order of life is produced, which yields up its life to a higher order in the shape of farm crops, which in turn yield up their life that man and animals may exist, thus rounding up a marvelous cycle, the connecting links of which we are just beginning to study and in a small way comprehend.

The thought has often occurred to many as to why the son and daughter of the original settler of the fertile valleys of Virginia and the plains of Massachusetts should have risked their lives and fortunes in pushing westward into a wild, somewhat desolate country, inhabited by savages and wild beasts, and suffer all the hardships that such an adventure imposes. The farmer has ever sought the virgin soil. He pushed westward from Virginia and Massachusetts into the Middle West, thence westward to the Pacific. Lately he migrated into Canada, always seeking the virgin soil, taking from it these necessary chemical properties that he found in it, but seldom restoring them. We have now reached that period in farming where we can not migrate any longer and find the virgin soil. We must replenish that which we have.

It is only within the past few years that we have been giving any thought whatever to the manufacture and use of fertilizers and commercial plant foods. We are just beginning to appreciate that we must furnish the plant with the nourishment that it is to take from the soil, and that these plant foods must be in a soluble condition, as the plant is germinated and full grown within a period of about 60 days. Many of our farmers understand very little about the use of commercial plant foods.

Part of the money to be appropriated by this bill is to be used by the Agricultural Department for the purpose of experimenting in and obtaining more knowledge of commercial plant foods, and at the same time disseminating this knowledge among the American farmers.

The average yield of wheat per acre in the United States for the year 1913 was 14.3 bushels; in Germany where they have been tilling the land for thousands of years, and where the land is no more fertile than that in the United States, for the year 1913 they produced 35.1 bushels per acre; in the United Kingdom during the same year they raised 32.8 bushels to the acre. In the United States during the year 1913 our average yield of potatoes to the acre was 96 bushels, whereas in Russia during the same period of time the average yield was 104 bushels to the acre; in Austria, 142; France, 129; Germany, 196; and in the United Kingdom, 202½ bushels per acre. The question is naturally asked, Why can not we produce as much per acre in this country as they do in the foreign countries? We can. If the ordinary American farmer only knew how. He has been living

upon the virginity of the soil for so many years that he is just beginning to realize that the soil is no longer virgin; conditions have changed. They have changed overnight, as it were. If the Department of Agriculture did no more than to instruct the farmer to increase the yield per acre, it would do a great deal toward reducing the high cost of living. It takes no more labor to produce 202 bushels of potatoes to the acre in the United Kingdom than it does to raise 96 bushels to the acre in this country.

We can increase the yield of wheat, potatoes, corn, and smaller articles to the acre if we would but try. The department has caused a number of boy and girl corn clubs to be formed in different sections of the country, and not long ago boys and girls in the North, South, East, and West assembled here at Washington and appeared before your committee. One boy in Alabama increased the yield of corn to the acre so that he was able to grow 235 bushels, and a boy from New Hampshire succeeded in raising 50 bushels to the acre, which is a considerable increase when it is considered that the ordinary farmer in that State seldom raises more than 30 bushels to the acre. It is results of this character that not only aid the producer but materially assist the consumer.

The successful business man of to-day bases his success upon the fact that he takes care of the little things. He succeeded in his large commercial undertakings, whether it be that of a department store or operation of a railroad or other lines of commercial adventure, because he sought out and stopped waste wherever possible, not only waste of product but waste of time and labor of his employees. For example, a large department store in the city of New York discovered that they were losing thousands of yards of materials in one department. They employed detectives to watch the employees, but they could not find a clew. The owner of the establishment then employed an efficiency engineer, who discovered that the loss was due entirely to the fact that the tacks upon the counter used in measuring the goods were more than 3 feet apart and that the clerks were careless in the method employed in measuring the goods. By readjusting these tacks and instructing the clerks in the art of measuring the goods the owners of the department store stopped the leak and saved thousands of dollars a year.

In order to reduce the high cost of living it is necessary for the farmer to seek out and stop every item of waste, whether that waste be due to the misapplication of his own energies, his failure to properly cultivate and prune the trees in his orchard, or the improper preparation and fertilization of the land. In these stirring times, when application and energy count for everything, the farmer as well as the business man must make every effort count.

Statistics show, and it is conservatively estimated, that the loss to the farmer, to say nothing about the unnecessary wastes, exceed $1,000,000,000 a year. Of this amount $795,000,000 is estimated to be the loss sustained in farm products because of the havoc and destruction worked by insects. Of this sum about $25,000,000 is lost in fruits from fungous and bacterial diseases, and $28,400,000 in wheat, oats, barley, and sorghums through preventable diseases, usually created by parasitic organisms, and the loss sustained in reference to the last named from nonpreventable diseases is estimated annually at $94,000,000. These enormous losses are not all that the farmer sustains. There is a further loss from diseases of animals which amounts to $212,850,000.

In order that this country should regain its previous prestige as an agricultural Nation and the high cost of living should be reduced, these losses must be overcome and conquered, for they are not only sustained by the producer, but in greater proportion by the consumer. Some one must stand these losses, and it is usually the man who needs the article who must pay an additional price to make up these losses.

In this bill the Department of Agriculture is asking appropriations to continue the Bureau of Animal Industry, Bureau of Entomology, Bureau of Plant Industry, and Bureau of Chemistry. Each of these bureaus have trained men and women, some of whom are examining into the life and characteristics of the insects that destroy plant life and fruits, as well as the causes and reasons for the fungous growths that are so injurious to our fruit trees. These bureaus are also attempting to find a cure or means of destroying these pests, and particularly those, such as the tick and other germs and diseases, that are destroying our meat-producing animals. By means of a system of quarantine and the application of dips, eradication of the cattle tick, which has been so destructive to beef cattle, is almost accomplished.

It is as much to the interest of the constituency that I represent in this body for the Government to meet and destroy the cotton-boll weevil and prevent its ravages as it is to the cotton planter of the South. The destruction caused by this insect produces a loss, a portion which every man, woman, and child in the United States must bear. For this, if for no other reason, I believe that the Agricultural Department is the most important branch of our Government, as its work benefits all.

If the ravages caused by hog cholera are continued, pork, one of the most important of our cheaper food products, will become a luxury.

During the past 15 years agriculture in the East has been on the decline. This situation was brought about by the fact that the large western plains were opened up to civilization and, being easier cultivated on a large scale than the small eastern farms, they could raise wheat, corn, beef, and such products and ship them into the East cheaper than they could possibly be raised there. Our population has been increasing so fast during the past 10 years, and our industrial centers have become so crowded, and the demand for agricultural products so great, that agriculture in the East is becoming profitable. There is no reason in the world why we should be required to import corn and beef from Argentina and potatoes from Europe. We can grow them as cheap, if not cheaper, in this country if we would only set our minds upon it and face the economic problems that confront us and work them out. If our population continues to grow in the next 25 years as it has grown during the past 25 years, unless we do something to stimulate agriculture we will cease to be a self-supporting Nation and be required to depend upon other sections of the world for our foodstuffs.

In 1910 the per capita supply of pork available was 89 pounds. If the decrease for the next 50 years in pork production continues as it has during the past 10 years, the available per capita amount of pork at the end of 50 years will be 34 pounds, or a decrease of 61 per cent of available pork. In 1909 we produced 683,000,000 bushels of wheat. If the reduction in average of wheat continues during the next 50 years upon the same average as the past 10 years, and even though the amount of wheat grown upon every acre is increased to 35 bushels, we shall then have only 630,000,000 bushels of wheat, or 53,000,000 less than we have at the present time, to feed what will at that time no doubt be a population of 238,000,000 people. At the present time we have about 425 loaves of bread for each individual in the United States. If the average decrease in wheat production continues, at the end of 50 years we will have less than 73 loaves per capita. These are facts, and when once brought to our attention they become startling, and the sooner we realize the conditions as they exist, the quicker we will produce a remedy and prepare not only for the future but take care of the present.

It is estimated that the waste in the poultry trade is about $100,000,000 a year; in the cotton trade, $150,000,000 annually, to say nothing about the loss suffered by the cotton raiser because of his failure to understand and know the value of his cotton crop. This waste in the State of Texas alone during the year 1913 was estimated to be over $40,000,000. These items of waste are not to be confused with the losses above mentioned. They are additional, separate, and distinct; and, again, they must be borne in the greater proportion by the consumer. The Department of Agriculture, through one of its bureaus, is attempting to save the waste in the poultry trade by instructing the poultry raiser how to kill and ship his product to market and candle and store his eggs so that they remain in a fresh condition until they reach the market.

Twenty-five years ago our shoes, for example, were manufactured upon the farms. The farmer not only tilled the soil, but made shoes. To-day the men and women working in the shoe factory produce only shoes and live within close proximity to the factory. In this way our great industrial centers have become thickly populated. In fact, they have grown beyond our belief, and we are just beginning to realize that it is not only necessary to produce in an agricultural way provisions to feed the people in our manufacturing cities, but to so prepare our foodstuffs that they can be transported to factory and thickly populated districts in an eatable condition. The terminal markets are suggested by many as a solution of this problem. Some of the funds appropriated in this bill are to be used for the purpose of investigating the question of terminal markets and to what extent they should be adopted.

Our consuming population has become so great that it behooves us in the hour of plenty to prepare for the time of need.

During the hearings before the Agricultural Committee I suggested that something should be done to stop the willful waste and destruction of fish destroyed for the purpose of keeping up the price. Since making that statement I have given the matter attention. The wholesale fish dealer lays the blame upon the retailer, who in turn lays it upon the wholesaler. Testimony was taken the other day before one of our com-

mittees to the effect that large quantities of wholesome fish were ground up and sold for fertilizer. It is neither the wholesaler nor the retailer who causes the trouble. It is the neglect and oversight of our people. Let us assume that on a certain day the fishermen make a large catch of bluefish—which is customary, as these fish run in schools—and bring them into the market. The wholesaler will naturally buy what he believes his trade will take. If he bought more, the effect would be to flood the market, and not only force down the price of bluefish at that time but keep it down. As a result, the fish that the wholesaler will not buy are destroyed—either thrown overboard or sold for fertilizer. This condition of affairs could be easily remedied by providing storage warehouses where this surplus of fish could be stored and placed upon the market gradually. This would be to the interest of not only the wholesaler but of the people.

In order to bring about this condition of affairs it is necessary that the people should be accustomed to the more liberal use of fish. In this way the wholesaler would have a market for all the fish caught and would sell in such large quantities that he could well afford to sell at cheaper prices.

The Department of Agriculture intends to spend money appropriated under it for the purpose of investigating these conditions and instructing both the seller and consumer of fish.

The department is investigating and experimenting with the most up-to-date methods of cold-storage transportation. They have pointed out to the railroad companies and those who construct refrigerator cars certain defects which they have willingly remedied. A cold-storage warehouse, as our population grows, has become more of a necessity daily, and the use of these warehouses should be stimulated and their abuses prevented.

There is legislation pending, introduced after investigations made by this department, that will go a great ways toward remedying the evils that have been brought about by the improper use of cold-storage plants, such as buying up of the apple crop, storing the fruit in cold-storage plants and keeping it there until by reason of a scarcity on the market the price is advanced.

Potatoes to-day are selling in my district for about $4 a barrel, which were purchased by speculators and cold-storage men from the farmers for less than $1.50 per barrel, placed in warehouses, and kept there for the purpose of cornering the market and forcing up the price.

Statistics show that the farmer receives 40 cents out of every dollar spent by the consumer for farm products. The question is, What becomes of the balance? And it is this question that this department proposes to solve by investigations.

One fact disclosed by the last Federal census is that in 10 years our population has increased over 15,000,000, while our farming population has decreased from 70.5 per cent in 1880 to 53.7 per cent in 1910. These figures are misleading, as only 28 per cent of our people live upon the farms. The drift of population is from the farm to the village and city. While our population has increased during the past 10 years, our meat-producing animals have actually decreased over 20,000,000 during the same period of time, so that to-day we are importing where six years ago we were exporting meat and its products. Our export of meats in the past six years have fallen off 97 per cent and our dairy products over 75 per cent. With these facts before us, there is no wonder that the people voted for a reduction of the tariff. Still many do not appreciate reduction of the tariff is only one move in the direction toward reducing the high cost of living.

The Department of Agriculture, by means of experiments, has been able to obtain a wonderful store of knowledge which it is just getting in condition to be disseminated about the country. These facts present serious problems, the solution of which must be made by the Government through this department. These are economic problems in which every man and woman in this country—it makes no difference what be his or her position or stage in life—are interested. For this reason I am heartily in favor of the appropriations contained in this bill.

Mr. LEVER. Mr. Chairman, how much time did I consume in my opening remarks?

The CHAIRMAN. One hour and twenty-three minutes.

Mr. LEVER. Mr. Chairman, I yield to the gentleman from Arkansas [Mr. OLDFIELD].

Mr. OLDFIELD. Mr. Chairman, I gladly supported the Alaskan railway bill. That bill passed the Senate by an overwhelming vote, and also passed the House by a big majority, or by a vote of 231 to 87. The vote will be taken on the conference report of the two Houses within a day or two, and the bill will be promptly signed by the President and become a law.

Mr. Chairman, by passing this legislation we are carrying out another platform pledge of the Democratic Party. The Baltimore platform says:

Immediate action should be taken by Congress to make available the vast and valuable coal deposits of Alaska under conditions that will be a perfect guaranty against their falling into the hands of monopolizing corporations, associations, or interests.

There is no way to make the vast and valuable resources of Alaska available to the people except by providing transportation facilities by which these resources may be gotten to the markets. There are two ways to get transportation facilities for Alaska—first, the United States Government must provide proper transportation facilities and let the people share in the profits of the sale of the Alaskan products when transported to the markets and sold or, second, permit such interests as the Guggenheims and the Morgans and other special interests to build railroads in Alaska and ultimately gobble up the vast resources of that great Territory.

Our Democratic President and a Democratic Congress, true to the interests of all the people, have in enacting this legislation declared in favor of the people as against the special interests.

President Wilson in his address to the Congress on the 2d day of December last strongly urged this legislation in the following language:

A duty faces us with regard to Alaska which seems to me very pressing and very imperative; perhaps I should say a double duty, for it concerns both the political and the material development of the Territory. The people of Alaska should be given the full Territorial form of government, and Alaska, as a storehouse, should be unlocked. One key to it is a system of railways. These the Government should itself build and administer and the ports and terminals it should itself control in the interest of all who wish to use them for the service and development of the country and its people.

But the construction of railways is only the first step; is only thrusting in the key to the storehouse and throwing back the lock and opening the door. How the tempting resources of the country are to be exploited is another matter to which I shall take the liberty of from time to time calling your attention, for it is a policy which must be worked out by well-considered stages, not upon theory, but upon lines of practical expediency. It is part of our general problem of conservation. We have a freer hand in working out the problem in Alaska than in the States of the Union; and yet the principle and object are the same wherever we touch it. We must use the resources of the country, not lock them up. There need be no conflict or jealousy as between State and Federal authorities, for there can be no essential difference of purpose between them.

The resources in question must be used, but not destroyed or wasted; used, but not monopolized upon any narrow idea of individual rights as against the abiding interests of communities. That a policy can be worked out by conference and concession which will release these resources and yet not jeopard or dissipate them, I for one have no doubt; and it can be done on lines of regulation which need be no less acceptable to the people and governments of the States concerned than to the people and Government of the Nation at large, whose heritage these resources are. We must bend our counsels to this end. A common purpose ought to make agreement easy.

Mr. Chairman, on this, as on all other public questions, the President is on the side of the people and on the side of progress. He is against the exploiter and monopolist. With my voice and my vote I shall support the President and his policy. I shall oppose those who would exploit Alaska and her splendid resources. Secretary Lane, of the Interior Department, under whose jurisdiction and control are all the public lands of the United States, including Alaska, and who has given this great question deep and thorough study, has indorsed and urged the speedy enactment of this legislation, as will be seen by a perusal of the following letter, written to Senator KEY PITTMAN, chairman of the Committee on Territories in the Senate:

DEPARTMENT OF THE INTERIOR,
*Washington, May 15, 1913.*

Hon. KEY PITTMAN,
*Chairman Committee on Territories, United States Senate.*

MY DEAR SENATOR: My opinion is requested as to Senate bills 48 and 133. These measures, in a word, provide for the construction by the National Government of a railway system in the Territory of Alaska.

I favor the adoption of this policy. I believe it to be that under which Alaska will develop most safely and most speedily and under which the resources of that Territory will most certainly become available to the whole people.

There is but one way to make any country a real part of the world—by the construction of railroads into it. This has been the heart of England's policy in Africa, of Russia's policy in western Asia, and is the prompting hope of the new movement in China. Whoever owns the railways of a country determines very largely the future of that country, the character of its population, the kind of industries they will engage in, and ultimately the nature of the civilization they will enjoy. The policy of governmental ownership of railroads in Alaska seems to me to be the one that will most certainly make for her lasting welfare

To many of our people Alaska is little more than a land of natural wonders, here and there dotted with mining camps and fishing villages. If Alaska is to be nothing more, it is almost a matter of indifference as to who builds her railroads. I have talked with many who know that country well, and I am convinced that we should think of Alaska as a land not only of mines and fisheries, but of towns, farms, mills, and factories, supporting millions of people of the hardiest and most wholesome of the race. If this conception of a possible Alaska is a true one, our legislation should be such as to most surely bring about this pos-

sibility, and it seems to me there is less of hazard as to Alaska's future if the Government of the United States owns the railroads which will make its fertile interior valleys accessible from the coast and bring its coal, iron, copper, and other mineral resources within the reach of the world.

This is a new policy for the United States. Very true. This is a new part of the United States. And policies properly change with new conditions. The one determining question in all matters of government should be: What is the wise thing to do? The ancient method of opening a country was to build wagon roads. The modern method is to build railroads. To build these railroads ourselves and control them may be an experiment, but such a plan does not suggest scandals more shameful, or political conditions more unhealthy, than many we have known in new portions of our country under private ownership. And in the end, we will be free to establish and maintain our own chosen relationship between Alaska and the rest of the United States unhampered by threats of confiscation or the restraining hand of any merely selfish influences. We can only secure the highest and fullest use of Alaska by making her railways wholly subordinate to her industrial and social life and needs—true public utilities.

Respectfully,

FRANKLIN K. LANE.

Secretary Lane, like the President, stands for the development of Alaska, stands for the construction of this railway by the Government, stands for the protection of Alaska's great riches against the graft of monopolizing special interests. I shall uphold the hands of Secretary Lane in this contest between equal rights and equal opportunities on one side and special privilege and favoritism on the other.

Mr. Bryan, the Secretary of State, and all the other members of the President's Cabinet have strongly supported this bill. I know not how it may be with others, but as for me I am perfectly content to find myself in such company, and I prefer such companionship to that of the minions of monopoly and the despoilers of a Nation's heritage. This is an administration measure, another one of the great pieces of constructive legislation since we came into control of the Government a year ago.

In area Alaska is a great Territory, one-fifth the size of the United States or about ten or twelve times as large as the great State of Arkansas, and this vast Territory belongs to the United States. We bought this Territory from Russia in 1867 and paid therefor $7,200,000; and products consisting of gold, silver, copper, tin, coal, and so forth, to the value of $500,000,000 have been taken out of Alaska since that time.

The experts tell us that Alaska has more coal than Pennsylvania, West Virginia, and Ohio; more copper than Michigan and Arizona; more gold than California and Colorado; more tin than Wales; and more fish than all other American waters combined; and this great storehouse of these products belongs to the people of the United States; and when the President builds these railroads as this bill provides, and these products are mined and marketed either by the Government direct or on some leasing plan, it will many times over pay for these railroads and also put millions of dollars into the Federal Treasury.

Mr. Chairman, the enactment of this legislation shows the difference in the public thought and public sentiment of to-day and that of a little more than a generation ago. Then the Government gave millions of acres of the public domain to the railroad builders—about 150,000,000 acres in all—to get them to build the railroads of our country. And the railroads to-day have this vast area of the people's lands and also the railroads. But conditions have changed. We will not give the resources of Alaska to special interests, as we did when the railroads of this country were built.

Then a spirit of reaction and special privilege controlled the situation; to-day a spirit of progress controls. I am unable to discriminate between the spirit that would oppose this Alaskan railway bill and the spirit—I might say the great transcontinental railway interests—that opposed the construction of the Panama Canal. Where is the man that would vote to-day to turn over that great international highway to a private corporation, to a private monopoly, for the gratification of private greed?

The Alaskan railway and the Panama Canal will forever stand out as two magnificent monuments to the spirit of modern progress and the spirit of modern improvement. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 30 minutes to the gentleman from Missouri [Mr. BORLAND].

Mr. BORLAND. Mr. Chairman, a few days ago my colleague from Missouri, Judge SHACKLEFORD, arose to a question of personal privilege in reference to a certain editorial published in the Philadelphia Ledger condemning the Shackleford road bill as an example of a legislative pork barrel. In the course of his speech my colleague not only repelled the statements of the particular editorial, but charged, in some detail, that there was a malevolent organization or syndicate of organizations opposing his bill which had some evil influence, by intimidation or otherwise, over certain portions of the press and Members of Congress, or were seeking to establish such an influence. He made specific charges of the collection of money by various organizations in pursuance of this purpose. Immediately upon the close of his speech I prepared and introduced a resolution providing for a committee of Congress to investigate these charges. The resolution was prepared upon my recollection of the speech as I heard it delivered, but since I have seen it printed in the CONGRESSIONAL RECORD I find that some of the more positive statements have been omitted. I can not find the word "lobby" anywhere in the printed speech, and there are a great many other portions of the speech as made on the floor of the House which I do not find in the RECORD. Some of the most offensive matter has been omitted. Doubtless this is to my colleague's credit, and I sincerely trust that both his natural life and his political life will be long enough for him to regret sincerely the entire speech.

The Shackleford road bill was a great disappointment to thousands of friends of good roads throughout the country. No wonder my colleague is stung by the criticism it has received. But I doubt the wisdom or propriety of his attempt to divert public attention from the merits or demerits of his measure by an attack upon the character of private citizens. So far as the citizens of my own district are concerned, I do not intend that it shall be done without a protest from me. These gentlemen have no voice on this floor to reply to such charges and are taken at an unfair disadvantage. The most offensive portions of the speech still remaining in the printed version are as follows:

Mr. Speaker, look at these editorials. Here is one headed "Another pork barrel." Here is another, which says: "It is distinctly a bad bill, the effect of which would be first to plunge the good-road movement head over heels into Federal pork barrel." Here is another: "Think what an entering wedge and scandal that 'pork-barrel' road bill would be." Here is another: "Judge Lowe is warning all supporters of the good-road movement throughout the length of the proposed old-trails route to help defeat the pork barrel." Here is another, from Kansas City, headed: "J. G. Paxton opposes the national-road pork barrel." Here is another: "That, at least, would stimulate State and local road building and would not be a distribution of pork." The distinctive feature of all of these editorials is the words "pork barrel."

If one comes across a quadruped and wants to know to what particular species it belongs, there are certain distinctive features which will point him to a correct solution. If a naturalist should go afield and discover a little animal under a hedge and he looked at it and was in doubt what it was, he would approach it closely. He would notice that it had a nose; so has a horse. He would discover that it had two eyes; so has a cow. He would discover that it had a tail; so has a dog. He would discover that it had teeth; so has a wolf. Approaching nearer still, he would suddenly discover the air filled with a fog which would penetrate his eyes, his mouth, his nose, his ears. From the distinctive odor of that fog he would instinctively discover the particular family to which the animal belonged.

When the big industries desired to erect a tariff board they organized headquarters in Washington, and until yet the stench of Mulhall rises up to high heaven; but the money expended by Mulhall and his coadjutors is as dimes to dollars as compared with the money that is being put into this propaganda now for peacock lanes that extend from New York to San Francisco.

Now, let us get down to him—this old trails man. What does he do? When he needs money to carry on his editorial canning factory he takes a United States map and a piece of red chalk and marks an old-trails highway across some State and then goes to the people in the towns along that line and collects dues.

The newspapers out in my country, like the Congressmen, are not rich. They have nothing to sell but their space. [Laughter.] If this old-trails hero is asking all of these newspapers to put up free hundreds of square feet of space in order to push his propaganda, then all I have got to say for him is that he is a little stingy in his disposition. He has got the money. Why does he not pay these people for the space he uses, if he does not?

The evil of a pork barrel is that it is cleverly designed to aid in the reelection of the sitting Member by the expenditure of public money. The money is distributed in such a way as to produce the largest political effect. It has not even the merit of being a party measure. It helps the sitting Member who had a chance to vote for it as against his opponent at the primaries who did not have a chance. The highest duty the press of America can perform is to turn the light of pitiless publicity upon the expenditures of public money. The humblest citizen in the land has a right to criticize public men and measures in his own way, with full responsibility for what he says under the laws relating to libel. If a corrupt lobby exists, both this House and the courts are clothed with ample power to punish it.

As near as I can understand the matter, my colleague has taken great offense at what he calls "peacock boulevards." If we disregard the epithet and get down to what he really means, the logic of his position is that he is assailing any form of improved highways which lead from city to city or town to town, or which cross an entire State or run into two or more States. It so happens that the present strength and success of the good-roads movement is very largely due to business men all over the country who are advocating just exactly this type of road. These men by the expenditure of a great deal of time, energy, and their own means have held road meetings in different parts of the country and in different portions of the various States, and from this has grown the present strength of the good-roads movement. Very few of these men have anything to

gain personally in the matter. For instance, the National Old Trails Road Association, which he denounces and which he compares to the odoriferous quadruped, has the following list of officers:

Judge J. M. Lowe, president, Kansas City, Mo.; Harvey M. Shields, general vice president, Dawson, N. Mex.; Walter Williams, advisory vice president, Columbia, Mo.; E. S. Ralph, treasurer, Springfield, Ohio; Frank A. Davis, secretary, Herington, Kans.; E. J. McGrew, chairman finance committee, Lexington, Mo.; J. A. Hudson, chairman executive committee, Columbia, Mo.

In our own State of Missouri is a similar organization, known as the Missouri Old Trails Road Association, with the following officers:

Walter Williams, president, Columbia, Mo.; E. N. Hopkins, vice president, Lexington, Mo.; Howard Ellis, secretary, New Florence, Mo.; Charles A. Sombart, treasurer, Booneville, Mo.

In addition to these there are in the State of Missouri the following local associations of the same class:

Short Line Routes Association. M. H. Hall, president, Tarkio, Mo.; F. S. Travels, secretary, Tarkio, Mo.

St. Joseph-Des Moines Interstate Trail Association: W. A. Hopkins, president, Lamoni, Iowa; Daniel Anderson, secretary, Lamoni, Iowa.

Cannon Ball Trail Association: James R. Bowsher, president, Leon, Iowa; Charles D. Davis, secretary, Princeton, Mo.

Sedalia-Springfield Highway Association: W. S. Jackson, president, Warsaw, Mo.; M. V. Carroll, secretary, Sedalia, Mo.

Capital Route State Highway Association: J. H. Bothwell, president, Sedalia, Mo.; M. V. Carroll, secretary, Sedalia, Mo.

North Missouri Cross State Highway Association: George Robertson, president, Mexico, Mo.; John F. Morton, secretary, Richmond, Mo.

Capital Trails Association: John W. Bingham, president, Milan, Mo.; A. B. Pratt, secretary, Unionville, Mo.

Western Missouri Good Roads Association: Bud M. Robinson, president, Joplin, Mo.; J. B. Grigg, secretary, Joplin, Mo.

Every State in the Union shows from three to a dozen of these associations designed to encourage the building of improved highways leading either across the State or across two or more States. Most of the members of these associations are business men of the highest type and the most unselfish patriotism. It may be possible that they are mistaken in their views, but it is not possible that they belong to the tribe of quadrupeds indicated by my colleague, or that they are engaged in any corrupt attempts to influence the press or Congress.

There is scarcely a paper that you can pick up that has not a statement of an effort along that line. Here is one that I picked up which shows a highway of that class extending from Canada to the Mexican line. A meeting was held at Excelsior Springs and presided over by Judge Low. Mr. Buffam, the State highway commissioner, was present, as was also Col. E. M. Harber, Trenton, Mo., supposed to be the selection of President Wilson for collector of internal revenue.

I find that Mr. Caminetti, the Commissioner of Immigration, has advocated a road of this kind along the Mexican border and the Rio Grande River, evidently a peacock boulevard. There are good-roads associations in every State in the Union, from three to a dozen. In addition to that there are a number of national associations. The South Appalachian Good Roads Association, the Southern National Association, the Capital National Association, the Quebec to Miami Association, and the Intermountain Good Roads Association. Every State has its own local association of the same class.

Mr. WILSON of Florida. Will the gentleman yield?

Mr. BORLAND. Briefly.

Mr. WILSON of Florida. Does the gentleman mean to imply that the criticism of the gentleman from Missouri [Mr. SHACKLEFORD] went to these associations or to their methods of propaganda? Did he mean to criticize all the road associations?

Mr. BORLAND. I understood from the speech that he was criticizing the character of the roads and the methods of the associations. The particular hit of the speech was calling them peacock boulevards, which referred to all improved roads that went farther than the nearest railway station.

Evidently from the hostility shown by my colleague to this class of roads he has made it impractical in this bill for the Government to aid in their construction. Of course, if it is wrong for the Government to aid in their construction it is equally wrong for the State and certainly wrong for the counties.

I have been an earnest advocate of having as good roads in every locality as possible; good dirt roads from the farm to the nearest main road; good main roads to the nearest town, so the farmer can haul any day in the year and can haul bigger loads without overtaxing his team; good through highways to competitive railroads or into the cities. Every class of roads should be improved by the aid of the Federal Government and the States. In this way the taxation of the cities help all the country roads, whether dirt roads or surfaced, and the good roads thus built for the farmers helps the wage earner in the cities by making cheaper and more abundant supplies. But I am opposed to wasting road money on politics, and I am opposed to making campaign matter by denouncing men who are working for any class of good roads. The farmer can not lose if good roads of any class are built, but he can lose if, under the name of good roads, money is spent only in politics. However, I do not intend at this time to reargue a question upon which I have already expressed myself in full in the debates. It seems to me unexplainable that the only Member of Congress, so far as I know, who belongs to any of these "peacock boulevard" associations is my colleague, the chairman of the Roads Committee. He is a member of the only highway association from ocean to ocean supported by automobile manufacturers, the one which runs through Chicago, Omaha, and Denver.

I know of no distinction between this association to which my colleague belongs and the National Old Trails Road Association, except that the old trails route is through Missouri, while the other route is through other States, and the National Old Trails Road Association has not the official backing of the automobile manufacturers, while the association to which my colleague belongs has. If my colleague really believes that these people belong to the class of quadrupeds to which he has referred, I am surprised to find him in their company, unless he is there purely as a naturalist. The truth is that large numbers of people, some of whom have a selfish and business interest, and many of whom have only a patriotic interest, have worked up in this country a splendid movement in behalf of good roads. When a movement approaches success it is hardly possible to prevent ambitious politicians from jumping astride of it and riding it to victory or death, as the case may be; but why the people who furnish the steed must also be kicked in the face is more than I can understand.

Many friends of good roads who have studied the bill of my colleague are strongly opposed to it on the ground that it is not an aid but rather a detriment to the cause of good roads, and that it will tend more to the building of political fences than to the building of roads. They have the right to so express themselves, whether their judgment is sound or unsound. This opinion of the bill is growing as the public becomes more familiar with its terms. I am surprised that my colleague should find it necessary in supporting this measure to make attacks upon the character and motives of the people who oppose it. The keynote may be found in his own speech—

Of course we all know the efficacy of an ad hominem attack—an attack not on a measure, but on the character and motives of the man who advocates it.

I am at a loss to know the occasion for his recent speech unless it be to support a measure in which the public is fast losing confidence. If he really believed that a dangerous and corrupt lobby was at work, in Washington or elsewhere, a very proper course open to him would have been to ask for an investigation of the lobby. I am surprised that he did not take this course. I doubt the propriety or the necessity of assailing on the floor of the House the character and motives of private citizens who are utterly unable to defend themselves. As my personal acquaintance with the matter is confined to the three gentlemen who reside in my district, I can speak only for them.

Judge J. M. Lowe, president of the National Old Trails Road Association, is a true and tried Democrat who has been prominent in affairs in Missouri for many years. He was prosecuting attorney of Clinton County during his young manhood, and more recently he was election commissioner of Kansas City by appointment of Gov. Folk. I am astonished to think that my colleague has intimated that Judge Lowe is engaged in buying or attempting to buy either newspapers or Congressmen, or, in fact, that there are in Missouri either newspapers or Congressmen for sale, but it is hard for me to read any other meaning into his language when he says:

The newspapers in my country, like the Congressmen, are not rich. They have nothing to sell but their space. [Laughter.] If this old trails hero is asking all these newspapers to put up free hundreds of square feet of space in order to push his propaganda, then all I have got to say for him is that he is a little stingy in his disposition. He has got the money. Why does he not pay these people for the space he uses if he does not?

I am utterly unable to explain that language upon any hypothesis consonant with the innocence of Judge Lowe or the newspapers. It appears to me as direct a charge in parliamentary language of corrupt influence as I can imagine. The fact is that Judge Lowe is a man of very modest means but large public spirit. He has given freely of his time and work and I have no doubt also of his means in devotion to what he believes to be a patriotic duty. His letter referred to by my colleague shows that he is asking friends to assist him in this work and entirely negatives the idea that any pay is offered or expected.

Judge J. G. Paxton is another distinguished Missouri Democrat of tried ability and spotless character. He is a man of strong views and personal force and expresses himself on public

matters with great independence and frankness. He has frequently disagreed with me upon public matters in the frankest manner, and I have the utmost confidence in his intellectual honesty. I know of no connection whatever that he has with the road movement except as any other public spirited citizen who has aided in forming public opinion.

Mr. H. D. Train is a prominent and successful business man who was at one time active in Republican politics. He was at one time president of the Automobile Club of Kansas City. This fact has not discredited him in the eyes of his business associates nor cast any suspicion upon his integrity. I know personally that he has not a dollar to gain by any form of road improvement, and I am confident that he would not engage in any corrupt practices. and yet my colleague says of him:

Wherever Mr. Train and others like him can do anything to put some of those Members out of commission it will be done. They have not many votes in my district, and I do not know to what method they would resort to defeat me at the coming election, as he says they are determined to do, except by putting their hands down into their treasury and fill the papers of my district and my State with canned editorials against me.

Again, it is difficult to reconcile this language with any hypothesis of the innocence of Mr. Train or the newspapers of Missouri.

The Public Printer tells me that 36,000 copies of this "polecat" speech have been ordered printed by my colleague, to be circulated under the Government frank. And this in the face of the fact that a demand for an investigation is now pending to determine the truth of the charges.

Of course, the circulation of these 36,000 copies will prove conclusively that the Shackleford bill is a good bill and in the interest of the farmers; that the opponents to it are divided into zoological groups of polecats, peacocks, and suckers; that the peacocks are not only found associating with such strange friends but have taught the polecat and suckers to "strut" like themselves; that the press of Missouri is poor and has nothing to sell but its space, and that good-roads associations should be put out of business. Well, after all, the 36,000 copies tell the tale without any words of mine. [Applause.]

I yield back the balance of my time.

Mr. LEVER. Mr. Chairman, I yield 15 minutes to the gentleman from Missouri [Mr. SHACKLEFORD].

Mr. SHACKLEFORD. Mr. Chairman, my colleague, Mr. BORLAND, has just finished a somewhat caustic arraignment of me for some things I said in a speech delivered in this House a few days ago. He belabors me because in that speech I charged that some of the big road associations and special interests have been and are lobbying in favor of ocean-to-ocean highways and against a general system of good roads connecting the farms with the nearest towns and railway stations. I did make such a charge, and I again repeat it.

The International Dictionary gives the following as the meaning of the word "lobbying":

To endeavor to secure the passage of a bill in a legislative body by influencing, as an outsider, the votes of members. To solicit the votes or attempt to influence the official action of a member of the legislative body in the lobby or elsewhere.

My friend Mr. BORLAND has added to my speech a word which I did not utter—the word "corrupt." I simply charged that a powerful lobby was being maintained here and elsewhere throughout the country against our road bill and in favor of some fancy boulevards connecting up the oceans, to be used primarily by automobile tourists. I did not say that it was done corruptly; but I did say, and I do say now, that it is a most thoroughly organized lobby and is supplied with adequate funds with which to carry out its work.

In my speech the other day, of which my friend Mr. BORLAND complains, I read an account of a meeting of the American Automobile Association, at which it adopted a resolution to establish headquarters at Washington for the purpose, as explained in the resolution—

To keep in close touch with Congress in order to wield a greater amount of influence.

Mr. Robert Hooper, who was president of the American Automobile Association at that meeting, in his address used the following language:

I have no hesitancy in saying that inside of two years we will have committed the Federal Government to a system of national roads that will connect all parts of the country.

Mr. Chairman, what does he mean when he says "we will have committed the Federal Government"? There is no other way to do that except by influencing Members of Congress.

Let me read further from Mr. Hooper's address:

The report which you will receive from the committee in regard to establishing additional headquarters at Washington has had my very careful consideration, and I can not but feel that it would be better for us to consider such a movement favorably. Inasmuch as our work is entirely national in scope, not only in regard to good roads but also as to touring and legislation, I feel that the closer we can keep in touch with Congress the greater amount of influence we can wield.

Following out that suggestion they did come here and established expensive headquarters, which are open yet. What for? Mr. Hooper, in his address, gave the answer:

The closer we can keep in touch with Congress the greater amount of influence we can wield.

That is what they said when they opened up here and that is what they have been trying to accomplish since they came here. I do not believe that they have attempted anything here by bribery. Be it said to the credit of our country that nothing could be done here by that method; hence it is not attempted. But there are other ways by which they hope to keep in touch with Congress.

This gentleman, Mr. Hooper, was not only president of the American Automobile Association, but also of the Pennsylvania Motor Federation. A big road fight was pulled off in Pennsylvania during the last two years. The automobile crowd in that State undertook to concentrate all road funds in the construction of some expensive cross-country automobile roads. To carry out this they also attempted to put over a $50,000,000 bond issue. The Grangers of that State opposed it. They favored a general system of roads extending out among the farms. The opposing forces developed a very hard fight on this question. Let us see what part Mr. Hooper and his Motor Federation took in this contest. I will read from one of his letters on the subject:

[Pennsylvania Motor Federation, affiliated with the American Automobile Association.]

OFFICE OF THE PRESIDENT,
JUNIPER AND CHERRY STREETS,
*Philadelphia, Pa., March 11, 1911.*

Mr. L. W. PAGE, *Washington, D. C.*

MY DEAR MR. PAGE: Generally speaking, however, as president of the Pennsylvania Motor Federation, I would request that before you make any assertion in Harrisburg you consult with me. The facts as given to you in regard to the present highway bill in Pennsylvania are a little inaccurate, and I also would state to you in confidence that the highway bill now before the Legislature of Pennsylvania was drawn up completely in my office and that the Pennsylvania Motor Federation have the entire matter well looked after.

The American Automobile Association or any other outside organization have not been asked to help out in any way, as we know exactly what is required better than any outside organization could know and we do not want any help.

When I have the pleasure of seeing you personally I will explain to you in confidence the situation as it exists in this State, which position may be different from that occupied by similar organizations in other States; but here we have such a compact and thoroughly organized body and we are working so closely to the administration that we are pretty ably backed, and the chances are so strongly in favor of the bill being passed that there is very little doubt about it.

I would also state to you that the "$50,000,000 bond issue" bill was also drawn up by us.

We have had several outside organizations ask us whether we needed any help, but we thanked them very kindly and asked particularly that they let it alone.

With very best regards, and hoping to have the pleasure of seeing you again, I remain

Yours, very truly,

ROBERT P. HOOPER, *President.*

From reading that letter it would appear that they not only keep in close touch with Congress, but with State legislatures as well. According to that letter they write the bills and then get busy to put them across.

Let me read another letter from Mr. Hooper to show how they do their work:

[Pennsylvania Motor Federation, affiliated with the American Automobile Association.]

OFFICE OF THE PRESIDENT,
JUNIPER AND CHERRY STREETS,
*Philadelphia, Pa., November 1, 1913.*

Mr. LOGAN WALLER PAGE,
*Director United States Office Public Roads, Washington, D. C.*

MY DEAR MR. PAGE: We are very much interested over the result of our election on Tuesday, as it will decide whether the $50,000,000 loan bill will be passed by the people. The motor federation has spent a very large sum of money trying to overcome the opposition of the Pennsylvania State Grange, but I do not feel very optimistic as to the passage of the bill.

Yours, very truly,

ROBERT P. HOOPER, *President.*

Mr. Chairman, in the face of those letters and in the face of the fact that the American Automobile Association has established headquarters at Washington to keep in close touch with Congress, who will say that there is no lobby being maintained on the road question?

Let me read the last sentence of Mr. Hooper's letter again. Here it is:

The Motor Federation has spent a very large sum of money trying to overcome the opposition of the Pennsylvania State Grange.

Now, I ask my friend, Mr. BORLAND, if that does not have every earmark of a lobby, of an active lobby, of a well-financed lobby, a lobby led by talented men?

It is the opposition of that lobby which our road bill has met before the country. It was the opposition of that lobby which

our bill met here. It is the opposition of that lobby which our bill will meet in the Senate.

In my speech of a few days ago about which my friend, Mr. BORLAND, complains, I read a letter from one of his constituents, Mr. Harry D. Train. He was vice president of the American Automobile Association and the member of its executive committee. In that letter Mr. Train uses these words:

> We consider this bill the biggest joke ever introduced into Congress. The American Automobile Association beat this bill once in the Senate after it had passed the House.

If that statement be true, then Mr. BORLAND's resolution to investigate should have been introduced in the Senate, not here. That letter does not claim that this lobby was able to keep in close enough touch with the House to defeat the legislation against which it was operated, but does boast that it was able to do it elsewhere.

My friend Mr. BORLAND comes to the rescue of Mr. Paxon, whose name I called in my speech a few days ago. I know Mr. Paxon. He is a gentleman of the highest character, incapable of any dishonorable act. Should dishonor be laid at his door, I would be as ready as Mr. BORLAND to defend him. The fact is, however, that I said nothing against Mr. Paxon. It looks as though Mr. BORLAND were lugging his name in to lend strength to himself. The only foundation for it all is that I read a number of editorials to show they all of them carried the words "pork barrel." One of them carried an article headed "Mr. Paxon opposes the pork barrel." I read this and made no further reference to him.

The third and last of his constituents whom Mr. BORLAND has felt constrained to defend against my alleged attack was Judge J. M. Lowe, of Kansas City. Now, what about him? He is a man, so far as I know, of unsullied reputation. He possesses great enthusiasm and firmness of purpose. He is obsessed with the idea of having the Federal Government build some peacock lanes to connect up the antipodal oceans. He has devoted himself to chasing this jack-o'-lantern. In his dreams he sees the old Cumberland Road, the old national trails, as they were in the days of long ago. In his waking hours he yearns for a restoration of these old ways of travel over which our forefathers drove their ox teams. He thinks that if these conditions were restored the crack of the ox driver's whip would drown the sounds of the clanging bell and the screeching whistle of the speeding locomotive. To bring all of this about he has been through the years conducting one of the most persistent lobbies that has ever existed in connection with legislation here. Just now he is procuring editorials to be inserted in every newspaper whose columns he can enter. For what purpose let him answer. Here is what he says in his letter to the editors:

> It is needless to add that we beg of you your best efforts, for it will be read in the Senate, together with the name of your paper and your own name and politics.

All of this, of course, has for its object the influencing of the votes of Members of Congress.

To get out all of this stuff to the newspapers takes money. To get it back takes money. To get it to Washington to be read on the floor of the Senate takes money. To travel about year in and year out to work up sentiment along the old trails takes money. He gets the money and spends it. What for? To influence Congress to kill a road bill which would extend a system of good roads among the farmers and to secure legislation for a construction of the old trails of which he is so much enamored. He is president of the Old Trails Association. He directs its movements. This association collects and spends every year large sums of money. Not a dollar of it has ever gone to build a rod of road.

Now, let me say again that I do not charge that Judge Lowe has been guilty of corrupt lobbying. I do charge, however, that he is expending large sums of money trying to influence legislation on the road subject.

Mr. BORLAND. I want to ask you if Judge Lowe has not denied to you that he is behind my bill?

Mr. SHACKLEFORD. I have a letter from him in which he makes that explicit statement, but he is advocating the construction of the Old Trails Road, and that road is embraced in the bill which my friend Mr. BORLAND introduced.

Now, Mr. Chairman, I must finish. No lobby in recent years has spent more money in trying to move Congress and the country into the support of a measure than has been put into this fight for peacock lanes and against roads connecting the farms with the towns and railway stations. If a road congress or road convention is held anywhere, this lobby is there to fashion the resolutions and see that they are widely published. Is a State legislature in session, this lobby is there to keep in touch and mold its measures. Is a road magazine published, this lobby is on hand to get behind it and subsidize it. And when the road question gets to Washington this lobby is here, with its headquarters open under the management of talented men to keep in close touch with Congress to wield its influence.

Mr. Chairman, they want ocean-to-ocean highways for automobile tourists at public expense, and they are not willing that a dollar shall be spent upon any system of roads leading from the farms to the markets. The tourist has his lobby here. Who is here to lobby for the farmer and the consumer of farm products? Nobody. They elected us to guard their interest, and we will be unfaithful to our trust if we fail to do it.

My colleague [Mr. BORLAND] has entered the lists against me and my road bill so often that it may lead some to infer that there is personal antagonism between us. Such an inference would be unwarranted. I am happy in the belief that he is my personal friend. I know I am his. I cherish for him a high personal esteem, and regard him as a gentleman of high character and conspicuous ability. We simply differ about the road bill, and each of us is waging the best fight he can. Indeed, I have had a conversation with him to-day, and was both surprised and gratified to find that, in fact, we are not so far apart as at first appeared. I gathered from my conversation with him that he, too, is in favor of a system of community roads connecting the farms with the towns and market places; that his opposition to my bill is more upon administrative features than upon the real principle involved in it. I have no doubt that ultimately he and I will be found supporting the same measure.

Mr. LEVER. Will the gentleman from Minnesota [Mr. HAUGEN] yield some of his time?

Mr. HAUGEN. I yield one hour to the gentleman from Minnesota [Mr. ANDERSON]. [Applause.]

Mr. ANDERSON. Mr. Chairman and gentlemen of the committee, the pending bill was introduced by the chairman of the Committee on Agriculture on the 20th of February last. The time which has elapsed since its introduction has been too brief to permit one not a member of the committee to gather the information and make the analysis which he would like to make on this occasion. I hope, however, to present some figures which will be of value to the Members of the House and to the country.

One of the most reprehensible and, at the same time, most inexcusable practices which is indulged in in the House is that of reporting bills without giving the membership of the House any adequate idea of the reasons which influenced the committee in its conclusions.

The report which accompanies this bill, however, is one of the most comprehensive which has ever accompanied a bill of this character. I congratulate the chairman of the committee upon the care with which he has prepared it; and yet the report conveys no idea of the character of the work or the scope of usefulness of the Department of Agriculture, and especially it gives no answer whatever to the important query whether the department is efficiently organized and administered, whether we are getting our money's worth from the activities of the department in results. These questions are in no sense political or partisan in character. But it is natural that the party in control of the Government and responsible for administration as well as legislation should point out the things in the bill which are commendable and emphasize the achievements of the administration. On the other hand, it is the duty of the minority to criticize, to point out defects, to emphasize failures and extravagances, and to protest against discriminations.

It is my purpose to point out some particulars in which I think the department is inefficient and the results which it produces insufficient in comparison with the amount expended. I intend to show that the bill and some of the expenditures contemplated under it are either discriminatory or ineffectual. It has been necessary, in order to bring these discriminations out clearly and to emphasize the deficiencies and inefficiencies of administration, to make certain comparisons of expenditures in different sections of the country and for different purposes. In making these comparisons I disclaim any motive of partisanship or any feeling or purpose of sectionalism. I do not even claim that my deductions from these comparisons are necessarily conclusive. The comparisons speak for themselves. I assert that they show an apparent discrimination, which ought to be made the subject of careful investigation and consideration by the Committee on Agriculture and the heads of the various bureaus of the Department of Agriculture.

There are 11 items in this bill, carrying aggregate appropriations of $1,119,200, which apply exclusively and peculiarly to the South. They are:

*Items in H. R. 13679 (the Agricultural appropriation bill) which are peculiar to the South and the amount appropriated therefor.*

| | |
|---|---|
| Page 11, line 20, "for all necessary expenses for the eradication of southern cattle ticks," etc | $400,000 |
| Page 17, line 1, "for the control of diseases of cotton, potatoes, truck crops, forage crops, drug and related plants" | 46,000 |

| | |
|---|---|
| Page 17, line 8, "for acclimatization and adaptation investigations of cotton, corn, and other crops introduced from tropical regions and for the improvement of cotton by cultural methods, breeding, and selection" | $38,000 |
| Page 17, line 18, "for investigating the ginning, handling, grading, baling, and wrapping of cotton and the establishment and demonstration of standards for the different grades thereof" (This is $50,000 above the estimate.) | 80,580 |
| Page 18, line 23, "for the investigation and improvement of tobacco and the methods of tobacco production and handling" | 25,000 |
| Page 19, line 9, "for investigations in connection with the production of table sirup, including the breeding, culture, and diseases of cane and the methods of manufacture, standardization, and marketing of sirup and the utilization of cane by-products" | 10,000 |
| Page 19, line 23, "for farmers' cooperative demonstrations and for the study and demonstration of the best methods of meeting the ravages of the cotton-boll weevil" | 378,240 |
| Page 19, line 5, "for the breeding and physiological study of alkali-resistant and drought-resistant crops" (Egyptian cotton) | 22,280 |
| Page 48, line 3, "for investigation of insects affecting southern field crops, including insects affecting cotton, tobacco, rice, sugar cane," etc | 49,000 |
| Page 48, line 12, "for investigations of insects affecting tropical and subtropical fruits," etc | 20,100 |
| Page 67, line 5, "for experiments and demonstrations in live-stock production in the cane and cotton districts of the United States" | 50,000 |
| Total | 1,119,200 |

Mr. LEVER. Mr. Chairman, will the gentleman yield at that point?

The CHAIRMAN (Mr. WEAVER). Does the gentleman yield?

Mr. ANDERSON. Yes.

Mr. LEVER. Does the gentleman know that only two of the items to which he has called attention are new and that all the other items to which he has called attention have been carried in this bill for 10 years?

Mr. ANDERSON. Well, I am not particularly concerned with that; but I will say to the gentleman that after he and his brethren on that side, with all the native eloquence and wealth of diction which they possess, have for 18 years tiraded against the party to which I belong, I do not think it befits them very well now to appropriate the cloak which they say the Republican Party has been wearing for 18 years.

One of these items is of such unusual character as to merit special mention. This is the item for experiments and demonstrations in live-stock production in the cane and cotton districts of the United States. No explanation of this item accompanied it in the Book of Estimates, but the hearings illuminate its general purpose. Dr. Galloway, in his testimony before the committee, says:

> Recognizing the fact that there will be economic changes so far as the production of sugar is concerned, we feel that the Government owes it to the people to do something constructive for them either in redirecting their work in sugar production or else in directing their work so that they take up other kinds of agriculture * * *. Certain projects have been planned, and we have included an item of $50,000 for taking up work in south Louisiana and south Texas, where the sugar cane is now growing.

Reduced to plain English, this statement means that having destroyed the sugar-cane industry in Louisiana by tariff legislation, the administration now proposes that the Government shall assist these people who have been injured by directing their activities to stock raising and other lines. It would be cruel to deny this constructive relief to the cane growers whose business has been destroyed by tariff legislation, but it seems fair to inquire why similar constructive efforts are not suggested to compensate for injury to the farmers of the North by tariff legislation and in the interests of the thousands of unemployed in the country. Observe that of the total $1,119,200 for projects in the South $591,240 is available in whole or in part for investigations and demonstration work in connection with the growing of cotton; $80,580 is available for investigating the ginning, handling, grading, baling, and wrapping of cotton, the establishment and demonstration of standards for the different grades thereof, and so forth. Compare this item with the $76,320 which is provided for the investigation of the handling, grading, and transportation of grain and the fixing of definite grades thereof. Remember that in 1909 the acreage in cotton was 32,043,838 and in cereals 191,395,963; that the value of the cotton crop in that year, including cotton seed, was $824,696,287, while the value of the cereal crops was $2,665,539,714. Bear in mind that the appropriation for cotton grading, and so forth, is $50,000 more than the department asked; that standard grades have already been established under previous authorizations on cotton and that of cereals standard grades have been established only upon corn and you will have some idea of the inequality of these provisions.

There are in the bill two items which are peculiarly comparable both in amount and in the character of the work covered, and which are fairly illustrative of the sectional character of the appropriations of this bill and their application. These are the items for farm-management work in the North and cooperative demonstration work in the South. The bill making an appropriation for the fiscal year ending June 30, 1914, carried an appropriation for farm-management work of $375,000 and an equal amount for cooperative demonstration work. Of the $375,000 allotted for farm-management work $240,000 was spent in actual field studies and demonstration according to the summary of projects submitted by the Bureau of Animal Industry. Actually, however, but $157,231 was spent in the field. The remainder of the $240,000 was disposed of as follows: For payment of district leaders' salaries and the general work, $39,165; for investigational work in some 13 Southern States, $33,285; and approximately $10,000 for miscellaneous supplies. Not only has the appropriation for farm-management work in the North not been spent in the field, but $33,000 of the appropriation was diverted to investigational work in Southern States already receiving more than their share of the funds available for cooperative work.

Of the $375,000 appropriated for farm-demonstration work in the South, $322,000 was actually used in the field and $53,000 in administration. It is the theory of these items that both of these funds shall be spent in cooperation with the States, the States contributing to the cooperative work an amount equivalent to that expended by the Government in the field or as much more as it desires. I wish now to make a comparison of the respective amounts contributed by the States as against each of these funds.

As I have stated, of the farm-management item $157,231 was expended in the field. This amount was distributed among 26 Western and Northern States, the average amount received by each State being $6,047. Of the cooperative demonstration work item $327,801 was allotted to 9 Southern States, an average of $36,422 to each State. The 26 Northern States received $157,321 and contributed $478,471 to the cooperative farm-management work, while the 9 Southern States, receiving $327,801, contributed $250,906. Minnesota received $6,963 and contributed $62,500. Alabama received $40,000 and contributed $33,818. North Dakota received $5,413 and contributed $60,830. Mississippi received $40,000 and contributed $18,091. Indiana received $5,682 and contributed $65,150. Louisiana received $33,741 and contributed $14,539. Besides the $327,801 received by the 9 Southern States referred to, these States and 6 other Southern States received an additional $250,000 for cooperative demonstration work from the general educational board, making a total of $577,801 received by 15 Southern States as against $157,321 received by 26 Northern States.

Mr. LEVER. Mr. Chairman, will the gentleman yield at this point?

Mr. ANDERSON. Yes.

Mr. LEVER. The gentleman will be fair enough to state, of course, that it was not until this House became Democratic—and this is the first time I ever used that word in connection with this bill—that the Northern States received any money for farmers' cooperative work at all, and the gentlemen who were here at that time will back up that statement as true.

Mr. HAUGEN. Mr. Chairman, I think it is due that I should state here that the expenditure of the money heretofore appropriated has been left to the discretion of the Department of Agriculture, and the committee has had confidence in that great department that it would apply the money where it would bring the greatest results.

Mr. LEVER. Undoubtedly.

Mr. McLAUGHLIN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. McLAUGHLIN. The gentleman from South Carolina [Mr. LEVER] says that only since the House became Democratic has an appropriation been made for farm-demonstration work in the North. I think he is in error in that. The year before the House became Democratic the appropriation for farm-demonstration work used in the North, as I remember, or available for use in the North, was $144,000. The amount was increased during the first Democratic House to $300,000. Last year it was $375,000.

Mr. LEVER. Mr. Chairman, if the gentleman will permit me, I wish to say that the gentleman may be correct in his recollection, but the gentleman will admit, of course, that the large increases for that work have come in the last two or three years.

Mr. McLAUGHLIN. Oh, the increases have come on my motion in this House, and over the opposition, at least, of the former chairman of the Committee on Agriculture, who was not a member of the party to which I belong.

Mr. ANDERSON. From the summary of projects which appears in the appendix of the hearings before the committee, I have prepared another comparative table. It shows the amount expended by the Department of Agriculture in cooperative work of one kind and another in 10 Southern States and the amounts contributed by each of said States to the same work, and also in comparison therewith the amounts contributed by the different bureaus of this department to cooperative work in 10 of the great agricultural States of the North and the amounts contributed by each of these States to this cooperative work. Without going into the details of the table at this point, I may say that the department expended in the 10 Southern States referred to $748,561; or an average of $74,856, while in the 10 Northern States the department expended $432,302, or an average of $43,230. The table further shows that the amounts expended by the department in the Southern States mentioned was offset by contributions from said States, amounting to $851,840, an average of $85,184, while the 10 Northern States contributed $834,780, an average of $83,478. Averages are rather unsatisfactory, and sometimes lead to erroneous conclusions. I wish therefore to be more specific. The table shows that the department expended in Alabama $90,421, while Alabama contributed $89,789. The department expended in Minnesota $47,534, while the institutions of Minnesota contributed $179,213. In Louisiana the department expended $56,757 and the State $36,174. In Wisconsin the department contributed $22,640 and the State $41,516. In Arkansas the department expended $74,049 and the State $61,192, while in Kansas the department expended $28,777 and the State $56,850. In Texas the department contributed $125,699 and the State $105,551, while in New York the department contributed $32,073 and the State $93,699. Is it possible that the agriculture of these Southern States is of as much greater importance than the agriculture of the Northern States as these comparisons indicate? The evidence certainly does not so indicate. The total value of crops in the Southern States mentioned, in 1909, was $1,454,695, while the value of all crops in the Northern States included in the table was $2,958,553,064. The value of live stock and live-stock products in the Northern States referred to was double the value of live stock and live-stock products in the Southern States included in the table.

I come now to the consideration of another phase of the matter. The last appropriation bill for the Department of Agriculture carried a total appropriation amounting to $17,896,945, exclusive of unexpended balance, amounting to about $8,000,000. I have been unable to get some of the figures which I wished to submit in connection with this phase of the discussion, but as near as I can determine from the statement submitted in the Book of Estimates and in the hearings, of this sum $2,375,317 has been expended or allotted to be expended in the field. This sum is 13 per cent of the total appropriation. It covers everything expended in the various cooperative projects of the department, including eradication of cattle ticks and sheep and cattle scab, soil surveys, improvement of post roads, farmers' cooperative demonstration work, farm management, field studies and demonstrations, and some 20 or more other projects. It seems strange that only 13 per cent of the appropriations for a great department of the Government, presumably dedicated to advancing the interests of the farmer, should find its way into the field where the farmer actually is. It seems strange that slightly over $2,300,000 should represent the results in the field of the expenditure of more than $17,000,000.

The fact of the matter is that the department has become a great investigational and regulatory machine. It has ceased to be engaged principally in the effort to advance constructive agriculture by increasing production or by the introduction of better methods by actual demonstrations in the field. It is natural, perhaps, that demonstration work should give way to the greater pressure of regulatory services and the more pleasant tasks of investigational work, but it is none the less unfortunate for the farmers. The department's activities which have actually reached the farmer in the field at all seem to fairly lead to the conclusion that we are bunkoing the farmer by calling this institution a Department of Agriculture at all. Most of its activity seems to be taken up in the regulatory and scientific work, which touches the farmer only in a very remote and impersonal way.

I find a very interesting and significant corroboration of the conclusions I have just stated in the last report of the Secretary of Agriculture. He says:

> The present appropriations for work of a regulatory nature or only indirectly affecting agriculture constitute about three-fifths of the total funds of the department, or approximately $15,000,000, leaving two-fifths, or $9,000,000, available for scientific research, experiments, and demonstration work directly affecting the farmer. While it would be difficult to segregate the funds which are used for purely demonstration work, because of its close relation in many instances to investigational work, it is safe to say that more than $1,000,000 is devoted to such work.

It seems that I have been too generous in my estimates of the amounts spent by the department for demonstration work in the field. The annual amount expended in increasing production would scarcely buy one round of ammunition for a single battleship, while the total amount expended by the Department of Agriculture, outside of its regulatory services, is about one-half the cost of a battleship.

We have recently passed the Army bill, carrying appropriations of some $90,000,000. We are soon to pass the naval appropriation bill, carrying appropriations of $140,000,000. Beside these amounts for military expenditures the $18,000,000—and more especially the two or three million dollars actually spent in increasing production by demonstration work in this country—seems ridiculous. It is the boast of the department that it "has made two blades of grass grow where one grew before." This boast does not appear to be justified by results.

I have compiled a table showing the average production per acre in the United States, Germany, and Austria for the following periods: 1890–1899, 1900–1909, and 1908–1912. The table shows that the average production of wheat per acre during these periods in the United States was 13.2, 14.1, and 14.1 bushels per acre; in Germany, 24.5, 28.9, and 30.1; in Austria, 16.2, 18, and 19.8. The average yield of oats for the same periods was as follows: United States, 26.1, 29.3, and 29.6 bushels per acre; Germany, 40, 50.7, and 51.9; Austria, 25.3, 29.8, and 31.1. The average yield of barley per acre for the same periods was as follows: United States, 23.4, 25.5, and 25.3; Germany, 29.4, 35.3, and 36.3; Austria, 21.1, 26.3, and 26. The average yield of rye per acre for the same periods was as follows: United States, 13.9, 15.7, and 15.8; Germany, 20.9, 25.6, and 27; Austria, 16.1, 19, and 20.6.

The average yield of potatoes per acre for the following periods, 1900–1909 and 1902–1911, was as follows: United States, 91.4 and 94.2; Germany, 200 and 194.4; Austria, 151.1 and 152.7.

I do not complain because the per-acre production in this country of the cereal crops is not as great as it is in some of the foreign countries; this is probably not to be expected. But it does seem to me that the fact that the per-acre production of the cereals in this country has increased only a very small extent in the last two decades, and that the proportional increase is by no means as great in this country as it is in some foreign countries, should be a matter of serious consideration and concern to the department, the committee, the Congress, and the country. It is a direct result of what seems to me a false policy. That policy is one of spending millions of dollars in getting information and a few thousands in making it available and of use to the persons for whose benefit it is gathered. The situation is no reflection upon the farmer. He is doing the best he can with the help he is getting.

Again, I find some confirmation of my views on this subject in the report of the Secretary of Agriculture. He says:

> What about the efficiency of the work on the land now under cultivation? What part of it may be said to be reasonably efficiently cultivated? What part of it is satisfactorily cultivated and is yielding reasonably full returns? The opportunity for guessing in this field is unlimited, but according to the best guesses I can secure it appears that less than 40 per cent of the land is reasonably well cultivated and less than 12 per cent is yielding fairly full returns or returns considerably above the average.

And again:

> Increased tenancy, absentee ownership, soils still depleted and exploited, inadequate business methods, the relative failure to induce the great majority of farmers to apply existing agricultural knowledge, and the suggestions of dependence on foreign nations for food supplies warn us of our shortcomings and incite us to additional effort to increase production.

Here is the nub of the situation. The Secretary says:

> The relative failure to induce the great majority of farmers to apply existing agricultural knowledge warns us of our shortcomings—

And so forth.

The plain, unvarnished truth is that the department is working 40 years ahead of the farmer. This is a direct result of the disproportionate relation between the amount spent for investigational work and that devoted to practical demonstration and education. I do not know that too much money is spent upon investigation. I do know that much of the results of these investigations are useless now, from the standpoint of the practical farmer, and will be for many years to come. There is too much rehashing of work already done and duplication of investigational work carried on by the States. I am satisfied that too little money is being spent on disseminating the information that is valuable among the farmers in a practical way. The Secretary says:

> We have unmistakably reached the period where we must think and plan.

In my opinion, we reached that period long ago. We have now reached the period when we must "do." We have reached

the point where we must make the knowledge gathered by the department effective in a direct and personal way.

The committee has increased the appropriation for the office of markets from $50,000 to $200,000. I congratulate them upon having done so; but I should do so with more confidence and less mental reservation if I felt certain that practical and speedy results were likely to follow from the uses to which the department proposes to put the funds. I have reference again to the report of the Secretary. Relative to the proposed activities of the office of markets, he says:

The department has arranged its marketing investigations under five important subdivisions:

First. Marketing surveys, methods, and costs, including especially available market supplies in given production areas, demand at consuming centers, cold and other storages, marketing systems and prices, and costs of wholesale and retail distribution of farm products.

Second. Transportation and storage problems, having in mind the elimination of waste and the study of problems connected with surplus market supplies; terminal and transfer facilities, including freight congestion, car supply, deterioration in transit, extension of the practice of precooling of perishable products, and other special services.

Third. City marketing and distribution investigations, involving a study of the uses and limitations of farmers', municipal, wholesale, and retail market houses; systems of city distribution; the promotion of direct dealing between producers and consumers by parcel post, express, and freight.

Fourth. Study and promulgation of market grades and standards. A consideration of sizes and suitability of packages and containers, methods of preparation of perishable products, and the ultimate establishment, so far as practicable, of official market grades and standards for farm products.

Finally, cooperative production and marketing investigations.

In the first place, the investigations pertaining to most of the subjects mentioned in the first four subdivisions can be better and more profitably undertaken by other departments of the Government. In fact, the investigations along several of the lines proposed are already underway in other departments. In the second place, the $200,000 provided would not be a drop in the bucket toward even beginning investigations of the scope proposed. In the third place, the information proposed can not be obtained in less than five or six years with an adequate appropriation, and the beginning even could not be made toward getting it with the appropriation provided. In the fourth place, the investigations proposed are so far ahead of the present ability of the people to perform that it will be at least 10 or 15 years before it can be practically applied. If the appropriation provided is to be spread out over the various fields of investigation proposed in these four subdivisions I am fearful the results will be very much like the Irishman's dinner, "So fine you can't see them." I suspect that much of the activity of the department is dissipated in much the same way. It seems to me that better results will be obtained if the activity of the office of markets is practically confined to one or two projects which give hope of comparatively immediate and practical returns.

The fifth subdivision, "Cooperative production and marketing investigations," seems to offer results. I trust it is not too much to hope, however, that the activities of the office of markets, in aid of cooperative production and marketing, may be constructive in character as well as investigational. If the office of markets can work out and establish in some suitable section or sections of the United States a plan of cooperative production, but more especially in some farming community, a system of cooperative or community marketing, and make a practical demonstration of the economies that can be effected, it will have done much to solve the problem of the high cost of living and will have performed a service of greater value than a million dollars' worth of investigation. The example of such a system in actual operation—the proof of the pudding, as it were—would speedily result in the adoption of similar systems. The tendency toward cooperation in agriculture is irresistible. It only requires a successful demonstration of its possibilities in production and marketing to promote its universal adoption. There are peculiar conditions in agricultural lines which lend themselves to cooperative effort.

The farmer has been an intense individualist. In a sense he is king of his domain. He is naturally rather suspicious of the Greeks bearing gifts; but he is fast coming to recognize the value of cooperation with those in his own line of business. It needs, as I have said, but the practical demonstration of the possibilities of cooperative production and marketing to bring about its universal adoption. The adoption of cooperative methods does not mean, as many seem to think, the elimination or even injury to the country merchant. It means simply that the farmer intends to avail himself of the advantages which the labor unions have secured for themselves by organizing for the purpose of collective bargaining.

The Secretary proposes and the committee provides for the presentation by the department of a plan of reorganization of the Department of Agriculture. A great many of us have felt for a long time—certainly I have felt ever since the beginning of my brief membership in the House—that there was something the matter with the Department of Agriculture; but, like a great many others, I have not been able to diagnose the difficulty. It is encouraging to note that the department also recognizes that something is wrong and is disposed to try to remedy it. I am not so sure that the method of reorganization proposed by the department is the best method that can be devised. It seems to me, as I have intimated, that the real difficulty so far has been our failure to provide a sufficient appropriation for demonstration and the disproportionate amounts allowed for investigation or regulatory work in comparison to the amounts allowed for demonstration work. I hope that the reorganization of the department will be directed rather to making the information already gathered of value to the farmer than to additional investigational projects. I hope that it will be of such a character and will so closely touch the farmer that in the end he will be able to say, with the spirit of Joaquin Miller:

And I have said, and I say it ever
As the years go by and the world goes over,
'Twere better to be content and clever
In the tending of cattle and tossing of clover,
In the grazing of cattle and the growing of grain,
Than a strong man striving for fame and gain.

[Applause.]

The tables referred to in the text follow:

*Amounts expended by Bureau of Plant Industry and State and county institutions in cooperative farm management and demonstration work.*

FOR COOPERATIVE FARM MANAGEMENT WORK IN THE NORTH.

| States. | By Bureau of Plant Industry. | By State and county institutions. |
|---|---|---|
| Vermont | $6,001 | $8,700 |
| Connecticut | 1,500 | 1,600 |
| New Hampshire | 1 | 1,800 |
| Massachusetts | 2,681 | 7,580 |
| New York | 17,727 | 39,100 |
| New Jersey | 2,100 | 3,700 |
| Pennsylvania | 11,752 | 13,200 |
| Ohio | 4,683 | 17,880 |
| Indiana | 5,682 | 65,150 |
| Illinois | 10,500 | 20,300 |
| Michigan | 16,204 | 27,700 |
| Wisconsin | 5,801 | 10,333 |
| Iowa | 10,152 | 19,300 |
| Missouri | 10,035 | 21,125 |
| Minnesota | 6,963 | 62,500 |
| North Dakota | 5,413 | 60,830 |
| South Dakota | 2,654 | 15,400 |
| Nebraska | 7,125 | 7,000 |
| Kansas | 4,860 | 14,320 |
| California | 1,501 | 5,500 |
| Colorado | 6,100 | 7,445 |
| Wyoming | 5,402 | 7,530 |
| Utah | 4,921 | 9,705 |
| Idaho | 1,802 | 8,950 |
| Washington | 1,445 | 14,445 |
| Oregon | 4,291 | 7,200 |
| Total | 157,231 | 478,471 |
| Average | 6,047 | 18,403 |

FOR COOPERATIVE DEMONSTRATION WORK IN THE SOUTH.

| | | |
|---|---|---|
| Texas | $65,000 | $72,583 |
| Oklahoma | 36,000 | 20,283 |
| Louisiana | 33,741 | 14,330 |

[By unanimous consent, Mr. ANDERSON, Mr. HUGHES of West Virginia, and Mr. WEAVER obtained leave to extend their remarks in the RECORD.]

Mr. HAUGEN. I yield 15 minutes to the gentleman from Wyoming [Mr. MONDELL].

Mr. MONDELL. Mr. Chairman, I desire to ask the committee to pass for a moment from the consideration of the peaceful ennobling and helpful pursuit of agriculture to a very brief consideration of some facts of current history. My excuse for it is that I think it is always important, when history is in the making, to have the facts fairly presented, stated, and understood.

Day before yesterday the Washington Post, published in this city, a paper of wide circulation, very ably edited, contained an editorial under the caption "Mexico in the Campaign."

That editorial, ably written, as Post editorials uniformly are, contains in addition to a number of suggestions, two definite statements of alleged fact relative to the Mexican situation. That editorial is as follows:

MEXICO IN THE CAMPAIGN.

The Mexican question is rapidly taking on a political aspect, notwithstanding the general indisposition in and out of Congress to infuse a partisan spirit into international complications likely to take a turn that would necessitate a call for men of all parties to stand together.

Congress affords the most conspicuous outcropping of this tendency to give our dealings with Mexico a political twist, and if anyone would realize how far the change of sentiment has progressed he has only to compare the temper of Congress to-day with what it was at the time the wisdom of the "watchful waiting" policy was impressed upon it by the President in person.

Analysis of the causes for the altered feeling, except along the line that human nature is what it is, would not be profitable. That a change of heart is under way is a matter of vital concern as regards the future rather than the past. The movement is yet to reach its full proportions and a definite plan of action. The responsible authorities are sharply assailed, but when it comes to recommending a new plan of restoration of peace and quiet in Mexico on a plane short of invasion and bloodshed nothing sound and practicable results.

Possibly the administration leadership, seeing that adverse opinion is geting out of hand, would prefer that it take a political direction for the moment, sooner than have it exert a disturbing effect on diplomacy as now brought to bear on the vexatious problem. Why not as well keep hands off and let the third party, which is badly off for an issue it may call its own, get all the campaign thunder possible out of the Mexican affair, while the Republicans keep pounding away on the tariff, themselves silenced as to the Mexican policy by the vital fact of that party having inaugurated the policy, and Mr. Taft's hearty indorsement only a day of two ago of the Wilson administration's past and present course.

As to evidences of insurgency in the Democratic ranks, does the possible defection of the Mexican program present any obstacles to the exercise of party discipline such as composed the differences which arose over the tariff and the currency?

All this, to be sure, is contingent on the success of the guiding hands in maintaining the present status of affairs in face of not improbable fresh complications in the interim, foreign or domestic.

There are two distinct statements of alleged fact in this editorial—one that members of the Republican Party are silenced as to the Mexican policy of this administration because the late Republican administration inaugurated that policy, and, second, that President Taft a few days ago gave hearty indorsement to the policy of the Wilson administration, past and present.

The writer of this editorial unfortunately fell into a very grievous error in both of those statements. It is not a fact that the last Republican administration, which went out of office March 4, one year ago, inaugurated the present Mexican policy, if indeed the attitude of the present administration toward Mexico and its people can, out of courtesy, be referred to as a policy. The fact is that Victoriano Huerta became provisional President of Mexico on the 18th day of February, just two weeks prior to the close of the last Republican administration; that the very lamentable and unfortunate assassination of ex-President Madero, of Mexico, occurred only 11 days prior to the close of the Republican administration, scarcely time in which to obtain from the City of Mexico accurate and circumstantial information as to the actual occurrences or the facts and conditions surrounding the establishment of the Huerta government. As a matter of fact, the Taft administration had not sufficient time to formulate a permanent policy touching the changed conditions in Mexico. So far as its failure to recognize the government of Huerta was concerned, it was based, first, on the fact that up to the close of the administration, or to within a few days of the close of the administration, we were not fully and accurately informed as to the actual occurrences, if, in fact, we have been at any time. Further, it was natural and proper that the Taft administration should for a time withhold its recognition of a government established through arbitrary methods, though with a claim to constitutionality, and particularly in view of the dreadful crime that stained the first days of the administration of President Huerta. Further, President Taft, out of consideration for the incoming administration and in order that it might not be embarrassed by any action he should take, deemed it proper that he should leave the settlement of the question of recognition or nonrecognition of the new Government to the new administration, a view and action which reflected great credit upon President Taft.

The present policy, if you may call it a policy, of the administration relative to Mexico was not, therefore, one which is inherited from the administration of President Taft. As a matter of fact, the policy of "watchful waiting" which the present administration claimed to follow for a time gradually merged into an attitude of open hostility toward the Federal Government in Mexico and became one of indirect intervention when President Wilson himself declared that Huerta should and must be eliminated from the situation in Mexico, whatever the people of a large part of Mexico might think of it, and later gave aid and comfort to the revolutionists by removing the embargo on the importation of arms.

Mr. MANN. Will the gentleman yield for a question?

Mr. MONDELL. I shall be glad to yield.

Mr. MANN. Under this administration Americans in Mexico have been robbed, raped, murdered, and driven out of the country, without any apparent definite policy being taken by our Government; but now that one Englishman has been killed, does not the gentleman think we will have to do business down there and have a policy? You may kill many Americans, but can you kill an Englishman without trouble?

Mr. MONDELL. The death of one Englishman seems to have stirred up the administration more than all the outrages committed against Americans for months. The fact that at last an Englishman has suffered at the hands of these outlaws seems to have aroused the administration tremendously.

The unfortunate and humiliating feature of the present situation is that the very men we have been giving aid and comfort, by furnishing them with arms, by insisting on the fall of the Federal Government, are at this very moment refusing to deal with our Secretary of State and impudently repudiating and flaunting our authority, our power, and our jurisdiction.

Mr. TRIBBLE. Will the gentleman yield?

Mr. MONDELL. I will yield to the gentleman briefly.

Mr. TRIBBLE. Does not that fact show that neither side of that crowd down there is worthy of the blood of the young men of this country to be spilled in war?

Mr. MONDELL. If the gentleman's thought is that we ought not actively to intervene I certainly agree with him. I think that is one thing above all others that we should avoid. Now, coming to the second proposition contained in the editorial to which I have referred, to wit, that President Taft, as they state, gave his hearty indorsement to the policy of the Wilson administration, past and present. I heard what President Taft said before the National Geographic Society, and it is as follows.

COST OF INTERVENTION.

He said:

Those of us who have had experience in the tranquilizing of a tropical country, with a people not very different from the Mexicans, who take naturally to guerrilla warfare, and who would rather fight than work—that is, would rather fight and run than work—know the difficulties that an army would have to meet to accomplish the only purpose that we would have in going in, to wit, the bringing about of law and order. It would involve the garrisoning with a sufficient force of every town.

It would involve the organization of columns to chase the guerrillas into their mountain fastnesses and across trackless desert plains and the subjugation of 15,000,000 of people. I don't know when we would get through; I don't know how many lives it would involve; I don't know how much it would cost; but I do know it would be a drag upon us, and then when we had gotten the thing done the future would still be doubtful and still be a charge and a burden upon our Government and upon our Treasury. I do not speak thus positively without some knowledge of the subject. No effort ought to be omitted to prevent a catastrophe like this.

Thus it will be seen that he did not directly or indirectly indorse the acts of the Wilson administration, but did say that intervention would be most unfortunate and costly in lives and money and that no effort ought to be omitted to prevent such a catastrophe. In all that I agree with him, and I am sure that a great majority of the American people do.

I do not wish to be understood as differing with the view of the President relative to intervention. Rather I indorse his views that active intervention should be avoided. The criticism I make is that the present policy or the present attitude of the administration toward the situation in Mexico is one that must inevitably lead to intervention. There can be no other outcome. If the only Government in Mexico which maintains order falls, we must intervene to preserve order and prevent further desolation and devastation or be held responsible for all that may occur. Therefore I have felt it my duty, as having some small responsibility as a Member of this legislative body, to voice my protest, not against the President's desire to avoid a conflict, but against those acts and omissions in our dealings with Mexico and its people which, it seems to me, are hurrying us forward toward the unfortunate condition of armed intervention.

Republicans are free to express their views in regard to these matters unembarrassed by any act of our former administration, not with the thought of making trouble, certainly not with the thought of bringing on war, but in the hope that a policy that leads or tends toward armed intervention shall be so modified that we may maintain our prestige in Mexico and aid in the early establishment of a permanent government there without resort to arms. Certainly our indirect alliance with the forces operating in northern Mexico and the often-reiterated declaration of our President—taking no account of the attitude of the Mexican people—that the Huerta government must fall, must inevitably lead to further complications and, I fear, to armed intervention. I hope there will be such a change of policy that such a calamity may be avoided. [Applause on the Republican side.]

Mr. HAUGEN. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has used two hours and eight minutes.

Mr. LEVER. Mr. Chairman, I yield to the gentleman from Georgia [Mr. EDWARDS] 20 minutes.

Mr. EDWARDS. Mr. Chairman, this is constructive legislation and is in the interest of the whole people, because the whole people are dependent upon the products of the farm for food and clothing. I count it a pleasure and a privilege to speak and vote in support of this measure.

This bill carries $18,947,232 for agricultural work. It is nearly a million dollars more than was carried in the last Agricultural bill. It will enable the Agricultural Department, with its corps of efficient and well-trained scientists, to do more and better work than ever before in the development of the agricultural industry in the United States.

The Department of Agriculture is the farmers' department. It is doing a great work. It ramifies into every direction and comes into the most intimate contact with all the people of the country. The department is organized into 15 main groups, as follows: Office of the Secretary, Weather Bureau, Bureau of Animal Industry, Bureau of Plant Industry, Forest Service, Bureau of Chemistry, Bureau of Soils, Bureau of Entomology, Bureau of Biological Survey, Division of Accounts and Disbursements, Division of Publications, Bureau of Statistics, Library, Office of Experiment Stations, and Office of Public Roads.

It can not be truthfully said that this Congress has been "stingy" or "narrow" in dealing with matters of interest to the American farmers. On the other hand, this Congress has been very liberal in this regard. It might not be out of place for me to refer to a few things we have done for the people on the farms. There is the bill passed by the House which provides $25,000,000 for the building and maintenance of "community" or "wagon" roads. This will be a great help to the American farmers and will make farm life more attractive. It will effect a saving to the producers that will make farming not only more attractive, but more profitable. If farming is profitable, it will be attractive. It is to this end that the Agricultural Department is striving, and it is to help the farmers put their occupation upon a paying basis that we have been legislating.

We have passed the cooperative agricultural extension bill, known as the "Smith-Lever bill," which provides for field demonstrations, publications, and other effective means that will bring to the attention of the farmer, his wife and children, such demonstrated truths and practices of successful agriculture which, if lived up to, make farming desirable and profitable as an occupation. It is a link that will connect the source of information with those who are seeking and are in need of it in agricultural matters, and is another mighty agency to our system of agricultural teaching. It carries to the farm and gives a personal and ocular demonstration to the farmer the most modern methods and practices of the agricultural colleges, experiment stations, the Department of Agriculture, and the best farmers, and proves their value under the immediate environment of the farm itself, thus demonstrating the means by which the organized agricultural institutions of the country may be made to serve all the people, rather than a privileged few.

Cooperative relations were perfected in Georgia, beginning December 1, 1912, so that since that date the "farmers' cooperative demonstration work" is carried on jointly by the College of Agriculture of the State of Georgia and the Bureau of Plant Industry of the United States Department of Agriculture. Splendid work is being done in that State under the direction of Prof. J. Phil Campbell, State agent; Prof. J. Walter Hendricks, district agent; Prof. R. J. H. De Loach, connected with the State Agricultural College; and other able and trained gentlemen who are engaged in this work. We now have demonstration work in half of the counties in Georgia. About 50 of these counties are cooperating in paying expenses of an agent. The county usually pays $50 to $75 per month, and the department an equal amount. Last year the agents conducted 18,000 acres in corn demonstration, with an average yield of 36.3 bushels per acre; 15,000 acres in cotton demonstration, with an average yield of 1,303 pounds of seed cotton per acre; 5,000 acres in oat demonstration produced an average of 43 bushels per acre; 10,000 corn club boys averaged 52 bushels of corn per acre, at a cost of 46 cents per bushel. More than 100 corn club boys produced from 100 to 185 bushels of corn per acre, at a cost of less than 30 cents per bushel. In addition to this work, the agents organized the pig clubs with the boys, and the canning and poultry clubs with the girls. They promote the live-stock industry and were instrumental in having shipped into the State several hundred Percheron horses, beef cattle, and pure-

bred hogs. A great deal of work is done in encouraging farmers to use better machinery, more horsepower, build better pastures, fencing, stumping, and draining of lands. Five hundred and thirty-five hog pastures were built in Georgia under the plan of the Federal Department of Agriculture, and a large number of silos and dipping vats were constructed as the result of the demonstration work.

This work will revolutionize farming not only in Georgia but throughout the country. It will put the industry on its feet and give to it that dignity and standing to which it is entitled.

This cooperative and demonstration plan means a new and bright era for the farmers and is a wise piece of constructive legislation, which every American farmer, large or small, should appreciate. It will give scientific aid and modern methods to the farmer, and that is what he needs. It will show him how to increase his yield, how to build up his soil, how to decrease the cost of production, how to increase farm profits, and how to shorten his hours of labor by an increase of brain power. It means that the farm demonstrator will create interest in farming among the young people. He will show them the splendid opportunities and the large and sure reward scientific farming opens to them; that it is a big business, an interesting business, a dignified business, and, when coupled with brains, industry, and patience, the best and safest business in the world. The farm demonstrator or "county agent" that we have provided for will literally connect the farm with the source of scientific knowledge. He will aid in building up a community spirit, will aid in cooperative movements and educational and social development, out of which will grow a higher and better type of citizen—the world's most valuable and necessary man—the scientific, efficient, and prosperous farmer.

The Smith-Lever bill will in time double the efficiency of the average American farmer. It is the opinion of nearly every authority, at home and abroad, that this "show-me" plan is the only one that will effectively reach the great toiling masses that most need help.

The rural credits system will be another great blessing to the American farmer. It is now being considered by the Committee on Banking and Currency, which will soon report a bill to the House for its consideration and passage. This will enable the farmer to finance his operations at the smallest rate of interest and with more ready money than ever before in the history of the country. This help is not coming any too soon, because the farmers are needing relief. In the district I represent there are about 1,000 mortgaged farms, upon which high rates of interest are being paid. What is true of the district I represent is true of many other agricultural districts of the United States. What those people, groaning under mortgage liens and high tax rates, want is a way to raise the mortgages, stop the interest, and regain the right and title to their homes and farms. What the farmers want is a way to keep out of debt. They are being told and shown that if modern and improved ideas and machinery are adopted and used, and if antiquated and unprofitable ways are discarded, their crops and profits are more certain, and that in this way they can get out of debt and lay aside something as a surplus, as banks and other business concerns are doing, through business methods.

The trouble with some farmers is they will not take advantage of the aid that is offered them, and then they "cuss" the Government, their Representatives, and Senators for never doing anything for them. The world, for all time, will have its "doubting Thomases," who will not join a new or progressive movement. This movement on the part of Congress and the department is to show by actual results what improved methods, if put into practice, will do.

There are elements that tend to discourage. Now and then you will find a "patriot," who has a long record of offices held by him, but who has never done or tried to do anything for the farmer, who is willing and anxious to "go to the front" for the "dear p-e-e-p-u-l," providing he is given an office through which to "save the country." It does not occur to him until he is thoroughly in the "swim" of his own "enthusiasm" that the farmers will say to him: "Bud, don't tell us what you are going to do, but tell us why you didn't do or try to do something for the farmers when you had a chance." If a man does not accomplish all he undertakes, the people at least like to see him "try." A moment of "effort" is worth a century of "inactivity." But to have something to "harp on" these "campaign-year friends of the farmer," who are willing to sacrifice much to get in office, feeling that it is no less than the people owe them, indulge in making light of the farmers' needs and what Congress and the department are doing and trying to do for the farmers, instead of planting themselves upon issues of public concern. Such a fellow loses sight of what the people have done for him and what he has not done for the people, and reserves the "fee-simple right" to be the "only friend to the f-a-r-m-e-r." A few will join with him in his "criticisms" of what the "free-pass friend of the farmers" is pleased to term "book farming." And of course this "biennial friend of the farmer" takes a "shot" at "free seed," which he has never seen fit to condemn before, and the "congressional frank," which never alarmed him when, no doubt, he was in position to have corrected these "great evils," and under which is sent out seed, documents, bulletins, books, scientific publications, and other agricultural literature. He does not stop to think that these things are sent to the people in many cases at their own request and that the literature and books are sent for the benefit of the man who toils and who not only needs but appreciates the useful things he gets from the department to help him in his work. The purpose of the "free-pass friend of the farmer" is not so much to discredit the work of the Agricultural Department as it is to discredit and ridicule the Representative who is at the post of duty in Washington, trying with all the earnestness of his soul to accomplish something for the people and district he represents.

You really never hear of these "spasmodic friends of the farmer" except in campaign years. They raise the cry of "country against the city," and "try" to "out-country" the man who put "try" in "country." In off years these "holier-than-thous" are talking about what "strength" there is in "union," and how "a house divided against itself can not stand," and how the people "should stand together and pull together," in order that development and progress may result. But the "tune" is changed when election year rolls around. As a general thing he believes that experience better equips one to render more efficient and effective service until election year rolls around; then his mind is changed; he does not believe in "free seed" or "long tenure" in office, except, of course, for some of his own folks or himself. It is all right if he or some of his own folks hold office for a lifetime. He just does not believe in long tenure in office for the fellow who is in. Such a fellow "bobs up" every two years and gives the people the same old "wail" about "free seed" and "worthless bills," and yet never designates a bill by name as being worthless. They say you are "doing nothing" if you do not introduce bills and make speeches, and they criticize and say you are "doing too much" if you introduce bills and make speeches, yet they never tell how a bill can be passed unless it is introduced and goes through the regular channels. The "free pass friend of the farmer" and a few "professional knockers" call attention to the minor things, like "free seed," with the hope that the people will lose sight of the larger and more important things that their Representatives and Senators have done and are trying to do for the farmers. No one is fooled or "gulled" with such "demagoguery," for the farmers, blessed with a good rural free delivery mail service, which we have given them, are taking and reading the daily and other papers and magazines. The fellow who thinks the farmer is not keeping up with the times is badly mistaken.

The farmer who is honest with himself about it knows that what the American farmer needs is something that will give him greater profits and more spare money, and that improved methods is the remedy, regardless of what the "sneering campaign friend of the farmer" may say to the contrary about "book-farming" and "free seed." I have never sent out a package of seed to anyone about which I had any regret, except where, by an oversight, a package was sent to some fellow who was too lazy to plant them. It is to the "street-corner drones" and the "ring politicians" a mortal offense and a personal insult to receive "free seed," because the planting of them suggests work to the "drone" and the receipt of them suggests to the "free-pass ringster" the idea that the people's Representative is not forgetting the folks on the farm. He then gets busy and rides around on his "free pass" denouncing a Congressman who would dare remember the folks at home by writing to them or by sending them seed and agricultural literature under the "congressional frank."

The "old idea" that a farmer does not need an education, and that it is of no use to educate a boy if he is going to be a farmer, is a great mistake. The people know this fact and are seeking to educate their boys and girls so that they will be better fitted for the responsible duties of life.

All are agreed that good and helpful books, bulletins, and other literature on agricultural topics, if read, understood, and applied, help to educate the people as to what is best for their farms. No man can read good literature on any subject without being benefited and enlightened. All agree upon this except the "campaign-year friend of the f-a-r-m-e-r" and the "professional knocker," who never see any good in anything except as it is promulgated by himself or some of his crowd. Everybody knows that the farmer, like the doctor and the lawyer, ought to be

well fitted and prepared for the avocation he is to follow, as it equips him for a fuller understanding of his important work and makes of him a more progressive and useful citizen.

The Agricultural Department was created and is kept up for the purpose of making investigations as to the best seed, methods, and ways, and for the purpose of giving the farmers of the country the benefit of these investigations, which I think the people, as a general rule, are glad to receive. The literature, like the seed, is generally sent out by mail.

It is an easy matter to "criticize" and "find fault." It is an easy matter to "obstruct" and "tear down," but it is a hard matter to "build up" and "construct." The country needs and the people want "construction" and not "destruction" in legislation pertaining to our great agricultural industry.

At the rate our country is growing our population will be 200,000,000 in 50 years. A serious question arises as to how that population will be clothed and fed. Such legislation as we are enacting looks to the development of our country and to the solving of that very question. We now consume 91 per cent of our wheat and 98 per cent of our corn. We exported 525,000 head of cattle in 1906, as against only 105,000 in 1912, which shows a decline of 75 per cent in six years. We imported 16,000 head of cattle in 1906, as against 318,000 in 1912, or an increase of 2,000 per cent in six years. In 1907 our beef cattle numbered 51,566,000 and in 1913, 36,030,000, a decrease of 30 per cent in six years. No wonder beef is scarce. No wonder living expenses are a problem. There is something wrong, and the people are concerned about it. They want that wrong righted. The man in the city is as deeply concerned as the man on the farm. There is an earnest desire of all the people to get to the root of the trouble and to correct the evil. Farming has not proven as profitable or as desirable as it should have been, with the result that great numbers of our boys and girls leave the farm every year and go into the towns and cities.

"Man for man the American farmer produces twice as much as the farmer of Europe, but he requires four or five times the area on which to do it." In Europe farming is more hand and less machine work than with us. There the whole family is in the field for long hours of labor. This means a peasant farmer. This we do not want. Our need is the best farm methods that can be carried on by machinery, cultivating smaller areas in a better manner. It is better to raise 80 bushels on 30 acres than 30 bushels on 80 acres. Too often the mistake is made of trying to cover too much ground. This legislation provides for a trained farm demonstrator or "county agent," to carry to the farmer in the field the best-known methods and show him how to apply them. It means greater productions at less cost and with less labor. That is the work that the department is trying to do. It is a noble work and it is an important work, upon the success of which much depends.

With national aid for roads, the "Smith-Lever bill," the "rural-credits bill," Rural Free Delivery Service, parcel post, and other beneficial legislation which Congress has given the farmers, with what is being done for them daily through the Agricultural Department, ought to bring "renewed hopes" to the breasts of all those who have been tempted to turn from the farm.

In extending these various benefits and advantages to the farmers we are but doing a simple justice to the sinew and backbone of our great citizenship. In helping the farmers we are helping the whole country, for every class is dependent upon the farmer. Our country is great only as her people are prosperous, patriotic, contented, and happy. We can do nothing that will make for the future welfare of our country more than to aid in this work, which means the establishing of farms and homes. The strength of this Republic must rest upon its noble womanhood, its strong manhood, and its Christian homes. In making appropriations to improve agricultural conditions we are "casting bread upon the waters," that will return not only to feed the people of this country, but will mean a tremendous increase in our annual farm productions, and will add to the country's wealth, prosperity, happiness, and greatness. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 20 minutes to the gentleman from Mississippi [Mr. COLLIER].

[Mr. COLLIER addressed the committee. See Appendix.]

Mr. HAUGEN. Mr. Chairman, I yield one hour to the gentleman from Nebraska [Mr. BARTON].

Mr. BARTON. Mr. Chairman, agriculture is the basis of all wealth and the prosperity of a country. It has been aptly said that public prosperity is like a tree—agriculture is its roots, industry and commerce its branches and leaves. If the root suffers, the leaves fall and the branches decay and the tree dies.

This fact being well established in the minds of the Members of this body, it is not necessary for me to urge that this most important branch of our Government should receive substantial consideration.

I speak on this subject with experience rather than with theoretical knowledge as a guide, for the major part of my life has been spent not in experimental farming, nor in farming by proxy, but doing the work incident to this industry; not for pleasure and experience, but to make legitimate profit and earn my daily bread. As I looked about me and saw men that scorned to do manual labor waxing rich on the profits of my labor, while I, by being frugal, could hardly make advance for that proverbial rainy day, I knew that the time would come in the history of this Nation when the great food producers would demand and receive the consideration due them; and, mark me, that time is approaching with a velocity and volume of a western cyclone.

The farmers of this country—and when I say farmers I say it advisedly; I do not mean the city farmer, the farmer by proxy, or the man with thousands of acres that is so far away from the business that he only advises with his overseers, but I do mean the farmer who goes squarely into the work himself. This man has been covered for many years past with leeches, who at the end of each season extract the bright red, rich blood, leaving only an impoverished body to recuperate during another season to again be subjected to the same process.

These leeches are first the gamblers, who, lolling in their rich and luxurious offices and places of business, play with the prices of the foodstuff the farmer produces and by one turn of the wheel deprives him of the legitimate profit that he has wrung from the earth during a season of hard work.

The second is the interest shark, the shylock who takes his last pound of flesh. We pay much attention to the loan shark who infests our cities and places his dollars at an exorbitant rate for interest. He is damned by the public and the press. He is the man who loans to the salaried employees the money with which he may keep pace in society's fierce gait, or who, perchance, wants a little money to make the lights shine brighter on Broadway, but little, if any, attention has been given the man who, with calloused hands, stooped shoulders, and sunburned face, is paying interest on his farm mortgage. The man whose daily prayer is that he may pay the mortgage and own his home; the man who is the very foundation of our Government.

We should adopt a law at this session of Congress giving the farmer a rural credit bill that means something, and this rural credit bill should in no sense of the word be a banker's bill. The Government gets only 2 per cent for its money when placed in banks, and we know that the soil of this country is just as good security as any asset on earth. If the farmer could get his farm loan at 3 per cent, covering an extended period of time, we would encourage farmers and men who are not farmers to go on the farm with the incentive that they may own it and become permanent producers.

We should forbid by law gambling in foodstuffs, just the same as we have forbidden other species of gambling in the localities from which we come, and by performing this meritorious legislation we would not only better the moral tone of our entire country, but take this old man of the sea off the backs of our producers. [Applause.]

Many other suggestions of importance could be urged, but these subjects mentioned are of prime importance and should receive immediate action. It would be quite interesting to take the price of the different productions of the farm, such as butter, eggs, poultry, hogs, beef, corn, wheat, fruits, and so forth, at the home of the farmer and trace the 50 to 60 per cent increase that is placed on these products when they reach the tables of the ultimate consumer. We should know where these profits go, and I am glad that this bill carries an appropriation permitting the market division under the Department of Agriculture to make this very valuable research.

Neither do I agree with my Democratic brethren, who have taken the tariff off practically everything that the farmer of the North and West raises, that we need to import our foodstuffs from foreign countries. Secretary of Commerce Redfield, in a recent speech at Hamilton, Ohio, treating the new tariff law, said:

A comparison of the last three months of 1912 with the last three months of 1913 shows that our imports increased during the year as follows:

Cattle, 112,000 head in 1912 to 341,000 head in 1913.
Corn, 253,000 bushels in 1912 to 4,450,000 bushels in 1913.
Fresh meat, 865,000 pounds in 1912 to 35,500,000 pounds in 1913.
Potatoes, 41,000 bushels in 1912 to 2,880,000 bushels in 1913.

This, in my judgment, shows what we may expect in the next few years in the way of importations of foodstuffs. My theory of government is entirely at variance to this condition, for, as I have said before, I believe that this broad, fertile country of ours can not only furnish all the foodstuff necessary for the consumption of this Nation, but that we can add a material export.

The agricultural problem is, in my judgment, one of the biggest questions before this body for solution. It is quite common from the press and platform to cry, "Back to the farm!" but making the statement does not put people on the farm. They must have some incentive, and the incentive in all business is the opportunity not only to make a comfortable living, but to be able to lay aside enough of the world's goods to care for one when they reach the age of nonactivity.

Dr. Cyril G. Hopkins, a member of the international commission who study the chemical methods of soil analysis, said in his speech before the Railway Development Co., at Baltimore, Md., that during the last 30 years of the old century, from 1870 to 1900, the population of this country increased by 98 per cent, from 38,600,000 to 76,100,000; but the area of farm land increased by 105 per cent, from 408,000,000 to 839,000,000 acres. Under these conditions there was no difficulty in producing sufficient food for our increasing population. Even during the last 10 years of this 30-year period, from 1890 to 1900, the population increased by only 21 per cent, while the area of farm land increased by 34 per cent. But almost coincident with the end of the century we came practically to the end of our free lands suitable to agriculture, and during the first decade of the present century, 1900 to 1910, the population continued to increase by 21 per cent; but the increase in farm land for the same period was less than 5 per cent, and President Taft, in his address before the National Conservation Congress in 1911, reported that the total possible future increase in farm land in this country was only 9 per cent, and even this addition required large expenditures for irrigation or drainage.

During the last decade the cattle in the United States decreased 6,000,000; swine, 5,000,000; sheep, 9,000,000. There was a positive decrease in food-producing animals during that 10-year period. It may be asked, If there has been practically no increase in food grains and an actual decrease in food-producing animals, then how have we fed the increase of 16,000,000 new people that came to our shores? By decreasing our exportations of foodstuff. This answer is simple, correct, and well authenticated. By comparison of the five-year average 1898 to 1902 with another five-year average of 1908 to 1912, we find that our average annual exportation decreased during the decade from 215,000,000 to 103,000,000 bushels of wheat and from 162,000,000 to only 48,000,000 bushels of corn. That in food animals and their products our exportations decreased from 416,000,000 to 190,000,000 head of cattle, from 635,000,000 to 357,000,000 pounds of beef, and 1,535,000,000 to 900,000,000 pounds of pork. Thus we saved for domestic use 112,000,000 bushels of wheat and more than 1,000,000,000 pounds of meat, and we thus provided per capita for the 16,000,000 new people 7 bushels of wheat and 64 pounds of meat, while the average per capita consumption for Americans has been reckoned at 6½ bushels of wheat and 162 pounds of meat.

Mr. MURDOCK. Will the gentleman yield to me for a question?

Mr. BARTON. Yes, sir.

Mr. MURDOCK. The gentleman says he is a practical farmer or has been one. Will he give his idea of what caused the enormous decrease in our productions of live stock? What is his personal view of that? What caused it?

Mr. BARTON. In the exports?

Mr. MURDOCK. No; in the actual production of live stock in this country. You gave some figures there showing an enormous decrease.

Mr. BARTON. I think it has been caused by making farm land out of our ranches.

Mr. MURDOCK. That is your answer?

Mr. BARTON. Yes, sir. Then, I think that the high price of land makes it unprofitable to raise cattle on the land that once had no other value, and the ravages of hog cholera, which depleted our herds 2,245,000 head last year.

The problem before us is not so much how to get more land, but how to make the land we have now in cultivation more productive.

In a report of Vice Consul De Witt C. Poole, Berlin, Germany, he makes the statement showing the increase in the yield per acre of rye, wheat, summer barley, potatoes, and oats, making a comparison covering a four-year period from 1883 to 1887 and from 1908 to 1912. During this latter period the German Government were interesting themselves in the study and culture of soils furnishing the food that makes it most productive. The yield per acre according to this statement was:

| Crops. | Average annual yield. | | Per acre yield. | |
|---|---|---|---|---|
| | 1883–1887 | 1908–1912 | 1883–1887 | 1908–1912 |
| | *Tons.* | *Tons.* | *Bushels.* | *Bushels.* |
| Rye | 5,867,800 | 11,012,171 | 15.93 | 28.36 |
| Wheat | 2,585,200 | 3,962,390 | 19.93 | 30.79 |
| Summer barley | 2,232,800 | 3,220,066 | 23.80 | 37.27 |
| Potatoes | 25,459,200 | 44,220,213 | 130.00 | 198.43 |
| Oats | 4,291,000 | 8,189,082 | 31.50 | 52.90 |

We should conserve our fertilizers of all kinds. We are exporting to Europe more than a million tons of limestone a year of the highest grade. For the paltry sum of $5,000,000 we ship abroad every year twice as much as is required for the production of the entire wheat crop of the United States, an amount which, if applied to our own land, would be worth to us and our children not $5,000,000 but $1,000,000,000 for foodstuffs—so says Dr. Hopkins. We should, in taking an invoice of our worn-out lands, think of this most valuable resource and build up our soil as they do in Europe to make it productive, to the end that we can produce the foodstuffs for this Nation.

I insert here a statement of the appropriations made by Congress since 1881 and 1882:

| | |
|---|---|
| Agriculture | $162,803,495.65 |
| Army | 1,726,861,907.26 |
| District of Columbia | 227,160,819.00 |
| Fortifications | 145,333,746.72 |
| Navy | 1,841,984,460.55 |
| Military Academy | 25,816,818.41 |
| Pensions | 4,184,301,783.52 |
| Rivers and harbors | 596,962,790.01 |
| Total of all appropriations made by Congress during this period | 20,479,013,289.16 |

An examination of this statement will show how little assistance the business of agriculture has received from our legislators. Ten times as much for the Army. Ten times as much for the Navy. We have donated more to the District of Columbia than to this great industry.

Again there are a great many things included in this Agricultural bill that do not go direct to the farms in the interest of the farmer. For instance, the appropriation for the Weather Bureau, the inspection of meats, the Forestry Division, and many other like items.

The farmers are not asking for charity. They are only asking the same consideration for their business others receive. They are asking for laws that prohibit interests from wronging them. They are not asking for garden seeds, and would much rather this same money be expended in seeds or stock that would raise the different standards in their section of the country.

All the farmer asks is justice at the hands of this Government, and let me tell you he is a sleeping giant that does not fully recognize his strength, but continued persecution from all points of the compass will awaken him and when once awakened he is bright, intelligent, and capable, and will demand laws that give to him his rightful heritage.

Mr. LEVER. Mr. Chairman, I yield 15 minutes to the gentleman from Mississippi [Mr. QUIN].

Mr. QUIN. Mr. Chairman, of all the appropriations that have been before this House this is the first one that my heart has really been in, with the exception of that good bill of old man SHACKLEFORD, which gives the farmers a road in this country over which to haul their produce to market. [Applause.] We come along with the small amount here—I think $22,000,000—and that sounds like a big sum of money, but when you think about this $94,241,000 that the Military Committee brought up, and I had the honor to be on that committee and wanted it to be $30,000,000; when we think of a great sum of $140,000,000 that is brought out for the battleships and the Navy and $200,000,000 for pensions, I think this is a very insignificant sum that we are giving to the backbone of this country—the old farmer—the man that puts us all here and pays us our salaries for staying here. But I am happy to say in this Congress more has been done for the farmer than in any other Congress since I can remember. According to my recollection, the farmers of this country never had any progressive legislation in their favor. But this Congress has come to the front and is enacting legislation that is going to make it worth while for the man on the farm. And when I say "the farmer" I do not mean the man who sits out in the summer time in the shade in a rocking chair reading the history of Greece or Rome. I mean the man that is out behind "Old Bet" saying "gee" and "haw," the man that pulls fodder, the man that takes his cradle and cuts oats, the man that goes out and husks his corn and throws it into a wagon. That is what a

farmer has to do in my country, and he is the man that this Congress is endeavoring to help.

My distinguished friend the gentleman from Mississippi [Mr. COLLIER] just made an able speech about the interlocking directorates. We all know that is one of the worst evils this country has. I think that to such an extent that I even voted for the Murdock amendment on the floor of this House. [Applause.] That is how much I think about that proposition. But we have here before us a committee that has brought out what I believe is the most vital part of this whole bill. It has put in $200,000 for the purpose of creating a bureau of markets. The farmer of this country is cheated out of his produce. Do you know that the man that produces vegetables does not get in reality 20 per cent of their value? That is the naked truth. I speak from actual experience. I represent a district in southern Mississippi that produces vegetables to a great extent, and they are shipped all over the United States. The Crystal Springs tomato produced in my district, is quoted in the market as the choicest and highest-priced tomato. We find that the man producing those vegetables can hardly live because of the fact that the transportation and the commission charges are so much that by the time he gets his returns he has hardly enough to pay for his fertilizer, to say nothing about allowing him a reasonable amount for his labor. We must have the bureau of markets enlarged. I introduced a bill in this Congress and went before this distinguished Committee on Agriculture, and I am happy to say that a part of that bill comes out with this bill, but not to the extent that it must come in order that the producers of the farm products will receive the value of their labor.

In my district, not more than two weeks ago, a man shipped to the city of Chicago $36 worth of vegetables. That is what it brought in Chicago. It was worth about $96. He received $36 for it, and the commission merchant's charges and the freight charges amounted to all of it except $1.06.

Mr. OGLESBY. I would like to say to the gentleman, right along that line, that a case came within my experience last summer where a young man from Georgia shipped 1,000 watermelons to New York City. The market there was quoted at $385 a car, and he got back $11.14.

Mr. QUIN. That is a part of the scheme. One reason for it is, gentlemen, that you have so many rascally commission merchants. They send out flaring literature to the farmers of this country saying chickens are so much to-day, eggs are so much, watermelons, beans, cabbage, tomatoes are so much; and when the man gets his stuff to the market they send back the excuse that the market is glutted and that the stuff came in a rotten condition, all of which is a lie. They are skinning the farmer out of his work. Do you think for one minute that the farmers of this Republic are getting value received for their toil? These commission men in the cities have no restraints around them, and when the farmer's produce is handled by them they can handle it to suit themselves and make any returns they please.

I guess there are a great many honest men in that business, but it seems to me that many rascals ply the vocation of "produce commission men." A great many of them are meretricious thieves and robbers, unblushingly stealing from the vegetable farmer the honest value of the produce consigned to him. I maintain it is the duty of this Government to protect the farmers from such outrageous thievery.

If we hammer on it long enough, the farmer will come into his rights. I am going to stand up for him on the floor of this House and everywhere else. [Applause.]

This appropriation for the bureau of extension of markets, as provided for in this bill, whereby the farmers of this country can be protected, will be the best money that this Congress could ever appropriate. If my bureau of market bill is fully enacted into law, it will redound to the benefit of those men who are the wealth producers of this Nation, the men who work in the sun and in the rain, who work by day and night. It is the legislation that will give them the real value of their toil.

Mr. Yoakum said that out of the $13,000,000,000 of farm products produced in this country, $6,000,000 is consumed in transportation charges. Now, when you take in connection with that the amount that the commission merchant gets out of it, what is it that the man who cultivates the soil and produces the crops and ships those products to market gets? He and his family get the privilege of working like thunder by day and by night, and then if he has enough to get a new dress for his wife on Christmas he is lucky indeed. [Applause.]

I believe that Congress can remedy that situation, and I believe this part of the bill which gives the bureau of extension of markets $200,000 will begin to remedy the trouble. And it would be the proper thing for the Government to have in that bureau inspectors to see that the market stuff as it is brought in by the farmer is in good condition, and that it is shipped properly, and inspectors at the other end to see that these commission merchants can not rob the farmer after he has produced his stuff. [Applause.]

The Government can do that and still not be guilty of paternalism. And I want to say that if there is any man in the United States whom the Government ought to be a papa to it ought to be the farmer. [Laughter and applause.] But it seems he is the last man who is looked out for.

This committee has brought a bill in here that is intended to help the farmer. This Congress is carrying on a program that will help him. I believe it will. The farmers of this country are waking up. They know who their friends are, and they are going to keep their friends in Congress, too. [Applause.] I can tell you from my experience with farmers of my district that they know as much about what is going on in this Congress as the lawyer or the doctor knows.

Mr. JOHNSON of Washington. Mr. Chairman, will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman from Mississippi yield to the gentleman from Washington?

Mr. QUIN. I do.

Mr. JOHNSON of Washington. Does the gentleman think that the farmers of his district have any idea of the attendance here this afternoon?

Mr. QUIN. Yes. They know there are a lot of men always lagging behind on their business. [Laughter.] They know that; but they know also that the men who are standing up for them on the day this bill comes up for passage are here. They realize that. [Applause.]

Mr. DIES. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Mississippi yield to the gentleman from Texas?

Mr. QUIN. Yes; with pleasure.

Mr. DIES. Does not my friend from Mississippi think there will be more here when they get ready to vote for the battleships that are paid for by the farmers?

Mr. QUIN. Yes. The gentleman will remember last year that I sat on the floor of this House, on about the 24th day of February, and you could not get standing room around here. Every man was here in his place, and almost everybody was hollering for big battleships. If you want to start a big standing army in this country and put floating palaces on the high seas for a few men with great big fine suits to march around in, you can get the crowd in here always, because the farmer is paying the bills. [Laughter and applause.]

But I want to say to my friend from Texas that the farmers of the country are going to see what is being done with their money. We are putting the saddle on the rich men. Before we put on the income-tax law the people had always been ridden. The battleship men, the special-privilege crowd, and the big standing-army men had been riding the farmer with whip and spur. The farmer bucked, but he could not throw his oppressor. The saddle was pinching him, but the farmer could do nothing but sweat and holler. Now we are putting the bits in the mouths of the plutocrats. We are putting the saddle on them. They are going to buck and snort and stand up on their hind legs; but, thank the Lord, a Daniel has come to judgment. [Applause on the Democratic side.] When they see the extravagance of Congress they will say that a sufficient amount of money is not raised, and then we will increase the income tax. Then we will put an inheritance tax on them. That is the way to get an economical administration in this country.

The rich men control the magazines and the big newspapers. They are the men who never care anything about the expense—graft and extravagance—of government except to whoop up the boys and ride the old farmers. But let me tell you, when the magazines and newspapers carry the news to the rich men in the United States they will be the first men who will holler against a big standing Army, extravagance and waste of public funds. They have never felt the oppressive weight of taxes, because the real taxpayer is the farmer and the laboring man—the toiling masses in this country.

Let us ride with the spurs on the back of Plutocracy. They will be the first men, then, to cry out against these big battleships. They will be the first men to holler against the pensioning of all these 400,000 employees of this Government, too. [Applause.]

Mr. CANDLER of Mississippi. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Mississippi yield to his colleague?

Mr. QUIN. I do.

Mr. CANDLER of Mississippi. Is it not a fact that those people who pay the least to the Government and get the most from it are the first ones to demand Government protection when they get into trouble? They are not willing to pay the expenses of the Government, but they are always willing to receive the benefits.

Mr. QUIN. Yes; that is their program. They are brought up in that way. The first thing they say when you suggest, "Let us do something for the farmer," is, "That is paternalism"; and yet they are always standing around and wanting the Government to guard them personally. If you take these battleships and soldiers and guard these men, the trust magnates of this country will say you are guarding the interests of the country. The plutocracy ever since the founding of this Government has thought that the Government was organized for its special benefit.

I am constrained to say most of the legislation has been in the interest of the plutocratic class. What does special privilege care about extravagance in government? The invisible government has always pandered to extravagance, because the special interests received what they desired from the hands of the Government, and the people, in the last analysis, paid it all.

Why, out in Colorado right now they have an army of soldiers around a mine oppressing a lot of poor laboring men. They have the same thing up in Michigan. Your committees are investigating that subject, which became a stench in the nostrils of honest people. Those are the men who always holler to us: "We want the Government, with all of its soldiers and all of its battleships, to come and help us." Big business sends out a Macedonian cry, and always gets soldiers at the expense of the people; but whenever you say, "Let us do a little something for the farmers, the wealth producers of this country, the men who are the real soldiers in the actual battle of life, the men who maintain and support the government," these plutocrats say, "Oh, no; this is a waste of money." I want to say that the farmers of the United States are the men who now need the help of this Government. They never ask for special favors. The only thing they want you to do is to keep the other fellows from running their hands down into their pockets and taking the benefit of their toil. That is all they ask for. All they ask for is honest and just laws. If the farmers of the United States can get this bureau of markets properly created, they will then receive the value of their labors.

I want to refer to another thing that, in my judgment, is doing much to keep the farmer out of his own. That is these gambling exchanges in the large cities. In the city of New Orleans there is a cotton exchange. In New York City there is what they call the board of trade. Gentlemen, those are nothing but gambling hells. Instead of following the law of supply and demand, a lot of trained and expert financiers, men who do not toil, neither do they spin, but who are smart and understand the game, are continually manipulating prices. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. QUIN. I should like to have a little more time.

Mr. LEVER. The gentleman is making such a splendid speech that I yield to him five minutes more. [Applause.]

Mr. QUIN. I will tell you. I live in McComb City, a town of about 8,000 people. I started to speculate once, and I had a good friend who told me what a great fortune we could make in the cotton business. I went into partnership with him and put in $200 in his name. The market went up. That was in 1900, a long time ago. The market went up day by day, and I was watching the figures. It went up, and my friend said, "Let us put in some more." I put in more, until I had $500 invested. Do you know, on the 10th day of December of that year the Government sent out a report, and these speculators took advantage of that report and ran the market down from 10 to 7.88 cents a pound and pretended that it was on the Government crop reports? That was my first and my last gambling. The amount that I lost was small, only $500, but it was a large amount for me then and would be a terribly big amount for me now. [Laughter.] And all the men who go into stock speculating or anything of that kind, if they are on the outside of the ring, will go busted. That one thing has busted more honest, upright merchants in the State of Mississippi than the boll weevil and all other pests combined. [Applause.] This Congress ought to make a law to put the farm products and stock gamblers out of business. Then the people of this country who produce the wealth could depend on the law of supply and demand to get the just and real value of their farm products.

The people of America are not asleep. They know that this is true. You can not pick up a newspaper that will not talk about it. Every farmer in the United States knows it is true. A few men who have been riding in the automobile of special privilege will stand up and talk about cotton gambling and farm-produce gambling and the stock exchange as a good thing, and they even find some big city preachers who will talk that way. You know when Christ went into the temple and saw the money changers there engaged in their nefarious operations, he kicked them out bodily, overturned their tables, and ran the money changers out of the temple. I am in favor of the American Congress, the representatives of the people, enacting statutes which will kick the money changers out of the temple and run speculators out of the stock, cotton, and grain exchanges of this country, and let the law of supply and demand produce natural prices under real, economic, just administration of the affairs of this country. Then the farmer can stand up and say, "Lord, I am proud that I live and am able to work." Now they are working for some one else. The people of this country support a great horde of parasites who do not know what it is to do an honest day's work. The people who speculate do not produce any wealth. The man who produces the wealth is always the one who derives the smallest amount of benefit from his labor.

The man who does the real toil of this land is the man that receives the smallest benefit of the law; the man who is the real wage earner of the United States can never expect to be anything but a poor man, and the one-horse farmer of this country can never expect to be anything but poor, unless my bill becomes a law. If he works from daylight to dark, and in the moonlight at night for good measure, and saves everything he makes, he is going to die a poor man, because of the fact that 50 per cent of all he makes is all he can ever get out of it. The transportation companies and the commission merchants and the people who handle his products take the balance, and it resolves itself into such analysis that Mr. Farmer is going to be kept with just enough to start another crop, and most of the time that on credit.

You know what the retailer has to pay for farm produce. Understand me, he is robbed, too. We pay in Washington City 46 cents a dozen for eggs to-day. I do not know what you pay for cabbage. I have a small family and do not eat much, but we pay enormous prices for hen fruit, vegetables, and all farm produce. The farmer is not getting the benefit of it, but somebody is getting too much. The poor retail grocer does not get it. He walks around a part of the time wearing patches on his breeches. [Laughter.] You have the man that produces and the man that retails it with patches on their breeches, while the railroad companies, with enormous bulks of inflated and watered stock, make a good profit on their water as well as on their real stock, and the commission merchant or broker, who works not with his hands but who is an artist at figuring returns of sales, rides in a fine automobile and wears a silk hat and diamonds. [Laughter and applause.]

I will append as a part of my remarks the following bill:

A bill (H. R. 9121) to establish a bureau of markets in the Department of Agriculture.

*Be it enacted, etc.*, That hereafter there shall be in the Department of Agriculture a bureau to be known as the market bureau. The chief of said bureau shall receive a salary of $5,000 a year and the assistant to the chief shall receive a salary of $3,000 a year, both of whom shall be selected and appointed by the Secretary of Agriculture. The chief of the bureau of markets shall name all special agents, clerks, and other employees that may be necessary to fulfill the duties of such bureau in or out of the District of Columbia, and they shall receive the same compensation as other United States Government clerks doing similar work.

SEC. 2. That it shall be the duty of the chief of the bureau of markets to make thorough investigations as to the system of marketing all farm products, especially vegetables, fruits, hogs, poultry, and all diversified products of the farm, cooperative and otherwise, in practice in various sections of the United States and foreign countries. The information and data thus collected shall be distributed to farmers, farmers' unions, farmers' organizations, and societies of consumers throughout the various agricultural sections of the United States, and made available for the use of any individuals or organization, either by the circulation of printed bulletins, letters, circulars, telegrams, or by information given personally by special agents or employees of said bureau. It shall also be the duty of the chief of the bureau of markets to make investigations of the demand for farm products in various trade centers and the current movement of such normal demand and the price thereof, with the view of furnishing information as to the best available markets, which information shall be distributed as above set forth.

SEC. 3. That it shall be the duty of the chief of the bureau of markets created under this act, from time to time, and at appropriate intervals, to gather accurate information from the various production areas of the United States upon and relative to the amount of productions of the various fruit and vegetable crops thereof, including the acreage planted therein, and of the various kinds, classes, and varieties thereof, respectively, and the probable dates upon which such crops will become ready for market, and to distribute such information through reports to interested persons, as hereinafter provided.

SEC. 4. That it shall be the duty of the bureau of markets to aid in every practicable way the sellers and buyers of such crops and farm products as are mentioned in this act while the same are subjects of interstate commerce, to the end that such buyer shall receive the full amount, quality, and quantity of such crop or commodity shipped, and the seller shall receive the full amount or price, less expense, for which such crops or commodities are bought; and that to this end such bureau

and the agents thereof shall have a right, and it is hereby made their duty, to inspect the quality and quantity of such crops or commodities that leave the hands of the shippers thereof and the quality and quantity of such crops or commodities that come into the hands of the buyers thereof, as well as to ascertain by inspection of the records hereinafter provided for, or by deposition or otherwise, the prices paid for such crops or commodities by the buyers thereof, and to report such information to persons directly interested therein; and further to prosecute persons guilty under this act of infringements hereof.

SEC. 5. That it shall hereafter be the duty of every agency, person, or corporation instrumental in selling, handling for sale, or arranging the sale of any such crops or commodities the subject of interstate commerce on behalf of the shipper, whether before or upon delivery to the first purchaser thereof, in each case of such nature to make a true and correct record in writing, dated and signed by the person entering such record, showing the quantity of such crop or commodity received by such agency, person, or corporation, the date and the time of day at which it was so received, the name of the shipper from whom it was received, the quality and condition of such crop or commodity when so received and when sold, the name and address of the first bona fide buyer thereof, the price paid by such buyer to such agency, person, or corporation to such shipper, and the date of such remittance, the original of which record shall be prepared immediately upon the transaction of the facts and matters therein recorded, and shall be thereafter forthwith transmitted by mail, duly addressed to such shipper, and a duplicate of which record shall be correctly entered by such agency, person, or corporation in a well-bound book or books to be kept for such purpose in the office of such agency, person, or corporation, subject to the inspection of the shipper and the bureau of markets.

SEC. 6. That any person or persons, corporation, or other agency, as well as any agent or employee thereof, who shall omit to send the original record, or to keep the duplicate thereof, or to allow inspection of such duplicate, as above provided, shall be guilty of a felony and upon conviction thereof shall be punished by a fine of not less than $1,000 and imprisonment of not less than 12 months or by both such fine and imprisonment.

SEC. 7. That any farmer, farmers' union, organization, buying or selling agency that desires telegraphic or telephone information from the bureau of markets shall deposit the actual cost of transmitting such telegraphic or telephonic information with the chief of the bureau of markets.

SEC. 8. That the sum of $—— shall be appropriated out of the funds of the United States Government, and the Secretary of Agriculture shall provide suitable offices in which said bureau of markets can conduct the business thereof and the chief of the bureau of markets shall make an annual report to Congress, giving in detail the workings, affairs, operations, and expenditures of such bureau.

Mr. LEVER. Mr. Chairman, I yield 30 minutes to the gentleman from Kentucky [Mr. ROUSE].

Mr. ROUSE. Mr. Chairman, I ask unanimous consent to extend my remarks by printing an editorial in the RECORD.

Mr. MURDOCK. What is the editorial about?

Mr. ROUSE. It is on the Mexican situation, from the Kentucky Post.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, I yield 15 minutes to the gentleman from Texas [Mr. YOUNG].

Mr. YOUNG of Texas. Mr. Chairman, I have the honor to represent in part one of the great agricultural States of this Union, having a territory from north to south of something over 800 miles, and from east to west of like dimension; a territory so large that if Texas were turned on its north boundary line as an axis the southern extremity of that State would fall across the Great Lakes. It is a State, I may say, wholly agricultural, for our manufacturing interests are quite limited. We have a diversified soil, producing almost every crop known to the civilized world, and, of course, I am intensely interested in any legislation that looks to the advancement and betterment of the great State from which I come.

Our chief product is cotton. We have in the past grown as high as 4,500,000 bales annually. One of the chief matters of interest to our State is the cattle industry, and if I shall direct my remarks to any one item more specifically than to another, it is at this time to the matter of the meat supply of this country.

Mr. Chairman, if we should look to the figures as they are handed to us by the experts of our Government, we find in this question of meat supply one of the great questions that not only confronts us for the future, but it confronts us at this very moment. Our population is growing very rapidly. Probably now the population of the United States will amount to between ninety-six and ninety-eight millions of people. Our foreign immigration runs the population up one million and a half annually. These people that come to us from other shores must to fed, our own people must be fed, and this is essentially a meat-eating people.

The cattle interest has been on the decline. The swine interest has been on the decline, and the sheep interest has been on the decline. In other words, we are not raising meat-producing animals as rapidly as our population is increasing. The rule is that while the population increases, the meat supply declines. What is the cause of it? There are many existing causes. Take the great State of Texas that formerly was chiefly a cattle-producing State. Even within my memory, and I am not an old man, the agricultural section of Texas was in the eastern part of the State, the timber section. The great prairie belt began in the county in which I reside, only about 125 miles from the eastern border of the State, and from that section to the west was an unfenced territory, largely privately owned, and what was not privately owned was State land. The grass that grew was free to the people, and the cattle interest predominated. Great herds of cattle grew from year to year that helped to supply the markets of the world. With free grass, mild winters, it was a great producing section for cattle. That condition has changed within my recollection. My home county that was formerly a cattle county, every foot of it to-day is under fence, and practically every foot of it to-day is bearing agricultural crops, and the cattle interest has been driven from it.

Land is worth from $25 to $200 an acre, and it has been found that it is not a good business proposition to any longer have it in grass to raise cattle, and they have turned it into cotton fields. What is true of that county is true of the great body of Texas, and hence Texas has ceased to produce great herds of cattle that formerly came from that section, and the farming interests have taken it up. That is true also in many of the Western States where they had their great herds. The small and the large farmer have now gone in there with the plow and have displaced the cattle industry, and they are now growing crops of wheat and corn.

This is one of the causes of the shortage of cattle. Mr. Chairman, in this bill there is one item that is inserted of $400,000, for eradication of the southern cattle tick, in which I am extremely interested; and, as I say, any appropriation made that will advance the farming interests of the country should be made, in my judgment, unstintingly by this Congress, because we depend for our food supply upon the farmers of the country. In the Southern States we have our problem in the way of stock raising, as people in other sections of the country have their problems. In the Western States and in the Central States, the great hog-producing States of the country, the hog cholera is a serious problem, and we have grappled with it and have appropriated $500,000 for stamping it out. In the Southern States we are grappling with the proposition of the infestation of what is known as the cattle tick. This Government, through its experts, has found a remedy which when applied, as it is being applied, will help to destroy and drive from us this infestation; but as the cattle interest now is it is a matter of education, something which must be carried to the farmer, and the separate States of the Union have not been able to cope with it as they should, although most of them have made appropriations looking to the extermination of the cattle tick.

As I say, great herds of cattle have been displaced, and now, in a large measure, the cattle supply comes not from the great ranches but from the individual farms, where each farmer has from 1 to 20 cows, and the infestation of the cattle tick is a serious item with him. But we are answered on the floor of the House, as in former Congresses we were answered, that the Government, having discovered the remedy it ought not go any further in appropriations to help carry this knowledge to the individual farmer, but that it should step back and leave it to the States to cope with. Under certain conditions this principle might be wise, but in the cattle-growing sections of the country it will not avail anything. The dipping vat, with a certain mixture, has been discovered, and the herd is driven through it, and in that way the tick is destroyed. The large ranchmen of the country have provided their individual dipping vats at a cost of from $500 to $800, but how about the farmer on the 160 acres of land who has but a few head of cattle—5, 10, 20, or 30, as the case may be? He is not able financially to have his individual dipping vat. In fact, many of them have not yet this knowledge brought to their doors, and in order to reach the individual farmer who is a small cattle grower, it is absolutely important that this work be kept up; and why is it a national question? Because the Nation, first, needs the products of the farm, and, second, the Nation has seen fit by its laws to draw a dead line about the States that have this infestation and say to the cattle grower, you can not ship from the infested district to the markets of other States. That quarantine line is a dead line to our people; and since the Government exercises this power of prohibiting our cattle from entering the commerce of the world, then can the Government say, or can any man on the floor of this House say, that it is not a national problem to help further free ourselves of the infestation of this cattle tick?

Mr. LEVER. Mr. Chairman, will the gentleman yield?

Mr. YOUNG of Texas. Certainly.

Mr. LEVER. Is it not a fact that the dead line to which the gentleman refers is costing from $4 to $6 a head on every head of cattle that is shipped above it?

Mr. YOUNG of Texas. That is true.

Mr. LEVER. That was the testimony before the committee?

Mr. YOUNG of Texas. Yes. Mr. Chairman, I feel deeply interested in this particular branch of agricultural legislation, because at this very session of Congress there was an effort made to prohibit cattle from the Southern States being shipped across the quarantine line for immediate slaughter. Under the act of 1884 it was provided that, although we were an infested district, as all of the Southern States were, yet we could ship our cattle to the foreign markets—that is, the markets of other States—provided that they were shipped for the purpose of immediate slaughter.

There was an effort at this session of Congress to have inserted in this bill a provision repealing that act in so far as it permitted the Southern States to exercise the privilege of shipping their cattle for immediate slaughter. I want to show, Mr. Chairman, that had this matter been consummated as it was attempted in the beginning it would have absolutely destroyed the cattle interests of Texas and every other Southern State. In Texas we have one great market for our cattle, and that is the Fort Worth market. In that market we have the same great packers that operate throughout the United States and foreign countries. It does seem to a man who is not on the inside working of these great meat-packing interests that the Texas cattle dealer ought, at least, to get as much in the market of Fort Worth for his cattle plus the freight that is necessary to bring it from Texas to St. Louis as he could get in St. Louis. That is not true; but the cattlemen of Texas, with their choice cattle, all ship to St. Louis and Kansas City, and hence all that choice foodstuff goes from the Fort Worth market because they will not bring the price in Fort Worth markets, although the same packing houses operate in Fort Worth, Tex., as at St. Louis and Kansas City.

Now, had this attempted effort been carried out to prohibit the people from shipping from Texas cattle across this quarantine line for immediate slaughter, what would have been the result on the cattle industry of Texas? It would be holding these people to one market, and that market is at Fort Worth. That means that we would have been at the mercy of the people who own these packing plants in Fort Worth.

The CHAIRMAN. The time of the gentleman has expired.

Mr. YOUNG of Texas. I would like to have about five minutes more.

Mr. LEVER. I yield five minutes additional to the gentleman from Texas.

Mr. YOUNG of Texas. I want to produce some figures on the proposition. The census of 1910 showed, and these are important figures, that in Texas during that year we had 7,133,400 head of cattle. Not one hoof of this great amount of cattle could have ever gotten out of the State of Texas into the market except through the Fort Worth market. In Oklahoma, below the quarantine line, they had 2,026,540 head of cattle; in Alabama they had 1,007,125 head of cattle; in Arkansas, all below the quarantine line, they had 1,091,733 head of cattle; in Louisiana they had 862,695 head of cattle; and in Mississippi they had 1,084,788 head of cattle. Mr. Chairman, had that effort succeeded these cattle would have depreciated in value not less than from $5 to $10 per head the very moment that they got the act of 1884 repealed.

Mr. DIES. Will my colleague yield for a question?

Mr. YOUNG of Texas. Yes.

Mr. DIES. If that provision had been made, not only would the cattle in the States mentioned by my colleague have depreciated in value but the meat supply for the balance of the Nation would have appreciated in value very much.

Mr. YOUNG of Texas. Surely. It put us at the mercy of these great packers, who have already grown too abundantly rich off the cattle growers of this country.

Mr. KETTNER. Will the gentleman yield for a question?

Mr. YOUNG of Texas. I will.

Mr. KETTNER. Is it not a fact that cattle are shipped from Mexico into certain parts of Texas?

Mr. YOUNG of Texas. It is.

Mr. KETTNER. Is it not a fact also that the reason for this opposition coming up was because those cattle were shipped from Mexico into Texas and it was the only State in the Union that under the law was permitted to have cattle shipped from Mexico?

Mr. YOUNG of Texas. The gentleman means the effort to repeal this law?

Mr. KETTNER. Yes.

Mr. YOUNG of Texas. I think not, sir. If they had singled out simply the State of Texas, they would have written into the law that it should apply to Texas alone and not to these other Southern States below the line.

Mr. KETTNER. The reason I make the statement is, I live 17 miles from the line of Mexico, where they have thousands of head of cattle that we can not make use of, because under the law we can not send them across the line into the city of San Diego.

Under the law as it stands now the cattle have to be dipped and then held 60 days. The cattle can be fat and in good shape, but in order to bring them up and dip them you would have to feed them two months in some other section, take them perhaps 200 miles and feed them, before you could bring them into southern California.

Mr. YOUNG of Texas. The gentleman is correct about that. As to the proposition of dipping a steer, you might as well knock him in the head for the time being as far as the owner of the fat steer is concerned. I am interested in this item in this bill not only because of the cattle industry of my State, but because of the effect it has on the general meat supply over the whole country. When you put it so that the cattle grower can not get a profit out of the cattle he raises we are going to stop growing the cattle, and we will be in a worse fix than ever as to the meat supply. I am glad to know that the Secretary of Agriculture withdrew his recommendation for the repeal of the act of 1884, and I am indeed glad that personally I was in a position on the Committee on Agriculture to forestall this effort to repeal said act by making a point of order against it.

Now, Mr. Chairman, I have some interesting data here, prepared by Judge Sam H. Cowan, the representative of the cattlemen of the United States, relative to the eradication of the cattle tick, two or three pages of it, and I desire to extend my remarks in the RECORD so as to insert this data.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD by including the data referred to. Is there objection?

There was no objection.

Mr. YOUNG of Texas. I append as a part of my remarks the following:

WASHINGTON, D. C., *February 5, 1914.*

To the Hon. ASBURY F. LEVER,
*Chairman of Committee on Agriculture,*
*House of Representatives, Washington, D. C.*

SIR: As the representative of the Cattle Raisers' Association of Texas and of the American National Live Stock Association, and by direction of those associations, I hereby submit to your committee the protest of those organizations, who represent the cattle raisers not only south of the quarantine line but those engaged in the business of feeding, raising, buying, and selling cattle to points north of the quarantine line, against the proposal which we understand has been made by the Agricultural Department to repeal the act of 1884, which act established the Bureau of Animal Industry, and which act provided (act of May 29, 1884, ch. 60, sec. 6, 23 Stat. L., p. 32) that:

"Railroads and other carriers are prohibited from transporting between States live stock affected with a contagious, infectious, or communicable disease, and all persons are prohibited from delivering animals so infected for transportation or to drive the same, etc., with the following proviso:

"'*Provided*, That the so-called splenetic or Texas fever shall not be considered a contagious, infectious, or communicable disease within the meaning of sections 4, 5, 6, and 7 of this act as to cattle being transported by rail to market for slaughter when the same are unloaded in order to be fed and watered in lots on the way thereto.'"

As will be observed, the law excepts Texas or splenetic fever from the regulations governing infectious or contagious diseases among cattle. For 30 years or thereabouts cattle have been shipped from south of the quarantine line to points north for immediate slaughter under regulations of the Bureau of Animal Industry, which regulations require that cars containing such cattle be tagged "southern cattle," and they are unloaded into separate pens, commonly known as quarantine pens, en route, where that is necessary, and at the markets throughout the United States, and no outbreaks of Texas fever have resulted in many years.

Occasionally, in case of the wreck of a train and the escape of cattle therefrom, the near-by native cattle have contracted the Texas fever; but these happenings have been so infrequent as not to merit attention.

The Texas fever is communicated only by means of the cattle tick; that is, not by means of a tick or ticks leaving one animal and going to another, but only by the process of the grown, matured ticks dropping off of the southern cattle, where the female tick has matured its eggs (about 2,000), each very much smaller than a mustard seed, and then hatching out in the sand or soil and crawling on the blades of grass, where cattle passing knocked them off, and thereupon the ticks crawl up the legs of the cattle and attach themselves in the inside of the thighs or along the belly, or around the udder, in case of cows, and after attaching themselves to the thinner skin set up a circulation with the animal, and if the animal is susceptible to the disease a sufficient number of ticks will communicate the Texas fever to cattle north of the line which are not immune from the disease. Once an animal has had the Texas fever (and that applies to all animals south of the line) he is as immune from it as a person who has had the smallpox is immune from a subsequent attack. This explanation is necessary in order to show that the southern cattle are not themselves diseased, but they may carry the means of disseminating the disease, just like horses may do.

The transportation for immediate slaughter under the regulations of the Department of Agriculture—that is, the Bureau of Animal Industry—have been perfectly successful, and no complaint is made by anybody, so far as we know, that any danger of disseminating Texas fever arises from the shipments for immediate slaughter.

The very large proportion of cattle shipped from the great breeding grounds of Texas and Oklahoma, saying nothing of the other States,

which furnishes the beef in all the markets of the United States, comes from south of the quarantine line, and has been for 30 years successfully shipped under the provisions of the act of 1884 and the regulations provided for unloading en route.

It caused astonishment to the cattle raisers and shippers and those who buy these cattle at the markets to find that a recommendation had been made to repeal this law. No opportunity had been offered or has been offered to stock raisers or to those who purchase these cattle for slaughter to be heard on the subject. I am safe in saying that all of them universally protest against the proposed repeal of the act of 1884.

As I understand it, the repeal of that act carries with it the proposal that all beef cattle—that is, cattle shipped for immediate slaughter from all territory south of the quarantine line (not merely in Texas and Oklahoma, but from Louisiana, Arkansas, Mississippi, Alabama, Georgia, and Florida)—could not be moved for interstate slaughter or otherwise unless they should first be dipped in some dip prepared or patented by somebody and recommended by the Bureau of Animal Industry. I assert it as a fact that stockmen can not afford to stand the loss incident to dipping cattle and then ship them to market.

They would therefore be compelled, for business reasons, to ship them only to a slaughtering establishment within the State of origin, trusting to it that the State authorities would not make a ruling which would prohibit such shipments for slaughter within the State.

No one contends that the health of the animal would be benefited by dipping just for shipping for slaughter. No one contends that the meat and meat-food products from the southern cattle would be improved by the dipping process. The only contention which we have heard is that if all southern cattle were required to be dipped before going to an interstate market for sale that the opportunity of those who desire to purchase cattle on such markets for feeders might be beneficial to those who want feeders. This overlooks the fact that a man engaged in the business of producing cattle ought to have the right to choose whether he desires to dip them or not with the view of selling to feeders if the price offered by slaughterers is not satisfactory.

Take the State of Texas as the most prominent example with its 14,500 miles of railroad, we find that about 12,000 miles of the railroads in Texas are situated below the quarantine line. We may fairly figure that there is a station on the average of every 8 miles. We may fairly assume that there are stock pens and shipping facilities where cattle are loaded constantly at two-thirds of these stations. It is impossible for the Government or the State to provide dipping facilities at these stations. So, therefore, a shipper of a carload of cattle (and it may be well said that there are thousands of people who don't ship more than one or two carloads in a year) could not dip them if they desired to do so without driving a long distance to some place where there might be dipping facilities.

The Government now provides supervision for dipping and so does the State of Texas for stock cattle going to northern pastures, but the facilities for dipping are not sufficient to provide them everywhere, and hence they are located in just a few places where the stockmen have sufficient interest in the matter to build the vats and provide the dipping. I am told it costs about $800 to build a proper vat for dipping and preparing facilities therefor. The dip is prepared, heated, and put in the vat, and the cattle are driven through it and made to swim and are immersed in the dip solution, and then walk out on a platform to dry off and drain the dip, so that it runs back into the vat.

From this it will readily occur to any man of ordinary sense that when you have prepared dip enough for a carload of cattle you have sufficient for 20 carloads or more. The process, therefore, of dipping 1 or 2 carloads of cattle would be enormously expensive and practically impossible. The estimate of the minimum expense judged by practical stock raisers is from $4 to $10 per head.

Whatever may be said of the propriety and benefit of dipping, it is a fact shown by actual experience that there is a large death loss resultant. For example, I know of one man who buys fine bulls on the Fort Worth market and carries those bulls north of the quarantine line to his pastures, who always contracts with the seller of the bulls, which are purchased south of the line, guaranteeing them for a period of time, and he tells me that in every case where he has bought bulls which, in order to get to his ranch, have to be dipped, there has been a considerable percentage of death loss attributable only to the effects of dipping.

Nevertheless the Cattle Raisers' Association of Texas has used and is using every effort to eradicate the ticks and has been the foremost leaders in the enactment of the law by the Legislature of Texas to that end, and in securing the largest appropriations which can be obtained from the legislature for that purpose. But to prohibit the movement for immediate slaughter without dipping would be the most serious detriment to the cattle business in Texas, Oklahoma, and all points south of the line, and I could not use language which would magnify sufficiently the importance of this statement.

I submit herewith a resolution passed by the American National Live Stock Association at its recent convention in Denver, where there were representatives of the most prominent stock growers and the officers of the State live stock associations from practically every State west of the Mississippi River who represented and spoke for the industry in those States, and they unanimously adopted this resolution without a single dissenting vote after mature consideration by the executive committee of American National Live Stock Association, composed of the most representative stockmen from the entire western stock-raising country.

Resolution adopted at the Seventeenth Annual Convention of the American National Live Stock Association at Denver, January 22, 1914, protesting against proposed repeal of quarantine law of 1884.

Whereas in a bulletin issued by the Agricultural Department of the Government, entitled "Weekly news letter to crop correspondents," of date January 14, 1914, it is stated:

"CONGRESS ASKED TO PROHIBIT MOVEMENT OF TICKY CATTLE BEYOND THE QUARANTINED AREA.

"The Secretary of Agriculture has recommended that Congress repeal the provision in the law of 1884 establishing the Bureau of Animal Industry which permits the shipment of cattle from the Texas fever region by rail to market for slaughter. This law was passed before the nature of the infection and its transmission by ticks were understood. The effect of the change would be to place Texas fever on the same basis as other communicable diseases and to prohibit the interstate movement of tick-infested cattle. Since the eradication of the ticks has been shown to be entirely practicable there is no longer any good reason for allowing the shipment of ticky cattle outside of the quarantined area, especially since this is now attended with danger of reinfecting some of the territory that has been freed of ticks.

"The Secretary's recommendation to Congress was unanimously indorsed by the Southern Cattlemen's Association at its recent convention in Memphis, and also received the approval of the United States Live Stock Sanitary Association at its recent Chicago meeting.

"Under the proposed change in the law cattle could be shipped interstate from the quarantined area only after they had been dipped or otherwise freed of ticks, but when so shipped they would be free from quarantine restrictions on account of Texas fever, and would not have to be sold for immediate slaughter.

"It is believed that this change would be of great advantage in promoting the eradication of the ticks in the South and also in protecting the territory already freed"; and

"Whereas by the act of 1884, which established the Bureau of Animal Industry and quarantine lines dividing the tick-infested area from the area not so infested, it was provided that cattle may be moved from the tick-infested area for immediate slaughter in interstate shipments, and that has been practiced now for 30 years with entire satisfaction to the Bureau of Animal Industry, and, under the various regulations which have been provided to prevent the spread of any infection from such shipments, quarantine pens have been established throughout the United States, in order that persons producing beef cattle or other cattle designed for slaughter may ship the same to any market which they may wish to patronize, and there have been no bad results and no outbreaks of Texas fever resulted from these shipments; millions of cattle have been shipped from year to year to the northern markets from Texas, with not even a suggestion opposing it from the Department of Agriculture, and with no protest from the States through which they moved, and thus the markets of the country have been open to the enormous production of cattle from the tick-infested area, to furnish a supply of beef to the entire trade of the country; and in the various reports of the Bureau of Animal Industry it has been shown, by experiment of the most detailed and painstaking sort, that the meat and meat products from such animals are as wholesome and healthful for consumption as any other beef and meat food products, which fact up to this time has never been questioned and can not now be questioned; and

"Whereas if this law is repealed and the Department of Agriculture shall require that cattle shipped to market be dipped, in order to free them from ticks, before they can be sent to market beyond the State in which they are produced, a loss of from $4 to $10 per head will result from such dipping, as well as a shrinkage in the weight of such cattle and a deterioration in the quality of the meat itself, with no benefit to anyone as a producer or consumer; and

"Whereas the expense incident to carrying out any such plan would prohibit the shipment to interstate markets, and thus force the shippers of cattle from the tick-infested area to the markets within the State in which such cattle are produced, thereby congesting such markets and giving a monopoly to slaughterers within such State, depriving the producers of the competition of the various markets which they have enjoyed for 30 years; and

"Whereas the Government and no State has provided or can provide the facilities for dipping at the thousands of railway stations at which cattle are shipped in one, two, or three carload lots, often gathered up in small bunches; and

"Whereas when such cattle are shipped to a market within a given State by a shipper who does not have the opportunity to dip such cattle under the regulations of the department, the producer who sells them must sell them either to the slaughterer or to some person who has provided means for dipping the cattle, and thus give to such persons a monopoly in the purchase of such cattle before they can enter interstate commerce, or force the sale of all cattle produced within a given State in the tick-infested area to such slaughtering establishments as may happen to exist within such State; and

"Whereas this would prevent the small stock raisers, who produce a large proportion of the cattle in the tick-infested area, from having a competitive market, thus discriminating against them, practically to the destruction of their business; and

"Whereas the proposition is revolutionary and has never been submitted to the representatives of the large producing live-stock districts south of the quarantine line, and its indorsement, as recited in the bulletin from which the quotation in this resolution is taken, by the so-called Southern Cattlemen's Association is not the indorsement of the producers in Texas and other States west of the Mississippi River, nor was the subject matter which is recited to have been approved by the United States Live Stock Sanitary Association ever made public, or the opportunity for an expression on the subject afforded either to the producers from south of the quarantine line or to the sellers, dealers, slaughterers, and others at the markets patronized by the producers from south of the quarantine line: Now, therefore, be it

*"Resolved by the American National Live Stock Association, at its annual convention in Denver, Colo., January 20–22, 1914,* That, in behalf of all live-stock raisers, slaughterers, and others interested, we protest against the repeal of the law of 1884, permitting the shipment of cattle from the tick-infested area to market for immediate slaughter; and in doing so we assert that it is equivalent to a prohibition to ship to interstate markets and destructive of the interests of the live-stock producers in that territory; and we urge upon the Members of Congress to afford an opportunity for those engaged in the business to have fair consideration of the proposed repeal of this law, in order that a business which has been safe, sound, and satisfactory may continue, and that the people engaged in that business shall not be injured by an act of Congress."

The importance of this matter can not be better stated than to show you by the statistics from the Census Bureau, kindly prepared for me, for the purpose of presenting to your committee the number of cattle south of the line, according to the cattle census of 1910, there were:

| | |
|---|---|
| IN TEXAS. | |
| Cattle in quarantined counties | 5,624,466 |
| Cattle released in counties formerly quarantined | 397,080 |
| Cattle in counties not quarantined | 1,101,254 |
| Total cattle in State | 7,133,400 |
| IN OKLAHOMA. | |
| Cattle in quarantined counties | 1,049,590 |
| Cattle released in counties formerly quarantined | 531,602 |
| Cattle in counties not quarantined | 445,508 |
| Total cattle in State | 2,026,540 |
| IN ALABAMA. | |
| Total cattle in State, all in quarantined counties | 1,007,725 |
| IN ARKANSAS. | |
| Cattle released in counties formerly quarantined | 231,797 |
| Cattle in quarantined counties | 859,906 |
| Total cattle in State | 1,091,703 |

| | |
|---|---|
| IN LOUISIANA. | |
| Total cattle in State, all quarantined | 862,695 |
| IN MISSISSIPPI. | |
| Cattle in quarantined counties | 881,227 |
| Cattle released in counties formerly quarantined | 203,561 |
| Total cattle in State | 1,084,788 |

I have not the precise and accurate figures of the total number of cattle marketed during the year 1913 from points south of the line which have been shipped under the regulations of the department made in accordance with the act of 1884; but I will vouch for it that from States west of the Mississippi River and from stations south of the quarantine line there was sent for immediate slaughter to the various markets not less than 2,500,000 head of cattle.

I made the assertion, which I think I can prove by men who have had experience in dipping cattle, that the loss which would occur in the shrinkage and in the expense of dipping, had these cattle been required to be dipped, would amount to $25,000,000, and would benefit nobody one cent. This is because we know that the southern cattle are just as healthful for food before they are dipped as they are afterwards.

The proposition to repeal this law is a grave mistake. It has not received the consideration which such an important matter should receive, and until Congress can give it proper consideration I denominate it an outrage on the public to enact such a law without the most careful deliberation.

It may be that persons who feed cattle desire to have the most extensive opportunity to purchase them for that purpose, but the man who owns them and ships them to market ought to have the right to choose whether he wishes to dip them with a view to selling them for feeders or whether he wants to ship them for immediate slaughter, dismissing the opportunity or chance to sell them for feeders.

The tables incorporated above will show the total number of cattle south of the quarantine line in the States named in the table, from which I have asserted there are marketed in a year at least 2,500,000 head.

They also show in the case of Texas and Oklahoma the number which are north of the line. I should state what will be borne out by Texas Congressmen who represent that part of the country north of the line, that young steers and a great many heifers under the commercial term "spaed" are sold together to northwestern pastures and very few are marketed directly as fat cattle from that part of Texas. Of the nine hundred and odd thousand head of cattle marketed at Fort Worth, or which went from the Fort Worth stockyard last year, only about 50,000 head were natives which came from north of the line. Oklahoma City, Wichita, and other places keep their buyers on the Fort Worth market to purchase cattle for their slaughtering houses for shipment for immediate slaughter. These cattle come from south of the quarantine line, which is the great source of supply.

We appeal to your committee on the merits of this case not to repeal the act of 1884. It could do nobody any good and would do everybody north and south of the line and the public infinite harm.

Very respectfully, yours,

S. H. COWAN.

Mr. Chairman, I yield back the balance of my time.

Mr. LEVER. Mr. Chairman, how much of the last five minutes did the gentleman consume?

The CHAIRMAN. He consumed all of it.

Mr. HAUGEN. Mr. Chairman, I yield 20 minutes to the gentleman from Michigan [Mr. J. M. C. SMITH].

Mr. J. M. C. SMITH. Mr. Chairman, agriculture from the first dawn of our civilization has been man's chief industry, and in my childhood fancy, in reading of the vast multitudes of the workingmen of ancient times and the armies of the Philistines, Pharaoh and his hosts, and even of the Cæsars, Hannibal, and the great chieftain, Napoleon, I have wondered how their support was provided.

To-day we are confronted with the great problem concerning the support of our own population. To-day we are not lacking in inventive genius, and we have the most advanced machinery of any nation on the globe, still the question of how to increase the production of the farm and make farming more profitable and more attractive is our most vital national question.

Mr. Chairman, in the consideration and purport of the pending bill I am in most hearty accord. It purports to appropriate for the benefit of agriculture $18,947,000 out of the Treasury of the United States; and I here insert the table taken from the report of the Committee on Agriculture, showing the various expenditures, the amount allotted to each department, and what the money is to be used for.

*Appropriations, 1915 United States Department of Agriculture.*
(Reported by House committee.)

| Bureau or office: | |
|---|---|
| Office of the Secretary | $320,830 |
| Weather Bureau | 1,668,270 |
| Bureau of Animal Industry | 2,245,026 |
| Bureau of Plant Industry | 3,053,975 |
| Forest Service | 5,543,256 |
| Bureau of Chemistry | 1,076,481 |
| Bureau of Soils | 359,235 |
| Bureau of Entomology | 792,560 |
| Bureau of Biological Survey | 220,090 |
| Division of Accounts and Disbursements | 61,320 |
| Division of Publications | 189,240 |
| Bureau of Agricultural Forecasts | 274,180 |
| Library | 45,360 |
| Miscellaneous expenses, Department of Agriculture | 106,000 |
| Rent in the District of Columbia | 108,329 |
| Office of Experiment Stations | 1,601,020 |
| Office of Public Roads | 353,060 |
| Total Department of Agriculture, for routine and ordinary work | 18,327,232 |
| Miscellaneous appropriations: | |
| Enforcement of insecticide act | $95,000 |
| Fighting forest fires in emergency | 100,000 |
| Enforcement of plant quarantine act | 50,000 |
| Office of Markets | 200,000 |
| Demonstrations on reclamation projects | 25,000 |
| Cooperative fire protection of forested watersheds of navigable streams | 100,000 |
| Live-stock production in cane-sugar and cotton districts | 50,000 |
| Grand total, Department of Agriculture | 18,947,232 |

While this seems like a large sum in comparison with other appropriations made for the general welfare, it is rather insignificant, and the more so when the overhead charges for carrying out the provisions of this bill are eliminated. As stated by the chairman, it would leave approximately but $9,000,000 to be used for the direct purpose of agriculture, much of which will be consumed in places and localities and for purposes rather local, but none the less a benefit to all the people.

The rivers and harbors bill carried appropriations of $262,000,000 in the last six years; there was appropriated for the Army and Navy this year the sum of $149,000,000; highways this year have received an appropriation of $25,000,000; and $35,000,000 have been appropriated for the construction of an Alaskan railway. The expenses of the Panama Canal are consuming millions.

PURPOSE OF THE BILL.

In the short time allotted to me I am convinced that agriculture or farming has not kept pace with other industries, and although it furnishes more employment to a greater number of people, and more people are engaged in farming than in any other occupation, it furnishes less emolument and less money for the work done than any other trade.

OUR INDUSTRIES.

The three leading enterprises which form the basis of our prosperity are agriculture, commerce, and manufacture. The total wealth of the Nation, we are told, is $130,000,000,000, of which $40,000,000,000 is represented by agriculture, $18,428,000,000 are invested in manufacture, and $15,895,000,000 are invested in railroads.

EMPLOYMENT.

There are engaged in agriculture 35,000,000 people, less than 8,000,000 in manufacturing, and 1,665,000 employed by the railroads.

The value of the products of the farm is estimated at $9,000,000,000, and manufactured products at $20,672,000.

ARGENTINE REPUBLIC.

The total foreign trade of Argentina in 1909, with a population of 6,800,000 people, was $675,000,000. This is more than the foreign trade of China, with a population of 450,000,000, or Japan, with a population of 50,000,000 of people, and out of this great foreign trade of Argentina only $56,000,000 was with the United States.

BRAZIL.

Brazil furnishes a good illustration of free commerce. In 1909 the United States purchased coffee and other products of Brazil amounting to $108,000,000 and sold to Brazil less than $21,000,000.

CUBA.

The foreign trade in Cuba in 1909 amounted to $204,000,000, but the trade with the United States amounted to only $30,000,000.

CHILE.

The total foreign trade or commerce of Chile in 1909 was $204,000,000, and only $30,000,000 with the United States.

SCIENCE OF FARMING.

That farming is a complete science is shown by some of the topics covered by this bill, viz:

Investigation and control of plant diseases.
Physiology of crop plants.
Soil bacteriology and plant nutrition.
Acclimatization and adaption of crops.
Technological and fiber-plant investigation.
Handling and standardizing cotton.
Handling and transportation of grain.
Testing commercial seed.
Investigation and improvement of cereals.
Study and improvement of corn.
Sugar-beet investigation.
To investigate and encourage farm management, farm practice, and demonstration work.
Corn production on dry land.
Improvement of fruit growing and handling and shipping.
Producing and shipping and garden truck.
Entomology and insect life.
Chemistry.

Types, composition, and chemical properties of soil.
Biological surveys.

All of which subjects are treated scientifically and are of the utmost importance to agriculture and farming. By the investigation of these subjects we are told when to plow, how to plant, how to cultivate, and how to harvest. By the science of chemistry we are told of the properties of the various plants and products and by the analysis we are told how oats require 500 pounds of water per pound of dry matter, clover about the same, and corn nearly 300 pounds of water to each pound of corn; and, although the net average of the farmers of Ohio, Indiana, Illinois, and Iowa, four of our best farming States, was less than 3½ per cent on their investment, we are told that he is getting rich by metes and bounds, and that he is a most valuable citizen; that he should rise early in the morning; he is also told when to retire at night, "that all he has to do when spring comes is to fight the weeds of all kinds and classes, named and unnamed, whether they are annual, biennial, or triennial; his corn field may be clean one day and full of weeds the next; he is to fight rusts, smut, and bugs, hoppers, weevils, ticks, and vermin," and cholera, which infests his herd of hogs, coming in for its share, with an appropriation of $500,000. Of course, it is not yet known where cholera comes from or exactly what causes it, and to discover and eradicate this fatal malady is laudable.

SCIENCE.

One horde saps the juice and bud suckers follow in the trail of the lively English sparrow until he must not only be the harvester but a born prophet. The cutworm, squirrel, gopher, red ant, and animal parasite is his constant companion, and when the storm lays low the golden corn which measures his toil and has ripened in the torrid sunshine he must have the patience of Job, tell his city cousins that he will do better next time, and go on raising his products for the next falling market.

If he organizes to follow the pattern set by other great industries he is threatened with injunction laws, and the plaint is made that the Sherman anti-trust law should reach out and extend its benign protection to the cooperating organizations of the farmer; for him has the old New England day of Thanksgiving been preserved, and this of all days is the one he is supposed to celebrate.

BUT THE FARMER SHOULD NOT BE DISCOURAGED.

The farmer should not be discouraged because recently we have opened the doors of our American market and admitted free of duty the agricultural products of the world. Recognizing that this done him a great injustice; the implements he purchases and did purchase made in his own market by American labor are furnished to him duty free, and the duties on his commodities have been reduced all along the line.

He even buys his sugar now tariff ridden. This has destroyed one of his most profitable products—the sugar beet and the cane; but will it not please the ultimate consumer to buy his sugar at the same old price, manufactured by the National and Federal Sugar Trust, now running at full blast night and day, after a shutdown of many months waiting for the tariff law on sugar to take effect? The ultimate consumer has our most earnest consideration. He rides the highways in his automobile, while the farmer is picking off potato bugs, spraying his orchard, or cultivating his crops, so that the consumer can get his produce cheaper. The consumer who cuts his coupons wants his breadstuffs, his clothing, and his fuel cheap, and of the great wealth piled up by farming we have yet to learn that among the list of millionaires and multimillionaires of our country they acquired their wealth by following the plow.

Can anyone produce a list of farmers whose yearly income compares with the income of these citizens:

| | |
|---|---|
| John D. Rockefeller | $100,000,000 |
| Andrew Carnegie | 15,000,000 |
| William Rockefeller | 13,000,000 |
| George F. Baker | 5,000,000 |
| William A. Clark | 4,000,000 |
| J. P. Morgan estate | 7,500,000 |
| Mrs. E. H. Harriman | 3,400,000 |
| Mrs. Russell Sage | 3,200,000 |
| W. K. Vanderbilt | 2,500,000 |
| Vincent Astor | 3,700,000 |
| Jay Gould estate | 3,700,000 |
| Mrs. Hetty Green | 3,000,000 |
| W. H. Moore | 2,500,000 |
| Arthur C. James | 2,500,000 |
| Robert Goelet estate | 3,000,000 |
| Thomas F. Ryan | 2,500,000 |

To him who thinks that farming is a snap I recommend a trial; he may make some discoveries of value to him. Of course following a furrow in loose dirt all day may make him foot weary; it is quite different from walking on the pavements. He may run into a little sour, cold clay which sticks to his feet and resists all known methods of cultivation in wet weather. If he works like a galley slave, he may keep his head above water. He will get to the field before 9 o'clock in the morning; he will do his work standing, and have no use for Turkish baths to open the pores of his body. After his day's work in the field there will be plenty to do before retiring.

HOG CHOLERA.

As a benefit to the farmer, there has been appropriated $500,000 to aid him in eradicating hog cholera from his droves of swine, a most worthy and laudable appropriation.

We see by the above appropriation hundreds of thousands of dollars are appropriated for farm extension work and farm demonstration work, for all of which the farmer takes off his hat to this body.

The field of credit to the manufacturer has been extended to the banks under the new regional reserve association where he can have discounted his trade bills for carrying on his manufacturing industry. This meets with the approval of the country and there is no one who does not want to see manufacturing prosper.

FARMERS WANT ONLY EQUAL SHOW.

Is the farmer getting a fair show by the legislation and laws that are being enacted? To me there are some inconsistencies which ought to be apparent to any fair-minded man. I for one do not think it is just to the American farmer to permit the farm productions of the world to be admitted into our country and into his market free of duty when that country from which they are shipped charges the farmer a duty for his products when he exports them into it. This was the great injustice and inequality in the Canadian reciprocity act. To me it appears like an injustice; it is not Jeffersonian, Jacksonian, Lincolnian, nor American. We are an independent Nation of people. Our market consumes 95 per cent of our home products, and is admitted to be the best market in the world; and why the bars should be laid down to the foreign produce of the world and various duties reaching as high as 100 per cent retained on the manufactured products is another discrimination.

I am glad that Canada knocked out the reciprocity treaty, and I am opposed to allowing other countries favors not given to our own people. A very good illustration of this kind of legislation was shown recently in the House when it voted for another Canadian reciprocity treaty, which permitted Canadians to fish in Sturgeon Bay with a fine-tooth comb while we were to fish with the meshes of a wire fence in our waters.

It seems to me that we should do more legislation for our own country and not so much for other countries. There was not a foreign country on earth but what rejoiced at the passage of the Underwood free-trade bill. Why was this? There has been no answer made satisfactory to me, except that it gave other countries our markets for farm products free. It is stated that citrous fruits are shipped from Europe and sold in New York market for less than the freight from California to New York and that it has demoralized and worked injury to the fruit growers of the West.

INCONSISTENCIES.

We pass laws excluding the Chinese and the Japanese, but we admit their farm products free into our markets. This was the crying need of better immigration laws, and against which principle the recent bill was passed. Of course, one might say that they are not injured by farm products coming from China or Japan; and while no country on earth has better artisans of the soil or can apply intelligent industry superior to the American farmer, I wish to include in my remarks a sample of the Chinese importation taken from the Grand Rapids Herald of February 21, 1914.

EGGS IMPORTED FROM CHINA ARE SOLD IN ST. LOUIS.

ST. LOUIS, *February 23.*

Thirty-six thousand eggs arrived in St. Louis from China to-day. They were received by a local commission dealer, who said he could sell the eggs to retailers at 20 cents a dozen and still make a profit. Eggs for the last week have been quoted here around 26 cents.

From the Washington Times of February 26, 1914, the following statement:

TO INVESTIGATE EDIBILITY OF CHINESE EGGS 50 YEARS OLD.

PHILADELPHIA, *February 26.*

Eggs which are possibly half a century old will be the subject of a special investigation here to-day by Pure Food Commissioner Faust and other Government experts. Since the tariff was removed, in October, tremendous shipments, totaling 300,000 pounds, have been received from the Far East, particularly China and Korea, where they are known to preserve eggs for as long as fourscore years. Large consignments have been shipped west also.

I have heard of embalmed meat, but this is my first introduction to mummified eggs.

Now, I am opposed to the importation of these "mummified" eggs, and I am in favor of keeping them within that Chinese wall.

The good housewife of the American farmer who gets the only money she sees from the butter and eggs will not be especially pleased at the depletion of her market.

I now wish to introduce as a part of my remarks something about the American potato, and as I am an Irishman I may be a little partial to the American potato.

Taken from a farm journal:

VALUE OF POTATO CROP.

The potato crop of the United States in 1913 had a farm value of $228,000,000, according to statistics made public early this week by the Bureau of Foreign and Domestic Commerce. With the exception of 1911, this was larger than for any earlier year. The statistics show, that the largest importation of potatoes in any single year occurred in the fiscal year 1912, when the total quantity imported was 13,750,000 bushels.

Prior to the passage of the free-trade Underwood bill the duty on potatoes was 25 cents per bushel, and the above potatoes paid a duty of $3,430,000.

The importation of potatoes may not injure the American farmer. It is a great crop in Michigan, New York, Maine, and Wisconsin, and in November, 1913, more than 750,000 bushels were imported into the United States.

Corn is the greatest American farm product. Last year we raised 2,500,000,000 bushels in the United States. There is now at this time being unloaded in American ports 10,000,000 bushels of corn from the Argentine Republic. It is admitted that this will at least steady the American market. I believe it will depress the farmers' market for his corn and will reduce the market price of his cereals. Anyway, I do not see how the American farmer is to compete with the farmers of the world in his own market and expect to pay his farm help American wages.

I believe, further, that the time will come when this will be a social question, and under free trade the people will see that the condition of the American farmer and the American laboring man must be drawn to a closer level with the laboring man and farmer of other countries if we are to compete with them in the market.

Some say that they pay as much now for their meat, their corn, potatoes, apples, butter, and eggs as they did before the tariff was removed; but let me say that if the removal of the tariff does not cheapen the price of farm products and bring down the cost of living, then it is a failure.

The price of farm products can not be affected immediately; but sooner or later, as sure as the bill remains in existence, it will have its effect ultimately to reduce the price paid to the farmer.

The high cost of living was the slogan of a great party during the last election. It brought into existence the free-trade Underwood tariff bill. I only ask whether any consumer gets his bread for less, his potatoes for less, his groceries for less, or his clothing for less than he paid before the act was passed? It is plain he does not. Although, if foreign importations continue and we procure our meat supply and food supply from foreign countries, we are certainly brought into absolute competition with them, and the price to the American farmer for his products must go down.

The working of the tariff may be noticed by the American farmer when he takes his wool to market next spring, and sells it for 12 to 15 cents a pound, instead of 18 to 25 cents, as formerly.

The transportation on corn from Argentine Republic to New York is 3 or 4 cents, while the railway freight from Iowa to New York is about 10 or 12 cents per bushel; so that the farmer is not only at a disadvantage in the cost of his production, but he pays more than twice as much for his transportation to the New York market than the Argentinian. Argentina exported last year 200,000,000 bushels of corn. There was raised in the United States last year 2,447,000,000 bushels, nearly all of which was sold and consumed in the American market. The total importation from Argentina of corn during the months of November, December, and January just past was approximately 12,000,000 bushels at the different Atlantic and Gulf coast ports for distribution throughout the eastern market, and if it was not for the importation of Argentina's corn the visible amount of corn in this country would be that much less. The Argentinian harvests his corn from May until July in a mild climate, without chances of frosts or wet weather, and can raise it at an expense much cheaper than the American farmer.

WAGES IN FOREIGN COUNTRIES.

I notice from Wallace's Farmer of February 27 and from an article on farming in the Far East that there was exported from the Philippines agricultural products to the amount of $140,000,000 in the year 1913. In Japan there are millions of acres of rice land. The exports from Japan was much of this product. The American rice farmer has a protection of 1 cent a pound on his rice, while the American farmers' wheat is free from every country admitting our cereals free, and keeping a duty on rice while having free trade for wheat is discrimination.

INCONSISTENCIES.

It can not be very consoling to California to exclude the Chinese and Japanese and let in the products of their labor duty free.

WAGES AND POPULATION.

If free trade is good for the farmer, why not extend it to other industries? Why would it not be good for them? The avowed purpose of the Underwood free-trade bill is to cheapen products and reduce the high cost of living. If free trade will not reduce the article, then it is a failure. The very purpose of free trade is to reduce the price of the article. It will not only reduce the price of the product, but destroy the home market.

Can anyone tell how an article can be manufactured in a foreign country and shipped into the United States and furnish a day's labor to any laboring man here? And what is true of manufactured articles applies to farm products. If the farm products were raised in foreign countries and sold in our home markets, the farmer loses just that much and the country loses the money paid out.

My friends, the American farmer is a superior artisan, the best workman in the world; but look what he must compete against—half-fed, half-starved, half-housed, half-clothed laborers of Japan, China, southern Italy, and many other foreign countries, where workmen receive from 17 cents to $4 a week, while the farm hands of America are well paid and well fed. I, for one, am opposed to reducing our American farmers and farm help to foreign conditions. In Japan the population is dense. In some places 2,000 to the square mile, and some fields have been cultivated for centuries by keeping up the soil.

In passing the free-trade bill we were told that prices were soaring mountain high, that people were all flocking to the cities, and that the American farmers could not produce enough to feed the people. Well, I fail to see that foreign farm productions sold upon our home market will better the farmers' condition or give them better prices. Foreign farm products on our home markets will not tend to send the town people back to the farm.

In the passage of the Underwood tariff bill we have been most kind to foreign countries. Prior to the passage of this bill the country was most prosperous; immediately thereafter the depression set in. Then we were told that the tariff needed a better banking system to help it out. We were also told on the floor of the House that as soon as the banking and currency bill was passed on that very day a flood of prosperity would sweep over the land. What has followed? Thousands of idle workmen are found in each of our great cities, and millions of our people are without employment in the country. Farming is without monopoly or trusts. If the tariff is based on healthy competition, we certainly have healthy competition in farming; every farmer in the land is a competitor with every other farmer and did not need the "injustice" of free trade to improve his condition.

Mr. Chairman, I am for this bill because it contributes to the welfare of agriculture, but I am much opposed to the American farmer being placed on equality with the farmers of foreign countries where farm products are raised by pauper labor and the condition of the workingman is abject poverty. [Applause.]

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. J. M. C. SMITH. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

The committee accordingly rose; and the Speaker having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 13679, the Agricultural appropriation bill, and had come to no resolution thereon.

HOUR OF MEETING THURSDAY.

Mr. LEVER. Mr. Speaker, I ask unanimous consent that when the House adjourns to-morrow—Wednesday—it adjourn to meet at 11 o'clock a. m. on Thursday.

The SPEAKER. The gentleman from South Carolina [Mr. LEVER] asks unanimous consent that when the House adjourns on Wednesday it adjourn to meet at 11 o'clock a. m. on Thursday. Is there objection? [After a pause.] The Chair hears none.

ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 45 minutes p. m.) the House adjourned until Wednesday, March 4, 1914, at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of War, transmitting with a letter from the Chief of Engineers reports on preliminary examination and plan and estimate of cost of improvement of Saugatuck Harbor, Mich., with a view to determining whether additional works are necessary or desirable to maintain the channel of the existing project (H. Doc. No. 808); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

2. A letter from the Secretary of War, recommending that the following provision in the Army appropriation act, approved March 31, 1911, be repealed: "The Secretary of War is hereby authorized and directed to release to the city of St. Augustine, Fla., a strip of land not exceeding 23 feet in width on the north line of the Fort Marion Reservation for the purpose of restoring the street formerly known as Clinch Street, extending from San Marco Avenue on the western boundary of said reservation to the Matanzas River" (H. Doc. No. 809); to the Committee on Military Affairs and ordered to be printed.

## CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 13496) granting a pension to Charles J. Rosenecker; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 13790) granting a pension to Peter Reno; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 13970) granting an increase of pension to Richard B. York; Committee on Invalid Pensions discharged, and referred to Committee on Pensions.

A bill (H. R. 13748) granting a pension to Warren E. Beam; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 10343) granting a pension to Louis Hoffman; Committee on Invalid Pensions discharged and referred to the Committee on Pensions.

## PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. DILLON: A bill (H. R. 14154) providing for free homesteads on the public lands for actual and bona fide settlers and reserving the public lands for that purpose; to the Committee on the Public Lands.

By Mr. CONNELLY of Kansas: A bill (H. R. 14155) to amend an act of Congress approved March 28, 1900 (Stat. L., p. 52), entitled "An act granting to the State of Kansas the abandoned Fort Hays Military Reservation, in said State, for the purpose of establishing an experiment station of the Kansas State Agricultural College, and a western branch of the State Normal School thereon, and for a public park"; to the Committee on Military Affairs.

By Mr. BARCHFELD: A bill (H. R. 14156) to provide for voluntary admissions to the Government Hospital for the Insane, and for other purposes; to the Committee on the District of Columbia.

By Mr. STEDMAN: A bill (H. R. 14157) to require all cotton exchanges in the United States doing an interstate or foreign business or both to keep a record of all sales made, and to require the buyer of cotton on such exchange to specify the grade he is to receive, and the seller of cotton on such exchange to deliver the grades so specified by the buyer; to the Committee on Agriculture.

By Mr. SMITH of Maryland: A bill (H. R. 14158) to appoint a committee to inquire into the advisability of changing the date of the inauguration of the President of the United States; to the Committee on Rules.

## PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ANTHONY: A bill (H. R. 14159) granting an increase of pension to James K. Earl; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14160) granting an increase of pension to Malinda Logsdon; to the Committee on Invalid Pensions.

By Mr. CAMPBELL: A bill (H. R. 14161) granting an increase of pension to Thomas R. Oliverson; to the Committee on Invalid Pensions.

By Mr. CARTER: A bill (H. R. 14162) for the relief of Samuel H. Butler; to the Committee on Claims.

By Mr. CONNOLLY of Iowa: A bill (H. R. 14163) granting a pension to Lydia B. Lanning; to the Committee on Invalid Pensions.

By Mr. DICKINSON: A bill (H. R. 14164) for the relief of James T. Barker; to the Committee on War Claims.

By Mr. FIELDS: A bill (H. R. 14165) granting an increase of pension to James T. Kelly; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14166) granting an increase of pension to John W. Cross; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14167) for the relief of Emily J. Byrd; to the Committee on Claims.

By Mr. GOOD: A bill (H. R. 14168) granting an increase of pension to George O. Steadman; to the Committee on Invalid Pensions.

By Mr. HAMILL: A bill (H. R. 14169) granting a pension to Carrie E. Wright; to the Committee on Invalid Pensions.

By Mr. HAY: A bill (H. R. 14170) for the relief of certain officers of the Confederate States Army in the War between the States; to the Committee on War Claims.

By Mr. HENSLEY: A bill (H. R. 14171) granting an increase of pension to D. J. Doughty; to the Committee on Pensions.

Also, a bill (H. R. 14172) granting an increase of pension to Joseph Wilson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14173) for the relief of William J. Rosselot; to the Committee on Claims.

By Mr. IGOE: A bill (H. R. 14174) granting a pension to Johanna Niehaus; to the Committee on Invalid Pensions.

By Mr. JOHNSON of Kentucky: A bill (H. R. 14175) granting an increase of pension to John R. Vickers; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14176) granting an increase of pension to Willis G. Craddock; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14177) granting an increase of pension to John T. Stasel; to the Committee on Invalid Pensions.

By Mr. KETTNER: A bill (H. R. 14178) for the relief of Horatio N. Thomson; to the Committee on War Claims.

By Mr. LEWIS of Maryland: A bill (H. R. 14179) granting a pension to Edgar A. Norris; to the Committee on Pensions.

By Mr. MAGUIRE of Nebraska: A bill (H. R. 14180) granting an increase of pension to Mary A. Shirey; to the Committee on Invalid Pensions.

By Mr. PATTEN of New York: A bill (H. R. 14181) granting a pension to Jennie Adel; to the Committee on Invalid Pensions.

By Mr. QUIN: A bill (H. R. 14182) for the relief of Flora E. Campbell Sudduth, administratrix of the estate of Walter L. Campbell, deceased; to the Committee on War Claims.

By Mr. SPARKMAN: A bill (H. R. 14183) granting a pension to Frank E. Saxon; to the Committee on Pensions.

By Mr. STEDMAN: A bill (H. R. 14184) for the relief of Hamilton Perryman and others; to the Committee on Claims.

By Mr. STONE: A bill (H. R. 14185) granting an increase of pension to George Roth; to the Committee on Invalid Pensions.

By Mr. TAYLOR of Colorado: A bill (H. R. 14186) granting a pension to Hattie Parsons; to the Committee on Invalid Pensions.

By Mr. THOMSON of Illinois: A bill (H. R. 14187) granting a pension to Lucy B. Weber; to the Committee on Invalid Pensions.

By Mr. WOODS: A bill (H. R. 14188) granting a pension to Elizabeth J. Pace; to the Committee on Invalid Pensions.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

Also, petition of sundry citizens of Bay City, Mich., against national prohibition; to the Committee on the Judiciary.

Also, petition of various bankers of Michigan, favoring amendment to income-tax law; to the Committee on Ways and Means.

## SENATE.

### WEDNESDAY, *March 4, 1914.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, Thou art so closely associated with us and hast called us into such intimate relation to Thyself as that Thou art willing to make our will Thy will and our heart Thy heart. Our life may be lived in God. All our activities may be God-centered. In Thy possession of us we find our largest liberty and out of it come our highest hopes and aspirations. As our interests are in Thy hands, Thou dost guide our steps. This day we pray that Thou wilt look upon us in Thy fatherly tenderness and keep us from harm. Help us to perform the duties of the day with an eye single to Thy glory. For Christ's sake. Amen.

The Journal of yesterday's proceedings was read and approved.

#### EDIE HOOK LIGHTHOUSE RESERVATION, WASH.

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 3454) authorizing the Secretary of Commerce to lease to the city of Port Angeles, Wash., certain property, which were, on page 1, line 4, to strike out "and demise"; on page 1, line 5, to strike out "of" where it first occurs; on page 2, line 23, after "times," to insert "and that the said city of Port Angeles shall not sublet any portion of the said property without first having obtained the consent of the Secretary of Commerce and his approval of all the terms and conditions in any such subleases"; and on page 3, line 18, after "Commerce," to insert "In addition to the aforesaid consideration, the said city of Port Angeles shall pay to the Government of the United States such annual rental for the aforesaid property as may be decided upon by the Secretary of Commerce: *Provided*, That there shall be a stipulation in the said lease that at the end of every 10 years during the existence thereof the Secretary of Commerce shall cause a revaluation of the leased premises to be made, and that the said Secretary shall thereupon be authorized to determine and fix the annual rental of the premises for the ensuing period of 10 years in accordance with such revaluation."

Mr. JONES. I move that the Senate concur in the amendments of the House of Representatives.

The motion was agreed to.

#### WATER SUPPLY OF BAKER, OREG.

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 3206) for the protection of the water supply of the city of Baker, a municipal corporation of the State of Oregon, which were, on page 1, line 12, to strike out "reservoir," and on page 1, line 13, after "the," to insert "rights hereby granted to said city shall cease and the unrestricted."

Mr. CHAMBERLAIN. I move that the amendments of the House of Representatives be concurred in by the Senate.

The motion was agreed to.

#### EMPLOYMENT OF CONVICTS IN FOREIGN COUNTRIES.

The VICE PRESIDENT laid before the Senate a communication from the Secretary of Commerce, transmitting in further response to a resolution of November 10, 1913, additional data in regard to the employment of convicts in foreign countries, which, with the accompanying papers, was referred to the Committee on Printing.

#### PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented memorials of Lafayette Branch, American Continental League, of Jersey City, N. J.; of Lincoln Branch, American Continental League, of Providence, R. I.; and of Local Division No. 1, Ancient Order of Hibernians, of Danbury, Conn., remonstrating against the repeal of that part of the Panama Canal act exempting American coastwise shipping from the pay of tolls, which were referred to the Committee on Interoceanic Canals.

Mr. SHEPPARD presented petitions of the Christian Endeavor Society of the Second Presbyterian Church of Columbus, Ohio; of sundry citizens of Reno, Pa.; and of General Canby Post, No. 2, Grand Army of the Republic, Department of Indiana, Brazil, Ind., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of De Witt County, Tex.; of the Merchants & Mechanics Bank of San Antonio, Tex.; and of Local Union No. 547, Bartenders' League, of Dallas, Tex., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a petition of the board of directors of the Merchants & Mechanics Bank of San Antonio, Tex., praying for the adoption of an amendment to the income-tax law to provide for a method of information at the source, which was referred to the Committee on Finance.

Mr. ROBINSON presented the petition of Herb Lewis, editor of the Gravette News Herald, of Arkansas, praying for the enactment of legislation to provide an educational test for immigrants to this country, which was referred to the Committee on Immigration.

Mr. GRONNA. I present a resolution adopted at the Lutheran Minnesota Conference of the Augustana Synod, indorsing the so-called Burnett immigration bill. I ask that the resolution may be printed in the RECORD and referred to the Committee on Immigration.

There being no objection, the resolution was referred to the Committee on Immigration and ordered to be printed in the RECORD, as follows:

THE LUTHERAN MINNESOTA CONFERENCE
OF THE AUGUSTANA SYNOD.
*Cannon Falls, Minn., February 25, 1914.*

Senator A. J. GRONNA,
*Washington, D. C.*

DEAR SIR: The Lutheran Minnesota Conference, representing about 100,000 individuals throughout the States of Minnesota, North and South Dakotas, in session assembled February 17–23 in the city of Minneapolis, Minn., passed the following resolution:

"*Be it resolved*, That the Lutheran Minnesota Conference most heartily indorses the Burnett immigration bill, H. R. 6060, and does

hereby express its wish that it may become a law: And be it furthermore

"*Resolved*, That a copy of this resolution be sent to the President of the United States, to the Senators and Congressmen from Minnesota, North and South Dakotas, and that we earnestly request that they do all in their power to the end that this bill may become a law."

Respectfully submitted.

P. A. MATTSON, *President.*
J. P. A. IDSTROM, *Secretary.*

Mr. GRONNA presented a petition of sundry citizens of Courtenay, N. Dak., praying for the enactment of legislation to provide an educational test for immigrants to this country, which was referred to the Committee on Immigration.

Mr. BRANDEGEE presented a memorial of sundry citizens of Bridgeport, Conn., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a memorial of W. W. Perkins Woman's Relief Corps, No. 18, Department of Connecticut, Auxiliary to the Grand Army of the Republic, of New London, Conn., remonstrating against any change being made in the United States flag, which was referred to the Committee on the Judiciary.

Mr. BURTON presented a petition of sundry citizens of Ohio, praying for the enactment of legislation to provide an educational test for immigrants to this country, which was referred to the Committee on Immigration.

He also presented memorials of sundry citizens of Ohio, remonstrating against the adoption of the pending resolution to submit to the States a national prohibition amendment to the Constitution, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Ohio, praying for the adoption of the pending resolution to submit to the States a national prohibition amendment to the Constitution, which were referred to the Committee on the Judiciary.

Mr. TOWNSEND presented a petition of General Henry M. Duffield Camp, No. 9, United Spanish War Veterans, of Detroit, Mich., praying for the enactment of legislation granting pensions to widows and orphans of survivors of the Spanish-American War and the Philippine insurrection, which was referred to the Committee on Pensions.

He also presented a memorial of sundry citizens of Port Huron, Mich., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. ROOT presented a memorial of sundry citizens of New York City, N. Y., and a memorial of sundry citizens of Hudson, N. Y., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Vienna, N. Y., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. GALLINGER presented a memorial of Local Union No. 31, International Brotherhood of Paper Makers, of Franklin, N. H., and the memorial of W. E. Wiggin, of Lancaster, N. H., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a petition of the New Hampshire Peace Society, praying for the establishment of international arbitration, etc., which was referred to the Committee on Foreign Relations.

Mr. SHIVELY presented a petition of the Marshall County Sunday School Association, of Indiana, and a petition of sundry citizens of Jay County, Ind., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. KENYON presented memorials of sundry citizens of Davenport, Burlington, Clinton, and Lyons; of Local Union No. 223, Culinary Alliance, of Des Moines; of Local Union No. 518, Bartenders' League, of Fort Dodge; of Local Union No. 150, Cigar Makers' International Union, of Sioux City; of Local Union No. 252, International Association of Machinists, of Cedar Rapids; of Local Union No. 460, Cooks and Waiters, of Waterloo; of Local Union No. 357, Bartenders' League, of Sioux City, all in the State of Iowa, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a petition of Valera Irwin, of Clarinda, Iowa, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. BRADLEY presented a petition of Level Green Council, No. 75, Junior Order United American Mechanics, of Kenvy, Ky., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented a petition of the National Association of Army Nurses of the Civil War, praying for the enactment of legislation to grant pensions to nurses who served in the Civil War, which was referred to the Committee on Pensions.

He also presented memorials of the Bavarian Benevolent Association, of Covington; of the St. John's Benevolent Society, of Covington; and of sundry citizens of Paducah, all in the State of Kentucky, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. DU PONT presented a memorial of sundry citizens of Wilmington, Del., remonstrating against the enactment of legislation to prohibit the circulation through the mails of the publication known as "The Menace," which was referred to the Committee on Post Offices and Post Roads.

He also presented a memorial of Local Union No. 626, United Brotherhood of Carpenters and Joiners of America, of Wilmington, Del., and a memorial of Local Lodge No. 184, International Association of Machinists, of Wilmington, Del., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. SMITH of Michigan presented a memorial of sundry citizens of Grand Rapids, Mich., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a petition of Local Union No. 588, United Association of Journeymen Plumbers, Gas Fitters, Steam Fitters, Steam Fitters' Helpers, of Detroit, Mich., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

## REPORTS OF COMMITTEES.

Mr. TILLMAN, from the Committee on Naval Affairs, to which was referred the bill (S. 3590) to make the appointment of pay clerks in the United States Navy permanent and to create the grade of chief pay clerk, and for other purposes, reported it with amendments and submitted a report (No. 314) thereon.

Mr. SMITH of Arizona, from the Committee on Foreign Relations, to which was referred the bill (S. 4553) to authorize the appointment of an ambassador to Argentina, reported it without amendment and submitted a report (No. 313) thereon.

## MUSKINGUM RIVER BRIDGES, OHIO.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (H. R. 11331) to repeal an act regulating the construction of bridges across the Muskingum River in Ohio, and I submit a report (No. 310) thereon. I ask for the immediate consideration of the bill.

The VICE PRESIDENT. The Secretary will read the bill.

The Secretary read the bill; and there being no objection, the Senate, as in Committee of the Whole, proceeded to its consideration.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

## PAYMENT UNDER RECLAMATION PROJECTS.

Mr. SMITH of Arizona. From the Committee on Irrigation and Reclamation of Arid Lands I report back favorably with amendments the bill (S. 4628) extending the period of payment under reclamation projects, and for other purposes, and I submit a report (No. 312) thereon. As there is a very large demand for copies of the bill and there will also be a large demand for copies of the report I ask unanimous consent that 7,500 extra copies may be printed in document form for the use of the Senate document room.

Mr. SMOOT. Of the bill and report?

Mr. SMITH of Arizona. Of the bill and report, to be printed as one document.

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). There being no objection, that order will be made. The bill will be placed on the calendar.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. OVERMAN:

A bill (S. 4682) making additional appropriation for the purchase of a site for a post-office building in the city of Rockingham, N. C.; to the Committee on Public Buildings and Grounds.

By Mr. BURTON:

A bill (S. 4683) granting an increase of pension to Mary Reidi (with accompanying papers); and

A bill (S. 4684) granting a pension to Georgeanna Thomas; to the Committee on Pensions.

By Mr. GALLINGER:

A bill (S. 4685) granting a pension to James L. Dawson (with accompanying papers); to the Committee on Pensions.

By Mr. OLIVER:

A bill (S. 4686) for the relief of the Philadelphia & Reading Coal & Iron Co.; to the Committee on Claims.

By Mr. WARREN:

A bill (S. 4687) granting an increase of pension to Sarah J. Apperson (with accompanying papers); to the Committee on Pensions.

By Mr. PAGE:

A bill (S. 4688) granting an increase of pension to Harrison W. Smith (with accompanying papers); to the Committee on Pensions.

COL. GEORGE WASHINGTON GOETHALS.

Mr. LODGE. I introduce a joint resolution. I ask that it may be read and then I will move its reference.

The joint resolution (S. J. Res. 118) extending the thanks of Congress to Col. George Washington Goethals, United States Army, and authorizing the President of the United States to appoint him a major general in the Army, and for other purposes, was read the first time, as follows:

*Resolved, etc.*, That the thanks of Congress be, and the same are hereby, presented to Col. George Washington Goethals, United States Army, in recognition of his great services as chief engineer and administrator in building the Panama Canal.

SEC. 2. That the President of the United States be, and he is hereby, authorized to nominate and, by and with the advice and consent of the Senate, to appoint Col. George Washington Goethals a major general in the Army of the United States.

SEC. 3. That the number of major generals authorized by law is hereby increased by one for the purposes of this act.

Mr. LODGE. I ask that the joint resolution may be read the second time, by unanimous consent, and referred to the Committee on Military Affairs.

The joint resolution was read the second time by its title and referred to the Committee on Military Affairs.

OMNIBUS CLAIMS BILL.

Mr. SHIELDS submitted three amendments intended to be proposed by him to the omnibus claims bill, which were ordered to be printed and, with the accompanying papers, referred to the Committee on Claims.

PRESIDENTIAL PRIMARIES.

Mr. CUMMINS. I offer a resolution which I ask may be read.

The resolution (S. Res. 284) was read as follows:

*Resolved*, That the Committee on Privileges and Elections be discharged from the further consideration of Senate bill 773, being a bill to establish a primary election for the nomination by political parties of candidates for President and Vice President of the United States, and for other purposes.

Mr. CUMMINS. I observe that the chairman of the committee is not in his seat. Therefore I ask that the resolution may lie over until to-morrow under the rule.

The VICE PRESIDENT. Under the rule the resolution will lie over until to-morrow and be printed.

EMPLOYMENT OF ADDITIONAL CLERK.

Mr. BANKHEAD submitted the following resolution (S. Res. 285), which was read and referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

*Resolved*, That the chairman of the Senate Committee on Post Offices and Post Roads is hereby authorized to employ temporarily a clerk at a salary of $120 per month.

ANNUAL REPORT OF CHILDREN'S BUREAU.

Mr. SHEPPARD. I have a copy of the first annual report of the Chief of the Children's Bureau, made to the Secretary of Labor, for the fiscal year ended June 30, 1913. I ask that the report may be referred to the Committee on Printing, with a view to its publication.

The VICE PRESIDENT. Without objection, that action will be taken.

INSPECTION AND GRADING OF GRAIN.

The VICE PRESIDENT. The morning business is closed.

Mr. McCUMBER. Mr. President, I desire now to proceed with the argument I was making upon Senate bill 120,

The VICE PRESIDENT. The Chair will suggest that the bill be laid before the Senate.

There being no objection, the Senate, as in Committee of the Whole, resumed consideration of the bill (S. 120) to provide for the inspection and grading of grain entering into interstate commerce, and to secure uniformity in standards and classification of grain, and for other purposes.

Mr. McCUMBER. Mr. President, I did not get very far in my argument upon the grain question yesterday. About all I accomplished was locating the opposition, and really I had not much difficulty in doing that, because I have for a long time felt the power and influence of the great grain exchanges, which are not only powerful in fixing the sentiment in their own sections, but which sentiment necessarily reaches into the Senate. I criticize no one whatever, because one naturally absorbs the influence of his surroundings. I expected to find opposition from those Senators who live in the shadow, or, as the Senator from Illinois [Mr. SHERMAN] probably would express it, in the effulgence of the glory of the stock exchanges.

I wish now to go on with some of the fundamental principles and then get directly to the testimony. I will boil down what I have to say upon the general proposition.

Since the year 1900 the price of land throughout the Northwest has increased 100 per cent, and if we take the wage price of farm labor for the year 1912 as a basis, farm labor has advanced in value more than 100 per cent. All live stock necessary for the operation of a farm has also increased about 100 per cent during that period. If one were, therefore, to buy a farm and the stock necessary to operate it, it would require an investment of capital nearly double that required in 1900. Interest on the capital invested in land and stock and the cost of labor annually expended constitute three great elements of expense in operating a farm. And with these three factors doubled in the last dozen years, the question of making ends meet, of making enough out of a farm to meet its running expenses and in addition thereto the necessary living for the owner and his family becomes a most serious one, and compels that owner to investigate with profound interest the problem of so marketing his grain as to secure the greatest possible price for it. Under our present system of doing business throughout the country and the world he recognizes if not the necessity at least the firmly rooted practice of a large army of middlemen, who must be supported out of profits which attach to the products after they leave the farmer's hands and before they reach the hands of the consumer. If he scans the situation on its surface appearance, he can not fail to note that these profits have not only been sufficient to support in lavish plenty this great army of middlemen, but has also made more multimillionaires than have been made in any other single line of business. He knows that more than a legitimate profit has been made by the many middlemen engaged in placing his products in the hands of the consumer. He knows also that the value of his products at the point of production is fixed by the demand and consequent value at the point of consumption; that it is the consumptive demand that makes his value; and that, therefore, any excessive profits in the handling of those products must come out of his pockets.

If he proceeds further and delves beneath the surface he will find that while the average buyer and seller conduct their business upon a reasonable margin on each grade bought and sold, another very large class so manipulate the grades, so mix inferior grades, so take advantage of a lack of uniformity in grades, that in addition to the reasonable profit charged for handling each grade they also make from one to two grades on each bushel bought, which gives them an enormous profit, and which enormous profit must necessarily be to the disadvantage of either the producer or the consumer, or both.

Desiring to be fair, the farmer is asking, not that a reasonable profit shall not inure to the middleman who handles his grain, but that the enormous profit above the legitimate be eliminated, to the end that he may receive the full value of his profit and no more, and that the consumer shall be required to pay only the value of his product with just charges for handling.

His investigation will show him that the illegitimate profits are made possible because of inaccurate and irregular inspection and lack of uniformity of inspection. In this bill he therefore is seeking to eliminate the source of all injustices inflicted upon both himself and the consumer.

The evolution in the handling and marketing of the farmer's grain, from the simple barter of a few bushels to the complex system of the present time, when the product is sold by millions of bushels, necessitates laws to guide commercial intercourse in that grain. In the primitive days, when the producer and the miller met face to face and agreed upon a purchase price, there was left no room for complaint or distrust. The

value of the article always depended upon the necessity of the purchaser or the seller. The law of supply and demand worked out approximate justice. There were no combinations to make or break markets, no vast field for the spirit of speculation, no complex conditions in which the expert manipulator alone could operate. But just to the extent that we have advanced from the simple plan into the realm of complexity we have opened up avenues for wrongs and injustices, and in the proportion that the few bushels handled in a single transaction under the old system bears to the millions handled under the present system have those wrongs and injustices increased.

There have been three great steps marking advanced methods in the handling and disposition of grain, which became necessary as the volume of business increased. In the earlier days there were no grades. The miller examined the grain in the farmer's sacks and the two agreed upon the price. The evil of that system was that there was no fixed value of the entire crop of the country. Grain of a certain grade sold at markets within a few miles of each other varied greatly in value.

This was followed as business increased by making contracts upon samples. But here again the sample was ordinarily so small that it was not a fair test of the bulk, and the value again depended upon the demand in a particular small locality.

The next step was a certificate as to the just quality or condition of a particular quantity of grain, signed by the party offering the same for sale. But here again two dealers in practically the same kind of grain might differ materially in their views as to the character and quality of the grain. This was so unsatisfactory that as the volume of the business increased the matter was taken up by trade organizations, and the certificates were issued by officers selected by these bodies. And under this system was born the method of dividing the grain into grades, and this system, though modified and expanded, and in many instances, under the control and direction of bodies authorized by the law of the State in which any great terminal might be situated, is the method adopted to-day in the handling of grain.

Great abuses have been in existence under this system for many years. As early as 1885 the State of Minnesota adopted a plan of having inspection and grading of grain made by State officials appointed by the governor. The evils of this system are somewhat numerous. The grading in all of these centers is controlled by rules either directly promulgated or indirectly established by the interests that deal in the grain—the buying and selling interests. The producer has no voice whatever in the determination of the method by which his product is to be marketed, nor the system of inspection and grading. No two terminals in the country have the same system of grading like grain. The grading is often inaccurate, is very uncertain, and sometimes fraudulently made for the purpose of meeting exigencies in the grain trade. While the producer has a right to appear in case his product is not graded in accordance with what he believes to be correct, the appeal is taken to one who is a part of the same system which made the initial inspection and grading. The fact that many more bushels of the higher grade of grain are sold out of every terminal than are accredited into it shows the injustice of the present system and how it works against the producer. It is a well-known fact among all dealers and producers that in a season of short crop the inspection and grading are liberal; we get good grades—that is what that means—when we have short crops; while in a season of bounteous crops the inspection is generally very rigid; in other words, during those seasons we do not get honest grades, for grain of exactly the same character graded in a year of short crop will grade much higher than the same kind of grain in a year of plenty.

The most prolific source of injustice, both to the producer and ultimate consumer, is that of mixing grains at the terminals. A few bushels of No. 1 northern will be mixed with many bushels of Nos. 2 and 3 and the whole sold as No. 1, thus perpetrating fraud upon both the producer and the consumer.

Ever since the grading system was adopted there has been strenuous complaint over the whole country and a plea made for Federal inspection.

Mr. President, this is not new at all. Away back in 1892, the first Secretary of Agriculture, Secretary Rusk, in his report transmitted November 15, of that year, said:

> Another matter which is the subject of legislation now pending is that of a national standard of grain. There is evidence in the correspondence of this department of a steadily growing feeling in favor of the establishment of such a national standard, which will relieve the grower from the annoyance inseparable from the existence of several standards, varying in the different grain markets of the country. Unquestionably some system of national inspection and grading under the control of the Secretary of Agriculture should be established in the interest of the grain growers, and would be without doubt in a very short time accepted and recognized in all the great market centers of the United States.

Mr. President, that utterance of Jerry Rusk, made as Secretary of Agriculture in 1892, is just as vital, and, indeed, more vital, to-day than it was when he uttered the sentiment. In support of Federal inspection he calls attention to the Federal inspection of meats, as follows:

> As a result of the meat inspection already executed under the direction of this department, we have raised the standard of taste in this matter among consumers themselves; witness the increased price willingly paid not only in our own markets but abroad for meat bearing our certificate of inspection. The second object to be thus accomplished is that which has been already, in a very satisfactory degree, attained, but which must be sedulously maintained—the reputation of our meat products abroad.

What applies to our meat production abroad, as I will show you in this argument, applies with equal force to our grain production. The same year—in 1892—bills were introduced by Senator Sherman and Senator Paddock for Federal classification and grading of grain. Senator Sherman's bill passed the Senate on April 28, 1892, but was lost in the House.

I want to say right here, Mr. President, that Senator Sherman's bill was practically the same bill that we now have under consideration.

In the Fifty-third Congress Senator Casey, of North Dakota, introduced a similar bill for Federal inspection of grain. In the Fifty-seventh Congress, in 1902, I also introduced a bill, practically the same as the one now before the Senate, and I have kept the matter before the Senate since that date.

Mr. President, let us first understand the methods of disposing of wheat and other cereal products. Let us remember that the real market—the market that fixes their value—is not at the local elevator where they are sold, but at the great terminals, such as Minneapolis, Duluth, Chicago, Buffalo, St. Louis, Kansas City, and so forth. Many of our farmers ship direct in carload lots to these terminals. The majority sell to the local elevators. These elevators, for the most part, are what are called line elevators. Hundreds of elevators along the lines of railway throughout the agricultural States are owned and operated by the men who are engaged on a large scale in buying and selling at the great central markets, where they have great elevator capacity for storing and handling.

The country elevator is in charge of an agent. Each morning this agent receives a wire from headquarters informing him what price he shall pay during the day, and often instructing him as to the method of grading, whether he shall be strict or liberal, dependent upon the conditions of the terminal market. This agent is under contract, with security, which holds him responsible in case the quantity in bushels or the grades which he allows to the farmer shall not hold out when the grain is regraded and weighed at the terminals. You can see, Mr. President, that this of itself forces the buyer to resolve every question of doubt against the producer for his self-protection. I have been informed—but this is not verified information—that in some instances the local buyer is given a part interest in the amount of overweight at the cleaning-up periods of the elevators, which of itself would induce him to make it as large as possible. If this is done, I imagine it is the exception and not the rule; and if done, it but accentuates the inclination to be extra careful not to overweigh or overgrade a load of grain.

Mr. REED. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Missouri?

Mr. McCUMBER. I do.

Mr. REED. I am interested in the statement the Senator has just made. Has the Senator any information of a character that he would regard as sufficiently authentic so that Congress could act upon it?

Mr. McCUMBER. I will not give the name, but I have the statement of a wheat buyer at one of the local elevators, who told me that that was the contract under which he worked. He told this, of course, after he had gone out of the buying business. I would not care to bring his name into the Senate upon that question. As I have stated, this is an unverified statement; that is, it is merely the statement of one man. I have also stated that, if it is true, it is the exception and not the rule.

Mr. REED. May I ask the Senator, then, whether this informant of his referred to an elevator that was covered by State grain inspection, or was it simply a private elevator?

Mr. McCUMBER. It was an elevator run by one of the great elevator companies, who have what we call "line elevators" scattered throughout the country, and the only inspector and grader is the wheat buyer himself.

Mr. REED. Oh, yes; then it would not apply to those cases where there is State grain inspection.

Mr. McCUMBER. Yes; it would apply just the same. For instance, the case that I mentioned was in my own State, where there is no State inspection, because all of our wheat that is

shipped out is sold in another State, and our inspection, of course, would not amount to anything.

Mr. REED. This particular instance would not apply, then, in any State where there was State inspection?

Mr. McCUMBER. Yes; it would in the division of the overweight; and the overweight is what I suppose the Senator refers to.

Mr. REED. I do not want to continue to interrupt the Senator, but the Senator mentioned one instance where he had information——

Mr. McCUMBER. Yes.

Mr. REED. And that, it appeared, was with reference to an elevator in his own State, where they do not have State grain inspection.

Mr. McCUMBER. No.

Mr. REED. So that that one instance which has come to the Senator's information is with reference to what we would call a noninspected elevator.

Mr. McCUMBER. Oh, yes; but that could happen at the line elevators in States having State inspection, except probably at the terminals.

Mr. REED. It could happen; but the Senator has no information that it has happened?

Mr. McCUMBER. No; I have no information of that in other States.

Mr. TOWNSEND. Mr. President, that is a question I desired to ask, whether the Senator from North Dakota knows of any case, or has reason to believe any case exists, where an inspector appointed by the State has profited by his grading and weighing of the grain?

Mr. McCUMBER. I will show the Senator that the man who employs the inspector has profited by the inspection and the weighing of grain and the difference in the inspection. This little item is infinitesimal in its injustice in comparison with those that I will disclose further on in the discussion of this case; but I hope to get through with these general propositions first, and then I will get down to the evidence.

The buyer has not only the fear of loss but the hope of reward to intensify his endeavor to be generous to his employer. The agent in the buying season, as rapidly as he is able to secure cars, ships from the local elevator to the terminal house. Before a car can be unloaded it must be inspected, either by a commission provided by the law of the State or by agents of a board of trade or chamber of commerce, and the grade of each carload, together with an estimated dockage for dirt, and so forth, certified. If unloaded into the purchaser's elevator, it is, of course, ordinarily mixed with other grain of like grade. It is then measured, cleaned, different grades mixed and regraded and certified, and those certificates are used to fill the orders for vast quantities bought and sold on the floor of the exchange and used for speculative purposes, either in making or breaking a corner.

Where the grain is shipped directly by the farmer or independent elevator company each car is inspected and graded in the same manner and sold by commission men upon the certificate of the inspector.

And in some of our exchanges, as I think in Minneapolis, they also, in addition, have samples from each car, so that the buyer may be able to see the grain as well as the certificate of inspection. It will therefore be seen that the value of every carload of grain sold from the farm is wholly dependent upon the certificate which is attached to it at the terminal. The owner is therefore entitled to just such grade as his grain will warrant, no more and no less. It follows, then, that one who weighs the grain, who determines the grade that properly belongs to it and the amount that ought to be docked for foul seed and dirt, ought not to be either one whose profit is greater to the extent that he undergrades or overdocks, or his agent. It ought to be made by an agency not under the control or domination of either buyer or purchaser.

In every little town, in every little village, there are scales where the farmer may have his load of hay weighed. The weigher's certificate is always accepted both by the owner and the purchaser, because the weigher himself has not the slightest interest in the article. Now, if that hay were weighed by the purchaser in some place where the owner could not see it weighed, there would be every inducement on the part of the purchaser to favor himself, and even if extremely honest the seller would not be without some justifiable suspicion. If that system should be applied not only to the weighing, but in addition, the purchaser decides that much of the load of timothy hay which the farmer brings to town is broom grass of inferior quality, the farmer would have greater reason for suspicion. He is not there to say that the purchaser's grade is not true; there is no forum in which he can be heard. It must be remembered that the producer of grain may live 500 or 1,000 miles from where that grain is inspected and graded. It ought, therefore, to be graded by those in whom he has entire confidence, both as to ability and integrity.

Let us consider the defects of the present system.

As I stated, if I should raise on a farm in western Minnesota or North Dakota three carloads of grain of exactly the same character in respect to color, weight, grade, and cleanliness, and should ship those three carloads, say, to Minneapolis, I might possibly receive the same grade for each of these three cars, or if I should send them all to Chicago I might possibly receive the same grade; there is no assurance that I would, but I might; and the dockage might be the same, but the chances are that they would not grade the same. If I were to send one carload of grain to Minneapolis, another carload of the same grain to Superior, and another to Chicago, it would be certain that no two of them would receive the same grade. It would be impossible to give the same grade to each, because the standard in each instance would be different. The Minnesota standard would require, if the grain were, say, No. 1 northern spring wheat, that it should be sound, well cleaned, must contain a larger proportion of the hard varieties, and must weigh not less than 57 pounds to the measured bushel. The Chicago standard might require a greater amount of a hard variety of wheat and a less weight. The Superior grade for No. 1 northern might differ in both respects from the grade of either of the other two centers. As the price of each carload would be wholly dependent upon its grade and the certificate under which it was sold, the probabilities would be that there would be a different value received for each carload, irrespective of the influence of freight.

The evils of the lack of uniformity can be best expressed by me by reading a portion of a resolution adopted at Salina, Kans., January 15, 1907, by the independent grain dealers. I especially wish to call the attention of the Senator from Kansas [Mr. BRISTOW] to this statement, because it is so clear and so lucid and places the matter before the Senate in such a way that even one not thoroughly acquainted with the handling of grain can understand it.

Mr. SMITH of South Carolina. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from South Carolina?

Mr. McCUMBER. I yield.

Mr. SMITH of South Carolina. Before the Senator reads the resolution, I should like to ask him a question. The Senator mentioned the fact that in the hypothetical case of shipping three cars of the same quality of grain to three different markets, three different grades would be given to the product. I am not so familiar with that as I am with some other systems of grading. I wish to ask the Senator whether there is a uniform price throughout the shipping territory in the West according to the grade?

Mr. McCUMBER. Always.

Mr. SMITH of South Carolina. All right. Now, wherever there is a difference made by an exchange as to the quality constituting a certain grade, if it is higher than it is elsewhere, then the farmer loses?

Mr. McCUMBER. Yes.

Mr. SMITH of South Carolina. And if it is lower than elsewhere he may gain as compared with where it is higher?

Mr. McCUMBER. As between one State and the other, to these points; yes.

Mr. SMITH of South Carolina. I wanted to get that clear.

Mr. McCUMBER. You will see the opportunity for manipulation through those grades, and the losses of which the farmer in the end must always pay. I will reach that further along in the argument.

I now call attention to this resolution, which says:

> Too much can not be said and done in favor of a national inspection law. We have no uniform inspection of grain and cotton, the principal farm products, which are so largely dealt in and which are of such great importance to both the producer and consumer. A shipper of grain can not send a car of wheat from one point to another with any degree of security at the present time, take all the precaution he may. A shipper at some point in Kansas may have a car of grain inspected by the Missouri State grain-inspection department as No. 3; the same car of grain may be forwarded to Illinois, and there inspected as No. 4; and from Illinois it may be sent to New Orleans, and there inspected as "no grade"; discounted from place to place anywhere from 1 to 15 cents per bushel, until it falls into the hands of the trust exporter, when it is again inspected as No. 2 and sold for No. 2 at No. 2 price, the difference falling into the hands of the trust instead of the farmer and producer.

It is but fair to say that this evil has been sought to be remedied by the National Association of Grain Dealers. The attempt failed only because of the suspicion and selfishness of

the several terminals, each fearing that the other might obtain an advantage. I believe a system was adopted for a short period of time; but as soon as an advantage would accrue to one terminal by abandoning the agreement for uniformity, self-interest rather than agreement governed at such terminal. There is no reason in the world why the same character of grain, raised in the same locality, should not be graded the same, whether sold in Chicago, Duluth, or Buffalo. A Federal law could reach the case and prevent the injustices that are being perpetrated under the present system, due to the lack of uniformity in grade.

Mr. President, possibly the greatest injury that has resulted to our general grain trade has been the effect of these fraudulent grades on our export business. It has been so grave that a congress of wheat buyers in all Europe was held in Berlin some few years ago, in which they passed resolutions against the purchasing of American wheat wherever they could avoid it because of the fact that they could not depend upon our certificates. They knew that grain from Chicago was graded under a certain system. They bought their grain under that system, but when it reached Liverpool or Hamburg or other places across the ocean it would be entirely a different kind of grain than that evidenced by the certificate. The condition became so bad that the great grain exchanges of Liverpool, Hamburg, Berlin, and other places appealed to the President of the United States to see if something could not be done in this country whereby our customers across the ocean could put some reliance on the grades of grain they were receiving. This was because, under our system of sales, the party purchasing had no remedy; the purchaser must buy according to the certificate; he must rely upon that certificate, and anything that was certified out as No. 2, although it might be rejected and bin burnt, he was compelled to take as No. 2.

There is a great deal on that point in the testimony. I purpose now to go over a portion of the testimony relative to the different exchanges. I shall take up that of Chicago first, because that was discussed yesterday. I will quote only marked portions.

I will first take the testimony of Mr. Greeley, who is at present in the city and probably could be found, as I understand he has been subpœnaed to give testimony on the House side upon a bill that is pending there now to investigate the methods of carrying on business at these exchanges.

Mr. Greeley was a member of the Chicago exchange and a purchaser of grain there. I want to quote something he says about the business in Chicago. He is speaking now as the representative of a farmers' cooperative company, I think, in the State of Iowa. He says:

> The men whom I represent are stockholders in the farmers' cooperative elevators. Whenever there is any question which seriously affects large bodies of men, numbering in the thousands, it is generally the case that some relation exists between the State and the individual, or the individual and the State, by which either the individual usurps the right of the State or the State fails to perform a certain function for the individual. Wherever the State refuses to perform a certain function for the individual or the individual usurps the rights of the State there is generally born a system of special privilege. That system of special privilege constitutes in itself a monopoly, and the monopoly generally works to the hardship of the people. In the grain trade there exists a monopoly in the city of Chicago, the monopoly being the result of a usurpation of a public function by private individuals acting for their own interests in a private capacity against the interests of the public.

Further on Mr. Greeley says—and I can quote only a little portion of his testimony:

> Having possession of the public warehouse facilities, a system was introduced whereby those elevators would become profitable to the public warehousemen.

Now, I am going on to show how this manipulation is carried on—

> The system was that if the grain entering the city could be bought on the basis of the lowest possible grade, put through private elevators, mixed, and put into public houses, and made the lowest of the improved grade in the public house, it would result to the benefit of the warehousemen in this way. It then became the duty of the warehousemen to continue the manufactured grades of grain in storage, those grades being made up of such a poor quality of the improved grade that the public would not desire to remove it from storage. The aim was for the elevator man to sell it ahead for future delivery at a premium; and when the future delivery day came, when he was to deliver the receipts on his contract, the grain would be of such inferior quality—made from a manufactured article in what they term a "hospital," or a private elevator—that the man who had bought the grain would, as we term it in the trade, "liquidate," or sell out. The elevator people stood ready to buy at the depreciated price, and would then resell for another deferred delivery to another speculative bull or bear. He in turn would pay a premium for that next deferred delivery, and thus a tax would be added to the grain for the privilege of buying that future.
>
> Thus was introduced an endless chain, from month to month, of forced liquidations on the part of the people who bought this grain. That went to such an extent from 1887 to 1893, and the depreciation of the grain by the forced liquidations of the speculative public became of such enormous importance, that corn on these western prairies sold for 8 cents a bushel. I sold oats in the Chicago market myself for 13 cents and the best grade of corn for 19½ cents a bushel. That produced the panic of 1893, and it was all caused by half a dozen men in the city of Chicago. Then the people on these western prairies all cried, "We will seat Bryan in Denver if we don't seat him in Washington." It was the cry of discontent. The purchasing power of the people had been impaired.

Mr. REED. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Missouri?

Mr. McCUMBER. I yield.

Mr. REED. Does the Senator agree with the statement of this witness that the manipulation of grain in the manner described by the witness could have reduced the price as he states? Does the Senator believe that testimony?

Mr. McCUMBER. Yes; I can see how it would reduce the price. When you put a certificate on No. 4 grain of any particular species that calls it No. 2, and that grain is not taken because of its inferior quality, and is sold, simply to get rid of it, at a lower price, it is very easy to see that it brings down the price of all the grain that is sold upon that grade.

Mr. REED. That is not the question.

Mr. McCUMBER. The Senator asked me if I believed the statement that this manipulation would lower the price. I said "Yes," and showed him how it would lower it.

Mr. REED. No; that was not my question, exactly.

Mr. McCUMBER. Oh, if the Senator means that that was the cause of the general low price over the country, certainly not.

Mr. REED. Of course we will all agree that a disturbance of market conditions might have some effect upon prices.

Mr. McCUMBER. Yes.

Mr. REED. But I was trying to elicit the opinion of the Senator upon the statement of this witness that the manipulation which he describes reduced the price of corn to 8 cents a bushel, and if he did not think that was such a wild and wholly improbable statement that a man who would make it could not be entitled to very much credit.

Mr. McCUMBER. I do not care about even arguing that proposition, because the Senator knows that these local conditions can not affect a world-wide condition—the general level of world prices.

Mr. SMITH of South Carolina. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from South Carolina?

Mr. McCUMBER. I yield.

Mr. SMITH of South Carolina. Apropos of the question asked by the Senator from Missouri at the time the Senator was reading the method of manipulating grain, which was the first time my attention had been called to the specific manner in which it was done, I desire to state, in corroboration of that, that almost identically the same thing is done in the case of the overvaluation of low-grade cottons in our exchanges. They hold these low-grade cottons and overestimate their value in comparison with the standard. Let us take, for instance, a middling cotton. They will put in a grade four or five grades below that, overvalue it, invoice it to come to New York, and then, upon delivery, when specific fulfillment of the contract is made, certificate it just as this is certificated; and the party who receives the cotton delivery receives a grade so far below the basis upon which he bought, and so overvalued, that he immediately retenders that grade and settles upon margins, which reduces it to a mere gambling contract.

That influenced the price of good cotton to such an extent that it brought about the very conditions that the Government has obviated in part in the matter of cotton; but where they have taken the grades and standardized them they spin the grade to determine its spinning value and the amount of waste and the cost of conversion into the finished article.

Middling cotton that was in the market in New York, let us say, at 12 cents a pound in the spot market; that is, where they go into the warehouse and select middling and not buy it upon the basis of middling, and then have the seller to deliver to you any other grade he may see fit, while middling cotton on the board in the same market was 10 cents.

Mr. McCUMBER. I will right here ask the Senator what has been the effect of standardizing cotton?

Mr. SMITH of South Carolina. It has just been completed. I have at my desk a most startling revelation in the Cotton World, issued about two weeks ago, where the Government has tested out the different grades of cotton and published their spinning value. The effect has been that this year, for the first time in the history of cotton throughout the entire South, it has been more uniform and steadier than ever before in my knowledge of the cotton business.

Mr. McCUMBER. How would that affect the producer?

Mr. SMITH of South Carolina. It has resulted in the producer at the primary market getting perhaps the best uniform price that was ever obtained in the history of cotton.

Mr. McCUMBER. The reason why I asked the Senator the question is because the Senator from Alabama [Mr. BANKHEAD] yesterday suggested that the cotton planter would not know any more about grades than I do about them, and therefore, as I understood him, the planter himself is getting no benefit whatever from reducing some grades——

Mr. SMITH of South Carolina. Twenty-seven; and some have run as high as 30.

Mr. McCUMBER. The different grades of cotton and reducing the number?

Mr. SMITH of South Carolina. To four or five full grades.

Mr. McCUMBER. I should like to have the Senator's expression on that point, and the reason why I ask it is because my investigation leads me to the conclusion that exactly the same methods have been adopted throughout the country in handling your cotton that have been adopted in handling our wheat.

Mr. SMITH of South Carolina. It sounded so familiar to me that if the Senator could have substituted the word "cotton" for the word "wheat" it would have been practically the same statement of fact. I was not in the Chamber yesterday when the Senator from Alabama made his remark. The Senator was right up to the standardization by the Government, because every little shipping point of any importance had its own system of grading, all of them pretending to conform to the Liverpool classification or the New York classification; but when the local buyer for an export house or representing New York stood on the platform and cut into a bale he would say, "This is middling," or "ordinary middling," or "strict middling," or "strict ordinary," the farmer stood there absolutely helpless. He had no legal standard of comparison by which to determine what was the grade that he was selling. When he sold that grade he had no means in the world of determining its spinning value. It might be off color; it might have a little foreign matter in it; and between middling and ordinary, just four grades, it made a difference of $15 a bale. According to the record which I have in my desk the difference is almost negligible.

The Senator from Alabama, perhaps, was right. The Senator from North Dakota is complaining of the same thing existing in wheat. What we want the Government to do for us is to fix the standard and then determine the relative value of the standard and see that it is complied with. The most costly luxury that the wheat growers of the West and the farmers of the South have had to put up with is the ignorance of what they have to sell.

Mr. McCUMBER. I wish to say, in order that the record may be clear, that in the colloquy between the Senator from Alabama and myself I was discussing the conditions in cotton since the standardization.

Mr. SMITH of South Carolina. Yes. The regulations have not yet been sufficiently promulgated. New Orleans has adopted the Government standardization. As soon as it is promulgated and a standard of comparison is put upon the platforms of the farmers of the South it will result in their getting full value for what they sell.

Mr. McCUMBER. May I ask another question of the Senator, because I think the two cases are so nearly parallel that the operation in one may foreshadow what the result may be in the other? In the first instance, as I understand it, all the cotton exchanges were rather opposed to standardization.

Mr. SMITH of South Carolina. I am not in a position to answer that question. I can state that New York has not even yet adopted the standard. New Orleans has adopted it.

Mr. McCUMBER. The standardization, of course, is not enforced upon them by any law.

Mr. SMITH of South Carolina. No; it is not enforced by any law. The Government simply standardized all by taking numerous bales of so-called different standards until they have a type of each grade.

Mr. McCUMBER. Then, if the Government should enforce it, the Senator thinks that immense benefit would follow to the cotton producer?

Mr. SMITH of South Carolina. I think it would certainly cure most of the tremendous evils under which we now suffer.

Mr. SHERMAN. I should like to inquire of the Senator from South Carolina if he thinks the Government can fix the price of those standards as established?

Mr. SMITH of South Carolina. I would not ask the Government to do it. All that we are working at is for the Government to fix the standard grades, to fix what shall constitute a grade, and then determine the relative value of each grade, as expressing its intrinsic worth, and leave it to the farmer having this knowledge in his hands to say whether a seller shall bunco him or not.

Mr. SHERMAN. I wish to inquire further, does the Senator think that the market value of cotton would be affected so as to control prices?

Mr. SMITH of South Carolina. By having a Government standard?

Mr. SHERMAN. Yes. Would that control the prices on the market?

Mr. SMITH of South Carolina. No; the Senator from Illinois is mistaken. What the Senator from North Dakota and I are complaining of is taking one grade and affecting the price of the other grades. We say there should be a uniform standard gradation, so that the seller will know what the grade actually is and will get the value of that grade.

Mr. SHERMAN. On the contrary, Mr. President, I have not misunderstood either of the Senators. I am inquiring whether, after those uniform standards have been fixed, they control the price on the market, and my inquiry has not been answered.

Mr. SMITH of South Carolina. I will unquestionably answer yes.

Mr. McCUMBER. Yes; it does control the price on the market. If I am a miller and I want to buy wheat for grinding purposes and No. 1 northern is the kind of wheat I want to buy and No. 1 northern has a certain price in the markets of the country, I will pay that price if I know I am getting No. 1 northern. But if there is shipped to me under a certificate of No. 1 northern something that ought not to have been graded greater than No. 3 northern, the very next car that I order from that company I will pay a No. 3 northern price for a No. 1 northern certificate of grade, and that of itself will drive down the market price of the No. 1 all along the line.

Mr. SHERMAN. Mr. President, if the Senator from North Dakota will permit me——

Mr. McCUMBER. I yield.

Mr. SHERMAN. Does the Senator expect this uniformity of standards in grades to prevent anybody from breaking his contract?

Mr. McCUMBER. There is no law on the face of the earth that can be created that will prevent people from breaking a contract if they want to do it. I do not expect any kind of law we could pass to accomplish that.

Mr. SHERMAN. When there is a breach in a contract all the law can do is to give a remedy. If I buy No. 1 northern spring wheat, there is no law that can be obtained by the terms of Senate bill 120 that will prevent somebody from delivering to me a lower standard, provided I will receive it, or breaking a contract if I do not receive it.

Mr. McCUMBER. But what I want is a law that shall authorize the Government to fix a standard and certify that wheat at just what it is. I want not only uniformity but I want certainty. The Government of the United States does not send us out light weight in our $20 gold pieces. Every one of them rings true to its weight. I believe the Federal Government should give us a certificate that would be as reliable, that would be accepted by the general trade of the country as easily and quickly, as the gold dollars of the country. Confidence is the life of trade. Confidence that you are going to get what you order is always a buoyant influence that drives prices upward. Distrust of what you are going to get upon a certificate of grade is always depressing, and sends the price downward. Therefore certainty of grade must necessarily benefit both the producer and the consumer—the ultimate consumer, I am speaking of now—in giving them what they want.

I am borne out in this by practically all the millers of the country asking for a Federal inspection law. The only millers, so far as I have been able to ascertain, who are opposed to it are those who have had some experience in what they call the political fixing of grades by State laws, and they are opposed to it because they are afraid that too much politics will get into it under Federal inspection. On the contrary, we would be escaping the political influence by having Federal inspection.

Mr. SHERMAN. I wish to inquire further if the power of Congress to fix the standard of weight and measure when exercised would not be uniform, and when so fixed uniformly whether that prevents deception on the part of dishonest people in both weights and measures. The query naturally follows whether the ideal condition which the Senator from North Dakota pictures will follow from a uniformity of grades in grain any more than from a uniformity in weights and measures. Everybody is in favor of the bettering of conditions. I do not think you will find any serious controversy with any Senator on that question. What we do controvert is whether

undertaking here to pull up by the roots the existing system and substituting for it nothing but a uniformity of grades or standardization will produce this ideal condition.

The uniformity of grades in grain when provided for under the purposes of this bill will not create any better men in the market. There will be no more honesty than now inherent in human nature. After these grades are fixed they still have to be operated under by men.

The query in my mind is whether it is not largely an ideal condition hoped for, and if the analysis of the bill in that spirit is not an interpretation of dreams. I have seen ideal conditions contemplated by bills before covering equally large subjects, but they must be operated by humanity, not by perfect people. It is the imperfect ones that make the trouble under any system.

Mr. McCUMBER. Mr. President, temptation is the basis of most human frailties. People fall in the struggle of life, not through an innate desire to do a wrong thing, but because of the reward that may follow it. If the Senator and I have a disagreement relative to our rights and duties toward each other, we submit our controversy to some one who is not interested, and that person will be able to render a decision between us closer to the line of exact justice than either one of us, because of our selfishness, could arrive at. Now, here is a system under which the buyer of the grain is also the weigher and the grader of the grain.

Mr. SHERMAN. Mr. President——

Mr. McCUMBER. Just a minute. I have given the Senator time for his address. It makes no difference whether it is done indirectly, if the man who buys the grain dominates in any degree the man who inspects and grades that grain. In some of the exchanges there is the direct employment of inspectors by the grain dealers. Again, there is a State law, as in Minnesota, where they try to avoid this as much as possible. Yet the result shows the domination of the great buyers. In your State you have another system with a law governing it, and yet the influence of the great buyers in your city dominates and controls the exchanges in that city.

Now, what I want is that some one who is not interested in the purchase and sale of our grain shall fix the standard of that grain. That person is not as liable to commit a wrong as one who would be influenced by either the buyer or the seller. There is no complaint that the persons who mint our coins do not give full weight and measure. There is no complaint that our coins are improperly alloyed. It is, of course, possible to bribe an employee to make coins of underweight and thereby benefit the bullion owner, but it has never yet been done. We can not adopt any system that will always grade with exact certainty. The line of demarkation is so close between one grade and the other, and the grades so merge into each other, that absolute certainty is impossible. Yet we can approximate it with sufficient certainty to give confidence to the trade of the country.

Mr. SHERMAN. Let me make an inquiry of the Senator.

Mr. McCUMBER. Certainly.

Mr. SHERMAN. Political influence is the power feared in the system of State inspection. If I interpret the Senator correctly, that is reached through the agency of State politics. Will not Federal politics in the large markets of the country be equally potent to reach in a malign way the inspecting authority?

Mr. McCUMBER. I think not. Let me give just one illustration. I was going to give it later, but I will give it right here. I want the Senator's attention to it.

A few years ago there was an attempt on the part of some of the great speculators in wheat to corner the market. It was impossible to break that corner with the grade of grain for the contract on which the corner was based. The grain could not be secured in the country to break the corner, yet some equally powerful grain dealers were interested in breaking it. The corner was so complete and the strife was so intense that I believe it made a difference of nearly 50 cents a bushel for a few days between the price of No. 1 and No. 2 wheat. This followed in a certain city, and I will not mention it here, but you will find it in the record. There were, I think, some 600,000 bushels of wheat graded, as I remember, as No. 2 or No. 3. An effort was made to get that grain certified as No. 1. It had already been graded as No. 2 or No. 3—I do not remember specifically—but it was graded under the contract grade. An attempt was made, as I say, to get that grain out and to use it to break the corner. The inspecting department refused to do so; an appeal was taken; their refusal was sustained; and the pressure continued harder and greater, until finally a reinspection was granted, when this wheat was graded up to the contract grade, and it was all dumped in to break that corner in the market. Now, I will ask the Senator if he believes that such a thing would be possible under Federal inspection?

Mr. SHERMAN. Equally so.

Mr. McCUMBER. Well, I do not. If a Federal inspector should do that, and the Government should be a party to it, I am inclined to think that I would want to move out of the country. The Federal Government would see that we had honest inspection in that respect. I am not a bit afraid that it would not.

Mr. SHERMAN. I can cite operations of certain Federal officers in the section of country with which I am familiar that will equal that.

Mr. McCUMBER. Though there may have been some such instances, I think they are very rare.

Mr. SHERMAN. I have not as much confidence in Federal officers when it comes to a matter of this kind as I have in the officers of a well-managed State-inspection department.

Mr. McCUMBER. But I want to go on for the remainder of my time and read into the RECORD the evidence of a neighbor of the Senator from Illinois, Mr. Greeley. I take this from the testimony on the hearings before the Agricultural Committee:

Mr. GREELEY. The men whom I represent are stockholders in the farmers' cooperative elevators. Whenever there is any question which seriously affects large bodies of men, numbering in the thousands, it is generally the case that some relation exists between the State and the individual, or the individual and the State, by which either the individual usurps the right of the State or the State fails to perform a certain function for the individual. Wherever the State refuses to perform a certain function for the individual or the individual usurps the rights of the State, there is generally born a system of special privilege. That system of special privilege constitutes in itself a monopoly, and the monopoly generally works to the hardship of the people. In the grain trade there exists a monopoly in the city of Chicago, the monopoly being the result of a usurpation of a public function by private individuals acting for their own interests in a private capacity against the interests of the public.

Having possession of the public warehouse facilities, a system was introduced whereby those elevators would become profitable to the public warehousemen. The system was that if the grain entering the city could be bought on the basis of the lowest possible grade, put through private elevators, mixed, and put into public houses, and made the lowest of the improved grade in the public house, it would result to the benefit of the warehousemen in this way. It then became the duty of the warehousemen to continue the manufactured grades of grain in storage, those grades being made up of such a poor quality of the improved grade that the public would not desire to remove it from storage. The aim was for the elevator man to sell it ahead for future delivery at a premium; and when the future delivery day came, when he was to deliver the receipts on his contract, the grain would be of such inferior quality (made from a manufactured article in what they term a "hospital" or a private elevator) that the man who had bought the grain would, as we term it in the trade, "liquidate," or sell out. The elevator people stood ready to buy at the depreciated price, and would then resell for another deferred delivery to another speculative bull or bear. He in turn would pay a premium for that next deferred delivery, and thus a tax would be added to the grain for the privilege of buying that future.

Thus was introduced an endless chain, from month to month, of forced liquidations on the part of the people who bought this grain. That went to such an extent from 1887 to 1893, and the depreciation of the grain by the forced liquidations of the speculative public became of such enormous importance, that corn on these western prairies sold for 8 cents a bushel. I sold oats in the Chicago market myself for 13 cents and the best grade of corn for 19½ cents a bushel. That produced the panic of 1893; and it was all caused by half a dozen men in the city of Chicago. Then the people on these western prairies all cried, "We will seat Bryan in Denver if we don't seat him in Washington." It was the cry of discontent. The purchasing power of the people had been impaired.

Senator DOLLIVER. Do I understand that this stock of manufactured and inferior grain was kept there, practically the same mass of grain, to serve as the basis——

Mr. GREELEY. As a club to depress the values and drive out speculators.

Senator DOLLIVER. Was it to serve as an instrument to offer delivery on these speculative contracts?

Mr. GREELEY. Yes, sir; it was.

Senator DOLLIVER. The same pile of grain?

Mr. GREELEY. The same pile of grain, often, from year to year.

Senator DOLLIVER. That is a very interesting statement.

Senator PERKINS. Did not the weevil attack it?

Mr. GREELEY. It might, and it might not. If the weevil attacked it and got into it, they would deliver to the public just the same.

Now, let me continue this little discussion, so that I may keep the thread of it.

The aim and object of the men in this combination is to make this grain of as low a grade as possible of the grade which is necessary for delivery—to make it not only low in grade but low in price; for the lower the price, the less interest and insurance they have to pay to carry it themselves in storage pending the day of future delivery for which they have sold to the future speculator. The whole basis of the scheme of the conduct of the grain in the public elevators was a depreciation of the price. The whole scheme was to buy the grain on the initial inspection from the country shipper at the lowest possible grade at which they could buy it, and then, having made it into the manufactured article in the public house, to make the grain in the public house as poor a quality of the increased grade as was possible to make it, to continue its life in storage, to earn the tax from the future speculators who bought it. In other words, it was a pawnbroker's game, the holding of the grain in pawn, subject to a tax which the speculative public had to pay.

That system has one very important ally. The important ally is the inspection of the grain.

Right here I want to get the connection between the inspection and the manipulator.

Previous to the usurpation of the public facilities in 1890, or about that time, there was existent in Chicago a system of public warehousing of grain whereby the aim of the inspection department and the aim of the public warehouse proprietor—he himself being not a dealer in grain—was to maintain a high standard of the grain in storage, in order that the public would buy the receipts of his elevator and keep the grain moving and attract it to his road and to his elevator and thus furnish him with a large amount of storage. Now the system prevails that instead of increasing the standard and protecting the buyers and protecting the shippers who send the grain to market, the scheme of these men is to depreciate the initial inspection and to appreciate the inspection of the poor grain into the contract grade in the public house.

In other words, it is the same proceeding that we have complained of in the Northwest in what we call the "rigid inspection in" and "liberal inspection out," giving the benefit in each instance to those dealing in the grain.

Senator DOLLIVER. Who makes this initial inspection at Chicago?

Mr. GREELEY. The State inspection department.

Senator DOLLIVER. Do you claim that that is an unreliable institution?

Mr. GREELEY. I certainly do.

Senator DOLLIVER. And who makes the inspection of this elevator grain?

Mr. GREELEY. The State inspection department.

Senator DOLLIVER. It is the same inspection?

Mr. GREELEY. The same inspection.

Senator PERKINS. Do the exporter and the miller purchase this grain on its merits or on what it rates in the market?

Here is an important question bearing upon the effect of false or unreliable grading.

Mr. GREELEY. There is not a grain man in the world familiar with the Chicago market who will buy a public-warehouse grain receipt and remove that grain from storage under any circumstances without an absolute knowledge of the grain he is going to get from that elevator.

That is a rather serious charge.

The standards of the public warehouse receipts in Chicago are in disrepute simply on account of this system and the inspection department which places the value on those receipts.

That is the result of improper inspection; the loss affects the producer, the purchaser, and the final consumer. If the miller has to keep a man at $125 a month at the Chicago terminal to inspect the wheat, instead of buying it upon a certificate which he can depend upon, somebody has to pay that man. It is not the miller; he will not suffer that loss; he will make an allowance to cover the amount he pays that man in the price he pays for the wheat; and that reflects back again upon the producer of the grain. I say the loss falls on the producer of the grain finally; in other words, it drives down the price of that grade of grain, the honest grade, the No. 1 sold generally on these certificates, to the price or real value of the inferior grain which is graded the same, because the purchaser will always have to take his chance, and he will always bid low, not knowing what kind of grain he will receive.

Senator DOLLIVER. You hold that those facilities for distributing grain have really become a hindrance to the commerce in grain?

Mr. GREELEY. They certainly have become a hindrance. In order to show you the magnitude of the forces at work under this system in Chicago I have prepared and printed a list of the Chicago public warehouses in control of what we in Chicago term this trust in the public facilities. Every elevator in Chicago is under the control of this system, with a total of 21,000,000 bushels of storage capacity, with the exception of one elevator.

Senator DOLLIVER. Why do you call it a trust?

Mr. GREELEY. I call it a trust because they are in a trust; in a combination. The articles of combination I shall be pleased to read you if you desire to have them in this discussion.

Senator DOLLIVER. I should like to have the whole thing.

Mr. GREELEY. The private warehouses in the control of this trust aggregate a capacity of 13,150,000 bushels. The total grain-storage capacity of the city of Chicago is in the control of five men. The five men I shall be pleased to name to you, so that we may have no misunderstanding in regard to the system, the men that work it, and the condition that exists.

I have handled tens of thousands of cars in the Chicago Board of Trade. I have stood in front of one sample table for 17 years as a handler of grain. I have sampled hundreds of thousands of carloads on the floor and noted the inspection. And I am free to admit that there is not a grain merchant of standing who is not either friendly to or affiliated with this organization in Chicago who will state, either under oath or otherwise, that a public warehouse grain receipt under the management of this public elevator trust and the State inspection department is worthy of the respect of any man in the trade.

That is a pretty strong indictment by one who has spent 17 years in buying grain in that portion of the country.

Mr. SHERMAN. Mr. President, I should want to know whether there was any cross-examination of this witness, so as to ascertain whether he was caught on the wrong side of the market at some time or other.

Mr. McCUMBER. That may be; I will let the Senator draw his own conclusion as to the interest or integrity of the witness; but what he says so dovetails in with other matters that we know of that I think he is fully corroborated; and when he makes a charge of that kind it would be well for those who deny it to meet him, because he is here in the city to-day to reiterate those same charges; so that there will be an opportunity for cross-examination upon them.

If millions of bushels are hoarded at market centers for the purpose of accumulating a storage charge by the collection of those storage charges from the people who buy grain for future delivery, and the speculative public is constantly forcing liquidations at these future months when the time comes for the delivery of the grain, our contention is that it not only depreciates the price, to the profit of the trust (which is largely interested in the speculative market also and reaps a profit from that also), but the tendency is to depreciate that large amount of the crop which never seeks the market and places values upon the crop of the entire country which does not leave the farm.

That is a conclusion, but every man of any judgment whatever knows that it is a correct conclusion; that, so long as you sell by grades and you depreciate the price of a grade in the great central market, it fixes the price of every bushel of grain in every farm granary and elevator within the commercial radius of that market.

I am told that in the case of the corn crop not over from 10 to 20 per cent of the crop ever leaves the farm. But the operation of this system tends to the depreciation of the entire values of the crops, and it goes into the hundreds of millions of cents per bushel on that part of the crop which never seeks market.

If this condition did not exist, and if we had a fair inspection and a fair warehousing of grain at the market centers, and independent custodianship of the grain in the public elevators, the confidence of the people would be so thorough in the management of the elevators and in the quality of the grain that these stocks would not accumulate at the market centers and would not be an advertisement to the world that Chicago is overstocked in grain and we are overproduced in crops. Then the world would take from those public elevators the accumulations as it used to before these men became enthroned there, and the effect upon the speculative market—which is the great effect upon the market—would be that instead of the longs liquidating on account of the inferior load carried at the market centers the shorts would be obliged to cover, and the prices would be on the boom rather than on the decline on account of the effect of the accumulations, as now.

That certainly is sound logic, if the basis of it be true. I think I ought to read all of this testimony:

Senator PERKINS. You have anticipated what I was going to ask you. If I were a client of yours, or the client of any member of your Merchants' Exchange, in Chicago, and should buy 10,000 bushels of wheat for June delivery, when the time of delivery comes you have sold me something you have not got and something I do not want; but we settle on the difference, do we not?

Mr. GREELEY. That is entirely legal, and that is done to a large extent.

Here is a word put in by Mr. Bartlett, also from Illinois. I do not know whether the Senator knows him or not, but he is interested in the grain business. Mr. Bartlett interposes here:

Mr. BARTLETT. Contrary to the laws of the State of Illinois. They are usurping the rights of the public by permission of a continuance of the system by the State officials of Illinois, whose duty it is to prosecute them. It is not a question as to whether or not they have the privilege so to deal in grain, because we hold a copy of the testimony in full which was sent up to the Supreme Court of the State of Illinois, the suit costing about $20,000, the money being spent by the board of trade to secure the decision that a public warehouseman could not be a grain dealer. This is a copy of the testimony [referring to volume placed on committee table].

I have stated that these men deal in grain, and deal in such a way that it operates to the detriment of the shipper and to the detriment of the buyer and to the detriment of the speculative public, and that their ally and chief assistant is the State inspection department of Illinois.

That is the claim made everywhere—the alliance or close relationship between the purchasers and the inspection department, an alliance which we seek by this bill to nullify.

In order that you may be a little more certain in regard to those statements and that my statement may not be the only thing you have on the point, I will read a few brief paragraphs, which will only occupy two or three minutes.

In testimony before Judge Tuley in the trial of the case to prevent public warehousemen from dealing in grain the following testimony was given by Mr. Patten, who was then an independent grain shipper. He has since become a member of the firm of Bartlett, Fraser & Carrington, and is a members of the Chicago Grain Trust. This testimony before Judge Tuley, as an independent shipper of grain, reads as follows:

About the time I speak of—this was from about 1890 to 1894—I found difficulty in securing enough grain, and found the elevator companies were going around amongst the tables bidding one-eighth to one-quarter of a cent more than the price bid in the car-lot market.

They were giving up a portion of the storage.

I also found they were willing to resell that grain to me at a quarter of a cent less than they were paying for it. In the course of time I found I couldn't buy anything in the car-lot market and that I had to buy all my grain from the elevators. Then, again, in the course of time I found that I couldn't buy anything from the elevator companies only when they pleased to sell me. I found that they were offering grain in the East to my own customers at prices that they asked me. There was no money in it for me to buy grain and resell it at the same price. It grew worse from 1890 down to the time I quit the business. There is no car-lot trade left now.

He also stated at the same trial (this is a continuance of his testimony):

I said something about competition of elevators in the eastern markets. I was affected by competition to certain extent. The New England trade make a specialty of yellow corn.

Now, here is the system:

There are grades in our market of 2 and 3 yellow. These elevator companies also had private elevators which were not under the control of the State inspection. They would buy both grades to go to store and sell the No. 2 grade yellow in New England. I noticed from the inspection sheets that these companies very rarely inspected any yellow corn out of store. It always came out No. 2. And I noticed I had that competition to meet at the other end, from the elevator companies. In other words, they adulterated their goods, to be plain. They didn't give the trade East what they claimed to, although they gave them the inspection certificate of our inspection.

That is the testimony of Mr. Patten, one of the greatest wheat buyers in your State.

Mr. Bartlett goes on:

What better authority could there be in the world than Mr. Patten, then a large shipper and now a public elevator man? And Mr. Patten has come to the conclusion that it is better to get out into the elevator business and rob the people than to stay out of it and be robbed by them.

Also, in conjunction with that same feature before the Interstate Commerce Commission in this case, October 13 to November 23, 1906, Mr. John Stream, of the firm of J. C. Shaffer & Co., or, rather, its manager, also stated:

We generally buy grain on basis of futures.

Now, that is all right. All grain trade, as a rule, in its larger capacity is regulated upon the course of speculation and the influence of speculation. These men try to force speculation as the leading problem; and their larger profits are not on the grain that goes through these houses—a few millions—but upon the countless millions of forced liquidations and control of the market which they, having possession of the facilities, are able to turn either way to their own benefit [reading]:

We generally buy grain on basis of futures. The price of the future is established on the floor, and we base the price of the cash on the futures, so when we send out our bids to the country any acceptance we get we sell for future delivery. When the grain comes in, if it grades—that means, if it is up to contract—we sell it out and buy back the future.

There is a second chance for them. If it does not grade, we put it into the cleaning house; and if we can ship it to better advantage, we ship it without putting it into the public house. If we can not—that is, if it does not grade, and they can not ship it when they put it into the cleaning house—we make it into contract grade and sell to a member of the board, to go into a public house, immediately buying back our future.

Now, gentlemen, there is the system.

Senator PERKINS. Admitting that all you say exists (which we are not prepared to deny), will you be kind enough to explain how you think Senate bill 382 will cure these evils?

Mr. GREELEY. I will try to get to that in just a moment, because it will assist me to continue right along.

Senator PERKINS. I do not want to disturb the continuity of your argument.

Mr. GREELEY. No; but keep that in mind, as I intend to take it up as the closing portion of my address.

Senator DOLLIVER. Where does the man that actually wants grain in this country go to buy it? How does he get it out of the mess there in Chicago?

Mr. GREELEY. He does not take it, as a rule, if he can help it.

Senator DOLLIVER. Yes; but in the case of a man that is running a mill and has to have wheat, where does he get it?

Mr. GREELEY. He goes out of that crowd to get it; and they keep that grain there as a constant club to hammer the price down.

Senator DOLLIVER. Would any evil happen to the wheat business and the legitimate wheat trade if those speculative ventures in wheat were abolished altogether by Congress?

Then Mr. Greeley goes on with the statement of his opinion of the benefits of speculation in wheat markets, but I wish to confine myself to the testimony relative to the operations under the present systems of grading and handling.

Senator DOLLIVER. Who establishes the standards of grade?

Mr. GREELEY. The State.

Senator DOLLIVER. This bill seems to authorize the Department of Agriculture to do that.

Mr. GREELEY. That is proper.

Senator MONEY. In other words, it is a substitution of Federal for State inspectors.

Mr. GREELEY. Where do we come in. We are farmers. We are not here as a joke. We do not go and adopt a resolution—two or three of us—and say: "We will appoint ourselves a committee, and have some grievance, and go down to Washington and constitute ourselves somebody representing something." We had 1,800 men at Fort Dodge, Iowa, just wild on this subject, discussing it for hours. We took up every feature of it. We then adjourned over into Illinois and went to Bloomington, and we had a convention there, with 900 men present; and almost the chief subject of discussion at both those meetings was the same proposition that we have here. These men are determined upon this subject. When they ship a car into Chicago the dominating force existing there is to undergrade that grain so that this trust may buy it at the depreciated inspection; and we know it to be a fact, from the evidence which I have read, that when a man buys it and takes it out of storage he gets the depreciated value of the improved grade to such an extent that he does not want the property, and he goes and buys it by sample on the track in the country.

Senator BURKETT. I do not know whether you mentioned this before I came in or not, but you made a statement to the effect that "We are farmers; we are not jokes," and you spoke of how you had 1,800 of them. Of course you did not mean to say that you personally are a farmer?

Mr. GREELEY. No, sir; I was with them.

Senator BURKETT. I would like to have you tell just what you are and how you do come to represent farmers. I take it that you are here in a representative capacity. I would like to have that appear, so that when the evidence is read by others that do not see you they will know who you are.

Mr. GREELEY. I fought this Elevator Trust for 17 years. I have been defeated in the fight in every avenue where I have attempted to accomplish my purpose—that of securing an honest warehousing of grain in the Chicago market.

Senator BURKETT. Where was it that you fought them?

Mr. GREELEY. In Chicago—on the board of trade.

Senator BURKETT. And you were acting in what capacity then?

Mr. GREELEY. As a commission merchant—an independent commission merchant.

I pause right here in the reading of the testimony to say that members of the exchange in Chicago have seen me personally and have evidenced their keen interest and hope that such a bill would pass, stating that, while the majority of even that board secretly favor it, they are under the control of a few men who are able to destroy their business if they see fit to do so, and therefore they could not make an open fight against the system.

Senator DOLLIVER. Are there no commission merchants in Chicago, except yourself, that take your view of it?

Mr. GREELEY. Very few of them. You can find very few.

Senator DOLLIVER. How do you account for that?

Mr. GREELEY. They do not dare do it.

That corroborates what I have just stated to you about the testimony that was given me personally.

Senator DOLLIVER. There are thousands of them?

Mr. GREELEY. Yes, sir; but they have not the courage.

Senator DOLLIVER. They are honest men, intelligent men?

Mr. GREELEY. These men are too powerful for them to fight.

I found that out on the floor of the Senate—that there was decidedly a powerful organization for the unorganized farmers to fight single handed.

I am going to read only a portion of this testimony:

Mr. GREELEY. To proceed a little to explain in regard to this bill. An evil exists. It is verified by any amount of testimony that you men will ever want, and we can obtain it. If it exists, then the proposition comes up as to whether this system of State inspection should be superseded by a national inspection.

We claim, first, that a national inspection of grain under the system of civil service inaugurated by the United States Government has a chance of producing the result of the education on similar lines in all States of grain inspectors who will be under the knowledge, control, and direction of a uniform set system of inspection. People in general, the country over and the world over, receiving our certificates will have it made known to them that United States Government inspection carries with it that kind of a description of each grade. That seems to be sensible and fundamental. We believe that instead of having an inferior quality of the men doing the inspecting, a system of training and education will be inaugurated which will bear good fruit.

We believe, secondly, that it will be more difficult to "fix" or influence inspectors if the authority is invested at Washington rather than at Springfield, if such "fixing" or influence exists at the present time; and whether it does or not, we believe it does.

That answers the Senator's question.

Thirdly, we believe that under a system of Government supervision which is regular and effective and along the same lines, a system may be introduced by the Government which will become general at all market centers, whereby governmental tests and governmental stamp of approval and education may be put upon the various kinds of grain raised in the country, so that the education and the stamp of approval and the improvement will lend dignity and standing to the receipts which have that stamp.

Further on he says:

Mr. GREELEY. Your farmers in the State of Iowa suffer every year, to the best of my belief, a depreciation of $250,000,000 in the value of their crops from the simple fact of the existence of the poor grain—as small a quantity as it is—that is carried and hoarded in the Chicago public warehouses in this elevator and grain combine.

I think the figure here is wrong. It says "$250,000,000," but I think it is meant for "$2,500,000."

The farmer has a crop subject to an increase in price or a decrease in price, according to what affects those open contracts of 150,000,000 bushels of grain. This is the way the game works: The contracts must mature, and those contracts all have to be filled by the delivery of a certain grade at a certain time in one of a certain number of warehouses made regular for the purpose. If those warehouses contain a certain amount of grain of a certain poor quality of the grade necessary for delivery when you approach delivery day, the buyers who have those contracts bought—that is, who are on the "bought" side of the market—will, if they fear the delivery of that poor grain to them, liquidate before the man who has it sold will purchase to cover his "short" sale. That throws the weight of the large amount of speculative "long" interest on the market on the selling side; and, as I tell you, month after month the preponderance of the evidence in this book shows that the liquidation of the "long" interest, forcing the decline in the market, is probable, rather than the covering of the "short" interest to increase the price.

Then, again, he says:

Mr. GREELEY. Admitting that, there is one thing in favor of this bill: The system is better. The establishment of the national classification in grades is better. It gives a better description for the entire country of what is expected of the grade and unifies it under one classification rather than having it, as now, under the classification of the various States.

Mr. President, I am going to follow this with the testimony of Mr. Ballard on the same subject. It now lacks but a minute of being 2 o'clock. I wish to give notice again that at the close of the morning business to-morrow morning I shall proceed to try to finish my argument, and that if the consideration of the unfinished business is concluded before the expiration of the day I shall ask to proceed with my argument at the close of the unfinished business.

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The SECRETARY. A joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

## SENATOR FROM GEORGIA.

Mr. SMITH of Georgia. Mr. President, I present the credentials of Hon. WILLIAM STANLEY WEST, who has been ap-

pointed by the governor of Georgia to the office of Senator in the Congress of the United States in the place of Hon. AUGUSTUS O. BACON, deceased, to serve until the people of the State shall fill the vacancy by an election provided by law.

Mr. President, the Legislature of Georgia last July passed an act following the provisions of the seventeenth amendment authorizing the governor in the case of a vacancy to designate by appointment a Senator until the next general election. This designation has been made by the governor in pursuance of an act passed since the adoption of the seventeenth amendment.

I call the matter to the attention of the Senate now, so that there can be no question about the credentials following the seventeenth amendment. Mr. WEST will reach the city on Friday, and if there is to be any question about the credentials I would ask that they be referred to the Committee on Privileges and Elections, that there may be a report before next Friday morning.

The VICE PRESIDENT. The Secretary will read the credentials.

The Secretary read the credentials, as follows:

STATE OF GEORGIA.
EXECUTIVE DEPARTMENT, ATLANTA.

*To the Senate of the United States:*

Whereas the death of Hon. AUGUSTUS OCTAVIUS BACON causes a vacancy to exist in the office of United States Senator from the State of Georgia for the term ending with March 3, 1919,

I, John M. Slaton, governor of the State of Georgia, by authority of the Constitution of the United States and the act of the General Assembly of the State of Georgia approved August 16, 1913, hereby designate and appoint Hon. WILLIAM STANLEY WEST, of the county of Lowndes, this State, to the office of Senator in the Congress of the United States, vice Hon. AUGUSTUS OCTAVIUS BACON, deceased, to serve until the people of this State fill the vacancy by election as provided by law.

In witness whereof I have hereunto set my hand and caused the great seal of the State of Georgia to be affixed at Atlanta, the capital, this the 2d day of March in the year of our Lord one thousand nine hundred and fourteen and of the independence of the United States the one hundred and thirty-eighth.

JOHN M. SLATON, *Governor.*

By the governor:
[SEAL.]
PHILIP COOK,
*Secretary of State.*

The VICE PRESIDENT. The credentials will be referred to the Committee on Privileges and Elections.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a concurrent resolution providing that the two Houses of Congress assemble in the Hall of the House of Representatives on Thursday, the 5th day of March, 1914, at 12 o'clock and 30 minutes in the afternoon, for the purpose of receiving such communications as the President of the United States shall be pleased to make them, in which it requested the concurrence of the Senate.

TOMBIGBEE RIVER BRIDGE.

Mr. VARDAMAN. From the Committee on Commerce I report back favorably without amendment the bill (H. R. 13365) to authorize the construction, maintenance, and operation of a bridge across the Tombigbee River near Old Cotton Gin Port, in Monroe County, Miss., and I submit a report (No. 311) thereon. I ask the unanimous consent of the Senate for the immediate consideration of the bill. It has the approval of the War Department. This is a House bill, and it is very necessary that it should become a law at once. The people of that community have their material there, and the work is suspended until action by Congress can be had.

Mr. SMOOT. I wish to say to the Senator from Mississippi that I have no objection whatever to the passage of the bill by unanimous consent, but I do object to it unless it is distinctly understood that it shall not displace the unfinished business.

Mr. VARDAMAN. I want to say to the Senator from Utah that I would not have asked for the consideration of the bill if I had thought that it would interfere with the regular order.

Mr. SMOOT. Technically it does, and therefore I take this means of having a distinct understanding.

Mr. BORAH. Merely granting unanimous consent does not interfere with the unfinished business.

Mr. VARDAMAN. I think not.

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). The Chair so understands.

Mr. BORAH. The Senator from Utah is in error. It is only a motion to take up a measure which can interfere with it.

Mr. SMOOT. I said unless the bill was considered by unanimous consent I would object.

Mr. VARDAMAN. I have asked unanimous consent to have the bill considered. It will take but a moment. There is no objection to it.

The PRESIDING OFFICER. The bill will be read.

The Secretary read the bill; and there being no objection, the Senate, as in Committee of the Whole, proceeded to its consideration.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

JOINT MEETING OF THE TWO HOUSES—PRESIDENT'S ADDRESS.

The PRESIDING OFFICER laid before the Senate the following concurrent resolution (No. 33) of the House of Representatives, which was read:

*Resolved by the House of Representatives (the Senate concurring),* That the two Houses of Congress assemble in the Hall of the House of Representatives on Thursday, the 5th day of March, 1914, at 12 o'clock and 30 minutes in the afternoon, for the purpose of receiving such communications as the President of the United States shall be pleased to make them.

Mr. KERN. I move that the Senate concur in the resolution of the House.

The PRESIDING OFFICER. Without objection, the Senate concurs in the resolution.

POST OFFICE APPROPRIATION BILL.

Mr. BANKHEAD submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendments of the Senate numbered 2, 3, 5, 6, 8, 9, 15, 16, 17, 18, 19, 20, 21, and 22, and agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "and hereafter the appointment and assignment of clerks hereunder shall be so made during each fiscal year as not to involve a greater aggregate expenditure than the sum appropriated"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 4, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "*Provided*, That after June 30, 1914, the pay of substitute letter carriers employed in the places of regular employees absent from duty with pay and of auxiliary and temporary carriers employed at offices where the City Free Delivery Service is already established or may hereafter be established, and of substitute clerks employed in the places of regular employees absent from duty with pay, and of auxiliary and temporary clerks employed in first and second class post offices shall be at the rate of 35 cents an hour"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 7, and agree to the same with an amendment as follows: In lines 9 and 10 of the amendment strike out the words "March 4, 1915," and insert in lieu thereof the words "December 1, 1914"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$3,250"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 11, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$2,350"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 12, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$2,250"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 13, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$2,100"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 14, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$28,521,440"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 23, and agree to the same with an amendment as follows: At the end of the amendment, after the word "postage," insert the following: "*Provided*, That the Postmaster General may, in his discretion, by order, fix the

time within which all parcels of the fourth class shall be delivered"; and the Senate agree to the same.

J. H. BANKHEAD,
CLAUDE A. SWANSON,
W. O. BRADLEY,
*Managers on the part of the Senate.*

JOHN A. MOON,
S. W. SMITH,
*Managers on the part of the House.*

Mr. POMERENE. If I may ask the Senator from Alabama a question, the amendments are referred to by number, and that does not advise me at present as to the contents of each particular amendment. May I ask the Senator what was done with the amendment giving fourth-class rates to seeds, plants, and so forth?

Mr. BANKHEAD. That is agreed to in the report.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

## WOMAN SUFFRAGE.

The Senate resumed the consideration of the joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. THOMPSON. Mr. President, the active movement for woman suffrage commenced about the middle of the nineteenth century. Among its most prominent and active promoters was Miss Susan B. Anthony, who spent much of her life in Kansas, and who, with the aid of Elizabeth Cady Stanton, of New Jersey, wrote the first authentic history of woman suffrage, and which in its present form is indeed the only great and exhaustive treatise on this subject in existence to-day. Miss Anthony spent nearly all of her long, brilliant, and noble life in the cause of woman suffrage. No more devoted, able, and convincing advocate of any reform ever lived than Miss Anthony in her life's struggle for woman's rights. No one ever suffered greater personal and financial sacrifice for any cause and no one was ever rewarded with greater success than finally came as a result of her struggles in the interest of women. She died in March, 1906, at the ripe old age of 86 years, loved and respected by all who knew her or knew of her good work.

In the introduction to Miss Anthony's great work on Woman Suffrage the story of the long struggle for the enfranchisement of women is beautifully told in the following language:

> The pioneers in the work for the redemption of women found an unbroken field, not fallow from lying idle, but arid and barren, filled with the unyielding rocks of prejudice and choked with the thorns of conservatism. It required many years of labor as hard as that endured by the forefathers in wresting their lands from undisturbed nature before the ground was even broken to receive the seed. Then followed the long period of persistent tilling and sowing, which brought no reaping until the last quarter of the century, when the scanty harvest began to be gathered. The yield has seemed small indeed at the end of each twelvemonth, and it is only when viewed in the aggregate that its size can be appreciated. The condition of woman to-day compared with that of last year seems unchanged, but contrasted with that of 50 years ago it presents as great a revolution as the world has ever witnessed in this length of time.

For the past half century there has been a steady but certain advance in the direction of equal rights for women. Enough has been accomplished in this comparatively brief period to make it certain that within a few years women everywhere in the United States will enjoy entire equality in social, civil, and legal rights. Woman's political equality with man is the natural outcome of the fundamental principles of our Government, clearly set forth in the Declaration of Independence and embraced in the Constitution of the United States. The majority of the leading statesmen of our country take the position that suffrage is a natural right that may be regulated but can not be abolished by State law. I have always believed that under the fundamental law and the supreme law of the land woman is justly and legally entitled to suffrage. The Declaration of Independence insured equal rights to all, which has been the watchword for Democracy throughout the long, proud history of the party.

The fourteenth amendment to the Constitution provides:

> All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside * * *.

The fifteenth amendment provides:

> The rights of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

Therefore, under the plain terms of the Constitution, there is no distinction as to sex when it comes to citizenship. To deny women the right to vote is to deny that they are citizens of the United States. The principle of equality of rights underlies all human sentiments and forms the foundation of the greatest nations. The nearer the rights of the citizens are equal, the greater the strength of a nation; the more unequal the rights of the citizens, the weaker is the nation. John Emerson Roberts, in his lecture on "Woman and justice," says:

> In mind there is no sex. Reason is neither masculine, feminine, nor neuter. Truth is not a thing of anatomy. Justice is not distinguished by pantaloons or petticoats. Science has neither body, parts, nor passions. Liberty is sexless as the sky.

Kansas has been among the most prominent of the States in this as well as other great reforms. She was one of the earliest States to adopt woman's suffrage in a modified form. She has had this from the beginning of statehood. She was the first State to submit a constitutional amendment for complete woman suffrage. In 1867 the amendment was submitted to the voters of the State, but it was coupled with political complications in connection with negro suffrage and failed. The first woman's rights association was organized in the spring of 1859 by about 25 men and women, with the object of securing suffrage for women from the constitutional convention which met in July of that year to draft a constitution for statehood. They did not succeed in getting full suffrage, but they did succeed in getting the right to vote in all school-district matters, which was afterwards extended by constitutional amendment February 15, 1887, to municipal woman's suffrage. The campaign leading up to this successful conclusion was one of the most brilliant ever held in the State, many prominent women from all over the country taking part in the discussion throughout the State, among them being Mrs. Belva A. Lockwood, Mrs. Julia Ward Howe, Rev. Anna Howard Shaw, Mrs. Helen M. Gougher, Mrs. Mary E. Haggart, Miss Susan B. Anthony, Mother Bickerdyke, Mrs. Annie L. Diggs, and Mrs. Lucy B. Johnston. The State Woman's Christian Temperance Union cooperated throughout the campaign with the suffrage association in this effort for municipal franchise, and they soon received their reward by seeing the government of the larger cities changed from unlawful, liquor-licensed, graft-ridden, lawless places to complete law enforcement by honest and faithful officials. After securing municipal suffrage, the work still went forward, the association meeting annually.

At the annual meeting at Newton, Kans., October 13 to 15, 1887, the yellow ribbon was adopted as the suffrage badge in honor of the sunflower, the State flower of Kansas—"the flower that follows the wheel track and the plow," as woman's enfranchisement should follow citizenship. In recognition of Kansas, then the most progressive State in the suffrage cause, the yellow, which among the ancients signified wisdom, was afterwards adopted by the national association as the official color. The fight kept up year after year, until both of the leading political parties in the State, in 1892, declared in their platforms for the submission of a suffrage amendment, and the legislature of 1893 passed a bill for this purpose. From this time on Mrs. Annie L. Diggs, one of the brightest and bravest little women in Kansas, and who became famous as a Populist orator and leader, organized the Kansas women, and with hundreds of Populist, Democratic, and Republican friends labored unceasingly for the success of the amendment. Nothing was left undone that human wisdom could devise or human effort could execute. Mass meetings were held in every city in the State, and in practically every township, and were addressed by the leading men and women of the cause, of both local and national fame. The amendment was submitted at the election of 1894, when the Republicans made a determined and successful effort to regain possession of the State from the control of the Populists, who had defeated them by fusion with the Democrats two years before. In the midst of political excitement and in the terrible scramble for power none of the political parties indorsed the amendment in their platform in this campaign. The battle, however, was waged by the women without the assistance of any party, but their cause was subordinated, bargained, sold, and traded off for every other concession by the Republicans in order to get votes to again place them in control of the State, so that the amendment proposed by the Populist administration was lost by about 35,000 majority. Defeated, but not conquered, the women kept up their courage and fought bravely on year after year for 18 more long years, when they were finally victorious by the submission of an amendment for equal suffrage at the last general election in 1912, which carried by 16,079 majority; 74 counties voted for it and 30 against it; one was a tie.

During the passage of the bill for municipal suffrage in 1887 a petition against the bill was sent in, supposed to have been signed by 19 women of Independence, stating that, in effect, women had all the rights they needed. On the morning when

it was considered a large beautiful bouquet of flowers was placed on the desk of Senator R. M. Pickler, a leader of the opponents to woman's suffrage. On a card attached to the bouquet was written these words, "From the women of Kansas who do not wish to vote. History honors the man who dares to do what is right." When the discussion was over, it was finally discovered that no woman had anything whatever to do with sending the flowers, but that they had been purchased and presented by the liquor interests, who have always opposed woman's suffrage or any other uplift toward civic righteousness. This fact alone should be one of the strongest arguments for woman suffrage.

The effects of woman suffrage in Kansas appeared very early. One month after municipal suffrage was granted to women the "age of consent" was raised from 10 to 18 years. In 1889 the divorce law was so amended as to give the wife all the property owned by her at the time of marriage and all acquired by her afterwards, and alimony being allowed from the real and personal estate of the husband. In the same year a bill was passed creating the Girls' Industrial School at Beloit, Kans., which separated the incorrigible girls from the boys; and this school was made one of correction instead of punishment and demoralization.

In about 1900 the women began in earnest to make their fight for the strict enforcement of the prohibitory liquor law, which had become more or less a farce by reason of failure to enforce the law in some of the larger cities of the State. It was claimed by those who were inclined to wink at the law and to defeat its purposes that it was impossible to enforce the law, and this belief prevailed for several years, and a sort of an illegal license-grafting regulation arrangement was carried on in some of the cities. From 1900 to 1910 the warfare against the liquor joints and dives was continued earnestly and vigorously until not a single joint remained in the State, and it was largely through the influence of women that the law which had been on the statute books for years and thought to be the hardest law to enforce was demonstrated to be absolutely the easiest law of enforcement when an honest and earnest effort was made to do so.

None of the objections raised against woman suffrage ever materialized in Kansas. Only a few of the women sought official positions, but when they did secure them, instead of making failures, as was predicted, they almost invariably made the best officers we had in the State. Several of the small towns put their entire local government into the hands of the women. It is conceded that they make our best county superintendents, and hence are naturally sought for this office by the various political parties. From 1887 to the present time there have been about 75 women aldermen, about a half dozen police judges, a few city attorneys, several city clerks and treasurers, and numerous clerks and treasurers of school boards. About one-half of the counties have women county superintendents of schools, and there are many women serving on school boards. A number of women in the last few years have been elected county treasurer, register of deeds, and clerk of the court. Probably one-third of the county officers have women deputies. About 25 women have been elected to the office of mayor in the smaller towns, and in several instances the entire board of aldermen have been women. The business record of these women has been invariably good, and their industrious efforts to improve schools, sanitation, morals, and safe, efficient, and economic public utilities of their towns have been generally approved and aided by the men of their community. The interest of the Kansas women in their political rights, so difficultly secured, has never abated in the least, as commonly predicted would be the result by those opposed to woman's suffrage. The proportion of their vote varies in about the same ratio as that of the men. As the years go by the general average of the woman vote grows larger.

When the character of candidates or the importance of the issue commands especial attention a great many women go to the polls. Their main interest, however, always centers in questions which bear upon the morals, education, and welfare of the children, the environment of their homes, and the purity and economy in the administration of the laws. Their part in municipal elections has completely demoralized the old stock objections to the presence of women at the polls. The polling places have been moved from barns and livery stables to the public halls, churches, schoolhouses, and other decent and respectable places, and instead of wading in tobacco juice and breathing the foul smoke from cigars and pipes you now walk upon carpets and breathe the fragrance from flowers appropriately placed in the polling places. Men have learned that women command influence in politics, and the best men are nominated for office because of the demand of the women for cleaner morals and higher and nobler standards.

One of the commissioners of elections in Kansas City, the largest city of the State, alluding to the much-mooted question as to what class of women vote, said:

> The opponents of woman suffrage insist that the lower classes freely exercise the franchise while the higher classes generally refrain from voting. As women in registering usually give their vocation as "housekeeper," it is impossible to learn from that record what particular ledge of the social strata they stand upon. Therefore, in order to locate them as to trades, business, etc., I give them the positions occupied by their husbands and fathers. I take the seventeenth voting precinct of Kansas City as a typical one. It is about an average in voting population of white and colored men and women and in the diversified industries. The 149 white women who registered in this precinct, as indicated by the vocations of their husbands, fathers, etc., would be classified thus:
>
> The trades (all classes of skilled labor), 32; the professions, 26; merchants (all manner of dealers), 16; laborers (unskilled), 15; clerks, 10; public officers, 8; bankers and brokers, 7; railroad employees, 7; salesmen, 5; contractors, 2; foremen, 2; paymaster, 1; unclassified, 16. Thus, if the opponents of woman suffrage use the term "lower classes" according to some ill-defined rule of élite society, the example given above would be a complete refutation. If by "lower classes" they mean the immoral and dissolute, the refutation appears to be still more complete, for the woman electorate in the seventeenth precinct is particularly free from those elements.

Mr. SHAFROTH. Mr. President, I should like to make a suggestion right there as to the operation of the law in the State of Colorado with respect to the red-light district or the immoral district of the city of Denver.

Mr. THOMPSON. Certainly; I yield for that purpose.

Mr. SHAFROTH. The contention is made that good women will not vote and that the bad women will vote, when the fact is absolutely the reverse. The true situation in Colorado is that the good women do vote and the bad women will not vote unless they are almost compelled to go to the polls. The reason why this condition arises is because of the fact that they are in a business that they know can be closed, and they are afraid if they vote the wrong way the authorities who win will close them. Then, again, they are registered, and if they are registered under assumed names and are challenged they have to take an oath as to their names, which discloses in some way their true names. There is a great objection to that on their part.

So, as a matter of fact, the slum districts of the city of Denver do not poll the voters of that district unless some one in authority forces them out by sending a police force for the purpose of telling them that they must get to the polls. In that way, and somewhat in terror, they do vote, but left to themselves the immoral women will not vote, while the good women will vote. That is the experience in the State of Colorado.

Mr. THOMPSON. I thank the Senator from Colorado for his good suggestion in this connection. I think the example I have given from the commissioner of elections in Kansas City, the largest city in the State, clearly shows the same state of facts in Kansas where we have had municipal suffrage. So it is that the last objection, so frequently urged against woman suffrage, has been dispelled by experience; but whether we believe in woman suffrage or not, it is here and it has come to stay and to grow. It is difficult to find a prominent man anywhere in Kansas who openly opposes woman suffrage. The most eminent men and women earnestly advocate it. We usually find those opposed to prohibition also unfriendly to woman suffrage, and well they may be, for with the woman vote the last hope of the resubmissionist has been completely blasted.

It has been well said that "the proof of the pudding is in the eating." Woman suffrage has worked successfully and satisfactorily wherever tried. Not a single State which has adopted it would go back to the old way. Not a single objection now urged against it has ever materialized in actual practice. Why one-half of the electorate of a free and independent Nation which glories in its freedom and equal rights for all should be denied the highest right of citizenship has never, to my mind, been satisfactorily explained. The women are to-day far more ready for franchisement than the men were when they first usurped the power. They would add more intelligence to the vote of the Nation than was ever added to the voting power of any Government at any one time. After all the intelligence of the Nation is given to its voting strength, then is the time to regulate the ballot and to eliminate the evils from ignorant and wrongful use of it.

I know of no better way to close my remarks than to use the words of Tennyson in defining this great movement in beautiful verse:

> The woman's cause is man's; they sink or rise
> Together, dwarfed or godlike, bond or free.
> If she be small, slight-natured, miserable,
> How shall man grow?
> The woman is not undeveloped man,
> But diverse.

Yet in the long years, liker must they grow;
The man be more of woman, she of man;
He gain in sweetness and in moral height—
She mental breadth, nor fail in childward care,
Nor lose the childlike in the larger mind.

And so these twain, upon the skirts of Time,
Sit side by side, full-summed in all their powers,
Self-reverent each, and reverencing each;
Distinct in individualities,
But like each other, as are those who love.

Then comes the stateller Eden back to man;
Then reign the world's great bridals, chaste and calm;
Then springs the crowning race of humankind.

Mr. OWEN. Mr. President, when the State of Oklahoma was admitted into the Union the question of woman suffrage was brought up by an organization of good women in that State, and a poll of the constitutional convention showed that a majority of the members of that body were in favor of woman suffrage, although it had not been greatly discussed in the State. The natural sense of justice, the knowledge which men had with regard to the matter, however, had induced a majority of the members of that body to say that they favored woman suffrage. The moment that that fact was ascertained the liquor interests of the State of Oklahoma engaged in an active warfare against a favorable vote on woman suffrage and prevented it from being made a part of the constitution of the State. It will be remembered that Congress in carrying out the pledges made to various Indian tribes, that in territory occupied by them there should be prohibition, put into the constitution of Oklahoma a provision that the State of Oklahoma by a special ordinance should declare the establishment of prohibition in the eastern half of Oklahoma, which was occupied by the Five Civilized Tribes. The question then immediately arose whether the people of Oklahoma should not also by an ordinance establish prohibition for the western half of Oklahoma.

There were many saloons in western Oklahoma at that time. I recall in Oklahoma City counting 11 saloons on the principal block in the center of the city before this question arose and was determined by the people of Oklahoma in favor of prohibition. The saloon men raised a great cry in favor of continuing the open saloon in Oklahoma. The women were naturally opposed to the saloon, as they are always opposed to that which brings grief to their sons, to their husbands, to the men of their families, and thus to themselves. Because it was well known that the women would align themselves with the churches against the liquor traffic in Oklahoma the liquor interests made haste to impress their power upon members of the constitutional convention. By threats and by cajolery they changed enough votes to prevent the matter being submitted as a part of the constitution of Oklahoma. The dangerous enemies of woman suffrage are those interested in the liquor traffic, in gambling houses, in the white-slave traffic. The sentimental opponents of woman suffrage who are of pure purpose do not really amount to any serious opposition.

Before the constitutional convention in Oklahoma I made an argument in favor of giving the women in that State the right of suffrage. I did so because I desired to improve the conditions of government; I did so because I believed in the high sense of honor of women; I believed in their superior moral and ethical and intuitive sense, and believed that they would improve the tone and level of the suffrage. I had observed that about all that men seem to know of good morals, of religion, of good manners they had learned from women, and I desired that woman's spiritual force, woman's moral and ethical force, should be more actively engaged on the side of good government and that they should be given power to make effective their point of view.

The arguments in favor of woman suffrage are so numerous and so convincing to my mind that it is difficult for me to understand how it can be seriously opposed.

When we read our great fundamental law, when we take up the Declaration of Independence and examine its language, we find it begins in this way:

When in the course of human events it becomes necessary for one people to dissolve the political bands which have connected them with another—

It does not use the word "men"; it uses the word "people"; and right through the Declaration of Independence runs the word "people"—not men, but men and women. The declaration is made in this great instrument:

That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed.

Are not women governed by the law of the land? Are they not subject to the civil law? May not their property be taken from them by civil process, by trial by jury? Nay, Mr. President, may they not be denied liberty by the declaration of law, by the decision of a court or of a jury? May they not be denied life itself under the criminal code on the declaration of a jury and the decision of a court? Many a woman has had her life taken by the law of the land, but the history of this country records that where there is 1 woman convicted under the criminal law, in comparison there are 50 men who are convicted under the criminal law, because men, when compared with women, are about fifty times as bad, or, I should rather say, that women are about fifty times as good, so far as the criminal law is concerned. In truth, the men of the world are not bad; 90 per cent of the men of the world in reality endeavor to do justice, to live rightly, and to be good citizens and good neighbors.

In looking at this Declaration of Independence, all the way through is the declaration of the rights of the people—of "men and of women." When I look at the Constitution of the United States, the very first great words of that Constitution declare the rights of women, the power of women. It says:

We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

The people means men and women; women are people.

The women of the United States had a part in establishing this Constitution; they had a part in fighting the battles of the Revolutionary War; they did their full share in that contest, just as they did their full share in the late war, and do their full share in every war that takes place.

Mr. SHAFROTH. Mr. President, will the Senator from Oklahoma allow me to make a suggestion?

The PRESIDING OFFICER. Does the Senator from Oklahoma yield to the Senator from Colorado?

Mr. OWEN. I yield to the Senator from Colorado.

Mr. SHAFROTH. In line with what the Senator from Oklahoma has said, I want to call to his attention, and to have him discuss, the fact that, since we have no law of primogeniture in this country, practically one-half of all the property, personal and real, in the United States descends to women. By reason of that fact it is a manifest injustice that they are not permitted to make any laws with relation to their property, but are controlled solely as to the making of the laws by men.

I wish further to call attention to the fact that nearly every year in the municipal corporations of the United States improvement taxes are placed upon women's property to an enormous extent, almost equal in many instances to the value of the property itself. These special-improvement taxes are placed there without women's consent and in direct violation of the Declaration of Independence, which the Senator from Oklahoma has read, namely, that the just powers of government are derived "from the consent of the governed." I would thank the Senator from Oklahoma if he would dwell upon that subject.

Mr. OWEN. Mr. President, I will do that in due course, as I consider this matter; but, first, I want to call attention to the fact that the great original powers of our Government, as set forth in the Constitution of the United States, proceeded upon the theory of the rights of the people, not the rights of some of the people, not the rights of men only, but the rights of men and women. I want it clearly brought forth in this debate that our great fundamental law does not contemplate denial to women of their rights, but recognizes throughout that these rights of the people ought to be enjoyed in common and equally. I remind you that New Jersey at the time when it came into the Union had woman suffrage, and it was on the authority of the women of New Jersey that the Constitution itself was ratified. And the Constitution was framed in such a way as not to deny woman suffrage. It failed to assert it, and so the rule was established by individual States.

Let me call attention to the language of the Constitution. Section 2 of Article I, where it refers to the House of Representatives being composed of Members, says they shall be "chosen every second year by the people." It does not say chosen by the men only, but shall be chosen "by the people"; and in apportioning Representatives and direct taxes, they are apportioned according "to the whole number of free persons," using the term "number of free persons," which means men and women.

And, then, when it refers to Senators the Constitution says that—

No person shall be a Senator who shall not have attained to the age of 30 years and been 9 years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State for which he shall be chosen.

The term "person," of course, is always referred to as a relative pronoun by the word "he"; but certainly woman is a person; certainly woman is a citizen; certainly woman is an inhabitant; and certainly woman is one of the people. She fills every requirement where the descriptive term is used.

When it comes down to the constitutional amendments, we find that Article I provides that—

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances.

The people means men and women. If women are people and have all the acknowledged constitutional rights, why should a just man deny the vote which will protect these rights?

And the women, being people, are here now as petitioners praying for the recognition of their just rights; and, for one, I not only am willing to concede their just rights, but I insist, so far as I can, that their rights shall be recognized.

Article IV of the amendments to the Constitution provides that—

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated.

And women should have the vote to enforce their guaranteed rights as people, because women, at least, are people.

Article IX of the amendments provides that—

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

That is, the rights retained by the men and women of the land.

When we come to Article XIV of the amendments, section 1, we find it reads:

SECTION 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside.

Women are therefore citizens of the United States.

Will any man deny that women who are "born or naturalized in the United States, and subject to the jurisdiction thereof," are citizens of the United States and citizens of the State wherein they reside? Then follows this language in Article XIV:

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

And women are citizens.

Mark the words "privileges or immunities." "Privileges or immunities" are terms not so strong as rights. A privilege would seem to imply some particular special grant, while a constitutional and natural right is a broad constitutional power vested indefeasibly in a person. You might take away a privilege or an immunity, but you can not take away the indefeasible rights of "life, liberty, and the pursuit of happiness," or of any of those rights which belong of necessity by nature to a man or to a woman. I hold that under the laws of nature and under the laws of God, written before man wrote his laws upon the statute book, a man and a woman have certain rights indefeasible, indestructible, not to be taken from him by his own hand, not to be contracted away, rights which are holy in their character—the right of liberty, the right of life, the right of the pursuit of happiness. These rights were vested in men before human law was written, and they were vested in women as well, and should not be denied; they can not be long denied and they must not be denied. If the Constitution thus forbids immunities to be taken from citizen women, how much more unjust to take the greater rights from women or to deny such rights.

The fourteenth amendment continues:

Nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

In a high, true sense it is not due process of law to take the life, the liberty, or the property of women by law in which they have no part, where they are not allowed to nominate or elect those who write the law and execute the law, where their consent is not given in due form to the law.

When you deny a woman the right of suffrage, do you not, as a matter of good conscience, deny her "the equal protection of the law"? Answer that proposal with a conscientious, upright mind! When you deny women the right of suffrage, you do most emphatically deny women the equal protection of the law. Men can vote for or against the lawmaker; men can vote for or against the representative; men can vote for or against the judge who is to sit upon the bench; men can vote for or against the sheriff who is to select the jury; but when women are denied the right of an equal voice to select the judge who shall sit upon their rights of "life, liberty, and the pursuit of happiness," the women are assuredly denied equal justice and equal protection of the law.

When we come to read the other portion of the fourteenth amendment we find again repeated this recognition of the people in apportioning the number of representatives in determining who shall be chosen as the representatives; and in Article XV we find that—

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

Under that amendment the right, even, of a negro to vote can not be denied. Shall it be maintained that our Constitution intended that this right should be granted a negro man and yet denied to white women? Is that a true interpretation of the rule of reason in interpreting the laws of this Republic?

Article XVI provides:

The Congress shall have power to lay and collect taxes on incomes.

On the incomes of men alone? No; on the incomes of women as well as of men. Shall women who pay their proper part of the income tax have no right to be heard in choosing those who shall pass the laws in regard to taxation or in selecting those who administer the laws of taxation?

On May 3, 1910, in a memorial of the National American Woman Suffrage Association demanding for the women of the United States the recognition by Congress of the right to vote the officers of the association laid down several good reasons which justify a modification of Article XV of the amendments to the Constitution of the United States so as to include the word "sex." Those reasons are very compact, and I call the attention of the Senate to them:

(1) The women of the United States are citizens of the United States, entitled by nature to an equal right to enjoy the opportunities of life.

Will that be denied? Can any man say that women are not entitled by nature to have an equal opportunity to enjoy life? And do they have an equal opportunity when they are not permitted to participate in government; when they are not permitted to nominate or elect men for office who are going to write the laws which govern them and their property?

The second reason is:

(2) Women perform half the work of the United States.

Will any man deny that? Would any man exchange with a woman or be willing to attempt to perform her allotted tasks? The woman who takes care of the house, who sees that the food for the family is provided and prepared, who sees that breakfast, dinner, and supper are cooked and served properly and in an attractive manner; the woman who looks after the servants in the house, cares for the children, and makes the home a pleasant place to live in performs a difficult task.

The woman must see that the house is kept in good order. It must be kept clean and free from dust, the furniture must be kept attractive, and the innumerable details which characterize the cares of a woman's life as a housekeeper, as a mother educating the children, caring for their manners, their morals, their health, justify the claim that women do half the work of the world.

I call attention to the fact that many activities formerly conducted by women in the home have been transferred to factories, and now women must enter the factories to do work which was formerly done in the home. In these recent days we find, however, that there are 8,000,000 women, outside of domestic service, engaged in the struggle to make a living in active competition with men in factories of every description, and we find women and girls standing at machines all day long outside of the home doing the hardest labor of the world.

It has been found that giving the right of suffrage gives women a better and more equitable wage for equal service performed. Upon that ground—the ground of common honesty, the ground of common justice, the ground of permitting a woman an equal opportunity to make her living in an honest fashion without being driven to vice by harsh, cruel treatment—the suffrage is justified.

Mr. SHAFROTH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oklahoma yield to the Senator from Colorado?

Mr. OWEN. I yield to the Senator.

Mr. SHAFROTH. In other words, woman suffrage opens up avenues and occupations for woman which now she has not?

Mr. OWEN. It does.

Mr. SHAFROTH. And, by reason of the increased number of occupations, it makes that much more of a demand for her labor, and therefore, according to the principle of supply and demand, would naturally increase her wages?

Mr. OWEN. Yes; and it makes the politicians pass laws that will require equal wages for equal work, and it has the effect of making the employer of labor more respectful and considerate to those who have additional power. If you take away power from a man or a woman, that person can be more easily imposed on.

Mr. BRYAN. Mr. President——

Mr. OWEN. I yield to the Senator from Florida.

Mr. BRYAN. Did the Senator observe that the passage of the eight-hour law in the District of Columbia, prohibiting the employment of women for more than eight hours a day, has caused the loss of employment by a great many of them within the last few days?

Mr. OWEN. Oh, Mr. President, any law which you pass has some unavoidable accidents attending it. The number losing employment has been grossly exaggerated. It will ultimately increase the employment of women. In a forward movement of an army there are always a few individuals who may possibly be harmed, a few casualties; but an eight-hour law for the protection of the women and children of this land is justified and essential, notwithstanding the observations of the Senator from Florida. I think some sinister men have discharged some women in a spirit of resentment against the law itself and as a protest, but without real justification.

Mr. BRYAN. Does not the Senator concede it to be a fact that since this law was passed prohibiting the employment of women beyond eight hours many of the women who formerly worked longer than eight hours have lost their positions and men have been substituted in their places? In what way did that benefit the women of the District of Columbia?

Mr. OWEN. It will benefit the women of the District by preventing in future injurious and ruinous hours of labor, in the conservation of the life and efficiency of the working women of the District. The retirement of a few women from the employment of harsh taskmasters to engage in other activities is not really an unmixed evil.

Mr. VARDAMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oklahoma yield to the Senator from Mississippi?

Mr. OWEN. I yield to the Senator from Mississippi.

Mr. VARDAMAN. I wish to say that the fact that they have lost their positions is in no way a condemnation of the law. It only serves to accentuate the fact that men are willing, in business, to sacrifice women, children, or anybody else to promote their material interests.

I can not vote for this amendment, because of certain conditions which I shall explain here later; but there can not be any suggestion, there can not be a reason even thought of, that will condemn the law which prohibits the working of women and girls more than 8 hours out of the 24.

Mr. BRYAN. There would be no objection to the law if you applied it to all alike; but when you undertake to say that women shall not be employed more than eight hours a day, and leave employers free to employ men beyond eight hours a day, you put it in the power of employers to deny employment to women and to discharge those who are already employed. That is just what has happened.

Mr. OWEN. Mr. President, the alleged facts in the case referred to by the Senator from Florida, in which the law prohibited women from being required to work over eight hours, and permitted their places to be filled by men because the men were not forbidden to work over eight hours, would only illustrate the defect of man-made law which does not deal equitably with the sexes. In my opinion there ought to be a rule which would prevent men being employed for over eight hours. I think human efficiency is best accomplished where eight hours is the limit of human labor for one day, whether on the part of a man or a woman; and the incident cited, if true, only illustrates that the law made by men alone is defective. If the law has unjustly injured women, it shows that women should have had more consideration. If they had the suffrage, their interests would be more tenderly considered.

But I think the facts have been seriously exaggerated to the Senator from Florida. I submit to the RECORD a statement of Constance D. Leupp, president of the Consumers' League, to which I respectfully call attention:

301 MUNSEY BUILDING, *Washington, D. C.*

Ever since the President signed the LA FOLLETTE bill prohibiting the employment of women in industry in the District of Columbia for more than eight hours a day, we have heard nothing but complaints as to the harm this humane and necessary piece of legislation is doing to the workingwoman.

Three years ago when California passed a similar law it was discredited in the same way. When the new child-labor law came into effect in Massachusetts five or six months ago the same thing happened there.

No thinking person will conclude that because the adjustment to a reform measure is difficult that therefore we must leave bad industrial conditions to continue forever.

Women and children must be protected. We have been very slow in getting this law onto the statute books in the District of Columbia. If we had left it still longer the adjustments would have been still more difficult.

The District Commissioners wrote last year to the chairman of the Committee of the District of Columbia, recommending the passage of the bill: "The employment of women is on the increase here as elsewhere and legislation enacted now will not only tend to correct such abuses as exist, but to prevent their further development." (P. 7, hearings before the Committee on the District of Columbia, S. 7723.)

The fact is that the adjustment will not be nearly so difficult as the employers are giving us to understand.

Where work must be done for more than eight hours in any one day, we have pointed out that it can be arranged by a shift system—having some of the women come on a little later than some of the others.

After the eight-hour law had been in effect in California for two years it was voted a success by a large number of the employers who had originally opposed it. The records of the California bureau of labor show that very few women were replaced by men as a result of the law, but that a great many more women were employed where the shift system was put into effect.

The same thing, we have every reason to believe, will result in the District of Columbia.

CONSTANCE D. LEUPP,
*President Consumers' League.*

The third justification for granting to women the right of suffrage is the women bear all of the children of the United States, a labor of great anguish and pain, necessary, indeed, to the life of the Nation and outweighing any labor that men perform.

It has been said that women do not serve as soldiers, and hence should not vote. The answer to that is that the bearing of a soldier is more painful and dangerous than being a soldier. Every mother is entitled to a substitute as a just reward for this dangerous service, and the right to vote is not confined to soldiers. In fact, soldiers rarely vote.

The late "Poet of the Sierras" has thus epitomized the battle of motherhood:

The greatest battle that ever was fought,
Shall I tell you where or when?
On the maps of the world you will find it not,
It was fought by the mothers of men.

Women have the courage, however, to go on the battlefield, and as nurses they do go on the battlefield with a courage that is as magnificent as men ever show. Their courage, both physical and moral, can not be denied. Every physician knows that women bear physical pain with more courage than men do.

The women not only bear the children of the Nation, they educate them. It is of the highest importance to the national interest that the children should be educated by mothers who are themselves educated, by mothers who understand government.

A fifth reason that justifies suffrage is that women inculcate in the children of the Nation lessons of morality, of religion, of industry, of civic righteousness, and of civic duty.

Is not this a great and important labor, performed in the interest of the Nation? Is suffrage too great a reward for such useful and honorable service to society?

Sixth. They deserve to be honored by the children of the country as entitled to equal dignity and honor possessed by men.

Should a son trained by a mother be given a dignity and power superior to his mother? Is a good son justified in desiring this right denied his mother?

Seventh. Women pay half of the taxes of the United States. Does not this justify suffrage? If "taxation without representation" justified our fathers in waging war, shall our mothers endure this injustice?

Eighth. Women possess half of the property of the United States, or at least they are entitled to possess half of the property of the United States by virtue of labor performed and duty well done. If they possess half the property, shall they be denied the power to protect this property? Is not suffrage necessary to protect property rights as well as other personal rights?

Their property and their right to liberty and to life are subject to law. The law controls the property rights of women and the rights of women to life, liberty, and the pursuit of happiness.

Therefore they are justified in demanding the right to a voice in the election of the representatives who write these statutes and who execute them.

Mr. President, it has been well established, beyond any possible controversy, that where women have been given the suffrage there has been an immediate and prompt response to the feminine sentiment in passing laws more favorable to the protection of child life. In Colorado, immediately after suffrage was established, there sprang up in that State the most highly perfected school system that any State in the Union has. A woman is superintendent of schools there. There followed in that State the juvenile-court law for the protection of child life; laws establishing the curfew, to prevent children being exposed to temptation at night; laws raising the age of consent; laws taking care of defective children; laws punishing those who contributed to the delinquency of a child; laws taking care of the weaker elements of society, of the deaf and dumb, the

blind, the insane, the poor; laws beautifying the cities and improving many other conditions of life.

One of the strongest reasons, in my opinion, in favor of woman suffrage is that if woman suffrage were established it would be an important factor in putting an end to machine politics, which have corrupted the governing powers of this Nation to so large a degree and in so many instances. Women will not stand for a man known to them to be immoral and corrupt, even if he be the party nominee. Women can not be persuaded to favor the liquor traffic, the white-slave traffic, gambling, or others evils of society. There can be no community of interest between the evil elements of the State and the feminine vote. I think this is of very great importance in purifying and making more rapidly effective the improvements in government which we all desire.

When you examine to see who are the opponents of woman suffrage, outside of the sentimental class, outside of those who belong to the conservative class—a constantly diminishing number, so far as woman suffrage is concerned—you will find that invariably the active, real, true enemies of woman suffrage are those who are engaged in the liquor traffic, those who are engaged in corrupt transactions around the town, in gambling, in keeping disorderly houses, and those who are machine politicians. You will always find that the machine politician is vigorously against woman suffrage, that the liquor interest is against it, and that those who are engaged in improper conduct of affairs around town are against it.

I am acquainted with the sentimentalism which builds a halo around woman and places her upon a pedestal and bows down and extends courteous admiration, and sometimes, I fear, gross flattery to woman, and then denies her fundamental justice. With that sentimental nonsense I have no sympathy. I had rather be denied courtesy than justice, and so had every thoughtful woman.

There have been many arguments made against woman suffrage, such as that women would be insulted at the polls. That argument has been exploded. Instead of their being insulted at the polls, the polls have become decent places, where men do not insult each other.

It has been said that women would be corrupted by politics. That has been shown to be utterly fallacious. The character of women will not change. They go to church just the same. They are the backbone of the church. You may go to a church, and you usually see at least two or three women to every man, and sometimes a much larger number. The women are the custodians of religion and morality in this land. The charge that they will be corrupted by giving them an opportunity to put an end to corruption springs from a corrupt reason, or from a corrupt reasoning, as you please.

It has been said by some that women would vote with their husbands, and therefore there is no need of giving them the ballot. Others say they would vote against their husbands, and therefore that they ought not to be allowed to vote at all. Well, you may take your choice of these arguments. They nullify each other. Neither one of them has any merit. If they voted with their husbands, it would be perfectly right if they chose to do so; but with an Australian ballot they could do as they pleased about it. If the husband was a sot, engaged in drunken debauches, and was in favor of the liquor traffic, you may be sure his good wife, who was afflicted by his conduct, would vote against him in that matter.

It has been said that women would neglect their homes. Nothing of the kind has proven to be true. It does not take any length of time to cast a ballot. A woman going down town, about her ordinary shopping, can drop into the voting booth and deposit her ballot and go on in five minutes. There is no trouble about it.

One of the important results shown in Colorado when they granted woman suffrage was that immediately a very large number of books upon the art of government were sold throughout the State. It demonstrated to me the fact that women immediately undertook to discharge their responsibilities with intelligence, and that as a conscientious duty they got elemental works upon government and studied the questions which were involved. In that way it is evident that a very much greater public knowledge upon questions of government would be obtained by having women as well as men interested in such questions.

The Senator from Florida [Mr. BRYAN] enlarges upon the theory that there is nothing in the contention that women are subject to taxation without representation; and he attempts, by a fine-spun theory, to show that there is no merit in that contention in favor of woman suffrage. The only way you can avoid it is upon the theory that the woman's husband, as her representative, will vote for her if she have a husband; but if she have not a husband, if she be a widow with a large family of girls, should they be denied the right to express their opinion as to the selection of a mayor in the town, or the police officials? Are they not interested in the administration of the laws protecting the home against burglary? Are they not interested in a proper system of caring for the sewage of the town, for the health of the town, in the supply of water and gas and electric light and street car service and in the innumerable things that are done by the town administration? If they have no vote, many a town administration which is corruptly managed by the machine can neglect them, can ignore their rights, can impose unfair taxes on their property for street improvement, and can deny them an adequate remedy.

You may say that they could go to law about it and protect themselves; but the proper way to protect human beings is to give the right of suffrage to them, because any thoughtful student will agree that "the right of suffrage is the right protective of every other right." Men have fought for that right, they have died for that right, because of its importance, and no just man should be willing to deny this vitally important right to women. All generous men should insist upon freely giving this just right to women.

I want my wife and my daughter to have this right; and even if they have not studied the question and do not appreciate its value and do not ask for it or even want it, still I have studied the question, I do understand it, I know its value to them, and I know its value to honest, good government, and I insist upon providing them this right so necessary to them and so important to me and to the ideals of good government which I am anxious to see established.

The Senator from Florida enlarges upon the fact that the constitution of Massachusetts gave men only the right to vote. In the early days of Massachusetts they had self-governing town meetings. The citizens of the town would come together in a "town meeting," and they would make their law in simple, direct fashion, talking it over together and laying down the rules that should govern the town. It was not necessary for the women to come under such circumstances. There was no discrimination then that would affect their interests injuriously. The men did what was necessary. It was a primitive state of society. Now, however, with 90,000,000 people in this Republic, with conditions becoming more and more difficult all the time, with some of the States having as many as 10,000,000 people, it is absolutely necessary, if justice is to be dealt to women in this country, to give them the right of suffrage, so that they may protect themselves by their own votes, and so that they may do more—so that they may protect their children.

I think there is not in this Capitol a more pathetic speech than that engraved in marble by the State of Illinois upon the statue of Frances Willard as one of her great appeals to man. She said:

> Ah, it is women who have given the costliest hostages to fortune. Into the battle of life they have sent their best beloved with fearful odds against them. Oh, by the dangers they have dared, by the hours of patient watching over beds where helpless children lay, by the incense of ten thousand prayers wafted from their gentle lips to Heaven, I charge you, give them power to protect along life's treacherous highway those whom they have so loved.

Mr. President, this Government is not based on brute force; it is based on intellect, on spiritual and moral forces directing the intellectual forces, which in turn can command material forces, and in the conduct of government women have a moral, spiritual, intellectual power which is of the greatest value to the Republic. These powers should be made as effective as possible in developing our great Republic and in speedily consummating its obvious magnificent destiny, and through the direct exercise of the suffrage alone can these powers of our splendid American women be made most effective.

Speed the day when American men shall fully appreciate the great service women can render society and government through the simple, dignified, direct power of the ballot.

It has been strenuously contended that woman's place is the home. Yes; we may all agree to that generous sentiment. We all know how splendidly women have cared for the home; how pleasant they have made it, how comfortable, how useful, how happy, when they have been permitted to do so by man-made laws, which unhappily have driven millions of them into the machine shops and factories.

Let us concede, however, that woman's place is the home, even if she has been driven by millions out of it into a labor market.

But what about the home, where woman's best place is? Does not the law vitally affect the woman's home and her happiness and her children and her health and her protection from crime?

Does not the law and its administration become of vital concern to her when in its hand is the safety, the health, and the welfare of her home?

Does not the law take charge of the teaching of her children, selecting the teachers of her children, building the schoolhouses, safe or unsafe, sanitary or insanitary?

Does not the law say when, where, and how the children—her children—shall attend the schools, the books her children shall use, the desks where her children shall sit, the water her children shall drink, the towels with which they may affect their eyes or their health if sanitary or insanitary?

Does not the law and its administration fix the social, moral, and intellectual administration in which her children are compelled to go?

Does not the law permit or refuse to permit the seduction of the open saloon to allure her sons to destruction?

Does not the law permit or refuse to permit the brothel which may destroy the chastity, the honor, and the physical powers of her sons?

Does not the law permit or refuse to permit the actual practice of white slavery to steal away the virtue of the daughters of the poor?

Does not the law determine whether the food which comes into her house shall be honestly measured to her or dishonestly measured to her?

Does not the law permit or refuse to permit impure food and impure drugs to be sold to her home, affecting the health and the happiness of her home?

Does not the law determine whether the streets in front of her home and in the town in which she lives shall be clean or unclean; whether the sewerage of the town shall be sanitary or insanitary, affecting the health of her home?

Does not the law determine whether the garbage and refuse of the home shall be removed or shall not be removed, thus affecting her health, her comfort, and her peace of mind?

Does not the law determine whether there shall be adequate police protection of her home against trespass, against nuisances, against assault or burglary?

Does not the law and the administration of the law determine whether the city water be abundant and pure and economical in her home?

Does not the law and the administration of the law determine whether the gas supply be abundant, pure, and economical in her home?

Does not the law control the electric lights in her home?

Does not the law control the telephone service in her home?

Does not the law determine whether the city she lives in shall be economically and efficiently administered and that the taxes exacted from her shall be honestly and wisely expended?

Does not the law in a broad way determine whether the town she lives in shall be made a pleasant place or an unpleasant place to live in?

No thoughtful man will deny that the powers of the law over the home are the powers which vitally affect the health of the home, the safety of the home, the pleasure of the home, the happiness of the home, the economy of the home; that it vitally affects the life of children, the health of children, the happiness of children, the protection of children from vice; and to say that the woman who is charged with the duty of making the home safe, pleasant, and happy shall be denied any voice in selecting men who shall wisely write the law and efficiently and faithfully administer the law that is necessary to the happiness of her children is to deny the obvious.

But in reality women are not only vitally affected in the home in all these ways and in many other ways, but absolutely her life and her liberty is subject to the courts, and the jury that may take from her her property, her liberty, and take from her her life, and to deny her the right of a voice in a Government which deals with her property, her liberty, and her life in this way is unjust to woman, an injustice to which I will never consent.

I should like to see a part of the energy of the human race diverted from pure commercialism into home building. I should like to see a restoration of society where woman could have a larger part in building real homes, in bearing children, and in raising them, in performing more fully the functions which have made them in so large a measure the custodians of homes and of children, and I do not doubt that this will be brought about much more speedily when women are given more power in electing public officers and determining with their vote questions of public policy.

Mr. President, this is a great moral question; a question of human liberty, of human rights. It must be settled with justice. I wish my wife and my daughter to have the same rights under the law which I myself enjoy and which I regard as essential to the preservation of my own life, liberty, and the pursuit of happiness, and I am not indifferent in the matter. While I appreciate the fact that many whom I regard with great respect do not favor woman suffrage, and while it seems unpopular in many States where the reasons justifying it are not well understood, or where sentiment and conservatism still control on this question, I felt it my conscientious duty to defend what I believe is both the natural and constitutional right of women.

Mr. CHAMBERLAIN. Mr. President, as the author of the pending joint resolution it had been my purpose to discuss the subject at some length, but it has been so ably discussed by the friends of the resolution, and particularly by the distinguished member of the committee who presented it [Mr. ASHURST], that I do not feel I would be justified in taking very much of the time of the Senate in discussing a question which has been so fully presented by both sides. I feel that it is my duty, however, because I favor the joint resolution, to say a few words in its behalf, particularly as applied to my own State; and I think I may safely say that the conditions which prevail there are not essentially different from those which prevail in other States.

The agitation in Oregon commenced prior to 1880. I as a young man, new in the State, remember it particularly because it was all entirely new to me. I was born and reared in a Southern State and went to the western country with a feeling which many southern men had of antagonism to the propriety of enfranchising women. I soon overcame that prejudice, which was inborn in me, and which still lurks in the bosom of nearly every southern man, I am sure, and I became an ardent supporter of the doctrine of equal suffrage. As the youngest member of the Legislature of Oregon in 1880, I had become so far converted to the cause that I was one of the very small majority of that body which submitted the question of amending our constitution to the voters of the State. Under the constitution as it existed then, and under the constitutions of most of the States of the Union now, it is required that a resolution shall be passed by two separate votes at two sessions of the legislative bodies before it can be submitted to the people to be acted upon. So, although it was determined at that session of the legislature to submit the proposed amendment to the people of the State, it was not agreed by the subsequent legislature to submit it, with the result that the people did not have an opportunity to vote on it for a number of years after 1880. But agitation never ceased from 1880 until it was finally accomplished a year or two ago.

Much has been said about the corrupting influence of equal suffrage upon the good women of our land, and that, in the very nature of things, if suffrage is given to the latter it will result in the neglect of home and fireside. I can not resist the temptation at this time to say that the first address I ever heard delivered upon the subject of woman suffrage in Oregon was by a distinguished woman who is now living, who is loved and honored by every man, woman, and child in the State. I refer to Mrs. Abigail Scott Duniway. She was then a young woman rearing a family, and she found time in the numerous household duties which devolved upon her to devote much of her energy to the cause of woman suffrage.

In those early days, Mr. President, the home life was not an easy life, and whilst she was devoting her time to the training and education of her children, all the domestic affairs which are now done in many homes by hired help was done by this magnificent specimen of the western mother, and in her duties and in her efforts made in the cause of woman suffrage she found time to raise a splendid family of children. As an evidence of that I call attention to the fact that one of her sons, who has since grown to manhood, is the president of one of our western universities and is highly respected and honored wherever he is known. Another is a prominent lawyer in my own city, distinguished for his ability, his refinement, and his training. Another is a distinguished business man of the West. Another was elected State printer of Oregon on two separate occasions and discharged every duty that devolved upon him up to the very time of his death, as the son of a splendid woman should discharge those duties. Aside from that, the daughter attained the same distinction in her walks of life that the sons attained in theirs.

I simply state this, Mr. President, to illustrate the fact that there is nothing in the charge that if a woman is given the right to vote she is thereby compelled to neglect her domestic duties and the duties which she owes to her family. I feel honored in being afforded this opportunity to say this much of this distinguished woman, who lives to-day beyond the age of 80, loved, respected, and honored, and after having lived to see the cause in which she has battled so long finally prevail in the State of my adoption.

Oregon has been charged with being a sort of experiment station in legislation. I can remember the time, and it was not very far in the past, when it was suggested that Oregon was a freak State because it blazed the way for what I am pleased to call popular government. It was one of the first States in the Union to put to a practical test the doctrine of the initiative, the referendum, and the recall. Its example has since been followed by many States.

Since the adoption of these measures, let me say to you, the people have exercised a conservative judgment in everything that has been submitted to them. Our legislative bodies were charged with being corrupt. Our polling places were in many cases too disreputable for any woman, or even for any decent man, to go to exercise the prerogative of an American citizen. After the Oregon system was adopted we found at once that legislation was enacted by the people which the legislatures for years had refused to crystallize into the form of statutes. Amongst other things, there was the Australian ballot law; there was the direct primary law; there was the practical election of Senators by a direct vote of the people, which Congress has subsequently ratified by constitutional amendment. It is true it was not a legal obligation to vote for the popular choice for Senator under the Oregon method, but it was a moral obligation, and no member of a legislature felt that he could dare disobey it. Other beneficial and forward steps in government were had under the initiative and referendum, and every time an attempt has been made to enact a law which was inimical to the best interests of the people it has been defeated by popular vote.

With all these laws in force, Mr. President, giving to the people the right to do those things directly which in times past they were compelled to look to a legislative body to do, and with the elective franchise conferred upon the women of the State, I venture the prediction that from now on every step in legislation in Oregon will be a forward movement.

It does seem a little strange that there should be objection made to granting to women the right of suffrage on the ground that its influence is corrupting, when, if the statutes of the different States be examined, it will be found that in nearly all the Western and, possibly, in some of the Eastern and Southern States women have had the right to vote for 50 years or more in all questions which affect the schools and, incidentally, the home life. If they were competent to vote upon matters of this kind, if they were capable of exercising the franchise intelligently on questions affecting the school and questions affecting the home life, how can it be truthfully said that they will not exercise the same discriminating judgment in matters of greater public policy, if it is possible to place any policy above the training of the children of the country?

I can remember, Mr. President, in my own time when it was almost worth a man's reputation in my State, under the domination of corrupt political machines, to go to the polls for the purpose of voting. I remember—and I state it as a fact—that I once saw a thug sitting in a window near an election booth at a precinct where a distinguished ex-Attorney General of the United States was compelled to go and vote. He held a gun across his knees and intimidated many who dared to come to the polls for the purpose of exercising the right of voting. I mention this because it is a matter of local history with us.

Mr. REED. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Missouri?

Mr. CHAMBERLAIN. I do.

Mr. REED. I should like to ask the Senator what year this incident occurred in?

Mr. CHAMBERLAIN. Somewhere along in the early nineties. I do not recall the year.

Mr. REED. When was it that the State adopted all its reform legislation except woman suffrage?

Mr. CHAMBERLAIN. Somewhere along about 1902.

Mr. REED. Then the men themselves, without the aid of woman suffrage, had done away with this evil condition?

Mr. CHAMBERLAIN. Yes; they were beginning to do away with it.

Mr. REED. They had pretty thoroughly done it, had they not?

Mr. CHAMBERLAIN. I think they had pretty thoroughly done it. I am not going to claim here, I will say to the Senator, that when women are granted the right of exercising the voting privilege the millenium is coming and that everything is going to be purified. Human nature is the same in men and in women, and I am not making any such claim as the question suggests. I do make the claim, however, that as a fundamental proposition the women have a right to vote, and that, too, under the provisions of the Constitution that have been cited by the distinguished Senator from Oklahoma [Mr. OWEN].

The conditions to which I call attention existed not only in Oregon, but they existed in other Western States. It speaks well for the men that many of those conditions have recently found a cure in modern statutes, like the Australian ballot law, the direct primary election law, corrupt-practices acts, and other statutes of that kind.

The women have voted only once in my State and that at the last election. Prior to the time when they were permitted to vote the men had so safeguarded the polling places that any woman, however refined she might be, could go to the polls without the least fear of insult or contamination from any source whatsoever. There is no thug sitting now at the polling place to prevent either men or women from voting. Not only that, but no one is permitted to approach within a certain distance of the polling place. I am the father of four daughters and I would not hesitate to let any one of them walk unattended to the polls in any place in the city of Portland, with its 300,000 people, and I would feel that she could return from the polling place to my home or to the home of her husband just as pure and just as refined as the moment she left her home to go there to vote.

The conditions of life will not be changed for the worse in our Government if the women are permitted to vote in other States in this Union. We will find that woman's influence will not only not be unrefining, but we will find that her influence will be purifying and beneficent. While there was a time when disreputable men were in the habit of frequenting the polls the very fact that women are present now keeps such individuals from attending the polls or going within a given distance of them.

I am not afraid to trust the women of Oregon nor am I afraid to trust the good women of my native State or any other State in this Union with the right of suffrage.

Mr. President, I favor this joint resolution, fundamentally because it is right, and, in the second place, I believe that there will follow in the wake of the granting of this right to the women the elevation of the home life. Who more than woman is interested in the proper training of our children? Who more than woman is interested in the proper regulation of the working hours of the young of our land? Who more than the women of our country are interested in protecting our sons from the unregulated saloon and other contaminating influences that surround them in early life? Who more than they will see to it that everything is done that will better the condition of the family and the home life? I for one am perfectly willing to intrust them with this great power and this great privilege, and I feel that because of their influence the benefits will be realized very much earlier in my State, at least, than it has been hoped for.

I felt it to be my duty to say this much because as the author of the joint resolution I did not want anyone to conclude that I was opposed to it or was afraid to express my convictions upon the subject. I would go into it at greater length but for the fact that my distinguished colleagues have covered the subject so fully and so well that very little is left for anyone to say except to express himself as in favor of or against the joint resolution.

Mr. SHERMAN. Mr. President, it is not likely I can add anything to the information on the subject. I will be satisfied if I do not subtract from the sum total of human knowledge already available. If I were sure that the passage of the joint resolution and its ratification subsequently by the required number of States would result in no immediate improvement of either national or local conditions, I would still be for the resolution. I am not idealist enough to believe that instantly upon the ratification of this amendment there would be a general advance in the several States of the Union so as to create idealistic conditions. I am not that hopeful. Probably I have lived long enough to be somewhat skeptical about ideal conditions created by mere human laws. Laws are merely helps. They mark some sufficient advance, but are of not much avail unless they are backed by a condition of public sentiment that itself is the result of actual progress in the management of human affairs.

So, for me, I am not intent upon having proved to my satisfaction that this improvement will instantly occur. From my viewpoint I find it difficult to accept the conclusion that there is any inherent abstract justice in the denial of this right any longer to a large portion of the American people. The distinction now drawn is illogical. I do not think it is in keeping with any other distinction made by the laws of this country. It would be as sensible, from my way of looking at it, to limit the right to vote to men 5 feet 10 inches high or 6 feet in circumference, or blondes, or brunettes, or of a given weight and rotundity, as it is to limit the right by the mere physical dis-

tinction of sex. Are they not human beings? Are they not possessed of a sufficient degree of reasoning faculties? Are they not sensible to the ordinary influences of evidence, sentiment, business, the ordinary relations that subsist between one human being and another? If that is so, it is difficult, from my viewpoint, to resist the logical deduction that a woman has as much inherent right to vote as anybody else has.

There was a time when she could not own property. That was in English-speaking countries a sort of a development of the feudal tenure. It came from an age of force. It did not come from an age when human reason controlled the action of men or served as the basis of government. It came from a time when the government, such as it was in that primeval day, was based upon the sword. The remark has been made that there are but two kinds of government in the world. One is a government by force and the other is a government by law. Governments by force exist yet in many parts of the world. In some places where force can not intervene there is no government. That is the unhappy condition of the Republic across the Rio Grande. In my judgment, it would be the exact condition of the Philippine Islands if the strong hand of the United States were removed from that population as at present constituted. So we must choose, if we are to have a government at all, between the two kinds—government by law and government by force.

In the day when there was government by law, somewhat imperfectly recognized after the departure of the Dark Ages, a movement had begun to struggle out toward a better condition along the highway of human progress. It was well enough then for women to remain under the protecting hand of the physically stronger element of the population. In the days when the military chieftain, by individual bravery, gathered about him his hardy band of followers and made his forays upon the neighboring clans, or in later days, when more military discipline and greater instruments of human destruction were made available by the invention and wit of men, such discipline and instruments prevailed and the military leader became the great living embodiment of human government. Whether in the one age or in the other in those days, it perhaps would have been futile for women to have had the ballot, because the word of that military chieftain was the law of his land. He embodied in his person all the departments of government. He made the law, he executed it, he expounded it, and applied it in the rude form of justice when military law did not prevail in his country.

In that time, Mr. President, I can understand why a woman would not ask the right or privilege, whichever it may be denominated. I can understand why it would have been a failure, because woman does not reign, either in the years past, where her influence has been supreme, or now by physical force, nor does she ever grasp the sword and enforce her domination upon any part of the population by brute strength. Her empire has always been in gentler means, but she nevertheless ought not now be denied her vote. So in those early days I can understand why it would have been improper, useless.

I can not understand now why in the leading countries of the world it is so. We are properly indulging in a great deal of self-congratulation about our progress, about our love of justice, about our development of republican government. We must not forget that we are not the only republican government that has been on earth since recorded time began. History is full of them. They have departed. Few ancient republics exist in this world now. Hemmed in by her mountains, accessible only by rugged passes, the little Republic of Switzerland has existed, a neutral ground, being a place of refuge for those who have fled from countries where government by force prevailed. With a few of these, sufficient to reach back into an earlier time, along with them are hundreds of republican forms of government that have vanished from the earth and have left nothing but the melancholy example that they perished by their follies and their excesses.

This is a republican form of government. As the Senator from Oklahoma [Mr. OWEN] read from the preamble to the Constitution, written at Philadelphia in 1787, it does not say "We, the male people of the United States," but "We, the people of the United States." That is not of value from a lawgiving or a lawmaking point of view, save as it indicates what its framers had in mind. It indicates the spirit of the men who wrote it. Consequently, in a government by law it seems to me woman has some proper part.

I myself do not think that this Government can endure by mere force, whatever our history may have been. If it is finally to be backed up by military force and to be dependent upon that for its continuance, it is at least but a foundation of sand. I rather take the other view—that moral sentiment is the basis of enduring republican government. If that is so, I see no reason why woman herself should not participate in this government of moral sentiment. I do not think any good law ever existed—I do not care whether it was of a reformatory character or merely of a preservative character—to gather in rights that had already been developed by constant struggle; whichever it may have been, every enduring law of value possesses back of it the underlying substratum of moral sentiment. If it does not, it is only a temporary fiat; it is the fleeting edict of the multitude, born of excitement, born of some ephemeral issue that in the lapse of years must necessarily perish with the same mutable element that produced it. Therefore, Mr. President, it seems, this being a Government by law, it is a Government in which woman can properly participate.

This leads me to the further observation that government is created not to support people, but to protect people who support themselves and those who are properly dependent upon them for support. The latter are those who are disabled by age, by infancy, or by their physical or mental condition from being the responsible breadwinners or doers of things on the active theater of life.

I do not subscribe to the doctrine that eventually this will be a government that will support everybody. A government is primarily created to protect its people. Its province is to keep them from being interfered with by those who are physically stronger or more influential wrongfully to disturb or destroy them. Civil society existed before government was invented. Civil society is the ultimate end, and government is but a means to that desired end. Therefore, government being an instrument of civil liberty, woman, under a reign of law based upon moral sentiment, becomes a proper factor in the creation of those laws. I am not talking about moral sentiment in its restricted definition; I am taking it in its broader sense, not relating to personal conduct, but a broader foundation of things that are just and right in human affairs. If womankind has an underlying moral sentiment, if she can contribute by her influence to the passage of wise and just laws and their administration, she ought to be admitted as a voter.

I do not think government creates civil liberty. If it does, I have not read to any purpose or reflected in my moments of leisure to any purpose upon that subject. I do not think the Constitution creates any rights. I think civil liberty existed before man thought of protecting it by law; law only protected and regulated it. I think the great headlands that have been thrown up, the promontories that are built out into the rushing tide of human affairs, do not create any constitutional rights. They existed before constitutions were ever written and before civil rights were ever prated idly about by those who did not understand them. They only safeguarded and guaranteed those rights. They were inseparable from human life before any of the great historic charters were written. So it occurs to me that a woman has a right to participate in a government which regulates all those ancient rights by law.

If it were a government like Huerta's, of Mexico, like that of Carranza or of Villa, I would have my doubts about whether woman would exert any moral influence upon some or all of those men who seem to be governed solely by the power of the sword; but I am not talking of that country; I am talking of ours on this side of the boundary. Because that is so, I find it difficult to deny to woman the right to take part in governmental affairs.

As I see things, one of the most vital questions was raised by the Senator from Florida [Mr. BRYAN]; that is, the subject of invading—if that term may be properly applied in this sense—the right of a State to regulate this subject. I am somewhat sensitive on the subject of taking away any legitimate power of a State. I think the State is a great training ground for American citizens. I would rather have a State do something that belongs to its local sovereignty than to transfer that power of the State to Washington.

I am opposed to any bureaucratic government where any local power inherent in the State can properly discharge the same duty. We have all the bureaus in Washington that I care to help create by any vote of mine. I have no especial sympathy for that particular brand of citizen who is continually looking to Washington for relief. Every time he stubs his toe he shrieks for help from the Capital. I would rather see a strong State acting within her legitimate province, discharging her powers to the full limit, with strong, capable departments taking care of everything that was left to her legitimate sovereignty when the Constitution of 1787 was ratified by the requisite number of States than to transfer a solitary one of those powers to the Federal Government. It is already exercising within its limits all that it can efficiently do; and if I would not be regarded as digressing or interfering with some-

body else's prerogative, I would suggest that, in view of the revenue reported by the Treasury Department of the United States, which shows now a constantly increasing deficit of $12,000,000 for the three months beginning with October and ending with the quarter—about $4,000,000 a month—instead of taking on additional duties, to become additional charges to the Government, instead of taking more powers, about which there might be some controversy from the States, and creating more bureaus at a cost of about a million dollars per bureau—for it never costs less than that to create a new bureau here; that is the initial cost—instead of doing that I would turn the tide back to the States and let the States perform some of these functions, and give supervision, if necessary, wherever that power can be properly exercised.

This is sentimental, it is true, but sentiment lies at the basis of these enduring laws which I have mentioned. This unpopular document known as the Constitution of the United States, that of late years it has become necessary to apologize for every time you mention it, has not fixed the limit on the qualifications of voters in the several States. It only says that in the election of Representatives in Congress the voter shall have the qualifications requisite for voting for the most numerous branch of the State legislature. That is all you will find in that document on that subject. It leaves it to the State to fix the qualifications, excepting only the mandate of the fifteenth amendment.

Fifty-six years ago this fall there was a great discussion on what a State could do to destroy a national right by unfriendly police regulations. Well, we have reached it. I do not wish to discuss that question; it is foreign to this joint resolution to discuss the effect of the unfriendly exercise of the police power on a right regulated by the legislatures of the States. I know, however, just as well as do the people who dwell in those States, that they have successfully, by unfriendly police regulations, extirpated that right given to a certain class of citizens by the fifteenth amendment. But I shall not discuss that question here, because I regard it as entirely foreign to the merits of this particular joint resolution, though at some appropriate time I shall regard it a duty to give my views on it when it is before the Senate in some proper way.

I am only making that as a preliminary statement to remark that voting is always exercised locally. There is no way to get away from the local regulations. Every State must have registration laws; the voter must live at some place; there must be some limit to your residence, your precinct, your ward, or some other political subdivision in which you have "a local habitation and a name." These laws are made so that you will not get somebody else's name, if I may depart from a Shakespearean quotation, and be sure you only vote once. We are not sure of that in some places in the country. I am sorry to say that I hail from a country where this occasionally happens.

The conditions of which the Senator from Oregon [Mr. CHAMBERLAIN] spoke have prevailed for a long time. I think womankind would better them somewhat. Whether it would be a complete revolution, I do not know; but she would better them some; and if she did not make them any worse, as I remarked last summer, I see no adequate reason for denying her this right. So long as the right to vote is regulated by the legislatures of States by registration, time of residence, age, sex, understanding, education, or whatever you call it, poll tax, ancestry, color—although that is prohibited—still the details of which I am talking are police matters; and so long as that is so the State will be supreme, and there is no way to prevent it, except the public sentiment existing in that State, unless we radically depart from existing constitutional powers.

I am not prepared to say what the solution of that difficulty will be. It is an existing one. It only shows that if a national right to vote must be exercised under the domestic regulations of a State, which are embraced in police powers, using that term in the widest possible signification, that State can so regulate that right as to accomplish the purposes of the local sentiment in that State. That is what is the matter now in those States in regard to which some controversy has arisen in this Chamber as to the justice or injustice of such regulations. I see no way to settle it in the passage or defeat of this particular joint resolution. At least, its passage will not destroy the State's present right to do so. The exercise of that right being local, it will continue to be regulated both as to men and women, as to Americans either of Caucasian or of African birth or origin. So I do not see, for my part, any valid objection to the passage of this resolution on that ground. If it were a right that could be transplanted and held under a national regulation without being interfered with by the local police powers of a State, I could understand why it would instantly emerge from its local condition and become a national question involved in the passage or defeat of this resolution. At present it is not.

If it were a question like human bondage, where the individual subject to servitude was carried to any State or Territory in the Union with the same bonds attached to him in the territory to which he escaped or was removed, as in the State where the peculiar institution once existed, I could understand, then, why this controversy would necessarily be wrapped up in this resolution, but it is not. This right, if created under the Senate joint resolution, will be a right that will be exercised in the very nature of things under the local regulation of the State. It calls for the exercise of domestic discretion on the part of the legislature. I do not, for my part, see that any Senator from the territory affected by some criticisms that have been made here, which I will not discuss at all, should hesitate a moment to vote for this resolution because of any possible fear of that kind.

I have given some time in my leisure moments to thinking of the question whether if the Government, by constitutional processes, can enlarge the right to vote, it can not also restrict that right. This is a very pertinent inquiry. I think it can both enlarge and restrict the right of voting for any Federal officer. In an election that relates entirely to the domestic affairs of a State I do not think it can, because with that the General Government has no concern.

This question has been discussed here very largely as if the passage of this joint resolution amended the Constitution. It does not; it is only the submission of a proposed amendment. We submit it to the States for their action. Critics of this joint resolution have suggested that there be a referendum taken in the States, so that the people at some ensuing State-wide election hereafter may express themselves whether they are for or against it. That would be mere stage work; it would be a drama in a playhouse; it would accomplish nothing. This is a legislative process that is the initiatory step of a constitutional amendment. We are proceeding along lawful lines. When the proposed amendment shall be submitted 48 States in the Union will still have a fair choice on what they want to do. They must elect their legislatures who ratify or reject it.

I think the seventeenth amendment has helped this question considerably. Sometimes we travel so fast that we do not see the milestones and we do not know the distance traveled. I am inclined to think that we have lost sight of the seventeenth amendment. I believe we will have better State legislatures than we used to have, for they will have less to do of a nature to complicate and involve their work; they will not again elect Senators. I had, probably, a different motive from that of some of my associates in supporting for the last 10 years, as I have done, the proposition to amend the Constitution of the United States to provide for the election of Senators by direct vote of the people. I favored it not so much as a matter of reforming the Senate—I do not think it will reform the Senate; I think the Senate will be about the same old body after all; not much better and, I hope, not much worse; I am not a very good judge of its condition, but only a casual observer, stopping here a little while, possibly—but I do think that the legislatures of the States, and especially of the larger States, where the right to vote has been a mooted one, will be better than they have been heretofore. I have seen whole legislatures nominated and elected, their committees organized, the chairmen of the committees selected, the membership of the committees determined, the speaker elected, and everything bartered, pledged, and peddled out, in order to elect somebody United States Senator; and when you got through what did you have? You had a machine that was framed to do something else, framed to kick a man out of his candidacy but not fit to make the shoe that kicked him.

That is why I supported the seventeenth amendment some years before it arrived. I thought the legislature had enough to do to take care of the ordinary business of the State; to take care of the great supply bills of the numerous departments; to settle the controversies that arise between the metropolitan cities and the rural population, the great questions of public franchises, the questions of revenue and taxation, of the development of social justice along sane and just lines, so that it would be no longer a war cry about which nobody had any particular information. I thought that was enough to engross the activities of the average able-bodied legislature, especially of the larger States, where these questions reached some time ago the acute stage.

So the change came. Therefore when this resolution is submitted to the 48 States of the Union they will have just as good legislatures at least as they had before, and I trust I am not too optimistic in hoping that they will be somewhat better,

because they will be less burdened. Every one of the States, when that happens, will have a chance either to ratify or reject the proposed constitutional amendment, so that it seems to me as if the State will have its rights fully preserved until 36 States adopt the proposed amendment. Then the 12 States, of course, if they oppose, must submit, but they are no worse off than the States have always been since the first amendment to the Constitution was adopted; they must submit to it; there is no way of avoiding the necessary effect of the form of government under which we are living.

The argument is made here—and I admit with some force—that the right of suffrage is now denied in 8 or 10 States; but is that a reason why we ought to reject the pending joint resolution? It does not impress me in that way. It does not argue that because a wrong may be committed in some States a right ought to be denied in all the States. I may not agree with the propriety of the police regulations of a State. It would be just as sensible for me to condemn a whole State because somebody committed a crime in that State as it would be for me to vote against the pending joint resolution because one or more of the 48 States of the Union had done something contrary to what I think is right. That does not affect the merits of this question. For instance, shall 38 States be denied the right of suffrage to their women residing within their respective limits because 10 States do something by a local police regulation which I think is not right? I fail to see the force of the argument.

Mr. O'GORMAN. Mr. President——

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). Does the Senator from Illinois yield to the Senator from New York?

Mr. SHERMAN. Yes, sir.

Mr. O'GORMAN. I want to make a suggestion to the Senator. There is nothing in existing law that would prevent the 36 States from giving the franchise to women, if they so desired.

Mr. SHERMAN. No, sir.

Mr. O'GORMAN. Is the Senator aware that it is possible to take 36 States out of the 48 and yet have the 36 States show only a minority of all the people of the United States? In other words, is the Senator aware that there are 12 States in this Union with a larger population than 36 States that could be named? I want to ask, in that connection, if the Senator thinks it is fair for the 12 States, with probably a majority of the people of the United States, to be coerced against their will with respect to the functions which up to this time have been very properly regarded as State functions? I ask this question in no spirit of hostility, because with respect to the main principle involved I perhaps have looked upon it with as much favor as has the Senator from Illinois; but at the same time I recognize the right of each State to settle this question for itself, just as the nine States which now permit woman suffrage have settled it for themselves, but not under the pressure of any coercive influence of the other States.

Mr. SHERMAN. Is that all of the interrogatory?

Mr. O'GORMAN. That is all.

Mr. SHERMAN. It is complete, is it?

Mr. O'GORMAN. Yes.

Mr. SHERMAN. Very well. The question is certainly an entirely proper one to ask, since, if it be properly discussed and examined, it must shed some light on the merits of this resolution.

First, if I get the viewpoint of the Senator from New York, not only 10 States or 12, but 8 States can politically dominate the country, if you have reference only to population, and especially to voting population. If you would spread a map of the United States before me, I could put my hand on 8 States in the Union that by returned votes will absolutely dominate 40 States if you will put the law in a certain condition. I will allude to that further on. The question is whether 8 or 10 States can possibly thrust upon the other 38 or 40 States woman suffrage against their will. The reply to that is, first, they can not. It will take 36 States to thrust it upon the remaining 12. I am talking about conditions and not about abstract theories. Those are the conditions under which it can be done. The established channels of constitutional amendment compel 36 States to ratify an amendment before it becomes valid as a part of this instrument.

That is one thing. I will state another: If it could be said that a minority of States had the power to thrust this amendment bodily into the Constitution and impose it upon the majority of States, I would say that is no more than has been done in the history of constitutional amendments. It was not done in that exact manner, it is true; but there was thrust upon them by way of constitutional amendment on the suffrage question a whole race of people, contrary to the wishes of some of the States.

That brings me, however, to a question that I do not care to discuss. I am only alluding to it as a constitutional condition we once faced. I do not regard that as an argument. I am only citing it as a condition.

Before this amendment can become valid as a constitutional provision 36 of the States must ratify it; so there is not a solitary one of the States left out that can complain. Every one of them, through its constitutional power, will be heard upon the question of ratification. On the other hand, the argument of control of the 48 States by 8 or 10 possesses some merit. I will only say in regard to it that I have taken the trouble—and I will give the figures before long—to take the election returns of 1912, and they show that eight States of the Union can absolutely dominate the whole Democratic Party under certain provisions.

What are those provisions? A nation-wide primary law, in which whole States shall be nothing more than mere provinces to foot up the returns of the vote, cast them up in a total column, and find out where the plurality is, abolishing the electoral college, abolishing everything else except a nation-wide primary; abolishing the convention of delegates, abolishing any means of communicating with the different States save through the agency of the press and the public magazines.

Who is in favor of the direct primary for nation-wide nominations? The President, the titular head of the Democratic Party. I am not in favor of it. Still, this argument urged against woman suffrage, if it applied on all fours to this resolution, Mr. President, would be no more than the President has already urged by way of message upon the Senate and upon the whole Democratic Party of the United States. I think, for my part, that it is an erroneous view that he holds. I do not intend to vote for any such act of Congress.

Mr. O'GORMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield further to the Senator from New York?

Mr. SHERMAN. Yes, sir.

Mr. O'GORMAN. May I ask the Senator from Illinois if he approves of the doctrine of a nation-wide primary?

Mr. SHERMAN. No, sir; I am opposed to it.

Mr. O'GORMAN. But the Senator does approve of the pending resolution?

Mr. SHERMAN. Yes, sir.

Mr. O'GORMAN. May I ask why the Senator opposes a nation-wide primary?

Mr. SHERMAN. Because I believe the States have a right to preserve their relative importance in nominating conventions or other nominating processes.

Mr. O'GORMAN. And yet the Senator does not think a State has the right to preserve its relative importance with respect to the elective franchise?

Mr. SHERMAN. Yes, I do; and the fathers who wrote the Constitution in 1787 thought the same way or they would not have required 36 States to ratify an amendment or to act affirmatively upon it before it could be thrust on the remaining 12. Nine of the original thirteen States adopted the Constitution, and it became operative on the nine. The other four came in only because they did not want to stay out and be Uitlanders in the new Government.

Mr. O'GORMAN. Would the Senator favor an amendment to the Constitution by which the President and Vice President might be elected by popular vote?

Mr. SHERMAN. No, sir. I will get to that pretty soon.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Utah?

Mr. SHERMAN. Yes, sir.

Mr. SUTHERLAND. The Senator from New York seemed to think that three-fourths of the States of the Union could force this amendment upon the remaining 12 States, although the 12 States had a majority of the entire population of the United States. That would be theoretically possible, but only theoretically so. Practically it would be impossible, because the Constitution contemplates that before an amendment can be voted upon at all by any of the States it must be submitted by a vote of both Houses of Congress; in one House, the Senate, by a vote which represents to all intents and purposes two-thirds in number of the States, and in the other House, the House of Representatives, by a vote which represents two-thirds of the population of the country. So before this amendment can be even submitted to a vote of the States, two-thirds of the people of the United States must speak for it through their representatives. Therefore, while it is theoretically possible, it is practically an

impossible thing that 36 States of the Union, possessing less than one-half of the population, could force an amendment of this character upon the remaining 12 States.

Mr. SHERMAN. That arises from our double form of government. I think it was written in the Constitution in a very stable way. It preserves the States. It was intended to preserve them and to give them their relative importance, the small States with the large. I am aware that the Democratic Party is perhaps more zealous in its advocacy of that principle than is my party, but when it comes to a question of that kind, I think I am in full accord with the Democratic Party on the subject, because it is not a political question; it is governmental. It is not political in the partisan sense. It is purely a question of maintaining the system with which we began our national life.

We have had an opportunity to look upon the primary law in its operation in the city of Chicago. On the 24th day of February there was a primary election held in the city. I have the figures here, which I wish to add for the proper illumination of this subject. This is woman's first effort in a primary. In the 35 wards of the city of Chicago 158,524 women registered. There are in Chicago potentially 500,000 women of voting age. So, in round figures, about one-third of the total woman population eligible to vote registered for the city primaries of last February. The total men's vote registered 433,624 in the 35 wards.

A primary was held on the 24th of February, 1914, for the nomination of municipal officers. These are the nominations of candidates for alderman, of whom one is to be elected from each of the 35 wards, covering the whole area in which this voting population exercises that right.

It has been suggested several times that woman was not sufficiently interested to go to a primary or to an election. Let me preface this statement by what has actually happened in years past with men.

I have seen primaries in the early days of primary legislation when not 10 per cent of the voters of a given area voted. I have seen other primaries when 70 per cent of the total potential vote went to the polls. That was in 1912, when there was a strenuous contest between two opposing candidates in the Republican Party, and a somewhat animated struggle between two Democratic candidates, the present Speaker of the National House of Representatives and the President. That drew a very large percentage of the potential vote, the largest in the history of the State.

I wish now to recur particularly to the primaries held in the 35 wards of the city. Out of the total registered vote, as given, of the women 47,527 voted at the primary. The total number of men voting at the same primary was 126,916.

Of course there are more men registered voters. They and their predecessors have been voting since the State was admitted into the Union. This is the first time the right was ever given to a woman in the city of Chicago to vote at a primary.

Let me figure the percentages, not mere numbers. Mere milestones do not indicate the direction in which people are going. It is necessary to take the compass to find in what direction the toes of the traveler may be pointed; and that ultimately, in the course of years, will determine his destination.

Mr. OWEN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Oklahoma?

Mr. SHERMAN. I do.

Mr. OWEN. I should like to ask the Senator from Illinois if it is not true also that in Illinois the primary law provides that a person is compelled to vote at the regular election following it in the way that he votes at the primary, or for two years he is not permitted to vote differently than he voted in the primary? And is not that a condition which might easily preclude from voting at the primary those who wanted to be at liberty to choose between candidates in the following election?

Mr. SHERMAN. Mr. President, the primary vote does not impose any obligation, legal or otherwise, upon any voter to vote for the candidate at the ensuing election. It does disable or restrict that voter from exercising the right to vote in any other party primary for two years.

Mr. OWEN. Yes.

Mr. SHERMAN. Unless the woman refrained from voting, she had to vote the Democratic or Republican or some other ticket in the primary, and she could not vote for two years in any other party primary.

Mr. OWEN. So that the women would be justified in not voting at the primary in order to leave themselves at liberty to choose between the contending parties at the regular election?

Mr. SHERMAN. No, sir; not at the regular election, but they could not vote at any other party primary for two years if they wished to change. Some misunderstanding, I think, arose——

Mr. OWEN. So they had full justification for not voting at the primary, which would tie their hands when it came to the election?

Mr. SHERMAN. It would not bind them in the ensuing general election, but would disqualify them from voting any other primary ticket for two years if they wished to change.

Mr. OWEN. Showing their superior sense.

Mr. SHERMAN. Yes, sir. That undoubtedly had great influence in keeping a larger number both from registering and from attending the primaries. The percentage, however, was what I was particularly solicitous about. The percentage of the registered women's vote at the primary is 29.98. The percentage of the total men's vote at the primary is 29.46. In other words, if it is reduced to the percentage test, the women have fifty-two one-hundredths of 1 per cent the best of the attendance at the primaries in Chicago.

Mr. SMITH of Michigan. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Michigan?

Mr. SHERMAN. Yes, sir.

Mr. SMITH of Michigan. I do not quite understand the inquiry of the Senator from Oklahoma and the answer to the Senator from Illinois. Is it possible that if a voter in the State of Illinois participates in a party primary he is precluded from voting as he may desire at election time?

Mr. SHERMAN. No.

Mr. SMITH of Michigan. I understood the Senator from Oklahoma to ask if that were not true.

Mr. SHERMAN. He did ask that question.

Mr. SMITH of Michigan. Of course that could not be true.

Mr. SHERMAN. The reply I made to him, which I aimed to make as clear as I could, was that he could vote for any candidate he pleased at the ensuing election.

Mr. SMITH of Michigan. Certainly.

Mr. SHERMAN. Let me illustrate it in this way: If he voted the Democratic ticket at the primary on February 24, 1914, he could not for two years thereafter vote at a primary as a Republican at any time within the two-year limit.

Mr. SMITH of Michigan. I understand that.

Mr. SHERMAN. But it does not affect the election itself.

Mr. SMITH of Michigan. But he can vote at election time for whomsoever he pleases. There is no party ballot there.

Mr. SHERMAN. He can vote for any person he pleases.

It has seemed to me that this two years' residence that is required in a party is a little excessive. I believe in a party primary being conducted by members of that party. I do not believe in my right to interfere in the nominating affairs of a party against whose candidates I intend to vote. I think party nominations ought to be made by men or women who are reasonably, and within proper restrictions, affiliated with that party. I have seen the time, in the days of soap-box primaries, when a large number of voters, or those claiming the right to vote, went to the primaries and nominated the candidate when they were not of that party. Sometimes they went from no sinister motive. Often, however, they went for the improper purpose of nominating the weakest candidate that could be selected. That candidate, when named on the ticket, was the easier defeated; so there was an influence that was entirely improper exercised by the outside voter on the party choice.

In order to protect against that, this provision was enacted in our present primary law. I think probably it administered a little too strong a dose of the medicine; nevertheless, I am in sympathy with it, when reasonably applied. I believe the present two-year limitation ought to be relaxed.

I wish to go a little further on this subject. I do not think extending to women the right to vote will interfere with the administration of justice. I think it will advance it. If I were a woman being tried for an offense of which I were guilty, I should greatly prefer to be tried by a jury composed of men than by a jury composed of women alone. Men have in countless verdicts acquitted a woman charged with crime when she was guilty. The guilt was lost sight of.

I wish now to take up particularly the effect of having women policemen in the city of Chicago. They have exercised that right.

Mr. REED rose.

Mr. SHERMAN. I shall be glad to yield, however, if there is any other order of business.

Mr. REED. How many women policemen have you in Chicago?

Mr. SHERMAN. I do not know the number.

Mr. REED. About five or six, or something like that, have you not?

Mr. SHERMAN. I think there are eight.

Mr. REED. How many male policemen have you?

Mr. SHERMAN. Four thousand, approximately.

Mr. REED. That is about the number.

Mr. VARDAMAN. Mr. President——

The VICE PRESIDENT. Does the Senator from Illinois yield to the Senator from Mississippi?

Mr. SHERMAN. Yes, sir.

Mr. VARDAMAN. It is manifest that it will be impossible to finish the consideration of the joint resolution this afternoon. Would the Senator from Illinois just as soon conclude his remarks to-morrow?

Mr. SHERMAN. Yes, sir.

EXECUTIVE SESSION.

Mr. VARDAMAN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 10 minutes spent in executive session the doors were reopened, and (at 5 o'clock p. m.) the Senate adjourned until to-morrow, Thursday, March 5, 1914, at 12 o'clock meridian.

## NOMINATIONS.

*Executive nominations received by the Senate March 4, 1914.*

ASSOCIATE JUSTICE OF THE SUPREME COURT OF HAWAII.

Edward Minor Watson, of Honolulu, Hawaii, to be associate justice of the Supreme Court of Hawaii, vice John T. De Bolt, term expired.

THIRD ASSISTANT SECRETARY OF STATE.

William Phillips, of Boston, Mass., lately secretary of the embassy at London, to be Third Assistant Secretary of State, vice Dudley Field Malone, resigned.

PROMOTIONS IN THE ARMY.

CORPS OF ENGINEERS.

Lieut. Col. James C. Sanford, Corps of Engineers, to be colonel from February 27, 1914, to fill an original vacancy.

Maj. Herbert Deakyne, Corps of Engineers, to be lieutenant colonel from February 27, 1914, to fill an original vacancy.

Maj. Charles S. Bromwell, Corps of Engineers, to be lieutenant colonel from February 27, 1914, vice Lieut. Col. James C. Sanford, promoted.

Capt. Edward N. Johnston, Corps of Engineers, to be major from December 6, 1913, vice Maj. Charles Keller, promoted.

First Lieut. Henry A. Finch, Corps of Engineers, to be captain from December 6, 1913, vice Capt. Edward N. Johnston, promoted.

Second Lieut. Howard S. Bennion, Corps of Engineers, to be first lieutenant from December 6, 1913, vice First Lieut. Henry A. Finch, promoted.

## WITHDRAWAL.

*Executive nomination withdrawn March 4, 1914.*

James M. Underwood to be postmaster at Farmerville, in the State of Louisiana.

# HOUSE OF REPRESENTATIVES.

## WEDNESDAY, *March 4, 1914.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Father of all souls, we draw near to Thee that we may be stimulated by the contact to think well, act well in all the relations of life, that we may reflect in our thoughts and acts Thy will as we know it in the heart of the Christ, and have the approving conscience and hear the "well done" singing in our hearts, which is the crowning glory of every task, the crowning glory of every well-ordered life. In Christ Jesus our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

JOINT MEETING OF THE TWO HOUSES OF CONGRESS.

Mr. UNDERWOOD. Mr. Speaker, the President of the United States has informed me that he desires to deliver a message to the Congress to-morrow. I therefore ask unanimous consent for the present consideration of the resolution which I send to the Clerk's desk.

The SPEAKER. The gentleman from Alabama asks unanimous consent to consider the resolution which the Clerk will report.

The Clerk read as follows:

House concurrent resolution 33.

*Resolved by the House of Representatives (Senate concurring)*, That the two Houses of Congress assemble in the Hall of the House of Representatives Thursday, the 5th day of March, 1914, at 12 o'clock and 30 minutes in the afternoon, for the purpose of receiving such communications as the President of the United States shall be pleased to make to them.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

On motion of Mr. UNDERWOOD, a motion to reconsider the vote whereby the resolution was agreed to was laid on the table.

CALENDAR WEDNESDAY.

The SPEAKER. This is Calendar Wednesday. The Clerk will call the roster of committees.

The Clerk proceeded with the call of committees.

PUBLICATIONS OF THE BUREAU OF EDUCATION.

Mr. HUGHES of Georgia (when the Committee on Education was called). Mr. Speaker, I desire to call up House joint resolution 84.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

Joint resolution (H. J. Res. 84) limiting the editions of the publications of the Bureau of Education.

The SPEAKER. The House resolves itself automatically——

Mr. HUGHES of Georgia. Mr. Speaker, pending that, I will be very glad indeed, if I am in order at this time, to have some time agreed upon as to the discussion of this resolution. It is a House resolution, and I think that 30 minutes will be a sufficient time. I ask unanimous consent that all general debate close in 30 minutes on this resolution.

The SPEAKER. The gentleman from Georgia [Mr. HUGHES] asks unanimous consent that general debate on this resolution be confined to 30 minutes.

Mr. HUGHES of Georgia. Fifteen minutes to be allotted to those in favor and 15 minutes to those opposed.

Mr. MANN. Why not make it 30 minutes on a side? Probably not all of that time will be required.

Mr. HUGHES of Georgia. Very well; I will make that amendment—30 minutes on a side.

The SPEAKER. The gentleman from Georgia asks unanimous consent that general debate on this resolution be closed in 1 hour, 30 minutes to be allowed on a side, the time to be controlled by the gentleman from Illinois [Mr. MANN] and by the gentleman from Georgia [Mr. HUGHES]. Is there objection?

There was no objection.

The SPEAKER. The gentleman from Texas [Mr. SLAYDEN] will take the chair.

The House resolved itself into Committee of the Whole House on the state of the Union for the consideration of House joint resolution 84, with Mr. SLAYDEN in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of House joint resolution 84, which the Clerk will report.

The Clerk read as follows:

Joint resolution (H. J. Res. 84) limiting the editions of the publications of the Bureau of Education.

*Resolved, etc.*, That the publications of the Bureau of Education, excepting the annual report of the Commissioner of Education, shall be published in such editions as recommended by the Secretary of the Interior, but not to exceed 12,500 copies for the first edition.

SEC. 2. That whenever the edition of any of the publications of the Bureau of Education shall have become exhausted, and the demand for it continues, there shall be published, on the requisition of the Secretary of the Interior, as many additional copies as the Secretary of the Interior may deem necessary to meet the demand.

The CHAIRMAN. The gentleman from Georgia [Mr. HUGHES] is recognized for 30 minutes.

Mr. HUGHES of Georgia. Mr. Chairman, the Committee on Education has had under consideration this resolution and has carefully investigated it and has made a unanimous report in its favor. Under the existing law only 1,000 copies of a circular and 12,500 copies of a bulletin can be printed for distribution by the Bureau of Education.

Now, Mr. Chairman, in the case of some of these publications the edition now permitted by law is not sufficient to meet the most urgent demands. In many cases a great many more copies are demanded. In the case especially of those publications relating to phases of rural education or secondary education or to school sanitation the maximum allowed is entirely inadequate, and the bureau is compelled to decline thousands of requests from the persons applying for those documents.

This resolution is similar to a law already in existence in the Bureau of Mines. The Bureau of Education exists almost solely

for the purpose of disseminating information, and this information is given largely through bulletins and circulars.

I sincerely hope that the House will pass this joint resolution. We believe it is right, and we believe it ought to pass.

Does the gentleman from Illinois [Mr. MANN] wish to take any time? I reserve the balance of my time.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] is recognized.

Mr. MANN. Mr. Chairman, the gentleman from Georgia, so far as I could hear, has not yet told what the resolution does.

This is a resolution with a peculiar title, considering what is in the resolution. It is entitled "Joint resolution limiting the editions of the publications of the Bureau of Education." What in fact it is is a joint resolution removing the limit and allowing unlimited editions of publications of the Bureau of Education. This resolution is to confer unlimited authority upon the Bureau of Education, or the Secretary of the Interior, to publish unlimited editions of the publications of that bureau—a right which no bureau or department of the Government possesses to-day. Even in the Department of Agriculture, with the great demand for agricultural bulletins and other publications, there is no such thing as unlimited power to publish unlimited editions.

This resolution provides in the first section that an edition of 12,500 copies of bulletins, which is the present limit, may be issued, but when that edition is exhausted the Secretary of the Interior may order as many additional copies as he may deem necessary to meet the demand—the free demand. There is no limit now upon the authority to publish bulletins to be sold. People can buy all they want, but when it comes to issuing free bulletins, the authority of any department of the Government to issue unlimited editions is not now conferred. How are you going to draw distinctions between this and all the other departments of the Government?

We are publishing now, free, more literature than is published by all the other Governments of the world combined. But here is the first time in my knowledge when it is proposed to confer upon any department or bureau the authority to publish as many copies as it desires.

The Commissioner of Education in his report says that there are more than 1,500,000 teachers and school officials in the United States, and in the report in another place he practically says that unless you can send the bulletins to all those people it is hardly worth while to send them to any of them. Is it proposed to publish a million and a half or more copies of every bulletin issued by the Bureau of Education, to be distributed free throughout the United States at the expense of the Public Treasury? Where are you going to stop if you commence this?

This report comes from the Committee on Education, to which the gentleman's resolution was referred. That committee did not have jurisdiction of it. The Committee on Printing is the committee that has jurisdiction of any proposition for printing by the Government, and it endeavors to preserve some equality between the different departments and bureaus of the Government. Mr. Chairman, I do not know a single bureau of the Government, or a single department of the Government, that is not complaining that it does not have authority to issue sufficient copies of its publications, or that it does not have sufficient appropriations to print all that it wants to. I can see no reason why we should start in authorizing any department of the Government to issue unlimited editions of its publications. Some gentlemen say there is a great demand for this. I do not know, for I seldom receive requests for any of the publications of this bureau. I endeavor to glance over many of them; some of them are not worth publishing, some may be. I am not prepared to support any proposition that confers upon a department of the Government the right to publish millions of copies of their bulletins for their own distribution throughout the United States. I reserve the balance of my time.

Mr. PAYNE. Will the gentleman yield?

Mr. MANN. Certainly.

Mr. PAYNE. I would like to ask the gentleman if he has forgotten the calf poem read the other day by the gentleman from New York, the chairman of the Committee on Appropriations?

Mr. MANN. I have tried to. [Laughter.]

Mr. PAYNE. The children are crying for copies of the calf poem.

Mr. MANN. If this resolution should pass, every child in the land would be urging the committee to publish millions of copies of that brilliant poetic effusion in order that they might recite it in all the schoolhouses in the country.

People suppose that it is the duty of the Government to publish everything free. The superintendent of documents will sell these publications to anyone who desires to buy. I reserve the balance of my time.

Mr. HUGHES of Georgia. Mr. Chairman, I yield 10 minutes to the gentleman from Alabama [Mr. ABERCROMBIE].

Mr. ABERCROMBIE. Mr. Chairman, the purpose of the pending resolution is set out in the resolution itself, which provides that publications of the Bureau of Education, excepting the annual report of the Commissioner of Education, shall be in such editions as the Secretary of the Interior may recommend, but not to exceed 12,500 copies of the first edition, and that whenever the edition of any publication shall be exhausted and the demand continues there may be published as many additional copies as the Secretary may deem necessary.

In order to ascertain the present needs of the Bureau of Education in this matter of the publication of bulletins, it will be necessary to consider its powers, duties, services, and possibilities of development.

The law establishing that bureau was enacted in 1867. In the beginning it was an independent department. In 1868 it was made a bureau in the Department of the Interior. In the original act the powers and duties of the bureau are set out in part in this language:

> That there shall be established at the city of Washington a Department [bureau] of Education for the purpose of collecting such statistics and facts as show the condition and progress of education in the several States and Territories, and of diffusing such information respecting the organization and management of schools and school systems and methods of teaching as shall aid the people of the United States in the establishment and maintenance of efficient school systems and otherwise promote the cause of education throughout the country.

In 1896 that act was amended as follows:

> The Commissioner of Education is hereby authorized to prepare and publish a bulletin of the Bureau of Education as to the condition of higher education, technical and industrial education, facts as to compulsory attendance in the schools, and such other educational topics in the several States of the Union and in foreign countries as may be deemed of value to the educational interests of the States; and there shall be printed one edition of not exceeding 12,500 copies of each issue of said bulletin for distribution by the Bureau of Education, the expense of printing and binding such bulletin to be charged to the allotment for printing and binding for the Department of the Interior.

It will be observed that the Bureau of Education is charged with the duty of disseminating the results of its investigations, and in the performance of this duty is limited to the publication of reports and bulletins.

Mr. BUTLER. Will the gentleman yield?

Mr. ABERCROMBIE. I will.

Mr. BUTLER. Will the gentleman answer this question: Is not this a very dangerous precedent to establish, and would not the same reason lie for granting the request of other departments if you grant this?

Mr. ABERCROMBIE. I will try to answer the gentleman in the course of my remarks. As I was saying, the Bureau of Education is limited almost entirely to the use of reports, bulletins, and circulars in the work of disseminating the results of its investigations. I submit that it is unreasonable and unwise to limit the operations of the bureau in this way and at the same time impose restrictions that virtually render it incapable of performing the duties required of it by law.

Mr. SHERLEY. Will the gentleman yield?

Mr. ABERCROMBIE. I will.

Mr. SHERLEY. Does the gentleman know what this will cost? Has he figured on that phase of it at all?

Mr. ABERCROMBIE. I do not. I understand, however, that the amount available for such expenditures is limited by the appropriations made for the Department of the Interior. Besides, we can afford to be liberal in our expenditures for educational purposes.

The limitations contained in the existing law were fixed many years ago, when interest in educational subjects was not so great and widespread as it is to-day, and at a time when the demand for the publications of the bureau was unknown. Since that time we have made wonderful progress in education. Yet in many of the States the task is only begun. Much remains to be accomplished before adequate educational facilities have been provided for all of the people. In fact, to students of education it is coming to be evident that the task of providing adequate educational advantages for all of the people is beyond the power of some of the States to perform.

Mr. HAMLIN. Will the gentleman yield?

Mr. ABERCROMBIE. Certainly.

Mr. HAMLIN. Does the gentleman think it is wise to take off the limit and permit this bureau to publish in unlimited quantities, regardless of cost, any effusion they may desire to foist upon the people of the country?

Mr. ABERCROMBIE. I think it would be wise to give the bureau the power to respond to the requests of interested people, especially of teachers and school officials, for information per-

taining to such subjects as are investigated by the Bureau of Education.

Mr. HAMLIN. Does not the gentleman know that people request innumerable publications, not because they really know and want what they contain but because they are free?

Mr. ABERCROMBIE. It may be true in some departments. I doubt that it is true of people interested in educational development.

Mr. HAMLIN. Is it not true in all? In 10 years' experience I find that I get requests for different publications from people who I am sure do not have the remotest idea of what the publications contain. I think it would be exceedingly unwise to take off the limit and permit this bureau to publish regardless of cost.

Mr. ABERCROMBIE. It is not proposed to take off the limit of cost; that will be regulated by the amount appropriated to the Department of the Interior for that purpose.

Mr. HAMLIN. Not under the language of this resolution. We give them here express authority to publish millions and millions if the Secretary of the Interior will O. K. the order. There is no limit until you exhaust all the money in the Federal Treasury.

Mr. ABERCROMBIE. The Secretary of the Interior is limited in his expenditures by the amount of the appropriation. This resolution authorizes the republication of bulletins only when the supply is exhausted and the demand continues.

Mr. HAMLIN. You give him unlimited authority and he would come in here and ask for the amount to be appropriated, and we could not refuse to give him the amount after giving him the authority to publish unlimited quantities.

Mr. ABERCROMBIE. In answer to the statement made by the gentleman from Illinois [Mr. MANN] relative to the powers of other bureaus, I desire to call attention to the Bureau of Mines, another bureau in the Department of the Interior. Some time ago Congress gave to that bureau exactly the power that is proposed in this resolution for the Bureau of Education. In fact, the language employed in this resolution is the same language as that used in the act giving this authority to the Bureau of Mines. So far as I am informed no one claims that this power has been abused in the operation of the Bureau of Mines. Why should it be abused by the Bureau of Education?

Mr. COX. Mr. Chairman, will the gentleman yield?

Mr. ABERCROMBIE. For a question.

Mr. COX. Does the gentleman say that there is a demand coming from the people to have this publication privilege widened?

Mr. ABERCROMBIE. Mr. Chairman, in answer to the question of the gentleman from Indiana, I will state that under existing law the annual report of the Bureau of Education is limited to 20,000 copies.

Mr. COX. I understand that.

Mr. ABERCROMBIE. The bulletin is limited to 12,500 copies and other publications to 1,000 copies. For a few of these bulletins the demand is less than the maximum allowed by law. For many of the bulletins and circulars the maximum number is insufficient; and for most of them the maximum allowed by law is very adequate.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. HUGHES of Georgia. Mr. Chairman, I yield five minutes more to the gentleman from Alabama.

Mr. COX. Mr. Chairman, will the gentleman yield for another question?

Mr. ABERCROMBIE. For instance, the bureau at present is unable to supply any copies of the 3 bulletins published in 1906; it can not supply at present any copies of the 4 bulletins published in 1907. Only 1 of the 8 bulletins published in 1908 is not exhausted. Only 6 of the 11 published in 1909, only 4 of the 6 published in 1910, only 5 of the 19 published in 1911, only 7 of the 33 published in 1912, and only 30 of the 60 bulletins published in 1913 are not exhausted. Yet requests for exhausted bulletins are received daily.

Mr. COX. Mr. Chairman, will the gentleman yield?

Mr. ABERCROMBIE. For a question.

Mr. COX. I have not read the hearings upon this resolution, if the committee had any hearings upon it; and if they had, I would like to have the gentleman state in a general way what class of people throughout the Nation is making a demand for copies of bulletins. Whence comes the demand?

Mr. ABERCROMBIE. In answer to the gentleman's question I would say that the requests come chiefly from school teachers and school officials, of whom there are about 1,500,000 in the United States. The subjects investigated by the Bureau of Education are important and of great interest to teachers, school officials, students in colleges and universities, and students of education generally. Some of the subjects investigated are school organization, school administration, courses of study, methods of teaching, and the policies and experiences of other countries in education. The present demand greatly exceeds the supply of bulletins relating to rural education, school sanitation, secondary education, and vocational training. In this connection, Mr. Chairman, I call attention to the fact that the Congress has recently authorized the creation of a Vocational Education Commission, and it is reasonable to suppose that for many years there will be an increasing demand for literature bearing on the subject of vocational education.

I called attention to the growth of education and the expansion of interest in educational matters. During the last year for which we have statistics the States of the Union expended for educational purposes $446,726,929. If all had expended as great a sum per capita as did the 10 States making the largest per capita expenditures the total would have been $692,875,664, or $263,086,255 more than was expended. I submit, Mr. Chairman, that since there is widespread interest in educational subjects, since there is a great and increasing demand for information of the character provided by the Bureau of Education, we can not afford to hamper that bureau in the performance of its work. If it is to render the best service of which it is capable it must be provided with the necessary means. I trust the House will adopt the pending resolution.

Mr. SHERLEY. Mr. Chairman, will the gentleman from Illinois yield me some time?

Mr. MANN. How much time does the gentleman desire?

Mr. SHERLEY. Four or five minutes.

Mr. MANN. Mr. Chairman, I yield the gentleman five minutes.

Mr. SHERLEY. Mr. Chairman, this resolution ought not to pass, in my judgment, and the precedent given as justification for passing it is the best reason why it should not pass. We are told that we ought to take off the limit because we did so for the Bureau of Mines. That is the very best illustration of the danger of a bad precedent that you can have. Take the limit off as to the Bureau of Education and then you will have a committee coming in in a week or two reporting a similar resolution and saying that we ought to take the limit off from, say, the Department of Agriculture; that because we have done it for the Bureau of Mines and for the Bureau of Education we ought to do it for the farmers of the land, and then some one will compute how many farmers there are in the country and how many bulletins each of these farmers needs and how absurd it is to fix a limitation of any kind; and if Congress is going to pursue this plan it ought to pass a general statute, to save time, giving to the departments the right to do what they please and then provide that we will arrange for a printing press to print the money to pay the bills.

It is all very pretty to come in and talk about the people's interest in particular things. There is an interest in some things, but there is no country on earth that wastes as much money in printing as does the Government of the United States of America. There is not a year goes by that we do not have statements made to us of the need to clean up the waste matter that we have printed at public expense and which has not been used. This material can be purchased for cost, and why the Government of the United States should undertake to furnish every person unlimited numbers of copies of any subject matter which he may wish passes my understanding. The Bureau of Education has the right now to print 12,500 copies, but it is proposed to take off all limit, and, as the gentleman from Illinois [Mr. MANN] remarked, here is a resolution that is designated a resolution to limit, when in point of fact it is a resolution to destroy all limit and to give to this bureau power unlimited. I believe in the zeal of an officer. I never knew an officer worth his salt who did not think his work was of great importance to the country, but the zeal of particular men run away beyond any other man's judgment, and we have an apt illustration in the case of the Commissioner of Education. If he pursues the same policy to get requests for his bulletin that he did to build a back fire on Members of Congress to increase his appropriation, I have no doubt any amount that we supply will be totally inadequate to the demand. But for us to undertake here simply to give him free rein is to violate every rule of safe legislation. In my judgment, what we ought to do is to go right to the opposite. We ought to do away with all free publications. England does not even distribute free a copy of a bill introduced into Parliament. Every document has to be bought. It is true they are bought for a very nominal sum, but the result is that those who want the document pay the tax for getting it, whereas in America everybody is taxed for much that nobody wants and for much that only a few want, and there is very, very great waste in our printing account.

Mr. ABERCROMBIE. I should like to ask the gentleman from Kentucky if he is in favor of offering any encouragement whatever to the promotion of education in America and to the Bureau of Education?

Mr. SHERLEY. I will answer that by saying yes, I am; but I am also in favor of teaching the very salutary lesson that it is the duty of the people to support the Government, and not the duty of the Government to support the people; and we are constantly going on the theory that in order to help somebody you must take away from him all expense and all effort on his own part.

Mr. ABERCROMBIE. May I ask the gentleman another question?

Mr. SHERLEY. Certainly.

Mr. ABERCROMBIE. Would you favor limiting the Bureau of Education in the future to the issuance of publications in order to reach the people? Would you favor that?

Mr. SHERLEY. I certainly favor a limit upon that bureau, the same as I do upon any other bureau. I do not think the work of that bureau is so unusual as to warrant its being made an exception and a favored child of the Government. Nearly all the work the departments do here is supposedly educational work. Why should we not take the limit off from farmers' bulletins? Why should we not take it off the bulletins of the Bureau of Public Health?

I hope the bill will be defeated. [Applause.]

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

Mr. MANN. I yield five minutes to the gentleman from Indiana [Mr. BARNHART], chairman of the Committee on Printing.

Mr. BARNHART. Mr. Chairman, I concede the liberality and admire the spirit of enterprise which prompts the champions of this bill, but it seems to me that of all the bills that remove the "lid" entirely that I have recently encountered in the way of a printing measure, this reaches the limit.

Mr. STAFFORD. There is no limit.

Mr. SHERWOOD. There is no limit to it.

Mr. BARNHART. So far as the departments are concerned, Mr. Chairman, I am sorry to say that there is not a department head but what is insisting more and more all the time that he shall absorb the functions of the Government Printer. We have established and have in active operation one of the greatest printing establishments in the world. These departments insist on doing more and more of their printing. I do not know that this is true of this bill, for nobody can tell from the reading of the bill what it does mean except that the Bureau of Education shall have unlimited authority and power to issue such bulletins as it sees fit to publish from time to time.

Mr. ABERCROMBIE. Will the gentleman yield?

Mr. BARNHART. I will yield; yes.

Mr. ABERCROMBIE. Does the gentleman claim that if this proposition is adopted the Bureau of Education will not be limited by the appropriations made to that department for that purpose?

Mr. BARNHART. The possibility is that it would; but nevertheless it would leave the matter entirely open to the bureau——

Mr. ABERCROMBIE. Within certain limits.

Mr. BARNHART. Yes; but in these bureaus the custom has grown up of really juggling appropriations. That is to say, they will take a fund appropriated for paper and apply it to printing, and vice versa; and they use these appropriations so that every dollar of every appropriation is absorbed each year, and a good deal of this stuff develops into junk.

Why, I have reliable information that one Member of Congress, in the not very distant past, gathered up a lot of this printed stuff and sent to one post office in the State of Ohio two carloads of printed matter that had been placed in the discard, and was all out of date. You can go about in the basement of this building and into the old car barns down here on B Street and find trainloads of this stuff which was printed, in many instances, at the suggestion and order of the head of some department, but never asked for nor sent out. My own State, and the gentleman's State doubtless, has its own bureau of education, and it engages, through the assistance of the legislature, in the printing and distribution of such literature as particularly applies to that particular State. In this instance, it is proposed to cover the whole United States with whatever the Bureau of Education might deem proper. Now, what might be proper literature to the school system of your State might not apply to mine, and I do believe that it is the duty of the State, just as far as possible, to take care of its particular interests in printing as well as in everything else.

Mr. CLINE. Will the gentleman yield?

Mr. BARNHART. Yes.

Mr. CLINE. Not a very great while ago there was taken out of the folding room or the document room a very large amount of printed matter which was uncalled for. Does the gentleman remember that?

Mr. BARNHART. Yes, sir.

Mr. CLINE. A year or two ago.

Mr. BARNHART. Every year it is done.

Mr. CLINE. And sold as junk, I presume. Anybody could take what he wanted out of it, but still there was a large amount left. Does the gentleman know how much was disposed of in that way?

Mr. BARNHART. I can not state that; but it is done every year. Each year there are condemnation proceedings to get rid of out-of-date documents at the instance of the Public Printer.

Mr. RUSSELL. Will the gentleman yield?

Mr. BARNHART. I will.

Mr. RUSSELL. The question was asked whether the Department of Education could publish more of these bulletins than was provided for by the appropriations for that purpose. I will ask the gentleman if it would not be true under this joint resolution, if passed, giving them unlimited authority to publish bulletins, that if there did not happen to be enough money appropriated to pay the bills, at the next session of Congress they would be here with a deficit, asking us to appropriate money to pay it?

Mr. BARNHART. Well, I do not know whether they could do it or not, but that they would try it I have no doubt.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MANN. Does the gentleman from Georgia desire to proceed?

Mr. HUGHES of Georgia. Go ahead.

Mr. MANN. I am willing to let the gentleman proceed.

The CHAIRMAN. To whom does the gentleman from Georgia yield?

Mr. HUGHES of Georgia. I yield five minutes to my friend from Ohio [Mr. WILLIS].

Mr. WILLIS. Mr. Chairman, I am in hearty sympathy with the purposes of this joint resolution, but I am inclined to think there is wisdom in the objection made by the gentleman from Illinois [Mr. MANN], and by other members of the committee, that it would be unwise to pass the joint resolution absolutely taking the limit off the matter of publication; therefore, at the proper time I shall offer the amendment which I ask to have read now in my time for information.

The CHAIRMAN. Does the gentleman offer an amendment to the joint resolution?

Mr. WILLIS. I simply desire to have the amendment read for information.

The CHAIRMAN. The Clerk will read the amendment in the time of the gentleman from Ohio.

The Clerk read as follows:

Page 1, line 12, after the word "copies," insert "not to exceed 12,500 in number."

Mr. WILLIS. Now, Mr. Chairman, the amendment, if adopted, will simply give the additional authority to the Secretary of the Interior to order the printing of 12,500 additional copies in case the original edition should be exhausted. It meets the objection of those gentlemen who think it unwise to absolutely remove that limitation. As I said before, I think there is some justice in that objection. Now, let me say I think there is need for some additional authority in this department for printing these publications of the Bureau of Education. Without making any invidious comparison, let me say we have never had a Commissioner of Education who is doing greater work for the common schools of the country than the present distinguished United States commissioner. He is bringing the work right to the common schools. Personally, time and time again I have been unable to get publications that have been requested by patrons of the common schools, by teachers in the common schools who are desirous of getting this valuable material that is already prepared in this bureau.

The Bureau of Education is not simply a bureau for the collection of statistics. They are doing splendid original research work in that bureau. As I said before, they are bringing the work right within the reach of the teachers in the common schools. Now, it seems to me it is shortsighted policy to appropriate large sums of money to employ experts to collect this information and write these bulletins and tracts and then not to make a sufficient appropriation to enable the people of the country to get this information. The amendment which I propose to offer will simply give authority to the Secretary of the Interior to print 12,500 additional copies in case the original edition would be exhausted.

Mr. BARNHART. Will the gentleman yield for a question?

Mr. WILLIS. Certainly.

Mr. BARNHART. The gentleman has not any doubt whatever that the Congress would always be ready to act on an emergency demand for bulletins that might serve any worthy purpose, has he?

Mr. WILLIS. I think the Congress will be ready to act, but here would be the objection to that. The Congress might not be in session, and, as the gentleman knows, sometimes it takes a good while to get perfectly meritorious bills and resolutions before the House. I think it a good deal safer to place this authority in the Secretary of the Interior in case there is a demand for some of these extremely valuable publications to print an additional 12,500 copies. I quite agree it would not be desirable to give him unlimited authority to print, but it seems to me that such a limitation as is suggested in my amendment is wise, and I hope when the time comes the amendment will be adopted and the resolution as amended will be adopted.

Mr. MANN. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. FITZGERALD].

Mr. FITZGERALD. Mr. Chairman, as has been stated here by the gentleman from Kentucky [Mr. SHERLEY], in no department of the Government is there so much waste as in our public printing. We spend almost $6,000,000 annually for printing for the Federal service. The Department of the Interior for the current fiscal year, exclusive of printing for the Geological Survey and the Patent Office, had $295,000 for printing, and of that amount $51,900 was allotted to the Bureau of Education.

To illustrate how our money is wasted in public printing, I hold in my hand a copy of an annual report of one of the departments. I shall not name that department, because it is typical of what happens from time to time. It is the annual report. After it is read this year, except for libraries, it will be of no value. It is bound in handsome flexible calf. My name is on the report in beautiful gilt letters. It is an absolute waste of public funds.

Mr. SHERLEY. If the gentleman will permit, it ought also to be stated that most of those reports come in about a month or two months after the date fixed for their publication, and after the hearings are had on which they are proposed to throw light.

Mr. ABERCROMBIE. Will the gentleman yield?

Mr. FITZGERALD. I yield.

Mr. ABERCROMBIE. I call the attention of the gentleman from New York to the fact that this resolution does not refer to the annual report.

Mr. FITZGERALD. I know it. We pay $25,000 a year to print the annual report of the Commissioner of Education, and it has, as a rule, been over two or three years behind; that is, we print a report two or three years old, as a rule. That illustrates how we waste money.

We have a superintendent of public documents. Any publication for which there is a demand can be printed by that superintendent and placed on sale, and the charge is fixed to cover the cost of the printing only. Any valuable publication, if there be a demand for it, will be printed by the superintendent of public documents, and should be paid for, because our great waste comes from the fact that there is such an avalanche of public printing continually coming to public officials and Members of Congress that it is not distributed to those who require it or would utilize it, but it is sent out indiscriminately. Perhaps not more than 10 per cent of the publications that are distributed in the country ever reach those who have any interest in them. If these publications were issued through the superintendent of public documents, with a slight charge for the documents, it would mean that whoever will apply for one of the documents, and pay the small charge required, would be some one who has some real vital interest in the publication.

The other day I referred to some of the bulletins issued by the Bureau of Education. Some of them are very valuable. Some of them can not be justified. I referred to the prospectus of the Farragut School in Tennessee, a beautiful, nicely illustrated bulletin, which, if prepared by those conducting that school for the sole purpose of advertising the school and securing pupils for the school, would not, in my opinion, be changed in a single iota.

These gentlemen are mistaken if they imagine the passage of this resolution changing the limit will confer any authority upon these officials to print bulletins in excess of the allotment of the money made to them. They can not print anything unless there be an allotment made out of the appropriation. I do not know whether the Bureau of Education was allotted sufficient money out of the $295,000 appropriated for the Department of the Interior. Two years ago the appropriation was $343,000, and it was ascertained that there was a very considerable unexpended balance of the appropriation made for the Department of the Interior. And so Congress for the current year appropriated only that sum that experience demonstrated would be used. If more be required out of the total appropriation of practically $300,000, it should be obtained by allotment from the Secretary of the Interior. But if this resolution should pass there would be a repetition of the experience had a few days ago. A bureau in a department will attempt to secure a separate appropriation for the bureau independent of the department and try to build up a separate printing allotment, so that the same gross extravagance which has existed for some time instead of being diminished will be greatly accentuated.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HUGHES of Georgia. Mr. Chairman, how much time have I left?

The CHAIRMAN. The gentleman from Georgia has seven minutes remaining.

Mr. HUGHES of Georgia. I yield four minutes to the gentleman from Iowa [Mr. TOWNER].

Mr. TOWNER. Mr. Chairman, the maximum editions now permitted to the Bureau of Education are entirely inadequate to meet the demand. The bureau can no longer supply copies of the 3 bulletins published in 1906 nor of the 4 published in 1907. It can supply copies of only 1 of the 8 bulletins published in 1908, of 6 of the 11 published in 1909, of 4 of the 6 published in 1910, of 5 of the 19 published in 1911, of 7 of the 33 published in 1912. And the supply of the 60 published in 1913 is already exhausted, although some of these were announced only a few days ago.

Mr. SHERLEY. Will the gentleman yield for a question?

Mr. TOWNER. I can not, because I have not the time.

The CHAIRMAN. The gentleman declines to yield.

Mr. TOWNER. I venture to say, Mr. Chairman, that this demand is a legitimate one. I venture to say that there are no bulletins issued by any of the bureaus of the Government for which the amount of special and particular and individual applications are so great as in this department. I venture to say that there is no other bureau of the Government in which the bulletins issued by it are more carefully used or where they exert greater influence or are of greater benefit to the people. Of course you can not say what is going to be the demand in any individual instance. The demand for some of these bulletins can not be supplied if 100,000 or 200,000 copies was the limit, because the demand is so great, but that should not be a reason why there should not be some discretion used by the chief of this department, because if the demand is great it is an evidence that the value of the bulletin is also great and will accomplish good. Perhaps there ought to be some limit, and I shall not object to a limit being placed.

But as large a limit ought to be given, or, rather, as large a discretion ought to be given, as can safely be given to the Commissioner of Education.

I do not think, Mr. Chairman, that it is a particular credit to the Congress of the United States to maintain a position of excessive criticism toward our Commissioner of Education and toward our own Bureau of Education. I do not think it is particularly creditable to us as Congressmen that we should refuse to pass any legislation because in some particulars it does not meet with our ideas. Let us perfect those features that may be improper in form. If it is unwise to give no limit, let us make a wise and reasonable limit. Let us do what ought to be done, as sensible men, to carry out the purposes of this great bureau.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. MANN. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has eight minutes remaining.

Mr. MANN. Mr. Chairman, any bureau of the Government, any official of the Government, having authority to issue a bulletin, and having authority to issue an advertisement of the publication, and having authority to send the advertisement broadcast throughout the United States, telling that the publication is issued and will be sent free on demand, can raise a demand for any publication, no matter how unintelligible it may be, from millions of people. The desire to get something for nothing is very strong in the mind of every person, and when you offer a free piece of literature to anyone who will write for it the demand, of course, is created.

Gentlemen speak of the demand for these publications. That is the way the demand comes. The Commissioner of Education sends out a circular letter stating that he has published, or that the bureau has published, certain publications which will be sent on request without charge. Thereupon a great number of requests come in. The superintendents of schools send word to

the teachers to send in requests; and it is not uncommon, as every experienced Member of this House knows, for a schoolteacher to tell the pupils in her school to write to a Member of Congress or to the department for copies of certain publications. That is a method of instruction to the pupil in writing letters, and then you can obtain something free, which may possibly interest one person in a thousand who obtain them.

Now, if the Commissioner of Education or any of the other bureaus of the Government publishes a bulletin of special value, it is a very easy thing to have plenty of copies of it printed. Any Member of the House can introduce a resolution, as is frequently done, providing for the publication of an extra number of copies of that bulletin. That goes to the Committee on Printing, which has the privilege of reporting the resolution and calling it up at any time in the House; so that if the Commissioner of Education desires to have some of his bulletins printed in large numbers he certainly can interest some Member of the House to introduce a resolution. Then that Member can go to the Committee on Printing and show the importance of the resolution.

We sometimes order the publication of 50,000 or 100,000 or 1,000,000 copies of publications for distribution. But here is a proposition to permit a bureau of the Government on its own suggestion to fill a demand which it itself has created; to print millions of copies of its publications, whether there is any need for them, whether there is any real demand for them or not. We can not differentiate between the Bureau of Education and other bureaus of the Government.

The Smithsonian Institution, which publishes the best documents that are published by the Government, has a limited edition, a very limited edition, and it never has been able to supply the demand. It would not be able to supply the demand if the number of copies were increased from 10,000 to 1,000,000 copies of each of its publications, because with the increased publication would come added advertisement.

A few years ago the National Museum got out a little advertisement, which it sent to the papers of the country, stating that it had recently published a certain report or bulletin of popular information, which could be secured upon application free. From every part of the country thousands of letters were written to the Museum and to the Members of Congress, asking for this publication, because it was free, although if it had been sent to all who asked for it, 95 or perhaps 99 copies out of every 100 would have been thrown into the wastebasket or into the back yard and burned without having been read.

If we propose to have any economy in the administration of our Government, we can not afford to publish free all that people will ask for when the suggestion is made to them, and we can not afford to commence with one bureau of the Government and give it the power to publish unlimited editions of its works unless we expect to give the same power to every other department of the Government.

I do not think we ought to commence it; therefore I am opposed to the passage of the resolution. [Cries of "Vote!" "Vote!"]

Mr. HUGHES of Georgia. Mr. Chairman, I yield three minutes to the gentleman from South Carolina [Mr. LEVER], the author of the resolution.

The CHAIRMAN. The gentleman from South Carolina [Mr. LEVER] is recognized for three minutes.

Mr. LEVER. Mr. Chairman, Congress by its action has created a Bureau of Education. Whether that action was wise or unwise, it is not for me to say at this time. This fact remains, however: If the Bureau of Education is to continue its existence, it is the duty of this Congress to give it liberal support. If you intend to destroy the Bureau of Education by this slow process of starvation, I for one would prefer to take the bit in my teeth and destroy it by repealing the act which created it.

The Bureau of Education was created for the purpose of gathering statistics and information touching education in this country and systems of education in other countries. It was charged with the duty of disseminating that information to the people of the country in aid of education, and the method of its dissemination has been limited to the use of the printed bulletin. Now, you gentlemen are willing to say that you are going to hamper even that process of reaching the people with these valuable bulletins touching education in the country.

Only yesterday morning I received a letter from the State superintendent of education of my State, a nephew of Senator TILLMAN, asking that he be sent a thousand copies of one of the bulletins issued by this bureau recently, in order that he might use it with the teachers of the rural schools of the State. This indicates what the educators think of the value of these publications, and proves that we should extend the facilities for getting them into the hands of the people. I called up the commissioner. The issue had been exhausted. He said he might be able to furnish me with 12 or 15 copies.

Mr. BARNHART. Will the gentleman yield for one question?

Mr. LEVER. I can not yield. I am sorry, but my time is nearly exhausted.

Mr. BARNHART. The gentleman can get them by paying for them. He can have them printed in that way.

Mr. LEVER. Of course you can have them printed. You can have your farmers' bulletins printed, too, in any number you wish, to send out to Indiana in that way, but you are not doing it; and there is hardly a session of Congress when some of you gentlemen are not arguing for a proposition to enlarge the appropriations for farmers' bulletins. But let me tell you that your rural constituents are as much interested in the great problem of education as they are in the problem of agriculture. [Applause.] The two go together, and you can not separate them.

Mr. SHERLEY. Is there a limit upon the number of farmers' bulletins that may be printed?

Mr. LEVER. You have an appropriation of $400,000.

Mr. SHERLEY. Yes; but there is a limitation on the number.

Mr. LEVER. Give us $400,000 to print educational bulletins, and I will not complain.

The CHAIRMAN. The gentleman's time has expired. All time has expired. The Clerk will report the resolution for amendment.

The Clerk read as follows:

*Resolved, etc.*, That the publications of the Bureau of Education, excepting the annual report of the Commissioner of Education, shall be published in such editions as recommended by the Secretary of the Interior, but not to exceed 12,500 copies for the first edition.

Mr. SHERLEY. Mr. Chairman, I move to strike out the enacting clause.

Mr. HUGHES of Georgia. Mr. Chairman, if I am in order now, I wish to say——

Mr. SHERLEY. I insist on my motion, which is not debatable.

The CHAIRMAN. The motion of the gentleman from Kentucky is to strike out the enacting clause of the joint resolution.

Mr. WILLIS. Is not that a debatable question? I make the point of order that the gentleman from Georgia is entitled to speak on it if he desires to do so.

The CHAIRMAN. It is in the nature of an amendment.

Mr. HUGHES of Georgia. Mr. Chairman, I do not propose to discuss this bill further, but I do wish to say that I think that one of the most important questions before this country to-day is education. I think it is the duty of the Members of this Congress to do everything in their power to promote that great cause. I want to say that the people all over this great Union are interested in this subject. The committee agrees to the amendment offered by the gentleman from Ohio [Mr. WILLIS]. I hope that this joint resolution so amended will meet with the approval of the House, and I believe it will. I think it is just and right that as much information as possible should be disseminated throughout the States and counties of this Union on this great question of education.

Mr. LEVER. Will the gentleman yield?

Mr. HUGHES of Georgia. I will.

Mr. LEVER. I should like to ask the chairman of the committee what will be the effect of accepting the Willis amendment? Am I correct in my idea that it will increase the number of each bulletin to 12,500 that may be issued from the Bureau of Education?

Mr. HUGHES of Georgia. That is the effect of the amendment.

Mr. LEVER. As I understand it, it also strikes out section 2.

Mr. HAMLIN. No; it amends section 2.

Mr. SHERLEY. The effect of it is to increase the issue of every bulletin 12,500.

Mr. HUGHES of Georgia. It makes that possible, perhaps.

Mr. WILLIS. Will the gentleman yield for a suggestion?

Mr. HUGHES of Georgia. Certainly.

Mr. WILLIS. The effect of my amendment is not to increase the publication of every bulletin by 12,500. It simply vests the authority in the Secretary of the Interior to publish additional copies provided the original edition has been exhausted, and absolutely limits the additional number that he may publish to 12,500.

Mr. SHACKLEFORD. May I interrupt the gentleman?

Mr. HUGHES of Georgia. Certainly.

Mr. SHACKLEFORD. Under this resolution and the amendments proposed to it is it possible for the Commissioner of Education to send out a sufficient number of arithmetics for the use of all the schools in the country?

Mr. HUGHES of Georgia. Oh, no.

Mr. SHACKLEFORD. Would he be authorized to publish as a bulletin an approved edition of algebra and send it to all the common schools?

Mr. HUGHES of Georgia. I do not think he could publish a treatise on algebra in a bulletin. It never has been done.

Mr. SHACKLEFORD. When one of these bulletins is issued by the Commissioner of Education, if it carries something of great value, is it not largely reproduced by the magazines and educational journals of the country, and so carried to the whole body of the people?

Mr. HUGHES of Georgia. I do not know whether that is the case or not.

Mr. SHACKLEFORD. Is it not true that it is?

Mr. HUGHES of Georgia. It may be. It can be done.

Mr. SHACKLEFORD. And is done.

Mr. MADDEN. Will the gentleman yield for a question?

Mr. HUGHES of Georgia. I will.

Mr. MADDEN. Do I understand the gentleman to say that the Willis amendment will only increase the authority of the Commissioner of Education to publish 12,500 copies of each bulletin?

Mr. HUGHES of Georgia. Additional copies.

Mr. WILLIS. Provided the original issue is exhausted.

Mr. MADDEN. Then when that print is exhausted he would have authority to print 12,500 more, and then 12,500 more when the second edition was exhausted.

Mr. HUGHES of Georgia. No; 12,500 additional is the limit.

Mr. MADDEN. He could print 12,500 additional copies as often as each edition was exhausted.

Mr. HUGHES of Georgia. Not at all. I sincerely hope that this bill will pass as amended. I think it is due to the people of this country. I believe it is due to the children of this country, and I sincerely hope that it will pass.

Mr. MANN. Mr. Chairman, the amendment suggested by the gentleman from Ohio [Mr. WILLIS] does not in any way tend to cure the defects of this bill. What does section 2 say?

That whenever the edition of any of the publications shall become exhausted—

then the Secretary of the Interior may publish as many additional copies as he may deem necessary to meet the demand.

Now, the gentleman from Ohio [Mr. WILLIS] proposes to say that he can publish 12,500 additional copies, but whenever that edition is exhausted, then he can publish another edition of 12,500 copies, and whenever that is exhausted he can publish another edition of 12,500 copies, and he can certify that they are all exhausted on the same day.

We have before the House a comprehensive bill for the revision of the printing laws, which I understand is likely to be brought before the House before a great while. When we take up that bill we can determine what editions shall be printed by the different departments of the Government, and determine as among them how many shall be printed for each department, without attempting to do it piecemeal in this manner, granting one bureau autocratic power to publish unlimited editions.

Gentlemen need not think that they pose as special friends of education because they favor this bill against those who oppose it. We are just as much in favor of education as gentlemen who favor the bill, but we believe that common-school education is largely to be controlled by the States instead of being dominated by the Commissioner of Education.

Mr. BARNHART. Mr. Chairman, just a word in further protest. This bill comes in in an irregular way, so to speak. It ought to have been referred to the Committee on Printing, that we might have some means of ascertaining the cost and the needs of this amount of printing. Bills are presented like this one on the floor of the House from time to time without reference to the Printing Committee. The law requires that there must be accompanying specifications as to the probable cost. We of the Printing Committee are required to do this in all legislation in the matter of printing presented on the floor. In this and similar cases bills come in without any estimate. The bars are thus all down, and somebody is authorized to proceed as he deems fit, and no limit on his expenditures. I insist that the bill ought to be defeated.

Mr. WILLIS. Mr. Chairman, there has been some question raised here as to whether the amendment suggested by myself will permit the publication of additional copies of bulletins after the first or succeeding edition may have been exhausted. When the proper time comes I shall offer an amendment, in line 8, following the word "the" and before the word "edition," inserting the word "original," so that it will read "whenever the original edition of any publication shall become exhausted," so that there can be only one additional edition of 12,500 copies.

Mr. MANN. Will the gentleman yield?

Mr. WILLIS. Certainly.

Mr. MANN. Does not my friend think that when it becomes necessary to offer so many amendments to a bill on the floor of the House, disclosing so many imperfections, that a new bill ought to be drawn and brought in instead of trying to correct the evils of this one?

Mr. WILLIS. Mr. Chairman, after a bill has been criticized by the gentleman from Illinois nobody else in any committee on earth could find any other flaw in it. These amendments of mine meet all the suggestions he has made.

The CHAIRMAN. The question is on the motion of the gentleman from Kentucky [Mr. SHERLEY] to strike out the enacting clause.

The question was taken; and on a division (demanded by Mr. SHERLEY) there were 36 ayes and 40 noes.

Mr. SHERLEY. Mr. Chairman, I ask for tellers.

The question of ordering tellers was taken, and tellers were refused.

The CHAIRMAN. The Clerk will proceed with the reading of the bill.

The Clerk read as follows:

SEC. 2. That whenever the edition of any of the publications of the Bureau of Education shall have become exhausted, and the demand for it continues, there shall be published, on the requisition of the Secretary of the Interior, as many additional copies as the Secretary of the Interior may deem necessary to meet the demand.

Mr. WILLIS. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 1, line 8, after the word "the" and before the word "edition," insert the word "original."

Mr. MANN. I suggest to the gentleman from Ohio that instead of using the word "original" he should use the word "first," because the word "first" is used in the first section.

Mr. WILLIS. Mr. Chairman, I will accept that suggestion, and I ask to modify my amendment in that way.

The CHAIRMAN. Without objection, the amendment will be modified as suggested.

There was no objection.

The CHAIRMAN. The Clerk will report the amendment as modified.

The Clerk read as follows:

Page 1, line 8, after the word "the" and before the word "edition," insert the word "first," so that the line will read: "Whenever the first edition of the publications," etc.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio.

The amendment was agreed to.

Mr. WILLIS. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 1, line 12, after the word "copies," insert the words "not to exceed 12,500 in number."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio.

The question was taken, and the amendment was agreed to.

Mr. HUGHES of Georgia. Mr. Chairman, I move that the committee do now rise and report the bill to the House with the recommendation that the amendments be agreed to and that the bill do pass.

The motion was agreed to.

Accordingly the committee arose; and the Speaker having resumed the chair, Mr. SLAYDEN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration House joint resolution 84, and had directed him to report the same back with sundry amendments, with the recommendation that the amendments be agreed to and that the resolution as amended do pass.

Mr. HUGHES of Georgia. Mr. Speaker, I move the previous question on the resolution and amendments to final passage.

The motion was agreed to.

The SPEAKER. Is a separate vote demanded on any amendment?

There was no demand for a separate vote.

The amendments were agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. HUGHES of Georgia, a motion to reconsider the vote whereby the bill was passed was laid on the table.

## CONVICT LABOR MADE GOODS.

The SPEAKER. The Clerk will proceed with the call of committees.

The Clerk called the Committee on Education.

Mr. LEWIS of Maryland. Mr. Speaker, I desire to call up the bill (H. R. 1933) to limit the effect of the regulation of

interstate commerce between the States in goods, wares, and merchandise wholly or in part manufactured, mined, or produced by convict labor or in any prison reformatory.

This bill is familiarly known as the convict labor made goods bill. Before proceeding to the discussion I would like to ask unanimous consent that general debate be limited to one hour.

The SPEAKER. The gentleman from Maryland asks unanimous consent that general debate on this bill be limited to one hour, one half to be controlled by himself and the other half by whom?

Mr. SHERLEY. It seems to me that that is too little time.

Mr. LEWIS of Maryand. How much time would the gentleman suggest?

Mr. SHERLEY. If it is the bill I think it is it involves some nice questions of law, and we ought to have a proper time to debate it. I do not desire to handicap the gentleman.

Mr. LEWIS of Maryland. Nor do I desire that the bill should not be sufficiently discussed. How will an hour and a half suit the House?

Mr. MANN. Mr. Speaker, there is a question involved outside of that. The gentleman said "general debate." There is no such thing as general debate on this bill. This is not a Union Calendar bill.

The SPEAKER. This is on the House Calendar.

Mr. MANN. Yes; and there is no such thing as general debate, except that any Member who gets the floor would be entitled to an hour up to the time the previous question is ordered. I desire to offer an amendment to the bill, and I do not wish to have that right cut off.

Mr. LEWIS of Maryland. Mr. Speaker, it is not my purpose to attempt that.

Mr. MANN. I understand that; but if the previous question were to be considered as ordered at the end of the time suggested, there might be no chance to offer amendments unless that was agreed upon.

Mr. LEWIS of Maryland. Let me ask the gentleman whether he does not consider it practicable that within an hour and a half we shall have sufficiently developed the general points of discussion so that we might go then to the consideration of the bill under the five-minute rule?

Mr. MANN. But the bill is not considered under the five-minute rule. There is no five-minute rule in the House, unless it is by unanimous consent.

Mr. SISSON. Mr. Speaker, I suggest that we let the debate run on for a while. There is only one matter in which I am interested. Generally I have no opposition to the bill.

Mr. MANN. The gentleman from Maryland understands that he has the authority to move the previous question at any time when anyone has not the floor, so that there is no trouble about limiting debate.

Mr. LEWIS of Maryland. Then I give notice now to the House that at the end of an hour I shall reserve the right to move the previous question.

Mr. SISSON. I have no objection to that.

Mr. LEWIS of Maryland. I withdraw the request for unanimous consent.

Mr. SISSON. There is one matter which affects my State, in which I am interested, and I would like to have that matter explained, and I may want to offer an amendment.

Mr. MANN. I think the gentleman better proceed now.

Mr. SISSON. I want to get an understanding, if I can, before unanimous consent is granted.

Mr. LEWIS of Maryland. But I have withdrawn the request for unanimous consent.

The SPEAKER The Clerk will report the bill.

The Clerk read as follows:

*Be it enacted, etc.*, That all goods, wares, and merchandise manufactured, produced, or mined wholly or in part by convict labor, or in any prison or reformatory, transported into any State or Territory of the United States, or remaining therein for use, consumption, sale, or storage, shall, upon arrival and delivery in such State or Territory, be subject to the operation and effect of the laws of such State or Territory to the same extent and in the same manner as though such goods, wares, and merchandise had been manufactured, produced, or mined in such State or Territory, and shall not be exempt therefrom by reason of being introduced in the original package or otherwise.

Mr. LEWIS of Maryland. Mr. Speaker, I believe I now have the floor for an hour?

The SPEAKER. The gentleman has the floor for an hour, and the gentleman has the right to move the previous question in that hour, and if he does not move the previous question, any gentleman who gets the floor has an hour, if he desires to use it, and so on ad infinitum.

Mr. LEWIS of Maryland. Mr. Speaker, I think perhaps the House sufficiently understands the object of this legislation. In a great many prisons and reformatories of the country their unfortunate inmates are employed in manufacturing industries. There labor is at very low cost to the enforced employer, and because of the character of the persons employed the product is sold in the market at prices lower than legitimately made goods can be bought. Within the State and with reference to the sale of goods made within the State the State has always been considered as possessing ample authority to correct any such situation; but manufacturing in our days is not conducted mainly for the purpose of intrastate sale or commerce, but the much larger proportion of manufactures takes place with reference to interstate commerce. When an article takes on that character, it is well understood that State legislation and State methods are incompetent to control its transportation and sale, and the object of this bill is that Congress, the only competent power, shall release State legislation from the restraining rules of interstate commerce.

Mr. SISSON. Mr. Speaker, will the gentleman yield?

Mr. LEWIS of Maryland. With pleasure.

Mr. SISSON. I will state to the chairman of the Committee on Labor that the point I have in mind is the situation in my State. We work the convicts in my State on a State farm, and I believe the entire Mississippi delegation will agree with me that, so far as the humanity of that method is concerned and the health of the convicts and good results to the State, it is a splendid system. It relieves the State of any expense attaching to the convicts, because the State farm makes a profit. That farm produces corn and cotton and such things as are usually raised on a Mississippi plantation. Does the gentleman think that his bill is broad enough to prevent the State of Mississippi from selling the products of that farm to the cotton buyers and the corn buyers, to be shipped out of the State?

Mr. LEWIS of Maryland. With this qualification: If those products were to go, say, into some State where an inhibitory law prevails they would be subject to the laws of that State in that event; but if they went to a State where no such inhibitory legislation obtains, they would suffer, of course, no interference whatever.

Mr. SISSON. For example, suppose the State farm in my State should sell its cotton to a Maryland cotton factory, could that factory buy the product of that farm and have it shipped into the State of Maryland from the State of Mississippi?

Mr. LEWIS of Maryland. Theoretically not, if Maryland had a law against the sale of convict-made goods.

Mr. SISSON. Is it the intention of the gentleman's bill to virtually destroy that humane system of working convicts that is prevalent in my State?

Mr. LEWIS of Maryland. No; the object of the bill is to subject the commerce, when it reaches the State, to the laws which that State itself shall apply to its own convict-made goods. The legislator in the matter, at last, is the State legislator. Congress merely releases or withdraws its technical rule as to interstate commerce, and leaves the State to determine for itself what shall be the disposition of these goods when they reach there.

Mr. SISSON. In order to call the gentleman's attention specifically to it, and I am not opposed to the principle and purpose which the gentleman is after, but I believe it will be conceded by everybody that the most humane treatment to a convict is that which is prevailing in my State, because it has been visited by the prison officials not only of the United States but by the prison officials of foreign countries, and it has been commended by everybody who has gone to look at it. Now, the language of the gentleman's bill is:

That all goods, wares, merchandise manufactured, produced, or mined wholly or in part by convict labor, or in any prison or reformatory, transported into any State or Territory of the United States, or remaining therein for use, consumption, sale, or storage, shall, upon arrival and delivery in such State or Territory, be subject to the operation and effect of the laws of such State or Territory.

Mr. LEWIS of Maryland. Yes.

Mr. SISSON. Now, would the State law of Maryland, in general terms, prevent the sale of convict-made goods of cotton raised on the prison plantation in Mississippi worked by the State?

Mr. LEWIS of Maryland. It would, if it had such a law.

Mr. SISSON. That is the only objection I have to the gentleman's bill, for this reason: If the system was an evil one, where we formerly worked the convicts within the walls producing wagons and various and sundry things, which was not conducive to the health of the convict, but there is no serious opposition to convict labor by the cotton producers, because the cotton produced on the convict farms is a mere drop of water in the ocean. I am not saying I myself am committed to the farm system, because I believe the better thing to do would be to work the convicts on the public roads, but we have that system now in my State. Now, the gentleman from Louisiana [Mr. DUPRÉ] also tells me that in his State one of the principal

products of that production is cane, and that on their State farm they produce that product because it is a product that is raised in that country, and their system, as I understand, has proved entirely satisfactory; as a matter of fact, the convicts rarely escape from the penitentiary. There is no desire to escape, owing to the treatment that they receive there—good quarters, good food, and things which are conducive to good health and satisfaction. I am taking up too much of the gentleman's time——

Mr. LEWIS of Maryland. No.

Mr. SISSON. Would the gentleman object to an amendment to his bill which would exempt from it the transportation of these farm products?

Mr. LEWIS of Maryland. I should have to object. And let me illustrate the practical side of this matter rather than the purely technical one with which we have dealt. As a matter of fact, a number of States have acted on this subject in the way of discouraging commerce in prison-made goods, but they have acted not in the way of a positive prohibition. The most favored method has been to provide that prison-made goods shall not be sold within the State unless marked "Prison-made goods," so that the buying public may know the moral circumstances involved in the transaction, namely, that an unfair element of commerce and competition is being introduced, and thus the ethical sense of the purchasing community may be employed as a method of protection.

Mr. SISSON. In order to have a concrete case, suppose a bale of cotton made on the convict farm in Mississippi should be sent to a State where a factory is located which has a law of which the gentleman spoke. How far would it be necessary to follow this question? Would it only be necessary to mark the cotton "Convict-made cotton," or would you have to go to the product and follow the finished product manufactured out of the raw material which was convict made?

Mr. LEWIS of Maryland. Without perhaps being entitled to express an opinion so hastily as to a situation of that kind, I should say that the bale of cotton represented the form of product upon which the law would act.

Mr. SISSON. I would have no objection with the law which prevails, as the gentleman says, in many of the States. I do not know whether they have them or not. I have no objection to putting a label on a bale of cotton which goes from the State farm as "convict-made" cotton, but I would not like for a State institution, which has succeeded so well, and with which the State is so well satisfied, and by which we have to a very large extent solved the very vexatious question of convict labor in my State, and on which the State has expended a great deal of money in improving that beautiful farm and building and beautifying the houses—I would hate to have it disturbed by a law which was not intended, perhaps, to reach that character of convict-made products.

Mr. LEWIS of Maryland. Now, Mr. Speaker——

Mr. HARRISON. Will the gentleman yield one moment?

Mr. LEWIS of Maryland. Yes.

Mr. HARRISON. I would like to inquire, as a matter of information—and I am sure the gentleman has it—how many States have such laws as the gentleman says Maryland has in respect to convict-made goods?

Mr. LEWIS of Maryland. About 16 States. He will find them set out in the report.

This bill comes from the Committee on Labor with its unanimous indorsement. Two bills, identical in form, were referred to that committee, one introduced by the gentleman from Missouri [Mr. BOOHER] and the other by his colleague [Mr. HENSLEY]. The committee carefully considered this measure, and in a previous Congress a like bill—indeed, identical in its wording—was passed by the House, but failed for want of proper parliamentary opportunity to secure the approval of the Senate.

Mr. MOORE and Mr. STEENERSON rose.

The SPEAKER. To whom does the gentleman yield?

Mr. LEWIS of Maryland. I yield to the gentleman from Pennsylvania [Mr. MOORE] first.

Mr. MOORE. This bill is in the nature of a protection to free labor against goods made by convict labor. It does not pertain to such convict labor itself as works upon the roads in certain States of the country?

Mr. LEWIS of Maryland. It could not. That is not a product that could go into interstate commerce.

Mr. MOORE. It relates only to the goods made by convicts that come in competition with goods made by free labor? Has the gentleman given consideration to the goods made by foreign convict labor?

Mr. LEWIS of Maryland. The tariff bill itself has a provision with reference to that,

Mr. MOORE. The Payne bill had a paragraph relating to convict-made goods, and it was carried over in the Underwood bill. There has been a suggestion that some convict-made goods have made their way into the country, and I wanted to know about that.

Mr. LEWIS of Maryland. The committee has considered that.

Mr. MOORE. There should be effective protection against convict-made goods coming into the United States, if we are going to protect ourselves as between the States.

Mr. LEWIS of Maryland. I now yield to the gentleman from Minnesota [Mr. STEENERSON].

Mr. STEENERSON. I notice this bill provides that the law shall be suspended, so to speak, until the article is delivered. It says:

> Shall, upon arrival and delivery in such State or Territory, be subject to the operation and effect of the laws of such State or Territory.

Now, in Minnesota we have a bindery-twine factory in the penitentiary, and in shipping the twine to the place where it is consumed a large part of it goes through Wisconsin, and a part of it goes through North Dakota, and back again into Minnesota. Does the gentleman think this bill would interfere in any way with that kind of shipment?

Mr. LEWIS of Maryland. Now, Mr. Speaker, I yield to the gentleman from Virginia [Mr. WATSON], who will methodically discuss those features.

Mr. WILLIS. I want to ask the gentleman a question. I have not had an opportunity to read the report here. Is this the substance of the bill, that it provides when convict-made goods are shipped into any State or Territory they will become subject to the laws of that State or Territory, and if such laws prohibit such sale, then such sale will be prohibited? If this is what the bill provides, I am in favor of it. Convict-made goods should not be sold in any State except under the laws of that State.

Mr. SHERLEY. The gentleman does not want to give complete consent to that question, because I think it is inaccurate.

Mr. WILLIS. I am asking for information.

Mr. SHERLEY. This is almost identically a copy of the Wilson law which applied to alcoholic liquors, and which was a successful attempt to make such liquors subject to the laws of the State into which shipped, upon delivery. Now, this bill does not give the State the control until delivery.

Mr. LEWIS of Maryland. Arrival and delivery.

Mr. SHERLEY. Well, upon delivery. What it does is this, namely, to prevent a resale contrary to the State law. In other words, the Supreme Court held that as to interstate commerce the law of the State did not apply until not only delivery but sale in the original package by the consignee was made; but the Supreme Court in rendering that decision said Congress could, if it saw fit, take away from an article its interstate character at an earlier period than it would otherwise lose it. Congress thereupon passed what was known as the Wilson Act, which provided that liquor shipped from one State to another should be subject to the law of the State to which shipped, the same as if made there. The constitutionality of it was upheld in the case of In re Rahrer. Subsequently, in the Vance case, an attempt was made to so construe the language as to make it apply before delivery to the consignee instead of afterwards. The Supreme Court held it did not apply until after delivery to the consignee, and indicated if it had it would have been unconstitutional. This act is in verbiage the same as the Wilson Act, and makes the State law apply after delivery to the consignee, but before sale by such consignee, and to my mind is the furthest extent to which the law can go constitutionally.

Mr. LEWIS of Maryland. Now, I yield to the gentleman from Virginia [Mr. WATSON] as much of the balance of my time as he may require.

Mr. MANN. Will the gentleman yield for a question?

Mr. LEWIS of Maryland. Surely.

Mr. MANN. I heard a part of what the gentleman from Kentucky [Mr. SHERLEY] said. Of course, there has always been a grave constitutional question involved in this proposition. The gentleman knows that in the last Congress the Judiciary Committee of the two Houses and the two Houses adopted what they believed to be a constitutional proposition in reference to the introduction of liquor into a State. Has the gentleman or his committee, in considering the constitutionality of the provisions of this bill as reported, considered the advisability of following the plan which Congress adopted in reference to liquor shipment?

Mr. LEWIS of Maryland. The committee has very fully considered it, and if I am allowed to yield to the gentleman from Virginia [Mr. WATSON], we will have the subject methodically discussed. I insist on yielding to the gentleman.

Mr. SHERLEY. Just a moment. The gentleman has indicated his intention at the end of his hour to move the previous question. Now he is proposing to yield to another gentleman.

Mr. LEWIS of Maryland. To discuss the very questions that are being propounded.

Mr. SHERLEY. That is all right, too, but I think it fair to the House that we should have an opportunity to fully discuss the matter. I desire to express some views upon the legal phase of this matter in addition to hearing the gentleman from Virginia [Mr. WATSON], who I know will enlighten us all on it, and for whose opinion I have a very proper respect. But I do think the gentleman ought to indicate to the House that he does not propose at the conclusion of the speech of the gentleman from Virginia to move the previous question.

Mr. LEWIS of Maryland. I do not. I mean to have the question adequately discussed. And I will say to the House that I have not fitted myself to discuss the constitutional niceties in this case. The gentleman from Virginia [Mr. WATSON] has, I believe, and I think the House will profit from his discussion more than from mine.

The SPEAKER. How much time does the gentleman yield to the gentleman from Virginia?

Mr. LEWIS of Maryland. All the balance of my time which he may wish to use. He says he will use about 20 minutes and will yield back the balance to me.

Mr. WATSON. Mr. Speaker, the statement that has just fallen from the lips of the gentleman from Kentucky [Mr. SHERLEY] has come so near to expounding my own view of the legal effect of this bill that I shall have to content myself in large measure with amplifying.

Every lawyer is familiar with the fact that under existing law there is no power in a State legislature to control in any way the commerce in goods transshipped from one State or Territory into another State or Territory. Under the Constitution the Congress has the power to regulate commerce with foreign nations, among the several States, and with the Indian tribes.

At a very early period in the judicial history of the country our court of last resort laid down the proposition that this power on the part of Congress was exclusive, and that no power was left with the States to deal with a commodity when it had once become the subject of interstate commerce.

Now, as the chairman of the committee [Mr. LEWIS of Maryland] stated, for a number of years the legislatures of different States have sought to deal restrictively with intoxicating liquors and with convict-made goods. But they have always been confronted with the power lodged in Congress to regulate interstate commerce, which stood as a barrier against the execution of their will. It has been held in a series of decisions by the Supreme Court of the United States that an article when once becoming a subject of interstate commerce continues to be such and has around it the protecting power of the Constitution until it is delivered to the consignee in the State or Territory of its destination; and, still further, that until the consignee has taken it from its original package or sold it, it retains its interstate character and is exempt from any regulation which State law may undertake to prescribe.

It was said in the earlier decisions on the subject that the right to sell an article which had been imported from another State was an inherent right which attached to its importation; that the citizen, I will say, in the State of Kentucky, not only had the right to import an article of commerce from the State of Maryland but that he had a right to sell it after he imported it. In fact, Judge Marshall, in an early case, stated that the right to sell was an essential and an inherent element of the right to import; that if a man could not sell the goods after he imported them, it would do him no good to import them. So that in former days the right to sell was considered an essential part of the importation.

But everything changes, Mr. Speaker, in the course of time, and even so conservative a body as the Supreme Court seems to be cognizant of the changes of opinion which take place in the country. Somebody has said of that court, in a spirit of adverse criticism, that the window to its chamber looked out upon the great body of the American people and it sometimes took judicial cognizance of changes going on among them. I do not subscribe to the criticism in the sense in which it was uttered; but, as a matter of fact, judicial opinions change, and in regard to this subject the mind of the Supreme Court has changed in recent years.

A later distinguished Chief Justice of the Supreme Court a few years past said that the right to sell an article which was imported—which Judge Marshall had pronounced an essential right—was merely an incident of interstate commerce; but that the right was not one of the fundamental aspects of such commerce, and that it was within the power of the Congress to withhold from the citizen after importation this incident—the right to sell—and immediately upon delivery to subject the article to State law.

In the year 1890 Congress passed the bill referred to by the gentleman from Kentucky, known as the Wilson bill, which undertook to regulate interstate commerce in intoxicating liquors. The bill now before the House is an exact reproduction of the Wilson bill. The only difference is that the pending measure deals with convict-made goods, whereas that act dealt with intoxicating liquors.

The pending bill in substance is that—

> Goods, wares, and merchandise manufactured, produced, or mined wholly or in part by convict labor, or in any prison or reformatory, transported into any State or Territory of the United States, or remaining therein for use, consumption, sale, or storage, shall upon arrival and delivery in such State or Territory be subject to the operation and effect of the laws of such State or Territory to the same extent and in the same manner as though such goods, wares, and merchandise had been manufactured, produced, or mined in such State or Territory.

Mr. BARTHOLDT. Mr. Speaker, will the gentleman permit a question?

The SPEAKER. Does the gentleman from Virginia yield to the gentleman from Missouri?

Mr. WATSON. Yes.

Mr. BARTHOLDT. Does the gentleman construe those words "upon delivery" as after delivery?

Mr. WATSON. I was just going to address myself to that proposition. Whereas the language of the bill provides, as did the Wilson Act, that upon the arrival in the State the goods shipped in interstate commerce should become subject to local law, yet the Supreme Court in construing the Wilson Act has held that "arrival in a State" meant "arrival at the point of delivery," and that there was no power in the State to stop an article of interstate commerce in transit before it was delivered to the consignee, but that the transportation had to be completed before any State law could affect it.

So, under existing law, not only has a citizen of one State the right to import articles of commerce from another State; not only has he the right to have them delivered to him, but he has the further right to dispose of them in any way he pleases, so long as the original package is unbroken. The legal effect of the pending measure, following the doctrine of the Supreme Court in construing the Wilson Act, is to lift from prison-made goods imported from one State into another the protecting hand of the Constitution the moment they reach the consignee, and thus to deprive the consignee of the right to sell in the original package if such sale be forbidden by local law.

Mr. BARTHOLDT. Does the gentleman hold that as soon as an article of merchandise has been delivered to a consignee in a certain State, and he proceeds to sell, the State law is not sufficient to protect the State against the sale of that article?

Mr. WATSON. I will say to the gentleman from Missouri that but for the enactment of the Wilson law, or prior to 1890, had he imported into the State of Missouri intoxicating liquor the interstate-commerce clause of the Constitution would have protected that importation throughout its transit and until the same was delivered to him, and would thereafter have protected him in the sale of it in its original condition, the law of the State of Missouri to the contrary notwithstanding.

Mr. MANN. Mr. Speaker, will the gentleman yield for a question?

Mr. WATSON. Yes.

Mr. MANN. Does the gentleman believe we have any greater power to regulate interstate shipments of convict-made goods than of intoxicating liquors?

Mr. WATSON. I would not think so, Mr. Speaker.

Mr. MANN. The gentleman—unfortunately for us, because we enjoy his presence here now—was not here during the great fight, that lasted for years, over the question of interstate shipments of intoxicating liquors; but the gentleman is undoubtedly aware that the last Congress, as apparently the final word of Congress until the Supreme Court has passed upon it, framed, after many attempts, a law to prohibit or govern the shipment of intoxicating liquors between the States. Does not the gentleman believe it would be wiser for Congress now, having attempted to make as perfect a measure on that subject as possible, with all the ability of Congress directed toward it for years, to follow the same line in this bill that we followed in the intoxicating-liquors act?

Mr. WATSON. To follow the same line?

Mr. MANN. Yes; to follow the same language, except in so far as it is necessary to change it to meet the difference in the goods.

Mr. WATSON. Will the gentleman kindly point out the diversity of language that he has in mind?

Mr. SHERLEY. If the gentleman will permit, it seems to me that, in connection with the question of the gentleman from

Illinois, this fact ought to be brought out: The difficulty that confronted Congress in dealing with the interstate shipment of alcoholic liquors was to prevent delivery to consignee; was to give to the States the power to seize the liquor before it ever reached the hands of the consignee. Now, as I understand this bill, it does not undertake to go that far, and, in the nature of the case, perhaps, does not need to go that far. This bill simply undertakes to prevent the sale after delivery to the consignee, and the right to do that was clearly upheld by the Supreme Court in the case of in re Rahrer, and this language does follow identically the language that was upheld in the Wilson Act.

Mr. MANN. But which proved of no value whatever.

Mr. SHERLEY. As to alcoholic liquors.

Mr. MANN. As to alcoholic liquors, and hence will prove of no value whatever as to convict-made goods.

Mr. SHERLEY. I think that does not follow, for the reason that the sale of convict-made goods is made by the manufacturer to dealers, who in turn sell at retail; whereas the sale of alcoholic liquors could be carried on directly to the individual consumer in original packages.

Mr. MANN. Yes; but, if the gentleman will yield, convict-made goods can be sent from one State into another and delivered to the consignee, and the original package broken and the goods put upon the shelf, after which God Himself has indicated no way for a human being to know whether they are convict-made goods or not.

Now, as to the liquor business, the Committee on the Judiciary of the House worked on the subject for years. The Committee on the Judiciary of the Senate worked on the subject for years. It is the most hotly controverted constitutional question which has been before Congress in many, many years. Finally a bill was brought into the House from the Committee on the Judiciary. A bill was brought into the Senate from the Committee on the Judiciary. They were not identically alike, or at least as the Senate passed the bill it was not identically like the House bill. There were some things in the House bill that the proponents of the bill feared were unconstitutional, and we finally took up the Senate bill and passed it. It was vetoed by President Taft, as I recall it, and then was passed over his veto. That is the law that prohibits the transportation into a State of intoxicating liquors which are intended by any person interested therein to be received, possessed, sold, or in any manner used, either in the original package or otherwise, in violation of any law of such State.

Mr. WATSON. The gentleman quotes the Webb bill, does he not?

Mr. MANN. Of course it was not the Webb bill that was passed, but it is practically the same thing. Now, I will say to the gentleman that I have prepared an amendment to this bill striking out all after the enacting clause and inserting a provision along the same line precisely as that we adopted in reference to intoxicating liquors. If that is constitutional, which has not yet been determined, then this will be constitutional. I do not think the gentleman's bill is worth the paper it is written on. It was not worth anything at all as to intoxicating liquors.

Mr. WATSON. The gentleman means practically.

Mr. MANN. I mean practically.

Mr. BARTHOLDT. Will the gentleman permit an interruption?

Mr. MANN. Yes.

Mr. BARTHOLDT. With the consent of the gentleman from Virginia [Mr. WATSON], I want merely to say that in the three or four cases that have reached the United States courts this interstate liquor law has been declared unconstitutional. The case has not yet been submitted to the Supreme Court of the United States, but is being prepared now. Every court that has passed upon the case so far has declared the law unconstitutional.

Mr. MANN. From my committee assignments, I think I have had as much occasion to study the subject of interstate commerce as any man in either House of Congress, and in my judgment the Supreme Court of the United States is likely to hold the intoxicating liquor law constitutional. Certainly it is the best effort that Congress has made yet on the side of regulation of interstate traffic in goods.

Mr. SHERLEY. With the permission of the gentleman from Virginia, there is clearly one way to handle it under the lottery cases if you want to, and that is to prohibit the interstate shipment of all convict-made goods. The reason that was never suggested in alcoholic-liquor cases was not a question of power but a question of policy, because that meant national prohibition.

Mr. MANN. There is no effort in this bill to adopt any such policy as that.

Mr. SHERLEY. I see no reason why that may not cut the Gordian knot. If you want to abolish convict-made goods, try a law forbidding the interstate shipment of them.

Mr. WATSON. Mr. Speaker, I am sorry that I did not have the advantage of being in Congress at the last session when this question was perhaps debated more elaborately than it will be on this occasion. Consequently I am loath to pit my judgment against that of the gentleman from Illinois when he says this bill is not worth the paper upon which it is written. I entertain no doubt, as a legal proposition, however much Congress may debate it and however much credit gentlemen may claim for such debate, that the Supreme Court will declare the bill which is pending a constitutional measure, because it is practically in the same words as the act of 1890, which has been sustained in two well-considered cases. (In re Rahrer, 140 U. S., 545; Rhodes *v.* Iowa, 170 U. S., 420.)

Now, as to the practical worth of this bill, I will say to the gentleman from Illinois [Mr. MANN] that it ought to be reasonably effective, and that there is no occasion to seize convict-made goods in transit. There was occasion to seize intoxicating liquors in transit, and hence the act of the last Congress on that subject.

As to the impracticability of following up convict-made goods after they have landed in a State and pursuing them into the channels of commerce, there is perhaps no law which can be enacted that will ever enable Congress to do that successfully.

The practical effect of this bill, as I understand it, will be to subject convict-made goods to the local State regulations as soon as they have been carried into the State and delivered to the consignee. And that is perhaps as far as we can go under the present state of the judicial mind.

The gentleman from Mississippi has asked whether the bill applies to the produce of farms operated by convicts. The chairman of the committee has stated that it does, and that is correct. The fact is, not much competition has ever arisen between the products of prison farms and those of free labor. The trouble which has arisen has been confined chiefly to certain lines of manufactures.

The most acute competition has been in the shoe industry, and after that certain lines of clothing and furniture have been most affected. As a matter of fact, the control of a large number of laborers under one management has had the effect of taking possession of particular lines of industry. There is one furniture company which is said to control the convict labor of seven State prisons. Eleven States directly or indirectly engage in the convict shoe manufacture. These are some of the lines along which trade has been disturbed by convict labor; but the principle is the same whether it be a barrel of corn made by convict labor and thrust upon the market or whether it is a pair of overalls or a pair of shoes.

Mr. GARRETT of Texas. Will the gentleman yield?

Mr WATSON. Certainly.

Mr. GARRETT of Texas. Suppose, in growing cotton or other farm products by convicts, the cotton is baled and sold in the State to a cotton merchant in that State. Would that end the convict feature of that product with the sale and delivery to the merchant within the State? Would not the merchant have a right to sell it anywhere in the country without its being under the brand of convict-made goods?

Mr. WATSON. Within the State where made the article would be entirely subject to State law. The State could forbid its sale if it saw fit to do so. The precise point at which convict-made goods cease to be such is an exceedingly difficult question, but I should say that as long as the goods retained their original form they would still retain their character.

What I was going to suggest in this connection was that in principle there is no more reason why convict labor should be permitted to enter into competition with the products of the soil, worked by free labor, than there is that prison-manufactured products should be allowed to enter into competition with manufactured products of free labor.

Mr. BARTHOLDT. Will the gentleman yield?

Mr. WATSON. Certainly.

Mr. BARTHOLDT. The gentleman argues that there is an analogy between the Wilson bill relating to intoxicating liquor and this bill.

Mr. WATSON. Yes; they are identical.

Mr. BARTHOLDT. Hence he concludes that the Supreme Court would hold this bill constitutional because it held the Wilson Act constitutional. I wish he were right, because I am in favor of this bill and would like to see it become a law. But is the gentleman right; does not this bill go further than the original Wilson Act? The Wilson Act, as I understand the terms of it, permitted the sale of articles in unbroken packages.

Mr. WATSON. No; the gentleman is mistaken.

Mr. BARTHOLDT. Then I am mistaken.

Mr. WATSON. The legal provisions of the pending measure, in their constitutional aspects, are identical with the provisions of the Wilson Act. No man would undertake to guarantee that a court would not change its mind; but in all human probability the Supreme Court, having before it identically the same legal proposition, would again reach the same conclusion; and I entertain no doubt as to what in this case that conclusion would be.

The SPEAKER. The time of the gentleman from Virginia has again expired.

Mr. LEWIS of Maryland. Mr. Speaker, how much time have I remaining?

The SPEAKER. Ten minutes.

Mr. LEWIS of Maryland. Mr. Speaker, I would like at this point to renew my effort to define the time that shall be applied by the House to this subject, and would like, suggestively, to make a request for unanimous consent that at half past 3 o'clock this bill, with all pending amendments that have been introduced in the meantime, shall come to a vote of the House.

The SPEAKER. The gentleman from Maryland asks unanimous consent that at half past 3 the previous question shall be considered as ordered on the bill and amendments to final passage. Is there objection?

There was no objection.

The SPEAKER. Does the gentleman from Maryland reserve the 10 minutes?

Mr. LEWIS of Maryland. Yes.

Mr. SHERLEY. Mr. Speaker, I desire recognition.

The SPEAKER. The Chair will recognize the gentleman from Kentucky.

Mr. SHERLEY. Mr. Speaker, I should not delay the House by any speech touching this matter if it were not for the fact that perhaps no question that has been before Congress during my tenure here has had as much consideration at my hands as to its legal phases as has this question of the power of Congress over interstate commerce, and how far that power can be, if at all, delegated to the respective States. As has been said earlier during the debate by other gentlemen, this matter was thrashed out pro and con for many years before the Committees on the Judiciary of the House and the Senate and then on the floor of the two bodies.

The law, so far as it is involved in this bill here presented, is to my mind not only now plain, but well settled, and I join in the statement made by the gentleman from Virginia [Mr. WATSON] that there is not the slightest doubt as to the constitutionality of the proposed bill. As to its effectiveness men may have different opinions. The Supreme Court held, in the case of Brown against Maryland, that in regard to importations from a foreign country the right to import carried with it the right to sell. It subsequently held that that rule which it applied to foreign commerce did not apply to interstate commerce, and in the License cases held that the right to import from one State to another did not carry with it the right to sell. But the decision in the License cases was overruled by the Supreme Court in the case of Leisy against Hardin, in which the court held that the rule as to interstate commerce was exactly the rule as to foreign commerce and followed the decision of Chief Justice Marshall in the case of Brown against Maryland and held that the right to import from one State to another did carry with it the right to sell. In deciding that case the court went on to say, as stated by the gentleman from Virginia, that the right to sell was an incident to the right of such importation, but that Congress could, if it saw fit, take away that incident of interstate commerce and could declare that an interstate shipment should lose its character as such at an earlier period than it would otherwise lose it. In other words, it could lose it at the time of delivery to the consignee instead of losing it at the time of the sale by the consignee in the original package. Congress immediately took the hint and passed the Wilson Act. That act came up for consideration, and the Supreme Court, in the case of In re Rahrer, declared it constitutional. Subsequently an attempt was made to amend the act so as to make it apply to the interstate shipment of alcoholic liquors before delivery to the consignee instead of afterwards.

The court in deciding that case decided first—and that was all it actually decided, speaking in a technical, legal way—that the Wilson Act by its terms did not undertake to prevent delivery to the consignee or to permit on the part of the State any control until such delivery, but in deciding it the court went further and intimated that, in the judgment of the court, if Congress had undertaken to deprive an interstate shipment of its interstate character, prior to the time that it reached the consignee, the action of Congress would have been invalid. The reason for that distinction is very plain. It is perfectly apparent that you can have interstate commerce without the right in the consignee to sell, because the transaction can have taken place at the other end of the line between the buyer and the seller, or a man may bring in for his own use property already owned by him and thus create an interstate transaction. But you can not have an interstate transaction without the right to import, because the very meaning of interstate commerce is commerce from one State into another State, and if the State into which the article is to be shipped would have the power to seize it the moment it reached the border, it could thereby prevent the article coming into the State, and so prevent an interstate transaction, and you would thereby have the action of a State controlling an interstate shipment, giving to the State law an extraterritorial effect. It was that difficulty that confronted the advocates of the amendment to the Wilson law in regard to alcoholic liquors. They undertook to avoid that by a new departure, not as was attempted originally in the bills presented, by amendment of the Wilson law, by adding to it the words "whether before or after delivery," but they undertook to give to the States absolute control by making a qualified prohibition. They were not willing to go to the extent of prohibiting altogether, as was done in the law construed in the lottery cases, an interstate shipment of alcoholic liquors, but they said:

> We will make such an interstate shipment unlawful whenever the intent of the shipper or any party to the shipment is to violate the law of the State into which the shipment is to be made.

That bill was enacted into law at the last Congress, after being vetoed by the then President of the United States on account of what he believed to be its unconstitutionality. It is now going through the courts. Now, you have here three courses by which you can deal with this question of convict-made goods. You could either follow the position taken by the gentlemen of the committee and propose a law as to convict-made goods which is an exact counterpart of the old Wilson law as to alcoholic liquors or you could follow the position taken by Congress last year as to alcoholic liquors in what was commouly designated as the Webb bill, providing that whenever convict-made goods are shipped into a State with the intent to violate the law of the State that such shipment shall be illegal, or you could follow the lottery decision, upholding a law whereby Congress prohibited absolutely lottery tickets in interstate commerce.

Mr. WATSON. Will the gentleman yield?

Mr. SHERLEY. I will.

Mr. WATSON. Mr. Speaker, I was going to ask the gentleman whether he thought that the Supreme Court would ever go as far in regard to convict-made goods as to declare them outlaws of commerce if Congress should so declare?

Mr. SHERLEY. If the gentleman had asked me that question 10 years ago I would have said no, but I am very much of the opinion the gentleman expressed, and as it was perhaps happily expressed by Mr. Dooley in his discussion of the insular cases. If the gentleman remembers, Dooley expressed some doubt to Hennessy as to whether the Constitution followed the flag or the flag the Constitution, and ended by saying, "But, Hinnissy, it is evident that the Supr-r-r-eme Cour-r-rt follows the illikshun r-r-returns." [Laughter.] In the true sense and with a deeper meaning than that so facetiously expressed, it is true, and the court should take such notice. The court is not a dead thing, but a living part of our Government, and it properly feels the effect and tendency of the time, and by so doing has made of our Constitution a living thing under which we have been able to grow and expand as we never could have done if it had held to the rigid, straight, narrow viewpoint of the people of a previous age and generation. I can not after reading the Lottery cases, and I have read them repeatedly, draw the line so as to be able to say where the court would say the power of Congress to prohibit ends. I have not the slightest doubt that historically the power over interstate commerce was given to the Federal Government for a directly opposite purpose than that for which the power was given as to foreign commerce, and while you find the power as to both foreign and interstate commerce in the same sentence and in the same language, yet the reasons that led to the enactment were just the opposite. We owe our Constitution largely to the fact of the quarrel between Virginia and Maryland touching boundary questions and touching matters of interstate commerce, and out of the convention called by them and the other convention that followed came the convention that adopted the Constitution and made the provision as to interstate commerce.

Now, the provision as to foreign commerce was put in there with the idea of enabling Congress to prohibit, to enable us to hit at foreign countries which were discriminating against us, and not only regulate in the ordinary sense of the term but to regulate, by prohibition, that foreign commerce, but the provision was put into the Constitution as to interstate commerce

to prevent the States themselves from prohibiting that commerce or discriminating against the commerce of sister States in favor of their own. Now, that I believe to be historically accurate as to the purpose, but we have long since passed the point where anyone having an appreciation of the law as it has been declared to be rather than what he thinks it should be can any longer say that the power over interstate commerce is a power simply of regulation and not a power of prohibition, because the Supreme Court has repeatedly upheld laws where Congress prohibited interstate commerce of a certain character. It is true that all of those cases have been cases where the character of the commerce was so inimicable to the welfare of the country as to give a warrant for the decision of the Supreme Court.

Mr. WATSON. Will my friend permit me to interrupt him there, as I am very much interested in what he is saying?

Mr. SHERLEY. Certainly.

Mr. WATSON. The gentleman thinks that the courts construing an act of Congress on a question as to how inimicable a certain commerce was would take into consideration the judgment of the legislative body?

Mr. SHERLEY. That would naturally be the tendency—and the proper tendency—of the court. How can we to-day say that what, in our judgment, is a legitimate article of commerce shall not, in the judgment of those who are to follow afterwards, be considered an illegitimate article of commerce? And therefore I said what I did to the gentleman in response to his original question, that I was no longer prepared to make any hard and fast line as to the subjects that Congress could prohibit interstate commerce in.

Mr. LEWIS of Maryland. Will the gentleman yield to me?

Mr. SHERLEY. Certainly.

Mr. LEWIS of Maryland. You have very succinctly stated the difference between the bill proposed, following the Wilson path, and the amendment suggested by the gentleman from Illinois. I want to ask you whether, in your judgment, there is not a difference of circumstances as to the individuals who manufacture intoxicating liquor on the one hand and the parties who manufacture prison-made goods? For instance, in the State of Alabama and in the State of Maryland, and in other States, the operators of the penitentiaries might not have a very substantial connection with this matter. The Mann amendment, it seems to me, implies that the offender, the man who would break the law, would be the party in the State of origin intending to violate the law and shipping his contraband matter into the State of consignment. In this case it may be the State of Alabama, it may be the State of Maryland, it may be some other State, that clearly might not be indicted, and the punishment thereof can not be made effective. I would like the gentleman's view on that phase of the matter.

Mr. SHERLEY. If the gentleman will permit, I was first undertaking to outline what I thought could be done by Congress, and that brings me naturally to the question of what should be done.

Now, believing, as I personally believe, that the Webb bill was an unconstitutional proposal, and that the law will be so declared, I could not agree to the adoption of that plan; in other words, to making your prohibition dependent, not upon an express rule as laid down by Congress, but dependent upon the intent of a shipper, together with the action of various States from time to time as they might see fit. In other words, there is a difference between a prohibition of interstate commerce on the part of Congress for a reason and a standard established by itself and the prohibition of such commerce according to the varying standards of State legislatures as they may enact laws from time to time; and on that point, in my judgment, turns the constitutionality of the Webb bill. But, dismissing that, and taking up the two alternatives, you can either provide, as you do here, to give the State control the moment an article has reached the hands of the consignee or, following the lottery cases, you can prohibit altogether interstate shipment.

Now, I think the committee has adopted the wise course, for this reason: That while I personally am inclined to believe the court would follow the lottery cases and uphold a direct prohibition of interstate shipment of convict-made goods, yet that is a question open to some doubt. The proposal presented by the Committee on Labor is one open to no doubt as to its constitutionality by any man who has given sufficient study of the decisions to have his opinions entitled to weight.

Now, coming to the question of the efficiency of the remedy, I answer the gentleman by saying that, in my judgment, there is such a marked difference as to the character of alcoholic liquors on the one hand and convict-made goods on the other, in the method of handling them and the consumption of them, as to make the failure as to effectiveness of the Wilson law as to alcoholic liquors by no means like the result following the enactment of this law as to convict-made goods. And the reason for that is perfectly plain. The trouble with convict-made goods is not with the desire of a particular consumer to get convict-made goods, because that desire does not exist; but the trouble with alcoholic-liquor legislation was not only the desire on the part of the manufacturer, who made a profit out of manufacturing and selling, but the desire on the part of the consumer to get, irrespective of law, the alcoholic liquor for his personal consumption. And therefore you had a difficulty that they found in a large degree insurmountable in enforcing State law in communities where the sentiment of the community was not sufficient to make that enforcement easy.

But I differ with the gentleman from Illinois [Mr. MANN] in the belief that convict-made goods will not be subject to identification. It is true that after they have gotten upon the shelf, commingled with other goods, they may not be identified, though that does not necessarily follow, but the power of the State to control is not restricted to that remote period. The power of the State to control takes place the moment there is a delivery to the consignee, and whenever he undertakes to sell or dispose of them in any way the power of the State exists to come in and to control. It seems to me the committee has been wise in following what is clearly a constitutional plan, and then leaving to the actual test of fact, rather than to our theory, the effectiveness of the law as passed. If it should prove to be ineffectual, then we can adopt the other method of direct prohibition.

Mr. Speaker, I can not take my seat without expressing a personal view touching the whole question of the treatment of convicts themselves, and which is directly involved in the consideration of this bill.

I have hoped for some time to be able to present to Congress a concrete proposal looking to the treatment of Federal prisoners, and I still hope to find occasion to put in concrete form the thought that I have touching them.

Two things are unquestionably wrong, touching the present situation in many States: First, there is a wrong done to the community at large by enabling certain private contractors to exploit convict labor and to take the product of such labor and bring it into competition with free labor and its output; and, second, there is the very dreadful wrong to the convict himself. If there be any justification for penitentiaries, that justification must be found not only in shielding society from the criminal, but also in giving to the criminal an opportunity to reform and become a useful member of society; and to my mind it is barbarous to confine a man in a penitentiary, use his labor, and then turn him out with practically only a new suit of clothes and enough money to keep him from starving for a few days and with the brand of a felon on his back.

What I believe we ought to do—and it would help to solve this whole problem—is to put the convict at remunerative work, charge him with his upkeep, credit him with his labor, and the difference between what he earns and what he costs should go either to his dependent family or to himself at the expiration of his service. [Loud applause.]

That, in my judgment, is true humanity. That means to make of a prison something more than a prison—to make of it a reformatory as well.

We are to-day treating our Federal prisoners in a way that is beyond possible justification. We have been having them doing a lot of useless work in the erection of buildings in the penitentiaries, frequently having them take stones piled up in the courtyard on one side and carry to and pile them up on the other side, because they have nothing else to do; and it is destructive of all the hope and manhood of the men who are put to work of that kind, and the whole system is a constant inducement to architects and builders to build useless buildings in order that they may get the fees and profit from them.

Mr. CLINE. I have been able to follow the gentleman on this proposition to the point where the goods have been made. In the case of a State, after the State has the goods manufactured by the prisoner, and he has been remunerated, or his family has been remunerated for his labor, the question would arise, How shall the goods be disposed of? I would be very much interested in having the gentleman give his idea of how we should dispose of the goods.

Mr. SHERLEY. My idea, particularly as to Federal prisoners—and I have thought of that only—is to have the prisoners employed in the manufacture of goods used by the Federal Government. For instance, there is no reason why they could not be making, as one gentleman suggested, mail sacks for the Postal Service. There is a great deal of work, not only in connection with the Post Office Department, but also in connection with the Army and the Navy, that they could be em-

ployed in, and the output of their labor could be used by the Government without bringing it into competition directly with free-made goods outside, and without having the tendency of breaking the market, which is what the laboring people properly complain against.

Mr. CLINE. Of course, if the theory is good for the Federal Government—and I am in harmony with the gentleman's view—it would also be good for the States——

Mr. SHERLEY. Providing the States had the same activities.

Mr. CLINE. The question is, What will the State do after the goods are manufactured by the convicts?

Mr. SHERLEY. I presume it will be possible for the State to use the prisoner in the manufacture of equipment which it uses; for instance, desks for public schools, or to use them on the public roads, which is highly desirable, not only from the standpoint of good roads, but also from the standpoint of the convict himself, for it gives him an outdoor pursuit rather than an indoor one.

Mr. CLINE. But would not that come into conflict with private employment?

Mr. HAY rose.

Mr. SHERLEY. In one sense it does, and in another sense it does not. It comes in conflict with private employment in the sense that it supplies a certain quality of material that otherwise would have to be supplied with outside labor; but it does not come in conflict with private employment in the sense of beating down the price, and that is the chief complaint of the laboring people.

Now I yield to the gentleman from Virginia [Mr. HAY].

Mr. HAY. Mr. Speaker, I want to say there is a proposition pending in Congress to work Federal prisoners in the construction of certain Federal roads. What would the gentleman from Kentucky think of a proposition of that sort?

Mr. SHERLEY. I should favor that idea, without committing myself to it without knowing the details. The general proposition I would favor, as I favor in my own State the use of the prisoners there on roads, instead of the barbarous system that we now have of farming them out to a lot of contractors, who make a profit out of them.

Mr. BARTLETT. Mr. Speaker, will the gentleman yield?

The SPEAKER pro tempore. Does the gentleman from Kentucky yield to the gentleman from Georgia?

Mr. SHERLEY. Certainly.

Mr. BARTLETT. I wish to say that the State of Georgia, after a very hard contest in the legislature by the governor, has succeeded in abolishing the old system that was fastened upon us of hiring out convicts to private parties. We have, at great expense, purchased a large farm, where the convicts are now employed. They produce various farm products, which are used partly in maintaining the other institutions of the State; but there are certain products that can not be consumed by the institutions of the State—for instance, cotton, which ought to be sold, either at home or abroad, to the people who manufacture cotton, in Massachusetts or elsewhere. Bills like this would prohibit the State of Georgia from selling that particular product if it happened to be in a State that followed this Webb law principle.

Mr. SHERLEY. My answer to the gentleman is this, that two courses are open. One is to exempt such agricultural products as he mentions, and the other is to let the lesser be swallowed up by the greater. There are a great many general laws that in their particular application work some hardship, and yet what Congress and the lawmaking body is to consider is not whether somebody will be injured or not, but whether the sum total of the result of the law is going to be good rather than evil.

Mr. BARTLETT. One more question.

Mr. SHERLEY. Certainly.

Mr. BARTLETT. The gentleman applies his objection to the Webb bill.

Mr. SHERLEY. I think the difference between the Webb bill and this bill lies in the fact that the Webb bill was unconstitutional and this clearly is not. That is my personal viewpoint. I think there is no doubt as to the constitutionality of this bill.

Mr. BARTLETT. I did not hear the gentleman's opening remarks. In what way does the gentleman distinguish this as being constitutional and the Webb bill not? I agree with the gentleman thoroughly. I believed when I voted that the Webb bill was unconstitutional, and so voted against it.

Mr. SHERLEY. I do not want to repeat what I said earlier. Briefly, I think this bill is in direct line with the decision of the Supreme Court in the case of In re Rahrer. The gentleman is familiar with that decision?

Mr. BARTLETT. Yes.

Mr. SHERLEY. Whereas the Webb bill was an attempt to limit interstate commerce, not by prohibition of the Federal Government, but to make it legal or illegal according to the particular action of a State and the intent of the shipper, which brought into it an element of uncertainty and of foreign sovereignty that, to my mind, was beyond the power of Congress to make the test of the legitimacy of the transaction.

I beg to thank the House for its attention, and I will be glad to yield such remaining part of my time as I have. [Applause.]

Mr. MANN. I should like to take the floor in my own right. I understood that while I was out for a moment some arrangement was made for closing debate. Did that cover the ordering of the previous question?

Mr. LEWIS of Maryland. It did.

Mr. MANN. That is unfair, and I shall ask to have that action of the House rescinded.

Mr. LEWIS of Maryland. I shall have to oppose that.

Mr. SHERLEY. It is in order to amend now. The gentleman has the floor. It is in order for him to amend the bill.

Mr. LEWIS of Maryland. The previous question is ordered at half past 3.

Mr. MANN. I thought you had ordered the previous question already.

Mr. SHERLEY. Oh, no. You can amend it now.

Mr. MANN. I yield 15 minutes to the gentleman from California [Mr. J. I. NOLAN].

Mr. J. I. NOLAN. Mr. Speaker, for over 100 years the question of the abolition of prison-contract labor has been before the people of this country, remedial legislation having been introduced at various times in the legislatures of the several States of the Union. The failure of this legislation to pass, in most instances, being due to the activities of well-organized prison-labor contractors and their allies, the prison warden and the so-called Prison Reform Associations.

For over 29 years the subject of convict labor, in one form or another, has engaged the attention of the Congress of the United States. Scores of bills have been introduced in both branches of this great legislative body. These have been considered by committees, extended hearings have been held, thousands of pages of testimony taken; and reports by the dozen have been submitted, practically all of them recommending favorable action.

Aside from the passage of laws prohibiting the employment of convicts on public buildings, and the purchase of convict-made goods for the use of any of the departments of the General Government, prohibiting the employment of Federal prisoners under the contract system, the prohibition of importation from foreign countries of goods on which convict labor has been employed wholly or in part, practically no headway has been made along the lines of eliminating the most vicious and insidious phase of convict labor. I refer to the system at present in vogue in 24 of our great States known as the contract system, whereby the labor—yes, the very lifeblood—of the convict is bartered away at so many cents per day. Not dollars! For in some of the Eastern States the convict's labor is sold to the contractor for as little as 8 cents a day, and as near as can be ascertained the average price per day paid by the contractor for the labor of these poor unfortunates is about 50 cents.

Under this contract system the State houses, feeds, clothes, and guards the prisoner, who after all is but a single unit of human energy in the hands of the contractor, who is careful to see that there is no waste of that energy, no lost motion, and that every hour—and these convicts work on an average nine hours a day—is made a productive and profitable one for the contractor.

It is small wonder that there has been a vigorous and an aggressive opposition to Federal legislation which has for its purpose the elimination—yes, the cure—of this malignant cancerous growth which has so firmly fastened its tentacles into the very vitals of our industrial life.

Who are the people who have most vigorously opposed this legislation? What was the real motive that actuated them? Do we find in the record of the hearings that have been held here in this great Capitol the testimony of any responsible executive official of any one of the States in which this contract system is in vogue favoring its continuance? No! The only voice of protest on that score has been that of the prison warden—the silent partner of the contractor—the despot: the power behind the throne. The reason for his opposition is so

obvious that comment would appear superfluous. The arguments which have been advanced by these wardens lack the soundness that accompanies sincerity.

But, coming to the question, Who are the people who have fought this legislation? Tearing away the masks and disguises, we are face to face with the prison contractor himself. We find him in his dual rôle. On the one hand an exploiter of convict labor, on the other a potent factor—yes; even a high officer—in the councils of the so-called prison reform associations.

The only real opposition and the only voice of protest has been that of the prison contractor, and he has been careful to cloak and to hide his opposition and to use as his mouthpiece either the warden or the so-called prison reform association.

The ramifications of this contract system are so great and the interests and joint interests of this "prison ring" so interlocked that I am unable in this brief reference to the subject to give you the details. However, they are all of record, and a careful perusal of the facts and figures, I am sure, will convince the most skeptical of you.

The fact remains that these contractors have until recently been in absolute control of the leading so-called prison associations of this country, which are ostensibly interested in prison reform, but in reality their true object is to exploit the unfortunate prisoner for their private gain and to oppose any form of Federal legislation tending to emancipate the convict from the shackles of this iniquitous system. Those are the only motives which have actuated their opposition.

One of the most energetic and aggressive opponents of legislation to abolish the prison contract-labor system was Mr. Edward Boyle, of Chicago. He repeatedly appeared before the committees of this House, ostensibly as the representative of the National Conference of Charities and Corrections, of which organization he was the treasurer, but as a matter of fact he was here as the paid attorney of prison contractors who practically dominated the prison-labor market of the United States.

Another supposedly active worker in the cause of prison-labor reform was Frederick H. Mills, of New York, who was treasurer of the American Prison Association and a director in the International Prison Congress. Mr. Mills was known as one of the most prominent penologists in America, but it was not quite so generally known that in his private life he was a prison-labor contractor, or that he used his high public office in these so-called reform associations for the purpose of suppressing any discussion of the evils of the prison contract-labor system.

It was through such men as these that the prison contractor worked. That he was successful is attested by the fact that proposed remedial legislation seldom got beyond the committee to which it was referred.

The Ford-Johnson Co., of Cincinnati, Ohio, the president of which was George B. Cox, political boss of Hamilton County, had contracts for years with a number of penal institutions for the manufacture of furniture, and got labor for as low as 8 cents a day in the New Haven (Conn.) county jail, and the average for all of their contracts was 34 cents a day.

The Bromwell Brush Co., of Cincinnati, Ohio, makers of brushes, controlled for a number of years the labor of prisoners in the Ohio workhouse at an average of 30 cents per day.

Twenty-four States still have, or had until March 4, 1913, the contract system in vogue in their penitentiaries.

PREVIOUS INVESTIGATIONS.

During these 29 years there have been four exhaustive investigations of the convict-labor question—three by the executive branch of the Government through its Bureau of Labor, one in 1885, another in 1895, and a third in 1904–5, and one by the legislative branch, through the Industrial Commission appointed in 1898.

The Bureau of Labor deals with the subject in its 1886 report in 612 pages; in its Bulletin No. 5, July, 1895, in 35 pages; and in its twentieth annual report, issued in 1905, in 794 pages; and the Industrial Commission devoted 166 pages to its review and report in 1900—in all, over 1,600 pages of authentic facts and figures. And in these reports practically every phase of this subject, so far as it relates to competition with free labor, is exhaustively treated. No thinking person could peruse those reports and escape the conviction that the subject of convict labor is one of vital concern to the welfare of our whole citizenship. It not only affects free labor, but the health and welfare of society at large.

So far as further investigation of this subject, either by congressional committees or commissions or by the Department of Labor, is concerned, practically nothing would be gained by such a course other than further delay. It would but prolong and hinder the action that must ultimately and necessarily be taken by the Federal Legislature.

The bill now before the House, Mr. Speaker, is the first vigorous and firm step toward the goal that must ultimately be reached—the absolute abandonment of the convict contract-labor system in all its forms.

The Committee on Labor, in submitting its report on H. R. 8716 (Rept. No. 2022, 50th Cong., 1st sess.), May 1, 1888—over 25 years ago—made the following observations with respect to the duty and the right of the Congress to pass remedial legislation of this character:

We can not admit that great evils, destructive in their effects and widespread, can exist in defiance of the National Congress, created by the whole people to establish justice and promote the general welfare. The safety and usefulness of the State, the prosperity and happiness of the people, depend upon the just observance of the cardinal political truth expressed in the familiar maxim, "So use your own as not to injure your neighbor." It applies with equal force to the State and to the citizen.

Your committee believe that free labor engaged in various important productive industries suffers great and serious injury from the unequal and unjust competition to which it is subjected by the prevailing systems of employment of convict labor by many of the States; that individual State legislation is incompetent to furnish adequate relief; that the necessary power is alone vested in Congress; that this power should be exercised to the end that capital invested, business good will long established, experience and skill acquired by years of industry may be protected and honest labor engaged in the productive industries involved may not be left without employment.

THE DUTY OF CONGRESS.

Although we are profoundly impressed with the conviction that the autonomy of the State should be preserved so far as possible under our dual form of government, yet, nevertheless, we feel it to be the duty of the National Legislature to exert to the fullest extent those constitutional powers conferred by the wisdom of the fathers when they are invoked, as in the present case, by citizens exercising the sacred right of petition and who furnish convincing proofs that their individual rights are assailed and their property threatened with destruction.

* * * * * * *

Finally, your committee base the authority of Congress to pass this bill not only upon the right in the National Legislature to regulate commerce between the States, to establish justice, to promote the general welfare, as expressly conferred in the Constitution, but in that fundamental principle upon which all legitimate sovereignty rests, that the welfare of the people is the supreme law.

PRISON POPULATION AND VALUE OF PRISON PRODUCTS.

The latest available statistics on prison population, supplied by the Census Office, show that in 1910 there were 2,823 prisons in the United States, and that the number of inmates was 112,881.

In 1905 the Bureau of Labor investigated only those penal institutions where the value of the productive labor was $1,000 or more during the year preceding the investigation. Out of a total of 2,823 prisons, 296 were thoroughly investigated and reported on, and in these 296 penal institutions there was found a daily average of 86,036 convicts, 93.5 of which were males. So that out of a total prison population approximating 113,000 over 76 per cent were confined in and employed in these 296 prisons. The conditions have changed but slightly, if at all, since those figures were compiled, and the same general percentages practically hold good to-day.

Of the 86,036 prisoners, 59.5 per cent of them, or 51,172, were engaged in productive labor in 89 different industries. The total market value of their product was $34,276,205. Of this amount nearly $17,000,000 worth of goods were produced under the contract system in 54 institutions, located in 27 different States. Over $3,000,000 worth of goods were produced under the piece-price system, which is but another form of the contract system. Ninety-seven per cent of these goods were produced in penal institutions and 3 per cent in juvenile reformatories.

Based upon the data secured the Bureau of Labor estimated that 32,801 free laborers would be required for the same work. And, measured by the value of the goods produced, the contract system far outranks any of the other systems, as 49 per cent of all goods produced were made under that system. Since that report was made the contract system has been abolished in a few States by constitutional convention in Ohio, by statute in New Jersey, but in this latter case, by reason of the failure of the legislature to make the necessary appropriations, the convicts are still being let to contractors on a one-year basis. In Ohio the contract system is still in force in some of the workhouses.

VALUE OF PRISON PROPERTY.

It was also ascertained by the Bureau of Labor that the total value of all property owned and controlled by the 296 penal institutions and reformatories covered in the report was $105,378,999, while that owned or controlled by prison contractors and lessees was but $8,493,790.

THE BOOT AND SHOE INDUSTRY.

The industry which was most largely affected by this enormous convict-labor output was boots and shoes, for $8,527,596 is the value of that product, or 24⅞ per cent of the total output of all convict labor. This product was confined to the penal institutions in 11 States, and, the report shows, was greater by

39 per cent than the export trade in boots and shoes for the fiscal year 1905, the figures being:

| | Pairs. |
|---|---|
| Convict-made shoes | 7,389,354 |
| Exported (produced by free labor) | 5,315,699 |

THE HOLLOW-WARE INDUSTRY.

Thousands of skilled iron molders were employed in this industry in former years. This is the trade that I followed as a means of livelihood for 20 years, and I can personally testify to the fact that prison labor not alone deprived the molder of his means of livelihood, but drove all of the foundry men engaged in this line out of business. Even to-day, right in the heart of the city of Baltimore, a few miles from our National Capital, in the Maryland penitentiary, several hundred men are employed in the prison under contract as molders and a corresponding number of skilled free men are walking the streets and the foundry proprietors in the entire district are suffering from this unfair competition.

At the present time there is a bill pending in the Maryland Legislature to abolish the contract system, and the prison contractors are fighting this measure, as they have always fought any and all remedial legislation, using their allies, the so-called prison-reform associations, in their campaign.

Prison contractors, with 50-cent labor, dominate the market, fix prices, and drive the employer of free labor out of business, simply because there has been no law under which the sale of the products of prison contract labor could be regulated.

The 1905 statistics show that the leading prisons sent out 7,000,000 pairs of shoes, 21,000,000 cigarettes, 10,000,000 pairs of stockings, 2,000,000 pairs of overalls, 360,000 boys' knickerbockers, 5,000,000 shirts, and 500,000 petticoats. This wearing apparel was made under the poorest sanitary conditions and in many instances by diseased and tubercular convicts.

DISPOSITION OF CONVICT-MADE GOODS.

As a general rule the State in which the goods are manufactured, either by law or through an understanding with the contractor, stipulates that the goods must not be sold within the State, but must be shipped out and sold in competition with free labor in other States.

Of the total amount of convict-made goods concerning which definite information was obtained by the Commissioner of Labor in 1905, only 34.7 per cent were sold within the borders of the State where produced, the remainder, 65.3 per cent, being disposed of in other States.

THE EFFECT OF COMPETITION.

Throughout the course of the several investigations and hearings which have been had on this subject during the past 29 years, manufacturers and others who have testified were unanimous in the opinion that the effect of convict-labor competition is most destructive. In the case of several industries, notably that of stove hollow ware, saddletrees, whips, and whiplashes, and cooperage in the Chicago market, prison-made goods have driven the products of free labor from the market.

Thirty-six years ago a special committee of the Ohio State Legislature, appointed to report upon "The effect of convict labor upon the manufacturing interest of the State," submitted the following conclusions:

The contract system interferes in an undue manner with the honest industry of the State. It has been the cause of crippling the business of many of our manufacturers; it has been the cause of driving many of them out of business it has been the cause of a large percentage of the reductions which have taken place in the wages of our mechanics; it has been the cause of pauperizing a large portion of our laborers and increasing crime in a corresponding degree; it has been no benefit to the State; as a reformatory agency it has been a complete, total, and miserable failure; it has hardened more criminals than any other cause; it has made total wrecks, morally, of thousands and thousands who would have been reclaimed from the paths of vice and crime under a proper system of prison management, but who now have resigned their fate to a life of hopeless degradation; it has not a single commendable feature; its tendency is pernicious in the extreme. In short, it is an insurmountable barrier in the way of the reformation of the unfortunates who are compelled to live and labor under its evil influences; it enables a class of men to get rich out of the crimes committed by others; it leaves upon the fair escutcheons of the State a relic of the very worst form of human slavery; it is a bone of ceaseless contention between the State and its mechanical and industrial interests; it is abhorred by all and respected by none except those, perhaps, who make profit and gain out of it. It should be tolerated no longer, but abolished at once.

That honest labor is injuriously affected and that the prison contract-labor system tends to pauperize free laborers is strikingly shown in the following paragraph from the special committee's report:

The testimony shows conclusively that the contract system carried on in our penal institutions is directly responsible for a large percentage of the reductions which have taken place in the wages of thousands of mechanics during the past four years. Nearly every manufacturer who testified before your committee attributed a large percentage of the reduction in wages to the system which enabled manufacturers who have prison contracts, and who employ large forces of convicts at cheap rates, to go into the market and undersell them. There is little or no room for doubt as to the evil effect of this system upon the interests of free labor. It not only tends to pauperize honest labor, but it is, in a great measure, responsible for the overcrowded condition of many of our penal institutions.

Mr. CLINE. May I ask the gentleman a question?

Mr. J. I. NOLAN. I will yield to the gentleman.

Mr. CLINE. I should like to inquire of the gentleman whether he would have convict labor employed at all, and if so, at what kind of work?

Mr. J. I. NOLAN. There are six different systems in vogue at the present time: First, the lease system; second, the contract system; third, the piece-price system; and they are all of the same caliber. The convict is exploited. There is a different remedy. There is the public-account system. So far as the convict is concerned, that system is the same as the piece-price system; but the two systems that are secure and that can be used to advantage by the State and the convict employed, so that he may became a useful member of society, are the State-use system and the public-works system. Several States, including the State of New York, have that system. The State of New York in its eleemosynary institutions and through its municipalities consumes over $20,000,000 worth of products yearly. They have had the State-use system in vogue in New York since 1897; but owing to the fact that the prisons were under political control, and through the fact that this man Mills, to whom I have referred, was in control of the sale of these products, only $1,000,000 has been manufactured for State use under that system.

THE EFFECT OF THIS LEGISLATION.

The question has been asked, What beneficial use can be made of the labor of convicts after the passage of this law?

There are not 10 penal institutions in the country where the prisoners are taught useful trades so that on their release they may have a chance to become useful members of society.

At the most, a dozen or two of contractors are the only beneficiaries under the contract and lease system, as has been proven by investigation. Only in a few instances has the State itself benefited in the leasing or contracting of its convicts. So in the enactment of legislation of this kind the people at large are the beneficiaries; and if the States will take advantage of their opportunity to employ their convicts under the State-use system, our penal institutions will cease to be a heavy burden on the taxpayer.

The choice of occupations open to these States is extremely varied. Let me show what some States have already done in this direction. Permit me to quote from a series of articles published by Julian Leavitt in the Baltimore News last month:

THE A B C OF THE PRISON-LABOR QUESTION.

This has been a subject of discussion in hundreds of books, reports, monographs, and magazine articles, covering tens of thousands of printed pages, within the last 50 years or more, so that even a summary of it would be beyond the province of this series of articles; but it may be well to state briefly that students of the problem are rapidly coming to agreement upon certain general principles, which may be formulated as follows:

a. The fundamental conditions of the problem are these:
1. The prisoner must be employed.
2. He must be employed productively.
3. But he must not be exploited for private profit or in unfair competition with free labor.

b. There are six interests involved in this question:
1. The interests of the State.
2. The interests of the prisoner.
3. The interests of the prisoner's family.
4. The interests of free labor.
5. The interests of the employer.
6. The interests of the consuming public.

c. The system of prison labor which will serve all or most of these interests is some combination or variant of the following:

1. Work on the public domain which would not otherwise be undertaken with free labor, particularly road building, reclamation, irrigation, tree planting, and allied conservation work.

2. A penal farm, the products thereof not to be sold on the open market, but to the penal, correctional, and charitable institutions of the State at a normal price.

3. Prison industries conducted within the prison walls, the products not to be sold on the open market, but to State, county, and city institutions and departments at a normal price, the profits from such sale, over and above the cost of maintenance, to be devoted to the support of the prisoner's family or to be funded for the prisoners themselves.

It is apparent that a judicious combination of these three systems can be made to work successfully in any climate and with any class of prisoners. Moreover, it provides for the interests of each of the groups named above. The State may thereby reduce the cost of its prison administration and the cost of supplies for the other State institutions. The prisoner may be healthfully employed and provided with a small fund wherewith to face the world again. His family may be protected against destitution. The free workingman may be protected against the concentrated and unfair competition of the contract shop; the employer of labor is protected against the demoralization of his market by the cut-throat methods of the prison exploiter, and the public is protected against the spread of penal diseases, penal dependency, and penal criminality.

Now, let us consider some of these systems in detail. First in importance is:

THE STATE-USE SYSTEM.

Briefly, under this system the convicts are employed, not by contractors, but directly by the State, and the goods that they manufacture

are sold not on the open market, but exclusively to State, city, and county institutions and departments.

The sanity and simplicity of this system are apparent. As a rule each Commonwealth tends to have a penal population that bears a fairly constant relation to the general population and to the "institutional" population. A great State like New York will have a big prison population. But it will also have full orphan asylums, insane asylums, almshouses, and homes for the deaf, the mute, the feeble-minded, the epileptic, the lame, the halt, and the blind. The inmates of these institutions all need food, clothing, and shelter. What can be more simple than to employ the able-bodied prisoners in the penitentiaries and reformatories of the State in the manufacture of these necessities? And if this is not sufficient to keep all the prisoners busy, why not enlarge the output to include needs of the other State and city departments—such as office furniture, school desks, street-cleaning apparatus, and the other thousand and one necessities for which the local governments pile up such heavy budgets?

Obvious as the system appears to be, it took New York exactly 100 years to discover it. The first open manifestations against the exploitation of convicts took place in 1796; but it was not until a full century of bitter struggle on the part of organized labor, of employers, and of social workers that the State-use system was finally embedded into the constitution of the State and actually adopted in 1897. To-day the three prisons of New York—Auburn, Sing Sing, and Clinton—manufacture the following lines of goods, as described in a recent official price list:

Wearing apparel: Prison and hospital suitings, overcoatings, uniform cloths, cotton shirtings and tickings, sheeting and toweling, collars and cuffs, white duck coats, muslin shirts, overalls, wrappers, ulsters, underwear, suits, caps, bath robes, skirts, hosiery, mittens, and shoes.

Furniture: Office and arm chairs, school desks, office desks, tables, dressers, wardrobes, assembly seats, recitation seats, settees, and bedsteads.

Institution supplies: Blankets, sheets, mattresses, pillows, pillow-cases, strait-jackets, restraint sheets, hospital stretchers, and instrument and operating tables.

Street-cleaning supplies: Dump carts and trucks, refuse and garbage cans, street brooms, wheelbarrows, and street scrapers.

Miscellaneous: Baskets, brooms, brushes, matting, tinware, and ironware.

The total prison output is about $1,000,000 per year. These goods, as already stated, are sold only to State, county, and city institutions at prices fixed by the prison commission; and no purchasing agent may buy in the open market without first obtaining a "release" from the prison commission certifying that the prison department is unable to supply the goods specified.

It has been peculiarly unfortunate that this system should never have had a fair trial in the State of its birth. It happened that from the very first it was put into the hands of a man who was in secret a prison contractor and whose private interest conflicted with the success of the State-use system at almost every point. This official, known as the sales agent, knifed the system by using antiquated machinery or hand labor in some of the shops; by deliberately subjecting many prisoners to idleness and then permitting the circulation of newspaper stories showing that the State-use system could not keep all of its prisoners employed, when, as a matter of fact, the prisoners were supplying barely one-twentieth of the available market; by trading in "releases" and by organizing a company that directly competed with the prisons for the State market. After 15 years of such practices he was finally exposed and dismissed last February.

THE LESSON FROM NEW YORK.

But even under so unfavorable a trial the system demonstrated its superiority over the contract system.

The State-use system has reduced prison competition to a minimum which organized labor is willing and glad to endure. It has reduced the prison population by thousands every year, because to-day there is no longer any incentive to railroad men to prison for the benefit of a contractor.

And it is to be hoped that the recent clean-up of the penal institutions of the State of New York will be beneficial not alone to the convict but to the State as well.

STATE USE IN CALIFORNIA.

Through the strong recommendation of Gov. Hiram W. Johnson, supported by organized labor, the Legislature of the State of California adopted the State-use system in 1911, and under efficient management it has been a complete success.

I quote the following from a letter received under date of February 24, 1914, from Mr. J. A. Johnston, warden of the State prison at San Quentin, Cal., in reference to the successful operation of the State-use system in that prison:

Since the passage of the law of 1911, providing for the State use of the products of the penal institutions of California, the inmates of this prison have been engaged in the manufacture of various articles used by the other institutions of the State.

Of course you must realize that it is a little early to make a very great showing, but, nevertheless, I can say that the results have been satisfactory and the outlook is very promising.

The law became effective July 1, 1911, and it took a little time to get started, but about the latter part of that year, or the beginning of 1912, things got under way. In the beginning the articles manufactured were raw and crude, due largely to a raw, crude, and callow organization. During 1912 our cash receipts for manufactured goods sold to other institutions amounted to $53,894.55, and during 1913 our cash receipts for similar goods were $38,544.87. The falling off in 1913 was due to the fact that the prison did not, because of unpreparedness in organization, turn out orders promptly and some of the other institutions were permitted to give their orders to regular dealers. Right now we are pretty well caught up with orders, have perfected the organization and are growing in efficiency, and this year expect to do a larger business and with much more satisfaction all around than heretofore.

We manufacture furniture—particularly chairs, rockers, tables, chiffoniers, dressers, and beds for the State hospitals, and desks, tables, and filing cabinets for the State offices. For the State normal schools we make student chairs, etc. In the iron and tinware department we make garbage cans, pails, milk cans, cooking and kitchen utensils for the institutions, and also manufacture clothing and shoes for the inmates of the State hospitals.

If the point of inquiry is as to whether or not we can keep our convicts busy on State work, my answer is that we can, for I believe that up to this time we have hardly scratched our market, and that as we improve in methods and organization in the prison the amount of business to be secured from the other State institutions will increase. Then, of course, the provisions of the law make the field very wide, for it includes not only the State institutions but all subdivisions of the State government, including county governments and the school districts, and as fast as we can assimilate the work we can secure more. At the present time we have not touched any school furniture outside of chairs and desks for normal schools, but we are planning to make desks of the kind used in the primary, grammar, and high schools, and when we are ready to take orders have no doubt we can get them.

Up to the present time nothing in the way of manufacturing has been carried on at Folsom. When the bill was passed in 1911 the prison at Folsom was without funds that would enable it to get a start in manufacturing, while San Quentin had a State prison fund that could be used for such a purpose, and so got an early start. At the last session of the legislature there was an appropriation of $33,060 for the erection of shop buildings at Folsom in which to carry on the manufacture of articles for State use, as provided in the 1911 law. Before the close of this year, undoubtedly, Folsom will get started in the work of manufacturing, and next year both prisons will be turning out articles for State use, and my opinion is that there will be plenty of work to keep the inmates of both prisons busy.

Ohio, by constitutional amendment, adopted the State-use system in 1912. It has not been in force a sufficient length of time in that State to have been given a fair test.

The passage of this legislation will not deprive the State of the opportunity of employing its convicts in both useful and productive occupations.

It has been conclusively shown that where convicts have been employed by the State on public improvements, road building, and other outdoor work, the State has been the gainer financially and the prisoner physically. In this connection, let me quote further from Mr. Julian Leavitt's articles:

CONVICT ROAD BUILDING.

The movement for convict road building has now gained such headway that no legislature can afford to ignore it. It has been the subject of legislation in at least a dozen States last year, and to-day fully two-thirds of the State legislatures are committed to some part of the program.

Poor roads in the country mean a high cost of living in the city; for mud roads mean a high cost of hauling of farm products, and this is, in the last analysis, the most important single item in the total cost of handling farm products. It has been estimated that the average cost per ton-mile on our average country roads is about 23 cents, while on some of the good roads of Europe it is less than 10 cents. In the end it is the city dweller—that is, the ultimate consumer—who pays this difference, plus. Good roads will permit the increasing use of motor trucks instead of the expensive horse. Good roads mean a better free delivery and parcel post, an increase in farm values, a quickening of all the vital elements in the economic life of a State. That State, therefore, which can apply its convict-labor problem to the solution of its road problems achieves a double triumph.

The ideal system of convict road building has been developed in the West, where much of the work is done under the honor system. It must be admitted at the outset that there are essential differences between western and southern prisons, which make it highly inadvisable for Maryland, let us say, to follow blindly the lead of Montana or Colorado. But the experience of the West has been far too suggestive to ignore entirely.

THE HONOR SYSTEM IN COLORADO.

When Warden Tynan took charge of the Colorado State Prison several years ago he found a hapless crew of 500 idle creatures who were on the verge of melancholia. To-day the prison is the center of a system of scenic roads that are the delight of the tourist and one of the chief assets of the State. And they have all been built cheerfully by convict labor, operating hundreds of miles from the prison, generally without watch or guard.

"I select the men for outside work," Warden Tynan tells me, "by personal contact with them. I know each prisoner. Wherever possible I get in touch with his people and pledge them to support me in the experiment.

"As a result our convict labor has paid. Many States have found convict labor outside the prison walls unprofitable, because they have paid too much attention to guarding the convicts, the armed guards frequently costing more than the labor was worth. We are at present working 50 per cent of our prisoners on the honor system. They are eager for road work. We make it an object for them to do good work and attempt no escapes, by commuting their time one month for the first year's road work, two months for the second year, and so on up to six months for the sixth year."

In this way the Colorado convicts have built several hundred miles of roadway, much of it blasted out of the solid rock. During 1909 and 1910 they built 50 miles at a cost of only $56,700, which if done by contract would have cost fully $200,000. During 1911 and 1912 they built about 300 miles, and Warden Tynan estimates an average of 500 miles to be constructed annually for the next 10 years.

"But," continues this new type of warden, "we have made manhood as well as money by this healthy, hearty outdoor labor. During the last three years we have had over 1,000 individual prisoners in the convict camps. These men work without guards some 50, 100, and even 300 miles from the prison. Less than 1 per cent have violated their pledges by successful escape. Communities no longer fear to have our convict road camps established near them. We have built up our men both physically and morally. They do not have the prison pallor, the hang-dog appearance, of the average convict. They are bronzed, healthy, efficient laborers, and in demand as such."

FROM PRISON FOUNDRY TO THE OPEN ROAD.

A few years ago the Oregon State prison was one of the worst in the country. The prisoners worked under contract in a stove foundry, with the usual accompaniments.

"No thought was ever given to the prisoners," says Gov. West in speaking of that period, "nor to the economic waste of contract labor. The prison grounds were filthy, the hospitals were crowded, and the men broken when they left prison."

Gov. West ousted the contractors and installed a road-work system, offering the labor of the prisoners to such counties freely as would

undertake to supply the raw material for road building. "At first we made many offers, but had no takers. In order to prove the practicability of the work I was obliged to launch into road building myself. There being no funds and equipment available, I was forced to borrow idle teams and raise funds through private subscription to cover the cost of housing and feeding the men and teams. We got results. We demonstrated that we could build roads for about one-third of what it was costing the several counties. To-day, if every man were of the right class, every one could be used in the open on the roads. As it is, we have at times used 35 per cent of the entire population in this way, the men being away from the prison day and night entirely on their honor." Some of these will attempt escape, of course. Of the 200 on the road last year, about 20 made the effort, and more than once Gov. West led a posse and recaptured the fugitive himself. Sometimes they return, repentant, alone, only to find that their disloyalty is resented more keenly by their fellow convicts than by the governor. One man escaped from the tuberculosis camp and got as far as San Francisco. There he repented, surrendered to the police, and was permitted to go back to Oregon unaccompanied by a guard. At the prison he apologized for his flight as an impulse of a moment, long regretted. The warden accepted his apology and reinstated him, but the honor convicts themselves were less lenient with the man, who by violating his pledge had endangered the privileges of all. They ostracized him completely, and the warden, in sheer pity, was compelled to remove him from the honor group.

Finally it may be well to add that under the contract system the Oregon State penitentiary drained the treasury of $40,000 a year. To-day it is self-supporting, and the prisoners earn for themselves and their families at least 25 cents a day.

New Mexico, which claims to have been the first State to introduce the honor system, reports that the men are far more efficient without the guards than with them. "One armed guard is useless, and the presence of a gun in a camp is always a menace." Of the 150 men in the honor camps about 17 escaped last year, but most of them were ultimately recaptured.

Similar reports come from practically all the Western States. Coming nearer East, Warden Codding, of the Kansas penitentiary, tried out 110 men; but nothing happened to make the warden regret the experiment. At the New Jersey Reformatory Superintendent Moore reports that last year he had 356 of the inmates at work outside of all inclosures. "Boys have worked more than half a mile away from the institution all night without any guards. As drivers, they always go and come from Rahway, a mile and a half distant, on their honor. With us the system is an unqualified success."

THE PRISON FARM.

I have already considered two of the newer constructive ideas in prison work—the State-use system within the prison and road building outside of prison. A third idea, more vital than either of these, is to be found in the wide-spreading movement for prison farms.

MOST SUCCESSFUL PENAL FARM.

The most successful penal farm in the world is that of the Swiss Canton Berne, located at Witzwill. Here, on a tract of 2,000 acres, free of walls, stockades, or other signs of confinement, some 200 or 300 prisoners receive, in the course of their sentence a training in practical farming, which virtually changes the world for them. These prisoners are, for the most part short-term men, fully 80 per cent of them serving less than one year; yet this shifting and shiftless mass of labor has converted an ordinary farm into a great agricultural plant worth fully $500,000, with a yearly output of cattle and hogs to the value of $20,000, dairy products to the value of $12,000, and other farm products to the value of $40,000. These results, according to Prof. Fetter, of Cornell, who has published a most illuminating report on the subject, have been achieved by simple business sense and organization. There are no idle guards on this farm to eat up the substance of the land. Every guard is a practical instructor or foreman and, when necessary, joins freely in the hard labor of the prisoners. These prisoners are trained to responsible duties as far as possible individually and learn to work, for the most part, without supervision. In short, these men are treated not as striped beasts of burden but as responsible members of a civilized community, and they respond accordingly. They have helped to draw the plans of the buildings that house them and have erected these buildings out of the raw materials and with a minimum of supervision. They have shaped all the structural steel used in the buildings, forged the iron work, finished the plumbing, wiring, tinning, and roofing, and even made the lightning rods; they have made the furniture, the stoves, the agricultural tools, wagons, brooms and brushes, barrels and boxes—in fact, practically the entire farm equipment. Shop and field complement each other so effectively that on stormy days even the tailors and shoemakers work in the field, and on rainy days practically everyone works in the shops. Each man gets a small wage for himself or his family. As a result, escapes are few in number, insubordination is rare, and punishment practically unknown.

SOUTH LEADS IN FARM MOVEMENT.

In the United States the South has naturally led in the farm movement because its prison population is largely black, and hence far better fitted for work in the cotton field than in the prison factory. Mississippi has two immense plantations in the Yazoo delta and several smaller plantations, aggregating fully 25,000 acres. Its yearly output is from 4,000 to 5,000 bales of cotton, and the State treasury clears nearly $200,000 a year from its convict labor. Louisiana has six penal farms, covering about 15,000 acres in all, much of it in corn and cane. One of the farms has a sugar refinery worth $500,000. Most of the other Southern States also have farms attached to their main prisons, which are used as outlets for the labor of the weaker prisoners or for those who are unfitted for factory labor. Most of these farms turn in great annual revenues to the State treasuries. Unfortunately, however, this is the most that can be said for them. They make no serious effort to reform their prisoners. The parole system is generally unknown. The indeterminate sentence, the suspended sentence, the prison school—in fact, most of the instruments of progressive penology—are generally absent. Whatever improvement there may be in the prisoner's lot is due to the open air and the sunlight rather than to any design on the part of the State. On some of these farms the worst abuses ever uncovered in our sad prison history have been revealed within the last few years—notably in Texas, where a legislative committee discovered that some convicts had been literally beaten to death, others abused and outraged in nameless ways, and still others driven to insanity by the guards on the State farms. All of which merely goes to prove that where the sole driving force is money the State may at times be as terrific an exploiter as any private individual.

REAL REFORM IN THE WEST.

To find a farm system that is truly reformative in its nature we must turn to the Middle West, where several wardens have attempted great things and a few have succeeded. The best of these seems to be at the Ohio State Reformatory, at Mansfield, under the superintendency of Dr. James A. Leonard. This farm is a small one, covering less than 2,000 acres, but it is notable in two ways: First, it sells its products not on the open market, as the southern prison farms do, but only to other State institutions, and at prevailing market prices. The products netted the State about $20,000 last year. The second and more important fact is that Dr. Leonard conducts his farm largely on the honor system. During the 10 years that the farm has been in operation some 2,600 prisoners have been allowed to work in the open without watch or guard. Only 18 ever attempted escape. The rest preferred their work.

The example set by the reformatory is now being followed by the Ohio State Penitentiary. During the last two years Warden Jones placed some 18 or 20 groups of selected prisoners, averaging 10 or 15 to a group, for honor work on the farms of the various State institutions. Some of the men escaped, of course, but the loss was so small that the warden and the board of administration are determined, despite the risk, to extend the experiment until it shall include the majority of the prison population. The first step in this direction was taken by the legislature last year, when it appropriated $250,000 for the purchase of a site for a prison farm to replace the old "pen" at Columbus.

SIMILAR STORIES FROM OTHER STATES.

From Michigan and Kansas, from New York and New Jersey come similar stories of new ventures in this field. In New York particularly the movement to raze Sing Sing and to transfer the prisoners to the open country has gained tremendous headway because of the recent disclosures of abominable conditions in the century-old cell block, and, on the other hand, because of the immense success of the 1,000-acre farm at Comstock, known as the Great Meadow prison, where hundreds of the worst slum products of New York are demonstrating their eagerness to rebuild their lives in the open.

The example nearest home, however, is to be found at Occoquan, near Mount Vernon, in Fairfax County, Va., where the District of Columbia has a penal farm of several thousand acres, tenanted by the very same class of convicts that fills the prisons of Maryland. Last year these men put up buildings estimated at a value of $125,000 for approximately $37,000. They run a brick plant with a capacity of 20,000 per day. They operate a quarry and a stone crusher. They operate a central power plant and a water plant worth about $50,000. The institution is to-day less than five years old, but it is rapidly reaching a stage of self-support and may soon net profits to the District.

CONVICTS AND CONSERVATION.

Convicts have been used for precisely such work in practically every civilized country in the world. England has used its prisoners to reclaim the moorland at Dartmoor, to construct a breakwater at Portland Harbor, to enlarge the dry docks at Portsmouth and Chatham, and many similar enterprises. In Denmark prisoners have reclaimed the heath of Jutland. In Prussia they have drained the Gross Moosbruch and dug the Nordhorn-Almelo Canal. In Austria and Hungary they have straightened streams, reclaimed marshlands, built dikes, and removed rapids.

In the United States, although practically every State has its conservation problem and its convict-labor problem, not one has as yet combined the two systematically. If the convicts of Louisiana and the other Mississippi States can be conscripted at flood time to build levees and dikes, why can not the convicts of Maryland be conscripted to reclaim the shore? It is more than likely that conscription would be unnecessary; that most of the prisoners would gladly volunteer for the work. And it is particularly fortunate at this moment in having at the head of its penitentiary board a man who has had the widest practical experience in reclamation work and who also has the public spirit to give his best thought to working out the details of the project if once it should be indorsed by the assembly.

PRESENTS RICH POSSIBILITIES.

The forest problem of the State also presents rich possibilities for the utilization of convict labor. Convicts can do the work cheaply and well. They have disposed of over 600,000 young trees at the State nursery run by prisoners at Comstock, N. Y., and the State conservation commission is clamoring for more. Moreover, the prisoners could not only grow the trees, but also plant them. They have planted fully 22,000,000 trees in New Zealand within the last 10 years, converting a desert waste into a forest that will ultimately supply most of the timber requirements of the country.

A SIGNIFICANT EXPERIMENT.

A significant experiment of this kind was tried last year at Clinton Prison, Dannemora, N. Y., where the State has some 18,000 acres of badly neglected forest land. Impressed by the need of reclaiming this stretch, the prison department and conservation commission of the State put heads together and agreed upon a scheme of cooperation. The prison supplied the labor in the form of 12 prisoners and a guard and the commission supplied an expert forester to superintend the work. Fortunately this forester, R. Rosenbluth, happened to be more than an expert. He was human, and he interested himself not only in getting the most out of the men, but in getting the most for the men out of the experiment. As a result there was complete harmony in the camp. Although the work was done 4 miles from the prison, no man attempted to escape, and the guard as a guard proved altogether unnecessary. During the 39-day period of the experiment, half of which were rainy, this little group planted 108,000 trees. Here is an extract from a glowing letter by Mr. Rosenbluth:

"The men were very well behaved. They worked hard and enjoyed themselves thoroughly. All of them improved in health while on the job, because the work is free and bracing and man's work. When you consider that the State owns perhaps 200,000 acres of land which is now waste and barren, not even adequately serving its purpose as watershed protection, you can see what a wholesome, noncompeting way this is of making use of prison labor.

"Another point: Woods work is one of the very few vocations, especially in the East, where the password to a job is ability to do the work. A man drops into a camp, gets his supper and bunk and breakfast and goes to work. No questions asked. No references required. If he can work, he holds the job. And it's well-paid work, too."

This bill permits any State to say to the prison contractor of every State where prison contract labor exists that the product shall be treated exactly as the product of the prisons of that

particular State is treated. This is only fair. And if it had not been for court decisions many States would have long ago enacted this legislation. The courts in their decisions have decreed that the people of the State have no right through legislation to protect themselves against the output of diseased convicts of other States. The present bill gives each State the right to enact remedial legislation against this iniquitous system.

THE PROGRESSIVE PARTY PLEDGE.

The Progressive Party was the only party in the 1912 campaign that made the subject of the abolition of convict labor a national issue. The platform of that party declares:

We pledge ourselves to work unceasingly in State and Nation for * * * the abolition of contract convict labor, substituting production for Government consumption only, and the application of prisoners' earnings to their dependent families.

In line with the platform of the Progressive Party I introduced H. R. 7755 August 26, 1913. That bill provides for the absolute prohibition of the shipment of the products of convict labor in interstate commerce, and also provides that any contractor or dealer in the products of convict labor must register and label, under the convict-labor act, all of the products of free labor in which he is interested and which he desires to ship in interstate commerce. The enforcement of that law would be placed in the hands of the Department of Labor.

The absolute prohibition of the shipment of the products of convict labor in interstate commerce is the real solution of this problem, and I intend to secure, if possible, favorable action on my measure at the earliest opportunity by the Committee on Interstate and Foreign Commerce of this House.

I stand for the prohibition of prison contract labor, believing it has a human as well as an economic side.

The unfortunate men and women in our prisons to-day are there not from choice but in many instances because they could not resist temptation or because of some crime committed in a fit of passion; and many have committed crime because of being in actual want due to our present social and industrial system, which casts so many working men and women adrift during periods of unemployment and for whom society makes no provision whatever, some of whom become desperate and find their way behind prison walls.

Only recently Gov. Foss, of Massachusetts, made the statement that—

Out of 27,000 sentences each year to Massachusetts jails and prisons, approximately 10,000 are not for any crime whatever, but only for poverty. This happens because the law has permitted judges to throw into jail persons who are too poor to pay small fines.

The prison contractor has exploited these poor unfortunates long enough. If any benefit is to come from their labor, let it come to the people through the State-use system, provision being made to care for the family or dependents of the prisoners by paying them a fair share of the profits accruing from the labor of the prisoner. Should he not have any dependents, this fair share of the profits of his labors should be set aside to his credit, so that at the end of his term he may have a competence to start fairly in his battle with the world to live down the past.

Our State prisons can be used to advantage in turning the prisoner out so that he may become a producer and a useful member of society. This can be accomplished through education where needed and the chance to learn a skilled trade, care being taken to have established diversified industries. This can readily be accomplished owing to the great variety of manufactured articles that are constantly in use by State, county, and city institutions.

Believing the bill introduced by Representative BOOHER to be a good measure, I am heartily in favor of its passage by the House, and trust it will not meet the fate that like measures have met in the Senate, but that speedy action will be taken by that body to the end that the States may have the right, wherever they feel so inclined, to take measures to stamp out this iniquitous system.

The Federal Government, it is true, consists of 48 political—not commercial—subdivisions. Commercially there are no State boundaries. For the purpose of trade and commerce the Nation exists as a single entity, and until a law is passed which shall apply uniformly to every one of the 48 States there can be no effective regulation of convict-labor competition and its consequent evils.

The following are a few of those who are interested in the abolition of the present contract system:

The American Federation of Labor, the National Prison Labor Association, the National Civic Federation, the National Free Labor Association, the Commerce Club of St. Joseph, Mo., the National Boot and Shoe Manufacturers' Association, the National Canners' Association, Pennsylvania Manufacturers' Association, the Merchants' Association of New York, General Federation of Woman's Clubs, United Garment Workers of America, and Pittsburgh Chamber of Commerce.

We might add to this list thousands of organizations representing local, State, and National bodies.

Mr. MANN. Mr. Speaker, I would be in favor of this bill as reported if it amounted to anything; but it does not. It is of no value and of no effect. I shall offer an amendment as a substitute for the bill which is effective, if Congress in expressing its judgment on the intoxicating-liquor proposition got it right.

The Wilson law endeavoring to control the interstate transportation of intoxicating liquors was passed, I believe, in 1890. It was sustained by the Supreme Court as constitutional by taking all of the meaning and effect out of it; and shortly after I came to Congress it became a live topic. The constitutional method of controlling the interstate shipment of liquors was discussed very thoroughly in the House and in the Senate, and in the committees of the House and Senate, from shortly after I came into Congress, in 1897, until the last Congress.

The Wilson law provided that intoxicating liquors when shipped from one State to another should, upon arrival and delivery in such State—I am reading the language of this bill which is identical—

Be subject to the operation and effect of the laws of such State or Territory, to the same extent and in the same manner as though such goods, wares, or merchandise had been manufactured—

And so forth—

in the State, and shall not be exempt therefrom by reason of being introduced in the original package or otherwise.

Anyone who looked at that law would have supposed it might prevent the shipment of intoxicating liquors from one State to another, or that if, when shipped, they arrived in the second State contrary to the laws of the State, they would be subject to seizure by the officials of that State. That is what the law apparently said. That was enacted under the commerce clause of the Constitution. When the case reached the Supreme Court it held it to be constitutional, and held it to be constitutional by taking out all the meat of it. They said the law did not apply until the liquor was delivered to the consignee. In all the prohibition States there never was the slightest trouble under that law in shipping any liquor from outside to anyone in the States. It became the practice of the people dealing in liquor, if they did not have some particular person to ship to, to ship it to John Doe or Richard Roe by the express company, with instructions to the express company to sell the goods to pay the charges and remit anything that was obtained over the charges, and with directions not to sell for less than the value with the express charges. That became the practice in every prohibition State in the United States. The law did not affect it in the slightest degree. You could sell liquor to anyone who wanted it shipped into the State or you could ship it to John Doe and order the express company to sell it.

Nobody could touch it. Nobody could touch it until it had been delivered to the consignee, and you could not do anything then unless you had an official standing over him to capture it immediately upon its delivery. That would be the case under this bill. You could not touch the convict-made shoes. When shipped from one State to another they go to the express company's office; they are delivered by the railroad company to the express company and then delivered to the consignee. After the goods are opened you can not tell whether they are convict-made goods or not. The merchant puts them on the shelves, and nobody can reach him. This bill, if enacted into law, will be no more effective as to the transportation in interstate commerce of convict-made goods than the Wilson law was as to intoxicating liquors.

What did we do as to the liquor question? The Committee on Interstate and Foreign Commerce, of which I was a member, worked on the subject a long time. Col. Hepburn, the chairman, was insistent that a law which would govern the subject and protect Iowa, as he said, should be enacted. The Committee on the Judiciary finally took jurisdiction of the subject, both here and in the Senate. Senator Knox gave an elaborate opinion in the Senate on the subject and concluded that Congress could not control the subject at all, so far as making it dependent on the legislation of a State.

But in the last Congress, after all the work of years had been carried on, the Committee on the Judiciary of the two bodies each reported a bill known in the House as the Webb bill. The Senate passed it slightly different from the bill introduced in the House. The Senate bill was agreed upon, and a part of the provisions of the House bill was left out. That bill contained no penalty clause, but it did prohibit shipment of intoxicating liquors from one State to another where it was contrary to the law of a State.

Now, that has not been finally passed upon by the Supreme Court, but up to date it represents the best combined wisdom of the two Houses of Congress on the subject of controlling interstate shipment of goods. Convict-made goods may be placed in the same category, so far as our power is concerned. If we are to pass a law to have any effect we ought to pass one following the one that was supposed to be the wisest thing we could devise as to intoxicating liquors, and prohibit shipment of convict-made goods from one State to another when it is contrary to the laws of the State into which they are shipped.

Mr. BARTLETT. That bill was vetoed by the President and passed over his veto.

Mr. MANN. It was vetoed and passed over his veto. It represents the best wisdom Congress has been able to give to this subject. Whether it will prove valuable in the end I do not undertake to say.

Mr. WATSON. Will the gentleman yield?

Mr. MANN. Certainly.

Mr. WATSON. I will ask if the Webb law has not had practically the effect the gentleman has stated? In other words, does not the shipment of alcoholic liquors from a wet State to a dry State still continue?

Mr. MANN. I think not to any great extent. At least I am informed by people of my city who were formerly engaged in the business that they have gone out of the business. But that law has not been finally acted upon.

Now, I have prepared an amendment putting the proposition in the Criminal Code, which puts teeth into it, which were not in the Webb bill at all. There are no teeth in the Webb bill. My amendment provides that we shall add to the Criminal Code an additional section, which will read like this:

The shipment or transportation in any manner, or by any means whatsoever of any goods, wares, or merchandise manufactured, produced, or mined wholly or in part by convict labor, or in any prison or reformatory, from one State, Territory, or District of the United States or place noncontiguous to but subject to the jurisdiction of the United States, into any other State, Territory, or District of the United States or place noncontiguous to the United States but subject to the jurisdiction thereof, which are intended by any person interested therein to be received, possessed, sold, or in any manner used, either in the original package or otherwise, in violation of any law of such State, Territory, or District or place noncontiguous to the United States but subject to the jurisdiction thereof, is hereby prohibited. And any person who shall knowingly ship or transport any goods, wares, or merchandise in violation of the prohibition of this section shall be fined for each offense not more than $5,000 or imprisoned not more than two years, or both.

If what we did in reference to intoxicating liquors is of any value constitutionally, this provision, if enacted into law, would prohibit the shipment of convict-made goods from one State to another in violation of the laws of the State and would be of some value. But we know from our experience with the Wilson law that the bill as reported will have no valuable effect. I offer the amendment striking out all after the enacting clause and inserting the following, which I send to the desk.

Mr. SHERLEY. Mr. Speaker, will the gentleman yield?

Mr. MANN. Certainly.

Mr. SHERLEY. What does the gentleman say about the proposal to make his prohibition direct, and not dependent upon anything—to simply prohibit interstate shipment of convict-made goods?

Mr. MANN. Mr. Speaker, that subject has been up in respect to the intoxicating-liquor proposition.

Mr. SHERLEY. The question was not up there as to its constitutionality, but as to its policy.

Mr. MANN. I understand. I think it is a question as to policy.

Mr. LEWIS of Maryland. Mr. Speaker, will the gentleman yield?

Mr. MANN. Certainly.

Mr. LEWIS of Maryland. Mr. Speaker, I desire to offer an amendment, to add the word "or" after the word "prison" in the title of the bill as a committee amendment.

Mr. MANN. That would come in after the passage of the bill.

The SPEAKER pro tempore (Mr. CANDLER of Mississippi). That would be amended after the bill is passed.

Mr. MANN. Mr. Speaker, if I may have the amendment read, I wish then to yield the remainder of my time to the gentleman from Texas [Mr. SLAYDEN].

The SPEAKER pro tempore. The gentleman from Illinois offers an amendment, which the Clerk will report, and which will be considered pending.

The Clerk read as follows:

Strike out all after the enacting clause and insert:

"That the act entitled 'An act to codify, revise, and amend the penal laws of the United States,' approved March 4, 1909, be, and the same is hereby, amended by adding thereto a new section, to be known as section 245a, and to read as follows:

"'SEC. 245a. The shipment or transportation, in any manner or by any means whatsoever, of any goods, wares, or merchandise manufactured, produced, or mined, wholly or in part, by convict labor, or in any prison or reformatory, from one State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction of the United States, into any other State, Territory, or District of the United States, or place noncontiguous to the United States but subject to the jurisdiction thereof, which are intended by any person interested therein to be received, possessed, sold, or in any manner used, either in the original package or otherwise, in violation of any law of such State, Territory, or District or place noncontiguous to the United States but subject to the jurisdiction thereof, is hereby prohibited. And any person who shall knowingly ship or transport any goods, wares, or merchandise in violation of the prohibition of this section shall be fined for each offense not more than $5,000 or imprisoned not more than two years or both.'"

Mr. SLAYDEN. Mr. Speaker, I can see by the clock that there is only time enough to prefer a request to print in the RECORD what I had intended to say, which I do.

The SPEAKER pro tempore. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The SPEAKER pro tempore. The question is on the amendment offered by the gentleman from Illinois.

The question was taken; and on a division (demanded by Mr. MANN) there were—ayes 27, noes 48.

Mr. MANN. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER pro tempore. The gentleman from Illinois makes the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred and twenty Members present; not a quorum. The Doorkeeper will close the doors, the Sergeant at Arms will notify absentees, and the Clerk will call the roll. The question is on agreeing to the amendment offered by the gentleman from Illinois.

The question was taken; and there were—yeas 78, nays 216, answered "present" 4, not voting 134, as follows:

So the amendment was rejected.

The Clerk announced the following pairs:

On this vote:

Mr. PLUMLEY (for amendment) with Mr. MURRAY of Oklahoma (against).

Mr. MCLAUGHLIN (for Mann amendment) with Mr. STANLEY (against).

Until return from Colorado:

Mr. BYRNES of South Carolina with Mr. SUTHERLAND.

From February 6 until return from Colorado:

Mr. FOSTER with Mr. AUSTIN.

From February 6 until return from Michigan:

Mr. TAYLOR of Colorado with Mr. HOWELL.

Until further notice:

Mr. GOLDFOGLE with Mr. ROBERTS of Nevada.

Mr. GOEKE with Mr. VARE.

Mr. BURGESS with Mr. TREADWAY

Mr. BURNETT with Mr. GRIEST.

Mr. EVANS with Mr. SWITZER.

Mr. TAYLOR of Alabama with Mr. HUGHES of West Virginia.

Mr. BELL of Georgia with Mr. BURKE of South Dakota.

Mr. DALE with Mr. MARTIN.

Mr. ASHBROOK with Mr. CARY.

Mr. BATHRICK with Mr. COPLEY.

Mr. BROWN of West Virginia with Mr. DANFORTH.

Mr. CALLAWAY with Mr. AVIS.

Mr. CARLIN with Mr. BRYAN.

Mr. CASEY with Mr. BURKE of Pennsylvania.

Mr. CLANCY with Mr. DUNN.

Mr. CONNELLY of Kansas with Mr. FRENCH.

Mr. CONRY with Mr. FARR.

Mr. CULLOP with Mr. GREENE of Massachusetts.

Mr. DAVENPORT with Mr. HINEBAUGH.

Mr. DOUGHTON with Mr. HULINGS.

Mr. FITZGERALD with Mr. GILLETT.

Mr. FLOOD of Virginia with Mr. KREIDER.

Mr. GOODWIN of Arkansas with Mr. JOHNSON of Washington.

Mr. GUDGER with Mr. MCGUIRE of Oklahoma.

Mr. HEFLIN with Mr. MCKENZIE.

Mr. HENRY with Mr. MANAHAN.

Mr. KITCHIN with Mr. MERRITT.

Mr. LEVY with Mr. MOTT.

Mr. LLOYD with Mr. MILLER.

Mr. LONERGAN with Mr. MORIN.

Mr. PALMER with Mr. FORDNEY.

Mr. RAINEY with Mr. PATTON of Pennsylvania.

Mr. REILLY of Connecticut with Mr. MOSS of West Virginia.

Mr. RUCKER with Mr. PETERS of Maine.

Mr. SHARP with Mr. PLATT.

Mr. SISSON with Mr. SMITH of Idaho.

Mr. STEPHENS of Nebraska with Mr. PORTER.

Mr. TAYLOR of Arkansas with Mr. WOODRUFF.

Mr. WEBB with Mr. SMITH of Minnesota.

Mr. GOULDEN with Mr. DILLON.

For the session:

Mr. SCULLY with Mr. BROWNING.

Mr. ADAMSON with Mr. STEVENS of Minnesota.

Mr. METZ with Mr. WALLIN.

Mr. HOBSON with Mr. FAIRCHILD.

The result of the vote was announced as above recorded.

A quorum being present, the doors were opened.

The SPEAKER. The question is on the engrossment and third reading of the bill.

Mr. WATKINS. Mr. Speaker, we were reading the bill for amendment.

The SPEAKER. Why, the previous question went into effect at half past 3 o'clock. The question is on the third reading of the bill.

Mr. LEWIS of Maryland. Mr. Speaker, I want to demand the yeas and nays on the passage of the bill.

Mr. MANN. We have not got to that yet.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time; was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. LEWIS of Maryland. Mr. Speaker, I demand the yeas and nays on the passage of the bill.

The SPEAKER. The gentleman from Maryland demands the yeas and nays on the passage of the bill.

The yeas and nays were ordered.

The question was taken; and there were—yeas 305, nays 2, answered "present" 4, not voting 121, as follows:

YEAS—305.

So the bill was passed.

The Clerk announced the following additional pairs:

Until further notice:

Mr. L'ENGLE with Mr. PETERS of Maine.

Mr. STANLEY with Mr. SCOTT.

Mr. MAHER with Mr. SMITH of Minnesota.

Mr. PADGETT with Mr. MILLER.

Mr. RAUCH with Mr. PORTER.

Mr. TOWNSEND with Mr. CARY.

Mr. HOBSON with Mr. COPLEY.

Mr. CLANCY with Mr. AVIS.

Mr. ANSBERRY with Mr. BARCHFELD.

Mr. CANTRILL with Mr. FRENCH.

Mr. FOWLER with Mr. GILLETT.

Mr. GRIFFIN with Mr. HINDS.

Mr. HAMILL with Mr. LANGHAM.

Mr. JONES with Mr. PLUMLEY.

Mr. LEE of Georgia with Mr. PAYNE.

The result of the vote was announced as above recorded.

Mr. LEWIS of Maryland. Mr. Speaker, I offer the following amendment to the title: Insert the word "or" after the word "prison" in the last line of the title of the bill.

The SPEAKER. Without objection, the title will be amended accordingly.

There was no objection.

### LEAVE OF ABSENCE.

Mr. BROWN of West Virginia, by unanimous consent, was granted leave of absence on account of personal illness.

### MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed without amendment bills of the following titles:

H. R. 11231. An act to repeal an act regulating the construction of bridges across the Muskingum River in Ohio; and

H. R. 13365. An act to authorize the construction, maintenance, and operation of a bridge across the Tombigbee River near Old Cotton Gin Port, in Monroe County, Miss.

The message also announced that the Senate had agreed to the amendments of the House of Representatives to bills of the following titles:

S. 3454. An act authorizing the Secretary of Commerce to lease to the city of Port Angeles, Wash., certain property; and

S. 3206. An act for the protection of the water supply of the city of Baker, a municipal corporation of the State of Oregon.

### BUREAU OF LABOR SAFETY.

Mr. LEWIS of Maryland. Mr. Speaker, I desire to call up the bill H. R. 10735.

The SPEAKER. The Clerk will report the title.

The Clerk read as follows:

A bill (H. R. 10735) to create a bureau of labor safety in the Department of Labor.

The SPEAKER. This bill is on the Union Calendar.

Mr. LEWIS of Maryland. Before going into the Committee of the Whole House I would like, if possible, to arrange the time for general debate. In order to raise the subject I ask unanimous consent that general debate on this bill be restricted to two hours.

Mr. MADDEN. Mr. Speaker, I reserve the right to object to that.

Mr. MANN. I suggest to the gentleman from Maryland [Mr. LEWIS] that he let it run during the day and attempt to close the debate on the next Calendar Wednesday.

Mr. LEWIS of Maryland. Would it be in order on the next day to make the same request?

The SPEAKER. The House goes into the Committee of the Whole House automatically.

Accordingly the House automatically resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 10735) entitled "A bill to create a bureau of labor safety in the Department of Labor," with Mr. RUCKER in the chair.

Mr. LEWIS of Maryland. Mr. Chairman, I ask that the bill be reported.

The CHAIRMAN. The Clerk will report the bill.

The Clerk read as follows:

A bill (H. R. 10735) to create a bureau of labor safety in the Department of Labor.

*Be it enacted, etc.*, That there is hereby created in the Department of Labor a bureau of labor safety. There shall be a commissioner of labor safety, who shall be the head of said bureau, to be appointed by the President, and who shall receive a salary of $5,000 per annum. There shall also be in the said bureau a chief clerk and such experts, special agents, clerks, and other employees as may be authorized from time to time by law. It shall be the province and duty of such bureau, under the direction of the Secretary of Labor, to make general and special investigation and examination of labor safety plans and devices of all kinds, and the need therefor, generally and specially, and also the study of all phases of the subject of vocational diseases, and to make public the results of such investigation, examination, and study from time to time. It shall also be the province and duty of such bureau, under the direction of the Secretary of Labor, to gather, compile, publish, and supply useful information concerning the use of labor safety plans and devices and vocational diseases in the industries of the United States and elsewhere.

SEC. 2. That there shall be erected a museum of sufficient size and capacity with grounds thereto annexed, in and upon which shall be exhibited approved devices for the safeguarding of machinery, the protection of employees from injury, the lessening of dangerous conditions which may exist in any industrial enterprise, and the methods of lessening, preventing, and controlling industrial diseases. All such appliances, devices, and arrangements may be exhibited at rest or in motion, as may best serve the purposes of such exhibit. That in addition to the museum hereinbefore referred to and in connection therewith there shall be established a laboratory, wherein may be examined and tested the relative efficiency of types of guards or other devices for the protection of machinery calculated to safeguard the employee or the general public from injury or industrial disease.

Mr. LEWIS of Maryland. Mr. Chairman, the object of this legislation is to supply some additional corrective, with a view to mitigate and reduce the accidents and occupational diseases which arise in American industries.

The Committee on Labor had two bills referred to it dealing with those subjects. One was the bill of the distinguished gentleman from Illinois [Mr. MANN], the minority leader, and the other the bill of the late Representative Bremner, from the State of New Jersey. In the committee's deliberations upon the subject it reached conclusions as to the treatment that should be applied to the subject, involving the application of the ideas embraced in the bills of both of these gentlemen, and the bill now reported and before the House comprises the essential provisions of both of the bills as thus introduced.

Mr. Chairman, there is probably no subject before the public functionaries of this Nation calling so loudly for remedial attention on the subject of industrial accidents in our country as this. I do not know how fully the fact is realized by our people at large, but it is still a fact that the ratio of the number of deaths and the number of injuries tend to run from two to as high as five times the number in the older countries of the world in the same lines of industrial occupation.

How far these frightful ratios are attributable to positive negligence in the individual it may be hard to say. My own impression, however, after the best thought I can give the subject, is this: There is a distinctively American temperament, constituted of the most restless and aggressive individualities of the Old World, willing to break the bonds of their habitations after centuries and come here as strangers to a newly discovered continent. Such persons and their children are liable to be more impatient and aggressive in their actions than those more sedate and quiet spirits which have been left behind; and probably this world-wide selection of aggressive spirits composing our population, and resulting in this distinctive American temperament, supplies the explanation for our high accident ratios in the United States. However that may be, sir, the condition

is here. We are paying these frightful life-and-limb prices in the way of accidents year after year, and, I say with regret, that the recent accident tables do not seem to show up to date any improvement in that respect.

But an improvement, I believe, is due. We have now a line of legislation known as workmen's compensation already adopted by some 25 States in the Union, in some of which—I think in four-fifths of which—the method of direct liability is employed, thus penalizing accidents, or perhaps it is better stated by saying that the prevention of accidents is premiumized, for these workingmen's compensation laws provide in principle that the employer shall be liable in a given amount to the dependents of the employee killed, or to the employee himself when injured, irrespective of any question of negligence as a producing cause of the accident; and I believe there can be no question but that the effect of such legislation in this country must ultimately be what it has proved itself to be in Great Britain, namely, a remedial agency of the highest efficacy; for on the railroads in Great Britain accidents have been reduced one-third as the result of the preventive influences of the compensation laws of Great Britain.

Now, that, sir, leads me to the financial aspects of this question—aspects which I believe ought not to be ignored merely because the more precious consideration of life and limb is also first involved. Sir, if the workmen's compensation bill had been passed to which the House gave its sanction a year ago, and to which the Senate gave its sanction at about the same time—the sanctions, however, not meeting in the way requisite for legislative action—if that measure had passed and railroad accidents had not fallen off after its passage, computation shows that the bill would have cost the American railways some $50,000,000 per annum.

If we take the other accidents into account, namely, those in the perilous industries generally, it is probably not an exaggerated statement to say that the employers and the business of the country would be presented with an accident budget annually of not less than $200,000,000.

So, barring wholly the remedial possibilities in the way of saving life and limb, and looking at this matter in its merely fiscal or economic aspects, it may have the effect of greatly reducing accidents and would go to greatly reducing the charges upon the industries of our country.

And in that connection I only wish to suggest that the passage of these compensation laws in the several States will supply the motive to the employer to search out and to apply in the most assiduous way any devices or methods which may be discovered having a character to prevent the happening of these accidents to his employees. There ought, therefore, to be some central point—a bureau whose function it would be to collect all available information upon this subject and to act as a clearing house for such information and supply descriptions of the devices which have been found useful in this or in other lands in reducing the number of accidents.

That, sir, is the object of this bill—to provide a bureau in the Department of Labor whose business it shall be to collect all available information with reference to accident prevention and with reference also to the prevention and cure of occupational diseases, and have it in readiness for those who may wish to apply it in their different lines of employment.

And now, sir, I yield half an hour of my remaining time to the gentleman from New Jersey [Mr. WALSH].

Mr. MADDEN. Mr. Chairman, the gentleman can not do that under the rules. I submit that he can not yield his time under the rules, but he can reserve it.

Mr. LEWIS of Maryland. Then, Mr. Chairman, I reserve the balance of my time.

Mr. MANN. After half an hour's time he can yield time.

Mr. LEWIS of Maryland. Then, Mr. Chairman, I yield half an hour of my remaining time to the gentleman from New Jersey [Mr. WALSH].

Mr. MADDEN. I object, Mr. Chairman, to anybody yielding time under the rules.

The CHAIRMAN. The uniform practice allows that.

Mr. UNDERWOOD. Mr. Chairman, the gentleman from Illinois [Mr. MADDEN] is clearly mistaken. It is against the rules to yield time in the five-minute debate, but in general debate a man can yield such time as he desires.

The CHAIRMAN. To whom does the gentleman yield?

Mr. LEWIS of Maryland. I yield half an hour to the gentleman from New Jersey [Mr. WALSH].

Mr. MOORE. Mr. Chairman, before the gentleman from Maryland yields the floor, as the chairman of the Committee on Labor, will he not yield to me for a question or two, asking the indulgence of the gentleman from New Jersey [Mr. WALSH]?

Mr. LEWIS of Maryland. Yes.

Mr. MOORE. The second section of this bill is undoubtedly going to provoke some discussion. Is this the paragraph suggested by the late Mr. Bremner?

Mr. LEWIS of Maryland. It is.

Mr. MOORE. Has the committee any data which will show the House what the cost of such a museum as is contemplated in that paragraph may be; what the extent of it would be, or where it would be located?

Mr. LEWIS of Maryland. No; we have not; but it is obvious that no sums could be expended under that section without the approval of the Committee on Appropriations.

Mr. MOORE. Is it the thought of the committee to have the bill passed with that paragraph included so that the Department of Labor further on can take up with the Appropriations Committee the question of the cost of the project?

Mr. LEWIS of Maryland. With the wisdom of each one of the proposals, item by item.

Mr. MOORE. Did the Committee on Labor give consideration to the cost of this project at all? I understand a museum is contemplated in which is to be housed appliances having to do with labor, the extent of which is not explained, and the magnitude of which is unlimited. The House ought to be informed as to the cost, and I wanted to know if the Committee on Labor had informed itself, or intended to trust to the Department of Labor later on?

Mr. LEWIS of Maryland. The Committee on Labor found the subject terra incognita as to cost; there were no definite data on that subject, and it thought there might be instances where the physical devices themselves ought to be displayed, and that the prudence of the Labor Department and the Committee on Appropriations might be trusted not to overdo it.

Mr. MOORE. The committee contemplates the purchase of ground on which the museum would be erected?

Mr. LEWIS of Maryland. We entered into no study of the cost of that museum.

Mr. MOORE. Did the committee consider the number and character of the devices that might be housed in that museum?

Mr. LEWIS of Maryland. The committee concluded that it would be impossible to draw any precise conclusions from the information available.

Mr. MOORE. The purpose of the committee was comprehensive as to the museum? It was not to be confined to railroad devices, like couplings, or elevator devices, but to all factory and industrial devices?

Mr. LEWIS of Maryland. It felt that this subject was under such disqualifications with respect to definite information that it would come to no particular conclusion.

Mr. WALSH. Will the gentleman yield to me?

Mr. LEWIS of Maryland. I will yield to the gentleman from New Jersey.

Mr. WALSH. Mr. Chairman, it seems to me that the gentleman from Pennsylvania, who is quite willing that great sums of money should be expended in opening channels of this country and in other river and harbor work, ought not to be so critical with respect to the expenditure of a small amount of money for the establishment and operation of this bureau of safety, which has for its object the safety of life and limb and the betterment of the condition of the great host of workingmen in this country of ours.

Mr. MOORE. I hope the gentleman from New Jersey is not going to oppose the opening up of the channels of commerce which will be in the interest of labor, simply because we inquire about a bill that contemplates the construction of a museum for the exhibition of safety devices without knowing anything about the cost or the real purpose to be attained. I hope the gentleman does not raise that question seriously, because if he does, I shall answer him when the time comes to do so.

Mr. WALSH. I am certainly not going to oppose the development of our waterways, because, as the gentleman knows, I am an advocate of them; nor do I think that the gentleman from Pennsylvania should oppose this safety bill on account of the comparatively meager expense involved.

Mr. Chairman, the bill on which I am about to speak has a significance quite out of the ordinary, due to the fact that it is a composition of two bills amended by the Committee on Labor, of which I have the honor to be a member. One of these bills was introduced by the gentleman from Illinois, Mr. MANN (Republican), and the other by the departed Member my esteemed colleague from New Jersey, Mr. Bremner (Democrat).

I consider it quite a distinction to have the opportunity of making my initial effort as a Member of this House in support of a bill which to a very great extent is the result of the work of "Smiling Bob" Bremner [applause], whose name deserves to, and I believe will, go down in the history of our National Legislature as that of a man who in the midst of constant and

excruciating physical suffering gave us all an example of fortitude and unconquerable good nature. [Applause.] We hear a lot, gentlemen, and we read a lot about the "brotherhood of man," but it is not often in actual life we have the pleasure of having known a man in whom the spirit of genuine brotherhood was so big and warm that he was eager and anxious under such circumstances as you know existed in his case to spend years of his life in devising and perfecting ways and means for promoting the well-being of our mighty army of American workers, among whom for so many years I was myself numbered. [Applause.]

This bill, Mr. Chairman, creates within the Department of Labor a bureau of safety and sanitation, for the purpose of investigating, studying, and helping in the development of whatever tends toward the greater protection of life and limb and the health of the thousands who labor. The bureau will have the power to put the result of their work on exhibition through the medium of a museum here in Washington, or in any great center of industry, for the instruction and benefit of employers of labor. And right here, gentlemen, I wish to emphasize a point which appeals to me forcibly in advocating the passage of this bill. While it is a measure which provides a new and very much needed source of blessing to the vast hosts of workers throughout the Nation, it will at the same time necessarily prove, in practice, of inestimable value to all employers of labor, for the existence and the workings of such a bureau at the expense of the Government will enable and encourage employers to keep in touch with the very latest improvements in methods of safety and sanitation, and help them also to reduce to a minimum the expense which they have to incur of necessity in rendering the conditions for their workers as safe and as sanitary as they possibly can.

I think the time is past when employers looked askance at any and every effort made for the improvement of labor conditions. The working of compensation laws in different States must have made it fairly evident that whatever makes for the benefit of the workers in health and safety makes also for the benefit of the employer by reason of the increased efficiency and the decrease in the number of industrial accidents, with their consequent unsatisfactory, costly, and long-drawn-out lawsuits, which helped to promote a feeling of class distinction, a spirit of antagonism, and a state of warfare in the industrial world which has more than once threatened serious disaster in the country. [Applause.]

Employers are coming to realize that the slogan of "Safety and sanitation" for the workers is also the slogan of economy and greater prosperity for themselves. I had some very practical experience in this regard during my time as a member of the legislature in my own State of New Jersey when I introduced and fought for the passage of a compensation bill under the leadership of the foremost of my constituents at the other end of the Avenue, who, by virture of his sterling worth, was lifted by the American people from practical political oblivion to the highest office in the land within three years.

We of New Jersey knew of Wilson what the rank and file of the people of the Nation now realize: That he is an eminent statesman, a scholarly gentleman, and what the poet calls the noblest work of God—an honest man.

Well, at the beginning there was bitter and intense opposition to the bill, as there was to all such legislation, but, notwithstanding this, I believe I am perfectly safe in making the assertion now that very few, if any, of the great employers of labor in my State would countenance the repeal of that law or any return to the conditions which existed previous to its enactment.

I do not know of a single instance in my State where an employer has failed to elect the compensation section of the law; on the other hand, the working people are satisfied as individuals and as labor organizations.

Mr. TOWNSEND. Will the gentleman permit an interruption?

Mr. WALSH. With pleasure.

Mr. TOWNSEND. The gentleman spoke of electing the adoption of certain features of the law.

Mr. WALSH. Yes.

Mr. TOWNSEND. I think it would be interesting if the gentleman would explain just what employers were permitted to do in that respect, to adopt or not to adopt, if the gentleman will state it.

Mr. WALSH. Of course, you know it would be unconstitutional to pass mandatory legislation compelling employers to pay so and so much to an employee for such and such an accident. You must give them their right of trial by jury; but if they want to waive that right of trial by jury and elect to adopt the compensation feature of that law, then, of course, it is absolutely legal and constitutional.

It was not essential that they should adopt it. They could have claimed the alternative of the right of trial by jury. I keep in fairly close touch with my State, and I do not know of one employer in that State who has not elected to adopt that compensation schedule. [Applause.]

You may remember how our great American railroads fought tooth and nail against the bill compelling them to provide air-brakes on their trains, and you know how they would now battle as a unit against any law which would even limit their use, because as a safeguard they have proved to be an effective remedy against accidents and consequent endless litigation and payment of damages.

The bill which is now before the House for our consideration, if enacted into law, is well calculated to promote industrial harmony and prosperity by bringing about the fostering conditions which will undoubtedly increase the percentage of efficiency among the workers, and thus benefit largely the employers. Every legislative effort which tends to promote such harmony between workers and employers is an effort in the right direction, and every law which will facilitate, as this one will, the efforts of employers to manifest a larger measure of consideration for their employees will prove a widespread benefit to the country and to the party under whose guidance it was enacted. It is a most encouraging thing to find that there are many employers of labor in this country who without the whip of compulsion by law have worked steadily to improve the conditions in their plants for the greater safety and comfort of their employees.

It is very gratifying to learn from a perusal of the testimony given before the Commission on Industrial Relations that many of our big business corporations, having plants located in cities where laws on this subject exist, have done vastly more on their own initiative than is requested by the law. In many European countries employers offer tempting premiums to those who by their inventive genius are able to improve existing methods of protection, and I am sufficiently enthusiastic about American ability to be of the opinion that under the stimulus of such a bureau as this bill provides our far-famed American ingenuity would soon succeed in furnishing thoroughly adequate means of protection at a minimum cost.

Thus far, Mr. Chairman, I have dwelt on the advantages which such a bureau will have for employers of labor. Naturally these advantages will be more evident in those States where compensation laws are on the statute books, and I am firmly convinced that such laws will very soon be in existence in every State and Territory of the Union. Now, if we take the other aspect of the matter and consider the value of this bill from the viewpoint of the workingman, I think it would be very hard to overestimate its advantages.

Reliable statistics show us that about 500,000 workers are killed or incapacitated in this country every year. The statement seems incredible, but even admitting the possibility of some error or exaggeration in figures which cover so wide a field, there yet remains enough to make the statement staggering. Think of it, gentlemen, almost half a million of our fellow beings every year either killed outright or through injuries brought face to face with that dreaded poverty which they are no longer able to avert!

Why, any war which would result in such a list of casualties as is reported in our industrial nation every year would go down in history as one of unexampled ferocity and horror. [Applause.] We cry out in condemnation of the atrocities of the war which is now going on in another land, and yet we practically stand stolidly by while this shocking and unnecessary and inexcusable carnage goes steadily on in our very midst, accompanied by horrors unsurpassed in war. In no other country does the accident rate reach such colossal proportions as in these United States. Oh, my dear friends and Members of this Congress, let me suggest to you that it is your duty and mine to see to it that through legislative means within our power the mighty hosts who labor are given an opportunity to reap the benefits which are theirs under the Constitution, which guarantees "life, liberty, and the pursuit of happiness" to all law-abiding citizens, and thus put an end to the deplorable destruction of human life and human agony which is being yearly offered up in the land on the altars of industry. [Applause.] It is very important for us to remember that we are here dealing with a class of people who, as a rule, have few, if any, resources to fall back upon in time of need. Their daily wage hardly admits of such provision. Multitudes of them struggle to make a home for themselves and enjoy its comforts, such as they may be, when the day's work is done. That home depends entirely on their earnings from week to week. Few of

us would be willing to change places with any of them; nevertheless it is their home, the result of their toil, and their only ideal of human happiness in a world which for them holds very few of the joys and comforts with which we may be familiar. What a tragedy, then, to take only one instance of this annual 500,000, where the sole support of such a home is either taken suddenly away by death or rendered "unfit for service" by some disabling accident.

I have not been insisting on these items, Mr. Chairman, for the purpose of making an appeal to your sympathies, although the mere statement of the truly heart-rending details of continual industrial disasters throughout the country can not but rouse the sympathy and the indignation, too, of anyone with a heart of human kindness; but legislation on the question is a matter of justice and not sympathy. [Applause.]

It is for us as national legislators to use our opportunities to enact laws of such a kind as will persuade and encourage, where we can not compel, all employers of labor to do whatever is necessary to bring about the desired result.

Men will talk to you, and writers will appeal to you, and politicians will enthuse with you, about the conservation and development of our natural resources. Every time a bill is before this House which gives any excuse for conservation speeches you will hear them from all quarters of this Chamber. With this I have no complaint; in fact, I am glad to know that we have so many Members who are eager about our resources; for surely, in the interest of the country at large, the conservation and development of these resources are of the utmost importance; but, at the same time, many of these very individuals will stand idly by, year after year, and let this mighty army of our fine American workingmen go to untimely graves or be flung like refuse into the rapidly increasing ranks of the poverty stricken and miserable.

Our forests are important as a natural resource; why, of course, they are. Our streams and rivers and lakes are important; the conservation of all the resources of our American soil is important; but I submit to you, gentlemen, that our most important resource is the mighty army of men, women, and children who produce the wealth of the Nation. [Applause.]

Is it not chiefly through the toil of their hands that all work of conservation must be finally carried out—aye, even the conservation of the country itself among the great nations of the world?

Are we not bound, then, as patriotic citizens to keep at heart the best interests of these millions of workers who have too long felt themselves to be the victims of neglect in legislation or of legislation which was partial? Are we not bound to use the opportunities which they as voters helped largely to give us to make laws which will work for their greater safety and security while they toil, and thus put an end to this disgraceful annual sacrifice of life, limb, and health and enable them to reach some measure of comfort and stable happiness in their lives?

It is a bad thing for a country when legislation for which there is crying need on the part of a large percentage of the population is overlooked or ignored by those to whom they must naturally look for its enactment. It has been very well said that "Man's inhumanity to man makes countless thousands mourn." It is just the lack of human and humane interest on the part of legislators, as well as on the part of employers, that has not only made "countless thousands mourn" in our own land, but has also developed in the hearts of other thousands a deep-rooted contempt for our laws and a correspondingly deep-rooted disrespect for our lawmakers, as being indifferent to the pressing needs of the laboring masses.

Now, it is very important for the continued stability and prosperity of the country that there be a widespread and sincere respect for its laws, but it is hardly possible that any such popular respect for laws can exist unless there be an equally general and genuine confidence in those to whom the making of the law has been intrusted. Nor can we ever hope for any very enthusiastic spirit of patriotism unless the people—the humblest worker as well as the greatest baron of industry—can feel assured that the lawmakers in State and Nation are working zealously and surely toward a fuller realization of the spirit of the Constitution for all the people. [Applause.]

The Democratic administration is in the limelight of national observation, and if we can satisfy the aspirations of the people for thoroughly representative government we shall have done much indeed to promote national peace and unity, patriotism and prosperity, together with respect for the law and for those who make it.

This bill represents no haphazard attempt at such legislation, nor it is anything in the nature of a sop to the working millions whose eyes are upon us and whose interests are at stake. It is a serious, well-thought-out, and determined attempt to place a law upon our statute books which will prove an incentive to the elimination of the conditions in the world of labor which have been and still are a disgrace to the country, a most fruitful source of misery and unrest and discontent and all the other ills that may afflict a people or work injury to a nation.

The two great measures already enacted into law have powerfully strengthened popular confidence in our administration. By such a law as this we reach out our hand, as it were, to the hosts of patient toilers and give them a hearty grip of an active and effective friendship, while at the same time speaking encouragement to every employer who has the interests of his employees at heart. And I believe that through legislation such as this the forces of discontent and possible revolt agninst law and order will rapidly lose their influence with the workers of the Nation, for all will feel satisfied that under the ægis of our Democratic administration there will be truly a government for the people—a reign of law and liberty. [Applause.]

Mr. STAFFORD. Mr. Chairman, I would like to ask the gentleman having charge of the bill how long he plans to run to-night? It is now nearly half-past 5 o'clock.

Mr. KEATING. Mr. Chairman, the chairman of the Committee on Labor desires to continue discussion until about 6 o'clock.

Mr. MADDEN. Mr. Chairman, I think we ought to have a quorum or find out if we can not get one, and I make the point of order that there is no quorum present.

Mr. STAFFORD. It is understood we are not going to vote on the bill to-night?

Mr. KEATING. It is so understood.

Mr. MADDEN. Mr. Chairman, I make the point of order there is no quorum present.

Mr. KEATING. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to; accordingly the committee rose, and the Speaker having resumed the chair, Mr. RUCKER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 10735, and had come to no resolution thereon.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed without amendment the following concurrent resolution:

House concurrent resolution 33.

*Resolved by the House of Representatives (the Senate concurring)*, That the two Houses of Congress assemble in the Hall of the House of Representatives, Thursday, the 5th day of March, 1914, at 12 o'clock and 30 minutes in the afternoon, for the purpose of receiving such communications as the President of the United States shall be pleased to make to them.

The message also announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 11338) making appropriations for the Post Office Department for the fiscal year ending June 30, 1915.

ENROLLED BILL AND JOINT RESOLUTION SIGNED.

The SPEAKER announced his signature to enrolled bill and joint resolution of the following titles:

S. 3206. An act for the protection of the water supply of the city of Baker, a municipal corporation of the State of Oregon; and

S. J. Res. 90. Joint resolution to continue in effect the provisions of the act of March 9, 1906 (Stat. L., vol. 34, p. 56).

ADJOURNMENT.

Mr. LEWIS of Maryland. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 27 minutes p. m.) the House, under its previous order, adjourned to meet at 11 o'clock a. m. to-morrow, Thursday, March 5, 1914.

## EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of northwest prong of Bay River to public wharf at dam in town of Bayboro, N. C. (H. Doc. No. 810); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

2. A letter from the assistant clerk of the Court of Claims, transmitting a certified copy of the findings of fact and conclusion in the case of Charles F. Rockwell, administrator of the estate of James Rockwell, jr., v. The United States (H. Doc. No. 811); to the Committee on Claims and ordered to be printed.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. O'LEARY, from the Committee on the District of Columbia, to which was referred the bill (H. R. 8593) amending the building regulations of the District of Columbia by providing for the better protection of persons engaged in and about the construction, repairing, alterations, or removal of bridges, buildings, viaducts, and other structures, reported the same with amendment, accompanied by a report (No. 336), which said bill and report were referred to the House Calendar.

Mr. LOGUE, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 13296) for the enlargement, etc., of the Wall Street front of the assay office in the city of New York, reported the same with amendment, accompanied by a report (No. 339), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

## PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. BORLAND: A bill (H. R. 14189) to authorize the construction of a bridge across the Missouri River near Kansas City; to the Committee on Interstate and Foreign Commerce.

By Mr. McCLELLAN: A bill (H. R. 14190) providing for purchase of site and for public building at Chatham, N. Y.; to the Committee on Public Buildings and Grounds.

By Mr. BYRNS of Tennessee: A bill (H. R. 14191) to establish a Bureau of Markets in the Department of Agriculture; to the Committee on Agriculture.

By Mr. CLARK of Florida: A bill (H. R. 14192) to appropriate $25,000 to erect at some suitable place within the State of Florida a fitting monument to the memory of Osceola, the chief of the Seminole Indians; to the Committee on the Library.

Also, a bill (H. R. 14193) authorizing the Secretary of War to deliver to the city of Gainesville, Fla., two condemned bronze or brass cannon; to the Committee on Military Affairs.

By Mr. SLOAN: A bill (H. R. 14194) providing for loan of disabled or obsolete cannon; to the Committee on Military Affairs.

By Mr. J. M. C. SMITH: A bill (H. R. 14195) to prohibit the transportation of certain corporate stocks and bonds by the United States mail; to the Committee on the Post Office and Post Roads.

By Mr. CLANCY: A bill (H. R. 14196) authorizing the Tuscarora Nation of New York Indians to lease or sell the limestone deposits upon their reservation; to the Committee on Indian Affairs.

By Mr. FLOOD of Virginia: Resolution (H. Res. 433) providing for the consideration of S. 4437; to the Committee on Rules.

## PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BARTLETT: A bill (H. R. 14197) for the relief of the legal representatives of Mrs. H. G. Lamar; to the Committee on War Claims.

By Mr. BYRNS of Tennessee: A bill (H. R. 14198) granting an increase of pension to Calvin S. Roberts; to the Committee on Invalid Pensions.

By Mr. CARLIN: A bill (H. R. 14199) granting a pension to Lucien D. Copin; to the Committee on Pensions.

By Mr. CONNOLLY of Iowa: A bill (H. R. 14200) for the relief of George M. Kimball; to the Committee on Military Affairs.

By Mr. DOREMUS: A bill (H. R. 14201) granting a pension to Charles Bruder; to the Committee on Pensions.

Also, a bill (H. R. 14202) granting an increase of pension to Ferdinand Mittelstnedt; to the Committee on Invalid Pensions.

By Mr. FAIRCHILD: A bill (H. R. 14203) granting a pension to Augusta H. Wilson; to the Committee on Invalid Pensions.

By Mr. GALLAGHER: A bill (H. R. 14204) granting a pension to America J. Austin; to the Committee on Invalid Pensions.

By Mr. GORMAN: A bill (H. R. 14205) to remove the charge of desertion from the military record of Michael Carter; to the Committee on Military Affairs.

Also, a bill (H. R. 14206) to remove the charge of desertion from the military record of Michael J. Doyle; to the Committee on Military Affairs.

By Mr. HARDY: A bill (H. R. 14207) granting a pension to James White Gillespie; to the Committee on Pensions.

By Mr. HOWARD: A bill (H. R. 14208) granting an increase of pension to Helen B. Read; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14209) for the relief of the estate of Epenetus Heath, deceased; to the Committee on War Claims.

Also, a bill (H. R. 14210) for the relief of the heirs of Frederick Hensolt, deceased; to the Committee on War Claims.

By Mr. JACOWAY: A bill (H. R. 14211) for the relief of the heirs of George W. Sleeker; to the Committee on War Claims.

By Mr. KEY of Ohio: A bill (H. R. 14212) granting an increase of pension to Williamine M. Van Marter; to the Committee on Invalid Pensions.

By Mr. KIESS of Pennsylvania: A bill (H. R. 14213) for the relief of Hiram Wilson; to the Committee on Military Affairs.

By Mr. LAFFERTY: A bill (H. R. 14214) for the relief of Joseph Giessner; to the Committee on Military Affairs.

By Mr. LOBECK: A bill (H. R. 14215) granting an increase of pension to Carrie M. Peters; to the Committee on Invalid Pensions.

By Mr. LOGUE: A bill (H. R. 14216) granting an increase of pension to Jane Alexander; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14217) granting an increase of pension to Jane M. Crowell; to the Committee on Invalid Pensions.

By Mr. LONERGAN: A bill (H. R. 14218) granting an increase of pension to Alexander Elcock; to the Committee on Invalid Pensions.

By Mr. MAGUIRE of Nebraska: A bill (H. R. 14219) granting a pension to Edward Meyer; to the Committee on Pensions.

By Mr. MOON: A bill (H. R. 14220) granting an increase of pension to Thomas C. Rutter; to the Committee on Invalid Pensions.

By Mr. MORGAN of Oklahoma: A bill (H. R. 14221) granting an increase of pension to Fredus H. Aldrich; to the Committee on Invalid Pensions.

By Mr. REILLY of Connecticut: A bill (H. R. 14222) granting a pension to Catherine M. Welch; to the Committee on Invalid Pensions.

By Mr. RUSSELL: A bill (H. R. 14223) granting an increase of pension to John W. Smith; to the Committee on Invalid Pensions.

By Mr. SMALL: A bill (H. R. 14224) for the relief of the estate of B. F. Havens; to the Committee on Claims.

Also, a bill (H. R. 14225) to carry out the findings of the Court of Claims in the case of the Catholic Church in Washington, N. C.; to the Committee on War Claims.

Also, a bill (H. R. 14226) to carry out the findings of the Court of Claims in the case of the Presbyterian Church in Washington, N. C.; to the Committee on War Claims.

Also, a bill (H. R. 14227) to carry out the findings of the Court of Claims in the case of the Methodist Episcopal Church South in Washington, N. C.; to the Committee on War Claims.

By Mr. SMITH of New York: A bill (H. R. 14228) granting an increase of pension to George R. Belcher; to the Committee on Invalid Pensions.

By Mr. STEENERSON: A bill (H. R. 14229) for the relief of Henry La Roque; to the Committee on Indian Affairs.

By Mr. UNDERHILL: A bill (H. R. 14230) granting an increase of pension to Ezra Niles; to the Committee on Invalid Pensions.

By Mr. HAY: Joint resolution (H. J. Res. 224) authorizing the Dowsett Co. (Ltd.) and its sublessees to remove the buildings erected by them on the military reservation of Schofield Barracks, Territory of Hawaii, on the expiration of their leasehold interest therein; to the Committee on Military Affairs.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Petition of A. R. Lebu, of Pacific, Wis., protesting against national prohibition; to the Committee on the Judiciary.

By Mr. ALLEN: Petition of various voters of Hamilton County, Ohio, against national prohibition; to the Committee on the Judiciary.

Also, petition of Dr. Louis Grear and 700 other citizens of Cincinnati, Ohio, against national prohibition; to the Committee on the Judiciary.

Also, petition of Charles Maffey and 278 other citizens of Cincinnati, Ohio, against national prohibition; to the Committee on the Judiciary.

By Mr. ANTHONY: Petition of the Union State Bank, of Everest, Kans., favoring amendment to income tax law; to the Committee on Ways and Means.

By Mr. ASHBROOK: Petition of Walhonding Valley Grange, No. 1751, favoring a law limiting the service of fourth-class postmasters and rural free delivery carriers to four years; to the Committee on the Post Office and Post Roads.

By Mr. BALTZ: Petition of sundry citizens of Illinois against national prohibition; to the Committee on the Judiciary.

Also, petition of sundry citizens of Illinois against national prohibition; to the Committee on the Judiciary.

Also, petitions of sundry citizens of the twenty-second Illinois congressional district, protesting against national prohibition; to the Committee on the Judiciary.

By Mr. BARCHFELD: Petitions of sundry citizens of the eighteenth ward of Pittsburgh, Pa., favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of the Pennsylvania Child Labor Association, favoring passage of House bill 12292, relative to child labor; to the Committee on Labor.

By Mr. BRUCKNER: Petition of Frederick W. Pfluger, of New York City, protesting against national prohibition; to the Committee on the Judiciary.

By Mr. BYRNS of Tennessee: Papers to accompany a bill (H. R. 14198) granting an increase of pension to Calvin S. Roberts; to the Committee on Invalid Pensions.

By Mr. CALDER: Petitions of H. I. Storms and other citizens of Kings County, N. Y., protesting against national prohibition; to the Committee on the Judiciary.

By Mr. COOPER: Petition of sundry citizens of Beloit, Wis., against Sabbath-observance bill; to the Committee on the District of Columbia.

Also, petition of the Southern Wisconsin Cheese Makers and Dairymen's Association, favoring amendment of act of March 3, 1913, relative to the manufacture of misbranded and deleterious foods, etc.; to the Committee on Interstate and Foreign Commerce.

Also, petition of the Federated Trades Council of Milwaukee, Wis., against national prohibition; to the Committee on the Judiciary.

By Mr. DALE: Petitions of sundry citizens of Kings County, N. Y., protesting against national prohibition; to the Committee on the Judiciary.

Also, petition of the Merchants' Association of New York City, favoring New York City for the Army-Navy football game; to the Committee on Military Affairs.

Also, petition of William C. Hawley, of New York, favoring passage of House bill 7374, for pensions for widows and orphans of Spanish War veterans; to the Committee on Pensions.

By Mr. DAVIS: Petition of the Lutheran Minnesota Conference of the Augustus Synod, of Cannon Falls, Minn., favoring the passage of the Burnett immigration bill (H. R. 6060); to the Committee on Immigration and Naturalization.

Also, memorial of the Minnesota Retail Jewelers' Association, of New Richland, Minn., favoring legislation to prevent frauds in watchcases, etc.; to the Committee on Interstate and Foreign Commerce.

By Mr. DIXON: Petition of the National Bank and Deposit Bank, of Rising Sun, Ind., favoring change in income-tax law relative to collection at source; to the Committee on Ways and Means.

Also, petition of sundry citizens of Ripley County, Ind., protesting against passage of the Columbus day bill; to the Committee on the Judiciary.

Also, petition of sundry citizens of Ripley County, Ind., protesting against passage of the Sabbath-observance bill; to the Committee on the District of Columbia.

Also, petition of sundry citizens of Ripley County, Ind., relative to the immigration bill (H. R. 6060); to the Committee on Immigration and Naturalization.

By Mr. DRISCOLL: Petitions of various voters of the forty-first and forty-second congressional districts of the State of New York, protesting against national prohibition (H. R. 168 and S. J. Res. 50 and 88) to the Committee on the Judiciary.

By Mr. ESCH: Petition of the Memphis Cotton Exchange, relative to certain conditions being inserted in all contracts for futures; to the Committee on Agriculture.

Also, petition of D. A. Tator Relief Corps, No. 27, Department of Wisconsin, protesting against any change in the American flag; to the Committee on the Judiciary.

By Mr. FINLEY: Memorial of the United Daughters of the Confederacy, relative to the naming of the military posts on the Canal Zone; to the Committee on Military Affairs.

By Mr. GARNER: Memorial of the Memphis Cotton Exchange, relative to conditions to be inserted in cotton futures; to the Committee on Agriculture.

By Mr. GERRY: Petitions of Robert Brucker Camp, No. 6, United Spanish War Veterans, of Westerly; Captain Allyn K. Capron Camp, No. 1, United Spanish War Veterans, of Providence; E. R. Barker, sr., vice commander in chief United Spanish War Veterans, of Providence; and Sidney Hoar Camp, No. 4, United Spanish War Veterans, Providence, all in the State of Rhode Island, urging passage of House bill 13044, granting a pension to widows and orphans of men serving in the Spanish-American War and Philippine insurrection; to the Committee on Pensions.

By Mr. GRAHAM of Illinois: Petitions of the Springfield (Ill.) Federation of Labor; Bartenders' Union No. 573; sundry citizens of the twenty-first congressional district of Illinois; Local Union, No. 147, Bakery and Confectionery Workers, of Springfield; and hotel and railroad employees of the twenty-first district of Illinois, protesting against national prohibition; to the Committee on the Judiciary.

By Mr. GRAHAM of Pennsylvania: Petition of the Memphis Cotton Exchange, relative to certain conditions inserted in contracts for futures; to the Committee on Agriculture.

Also, petition of W. G. Ally, of Philadelphia, Pa., protesting against national prohibition; to the Committee on the Judiciary.

By Mr. GREGG: Petitions of various banks and bankers of Galveston, Tex., favoring change in income-tax law relative to collection at source; to the Committee on Ways and Means.

By Mr. HELVERING: Petition of sundry citizens of Kansas, favoring national prohibition; to the Committee on the Judiciary.

Also, petition of sundry citizens of Kansas, favoring House bill 9687, for betterment of headquarters clerks in War Department; to the Committee on Military Affairs.

Also, petition of the Prairie Center (Kans.) Local Union, No. 640, favoring House bill 10076, relative to stock exchanges; to the Committee on the Post Office and Post Roads.

Also, petition of the Business Men's Association of Minneapolis, Kans., favoring continuance of city delivery service in Minneapolis, Kans.; to the Committee on the Post Office and Post Roads.

By Mr. HINEBAUGH: Petitions of sundry citizens of the twelfth congressional district of Illinois, protesting against national prohibition; to the Committee on the Judiciary.

By Mr. JACOWAY: Papers to accompany a bill (H. R. 14211) for the relief of the heirs of George W. Sleeker; to the Committee on War Claims.

By Mr. LAFFERTY: Petition of the Portland (Oreg.) Bartenders' League, No. 339; Bartenders' Union, Local No. 142, Oregon; and citizens of Oregon, against national prohibition; to the Committee on the Judiciary.

Also, petition of sundry citizens of Oregon, favoring national prohibition; to the Committee on the Judiciary.

By Mr. LEVY: Petition of Edward M. Wheeler, of New York City, favoring passage of House bill 9292, the classification bill; to the Committee on Labor.

Also, petitions of the Buffalo Chamber of Commerce, the Railway Business Association, the American Locomotive Co., and the Manganese Steel Rail Co., favoring legislation for bureau for bill drafting and reference; to the Committee on Appropriations.

Also, petition of the Scandinavian Hundred Men Society, of Brooklyn, favoring passage of bill for erecting memorial to John Ericsson; to the Committee on the Library.

Also, petition of New York Mailers Union, No. 6, favoring passage of the Bartlett-Bacon anti-injunction bills; to the Committee on the Judiciary.

Also, petitions of Light & Schlesinger and Daggett & Ramsdell, of New York City, favoring passage of the Ransdell-Humphreys bill for flood control; to the Committee on Rivers and Harbors.

Also, petition of J. E. Hiller, of New York City, protesting against national prohibition; to the Committee on the Judiciary.

By Mr. LIEB: Petitions of G. A. Beard & Co., Schultze, Waltman & Co., Sunnyside Coal Co., the American Pharmacy Co., and August Schmitt & Sons Co., all of Evansville, Ind., protesting against national prohibition; to the Committee on the Judiciary.

By Mr. LONERGAN: Petition of F. H. Hemker and J. J. Missett, of Hartford, Conn., against national prohibition; to the Committee on the Judiciary.

Also, petition of C. W. Backus, of New York, favoring legislation for claim of Volunteer officers of Civil War to be retired, to date from 64 years of age in case of each officer; to the Committee on Military Affairs.

By Mr. McANDREWS: Petition of sundry citizens of the sixth district of Illinois, against national prohibition; to the Committee on the Judiciary.

By Mr. McCLELLAN: Petition of Frank Hasselmann and others, of Catskill, N. Y., protesting against national prohibition; to the Committee on the Judiciary.

Also, petition of residents of Hudson, Columbia County, N. Y., protesting against House joint resolution 168 and Senate joint resolutions 88 and 50, relative to national prohibition; to the Committee on the Judiciary.

By Mr. METZ: Petition of the Merchants' Association of New York, favoring New York City for Army-Navy football game; to the Committee on Military Affairs.

By Mr. MOON: Papers to accompany a bill (H. R. 14220) granting an increase of pension to Thomas C. Rutter; to the Committee on Invalid Pensions.

By Mr. MOORE: Petition of the Commodore Barry Branch of the American Continental League, of Philadelphia, Pa., urging defeat of attempts to repeal clause in Panama Canal act exempting American coastwise shipping from payment of tolls; to the Committee on Interstate and Foreign Commerce.

Also, petition of the John Paul Jones Branch of the American Continental League, of Philadelphia, Pa., against "One hundred years of peace celebration"; to the Committee on Foreign Affairs.

By Mr. PAYNE: Petitions of sundry citizens of Cayuga County, N. Y., favoring national prohibition; to the Committee on the Judiciary.

By Mr. REILLY of Connecticut: Petitions of sundry citizens of New Haven County, Conn., protesting against national prohibition; to the Committee on the Judiciary.

By Mr. ROUSE: Petitions of 126 citizens of the State of Kentucky, protesting against national prohibition; to the Committee on the Judiciary.

By Mr. STEENERSON: Petition of J. M. Faruseth, of Gully, Minn., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of P. N. Pederson, A. H. Erickson, and J. B. Erickson, of Moorhead, Minn., against national prohibition; to the Committee on the Judiciary.

By Mr. STEPHENS of California: Petitions of sundry citizens of Los Angeles, Cal., favoring passage of Hamill bill for pensions and retirement of aged civil-service employees; to the Committee on Reform in the Civil Service.

Also, memorial of the Sacramento Valley Development Association, favoring rural farm-credit system; to the Committee on Banking and Currency.

Also, memorial of Los Angeles (Cal.) Lodge, No. 311, International Association of Machinists, relative to pay for overtime and longevity service of organized labor on Panama Canal; to the Committee on Appropriations.

Also, petition of the San Francisco Labor Council, approving action of the United States Government in dissolving the Central Pacific and Southern Pacific Railroad Cos.; to the Committee on Interstate and Foreign Commerce.

Also, memorial of the Southern California Child Labor Committee, of Los Angeles, Cal., favoring the passage of House bill 12292, relative to child labor; to the Committee on Labor.

By Mr. TALBOTT of Maryland: Petition of sundry citizens of Maryland, against national prohibition; to the Committee on the Judiciary.

By Mr. WHITACRE: Petition of members of the Young People's Christian Union Alliance of the State of Ohio, favoring national prohibition; to the Committee on the Judiciary.

By Mr. WINSLOW: Petitions of sundry citizens of Worcester, Mass., and of Joseph Jackson and other citizens of Milford, Mass., protesting against national prohibition; to the Committee on the Judiciary.

Also, memorial of the John Hancock Branch of the American Continental League, of Worcester, Mass., protesting against the "One hundred years of peace celebration"; to the Committee on Foreign Affairs.

Also, petitions of various banks of Worcester, Milford, Westboro, Whitinsville, and Spencer, all in the State of Massachusetts, favoring change in income-tax law relative to collection at source; to the Committee on Ways and Means.

By Mr. WILSON of New York: Petition of the Merchants' Association of New York City, relative to New York City as the place for the Army-Navy football game; to the Committee on Military Affairs.

By Mr. YOUNG of North Dakota: Petition of sundry citizens of Westhope and others of North Dakota, favoring amendment to the Constitution abolishing polygamy; to the Committee on the Judiciary.

## SENATE.

### THURSDAY, *March 5, 1914.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, look upon us in Thy tender mercy as we gather to face once more the solemn obligations and duties of the Senate. Grant us the wisdom that cometh from above. When Thou hast spoken to us out of human history and taught us by human philosophy and inspired us by divine revelation, Thou hast not even then exhausted the treasures of Thy wisdom and power and Thy ability to guide us in the ways of truth. So do Thou speak to the heart of each of Thy servants this day that we may know God's will, that we may follow God's will, that we may do God's will. For Christ's sake. Amen.

The Journal of yesterday's proceedings was read and approved.

LAND IN ST. AUGUSTINE, FLA. (S. DOC. NO 434).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of War, suggesting the repeal of the provision contained in the Army appropriation act approved March 31, 1911, relative to the release to the city of St. Augustine, Fla., of a strip of land not exceeding 23 feet in width on the north line of Fort Marion Reservation for the purpose of restoring the street formerly known as Clinch Street, etc., which was referred to the Committee on Military Affairs and ordered to be printed.

PUBLIC BUILDINGS (S. DOC. NO. 436).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Treasury, transmitting for consideration in connection with the urgent deficiency appropriation bill estimates relative to public buildings under the control of the Treasury Department, which was referred to the Committee on Appropriations and ordered to be printed.

EMPLOYMENT OF CONVICTS IN FOREIGN COUNTRIES.

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Secretary of Commerce, transmitting in further response to a resolution of November 10, 1913, additional reports in regard to the employment of convicts in foreign countries. The communication and accompanying papers will be referred to the Committee on Printing for determination.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented memorials of John Hancock Branch, American Continental League, of Worcester, Mass.; of John Paul Jones Branch, American Continental League, of Philadelphia, Pa.; of Rochambeau Branch, American Continental League, of Philadelphia, Pa., and of Liberty Bell Branch, American Continental League, of Philadelphia, Pa., remonstrating against an appropriation for the celebration of the so-called "One hundred years of peace among English-speaking peoples," which were referred to the Committee on Foreign Relations.

He also presented a petition of Menace Court, No. 16, Guardians of Liberty, of Cincinnati, Ohio, praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented petitions of sundry citizens of Bloomington and South Bend, in the State of Indiana, praying for the adoption of an amendment to the Constitution to prohibit polygamy, which were referred to the Committee on the Judiciary.

Mr. GRONNA presented a petition of sundry citizens of Lignite, N. Dak., praying for the enactment of legislation to establish a system of rural credits, which was referred to the Committee on Banking and Currency.

He also presented a petition of sundry citizens of Jamestown, N. Dak., praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which was laid on the table.

He also presented a petition of sundry citizens of Bowbells, N. Dak., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

Mr. SMITH of Michigan. I present a memorial of the Grand Army of the Republic of Belding, Mich., and ask to have it read.

There being no objection, the memorial was read and referred to the Committee on the Judiciary, as follows:

FEBRUARY 7, 1914.

*To the Sixty-third Congress of the United States:*

Whereas certain bills have been introduced in the Senate and House for a change in the United States flag, we, the members of Dan. S. Root Post, No. 126, Department of Michigan, Grand Army of the Republic, of Belding, Ionia County, Mich., at a regular meeting of said

post, held on the above date, number of members present, by unanimous vote, do most earnestly protest against any change whatever in the flag that we imperiled our lives to preserve, and which is known throughout the world as the emblem of liberty and equality.

FRANK R. CHASE,
*Commander Department of Michigan,*
*Grand Army of the Republic.*
W. R. OLDS, *Adjutant.*

Mr. McCUMBER. Mr. President, I have had a number of letters concerning this subject. I have not found out that anyone has introduced such a bill. If such a bill has been introduced and any Senator knows of it, I wish I might be informed of the number of the bill.

Mr. GALLINGER. It has been introduced in the other House.

Mr. McCUMBER. I have not found any such bill introduced in either the Senate or the House. I will ask the Senator from Michigan if he knows positively that such a bill has been introduced in either branch of Congress.

Mr. SMITH of Michigan. I have been informed that a bill has been introduced in the House of Representatives having for its object a change in the character of the American flag, but I presented this remonstrance from the Michigan Grand Army of the Republic because it came to me in due course of business, and not because I regard any such change as imminent.

I do not know who introduced the bill, but I am informed that there is a bill pending in the House of Representatives having such an object in view.

Mr. McCUMBER. I imagine, Mr. President, that such a bill could get exceedingly little support in either branch of Congress.

Mr. SMITH of Michigan. It would not get any from me, I will state to the Senator from North Dakota.

Mr. McCUMBER presented a petition of sundry citizens of Souris, N. Dak., praying for the adoption of an amendment to the Constitution to prohibit polygamy, which was referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Courtenay, N. Dak., praying for the enactment of legislation to provide an educational test for immigrants to this country, which were referred to the Committee on Immigration.

Mr. CHAMBERLAIN presented a petition of sundry citizens of Gaston, Oreg., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Salem, Oreg., praying for the enactment of legislation to provide an educational test for immigrants to this country, which was referred to the Committee on Immigration.

Mr. POMERENE presented petitions of sundry citizens of Cincinnati, Springfield, Canton, Clinton, Millsburg, Sandusky, Akron, Kingsville, Kent, Larue, Athens, and Massillon, all in the State of Ohio, praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which were ordered to lie on the table.

Mr. BRANDEGEE presented memorials of sundry citizens of Bridgeport, New Haven, and Stratford, all in the State of Connecticut, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. KERN presented a petition of sundry citizens of Fulton County, Ind., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. CLAPP presented memorials of sundry citizens of St. Cloud and Minneapolis, in the State of Minnesota, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. BURLEIGH presented a petition of sundry citizens of Bangor, Me., praying for the enactment of legislation to provide a retired list of volunteer officers of the Civil War, which was referred to the Committee on Military Affairs.

Mr. GALLINGER presented a petition of Lucy Hale Chandler Council, Daughters of Liberty, of Concord, N. H., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

Mr. LODGE presented memorials of sundry citizens of Holyoke, Chicopee Falls, Springfield, Lowell, and Brockton, all in the State of Massachusetts, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented memorials of John Boyle O'Reilly Camp, American Continental League, of Springfield; of Anthony Wayne Branch, American Continental League, of Brockton; and of John Hancock Branch, American Continental League, of Worcester, all in the State of Massachusetts, remonstrating against an appropriation for the celebration of the so-called "One hundred years of peace among English-speaking peoples," which were referred to the Committee on Foreign Relations.

He also presented a memorial of H. M. Warren Post, No. 12, Grand Army of the Republic, Department of Massachusetts, of Wakefield, Mass., remonstrating against any change being made in the United States flag, which was referred to the Committee on the Judiciary.

He also presented a petition of the board of directors of the Federation of Churches of Boston, Mass., praying for the enactment of legislation to increase the chaplains in the Navy, which was referred to the Committee on Naval Affairs.

Mr. SHIVELY presented memorials of sundry citizens of Indianapolis, Evansville, Fort Wayne, New Albany, Rushville, Muncie, Lawrenceburg, and Lake County; of Local Union No. 60, United Brotherhood of Carpenters and Joiners, of Indianapolis; and of Local Union No. 382, Cigarmakers' International Union, of Rushville, all in the State of Indiana, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. WARREN presented a petition of the Woman's Club of Laramie, Wyo., and a petition of Custer Post, No. 1, Grand Army of the Republic, Department of Wyoming, of Laramie, Wyo., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. ROOT presented a memorial of sundry citizens of White Plains, N. Y., remonstrating against the enactment of legislation compelling the observance of Sunday as a day of rest in the District of Columbia, which was referred to the Committee on the District of Columbia.

He also presented the memorial of A. H. Meyer, of New York City, and memorials of sundry citizens of New York City, Geneva, Seneca, Waterloo, Victor, Canandaigua, Rochester, and Cooks Falls, all in the State of New York, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. BRADLEY. I present the petition of Mrs. James Bennett, of Kentucky, which I ask may be printed in the RECORD and referred to the Committee on the Judiciary.

There being no objection, the petition was referred to the Committee on the Judiciary and ordered to be printed in the RECORD, as follows:

A petition of Mrs. James Bennett, of Kentucky, to the honorable Members of the United States Senate and House of Representatives in Congress assembled.

Mrs. Bennett to the honorable Members of Congress *most respectfully showeth*: That the States of Wyoming, Colorado, Utah, Idaho, Washington, California, Oregon, Kansas, and Arizona, by removing the words "white and male" from their constitutions and laws as qualifications for voting, have enabled colored male and white and colored female citizens of the United States to have the same right to vote for Members of Congress, presidential electors, and United States Senators in them that white male citizens of the United States possess.

That some of our States, by having "grandfather" and other clauses in their constitutions and laws which directly or indirectly prescribe "white and male" as qualifications for voting, are preventing colored male and white and colored female citizens of the United States from having the same right to vote for Members of Congress, presidential electors, and United States Senators in them that white male citizens of the United States possess.

That these States, by doing the above-mentioned things, have made it appear that the right to vote for Federal officers is secured to citizens of the United States by the constitutions and laws of the States and not by the Federal Constitution.

After the Supreme Court of the United States decided in United States *v.* Reese, of 1876, that Congress had no constitutional power to make Federal laws that provided punishments for persons who hindered or prevented citizens from exercising a "right to vote" at any election that was secured to them by the constitution or laws of a State. And after the Supreme Court said in *ex parte* Yarbrough, in 1884: "If this Government is anything more than a mere aggregation of delegated agents of other States and governments each of which is superior to the General Government, it must have the power to protect the elections upon which its existence depends from violence and corruption. If it has not this power, it is left helpless before the two great natural and historical enemies of all republics—open violence and insidious corruption."

After thus declaring in the first part of its *ex parte* Yarbrough decision of 1884 that "the General Government must have the power to protect the elections upon which its existence depends from violence and corruption," the Supreme Court reversed the Minor *v.* Happersett and United States *v.* Cruikshank decisions of 1875 and 1876, in which it had decided that "the Constitution of the United States did not confer the right of suffrage upon anyone" by declaring in the

conclusion of ex parte Yarbrough that the "right to vote" for Members of Congress and presidential electors was secured to citizens of the United States by the Federal Constitution. And by deciding that sections 5508 and 5520 of the Revised Statutes of the United States—which were inappropriate legislation for the protection of citizens in exercising the new "right of exemption, etc." that the fifteenth amendment of the Federal Constitution had conferred upon them from their lack of the limiting words of "race, color, or previous condition of servitude"—were constitutional laws for the protection of citizens against the violence of private persons in exercising their "right to vote" for Members of Congress and presidential electors, because the first section of the fourteenth amendment of the Federal Constitution had authorized Congress to make laws which provided punishments for private persons as well as for State officers who hindered or prevented citizens from exercising "rights conferred by the Constitution of the United States essential to the healthy organization of the Government itself."

The Supreme Court of the United States indirectly affirmed in its combined Minor v. Happersett and ex parte Yarbrough decisions of 1875 and 1884 that the fourteenth and fifteenth amendments of the Federal Constitution annulled the words "white and male" that were in the constitutions and laws of the States when they were adopted as qualifications for voting, and thereby left the colored male and white and colored female citizens of the United States in each State in possession of the same "right to vote" that white male citizens of the United States already possessed. But in its ex parte Virginia decision of 1879 the Supreme Court says that much of the force of the fourteenth and fifteenth amendments of the Federal Constitution is derived from that section which declared that Congress should have power to enforce their prohibitions by "appropriate legislation," and that some legislation by Congress was contemplated to make their provisions "fully effective"; that "it is not said the judicial power of the General Government shall extend to enforcing the prohibitions and to protecting the rights and immunities guaranteed. It is not said that branch of the Government shall be authorized to declare void any action of a State in violation of the prohibitions. Congress is authorized to enforce their prohibitions by appropriate legislation."

In consideration of all of the above-mentioned facts, Mrs. Bennett most respectfully petitions the honorable Members of Congress to declare that when the fourteenth and fifteenth amendments of the Federal Constitution forbid the States to make or enforce any law which would deny or abridge any of the privileges or immunities of "citizens of the United States" they annulled the words "white and male" that were in the constitutions and laws of the State as qualifications for voting in so far as these words affected the right to vote for Federal officers, and left the black male and white and colored female citizens of the United States in possession of the same right to vote for Federal officers in the State in which they resided that white male citizens of the United States already possessed.

And she petitions Congress to declare these things by making Federal laws which say that white and colored male and female citizens of the United States are entitled and shall be allowed to vote for Members of Congress, presidential electors, and United States Senators upon the same terms in the States wherein they reside; and which provide everything that is necessary to enable them to exercise their constitutional right to vote for these Federal officers in the State.

In short, Mrs. Bennett most respectfully petitions the honorable Members of the present Congress to protect white and colored male and female citizens of the United States in their constitutional "right to vote" for Members of Congress, presidential electors, and United States Senators upon the same terms in the State wherein they reside, by making Federal laws somewhat similar to those which the Congress of 1870 made to enforce the new "right of exemption from discrimination in the exercise of the elective franchise on account of race, color, or previous condition of servitude" at public elections, that the Supreme Court of the United States has affirmed in its ex parte Yarbrough decision of 1884, that the fifteenth amendment of the Federal Constitution conferred upon the white and colored male and female citizens of the United States when it was adopted in 1870.

Mr. BRADLEY presented a memorial of the William Riedlin Republican Club, of Covington, Ky., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a petition of the congregation of the First Baptist Church of Dayton, Ky., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a petition of the State Council of Kentucky, Daughters of America, of Louisville, Ky., and a petition of the Ministers' Alliance of Owensboro, Ky., praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

He also presented a petition of the Cotton Exchange of Memphis, Tenn., praying for the enactment of legislation to prohibit the making of so-called future contracts in cotton, which was referred to the Committee on Agriculture and Forestry.

### USELESS PAPERS IN DEPARTMENT OF COMMERCE.

Mr. SMOOT. Mr. President, on March 3 the Vice President laid before the Senate a communication from the Secretary of Commerce stating that there is in the Department of Commerce an accumulation of documents and files of papers not needed in the transaction of the current business, and suggested that it be referred to the Joint Select Committee on the Disposition of Useless Papers in the Executive Departments. I thought the communication referred to public documents and asked that it go to the Committee on Printing, which was agreed to; but I find that it refers only to documents and files of papers in that department, and therefore it should go, as the Vice President suggested, to the Joint Select Committee on the Disposition of Useless Papers in the Executive Departments.

I move that the Committee on Printing be discharged from the further consideration of the communication and that it be referred to the joint select committee.

The VICE PRESIDENT. Without objection, that action will be taken. The Chair appoints as members of the joint select committee on the part of the Senate, to which the communication shall be referred, the Senator from Vermont [Mr. PAGE] and the Senator from Oregon [Mr. LANE]. The Secretary will notify the House of Representatives of the appointment.

### BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. THOMPSON:

A bill (S. 4689) to provide for the erection of a public building at Junction City, Kans.; to the Committee on Public Buildings and Grounds.

A bill (S. 4690) to amend an act of Congress approved March 28, 1900 (Stat. L., p. 52), entitled "An act granting to the State of Kansas the abandoned Fort Hays Military Reservation, in said State, for the purpose of establishing an experiment station of the Kansas State Agricultural College and a western branch of the State Normal School thereon, and for a public park"; to the Committee on Military Affairs.

By Mr. CLARK of Wyoming:

A bill (S. 4691) for the relief of Minnie Holden; to the Committee on Claims.

By Mr. McCUMBER:

A bill (S. 4692) granting an increase of pension to Alfred D. Walker (with accompanying papers); to the Committee on Pensions.

By Mr. CHAMBERLAIN:

A bill (S. 4693) for the relief of the Port Graham Coal Co.; to the Committee on Claims.

By Mr. CHILTON:

A bill (S. 4694) to further regulate canal tolls and to amend the Panama Canal act; to the Committee on Interoceanic Canals.

By Mr. BRADY:

A bill (S. 4695) granting a pension to Sigmund Schlesinger; to the Committee on Pensions.

By Mr. CATRON:

A bill (S. 4696) granting an increase of pension to Juan B. Gutierrez; to the Committee on Pensions.

By Mr. CLAPP:

A bill (S. 4697) granting an increase of pension to Willis M. Hatch; to the Committee on Pensions.

By Mr. BURLEIGH:

A bill (S. 4698) granting an increase of pension to Libbeus C. Curtis; to the Committee on Pensions:

By Mr. MYERS:

A bill (S. 4699) granting an increase of pension to Mary D. Ransom; to the Committee on Pensions.

By Mr. FLETCHER:

A bill (S. 4700) to consolidate national forest lands within the Florida National Forest, and to add to the timberlands included within that forest by the purchase of privately owned lands within the exterior limits of the Florida National Forest, State of Florida; to the Committee on Public Lands.

A joint resolution (S. J. Res. 119) authorizing the President of the United States to appoint a commission to examine and report upon a route for the construction of a free and open waterway from St. Johns River to Key West, Fla.; to the Committee on Commerce.

### AMENDMENTS TO APPROPRIATION BILLS.

Mr. THOMPSON submitted an amendment proposing to appropriate $20,000 to enable the Secretary of Agriculture to cooperate with and make an exhibit at the next annual meeting of the International Dry-Land Congress to be held at Wichita, Kans., during the year 1915, etc., intended to be proposed by him to the Agricultural appropriation bill, which was referred to the Committee on Agriculture and Forestry and ordered to be printed.

Mr. PERKINS submitted an amendment proposing to appropriate $6,000 for the construction of a rostrum in the national cemetery in the Presidio of San Francisco, Cal., etc., intended to be proposed by him to the Army appropriation bill, which was referred to the Committee on Military Affairs and ordered to be printed.

Mr. MYERS submitted an amendment proposing to increase the appropriation for the support and civilization of Indians at

the Flathead Agency, Mont., from $12,000 to $15,000, etc., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

Mr. OWEN submitted an amendment to carry into effect the agreement between the United States and the Muskogee (Creek) Nation of Indians, ratified by act of Congress approved March 1, 1901, etc., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

Mr. RANSDELL submitted an amendment proposing to appropriate $1,715.50 to be credited to the accounts of Col. James L. Bright, disbursing officer, Organized Militia of Louisiana, etc., intended to be proposed by him to the urgent deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

Mr. GORE submitted an amendment proposing to increase the salary of the Commissioner of Indian Affairs from $5,000 to $7,500, intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

He also submitted an amendment relative to including the schools on the Osage and Quapaw Reservations in the appropriations in aid of common schools, etc., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

He also submitted an amendment proposing to increase the appropriation in aid of the common schools in the Cherokee and other Indian tribes in Oklahoma, etc., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

### RIVER AND HARBOR APPROPRIATION BILL.

Mr. SAULSBURY submitted an amendment intended to be proposed by him to the river and harbor appropriation bill, which was referred to the Committee on Commerce and ordered to be printed.

### OMNIBUS CLAIMS BILL.

Mr. CATRON submitted two amendments intended to be proposed by him to the omnibus claims bill, which were referred to the Committee on Claims and ordered to be printed.

### BILLS AND DEBATES ON TRUSTS.

Mr. ROBINSON submitted the following resolution (S. Res. 286), which was read and referred to the Committee on Printing:

*Resolved*, That there be printed 500 additional copies of Senate Document No. 147, Fifty-seventh Congress, second session, "Bills and Debates in Congress on Trusts," for the use of the Senate.

### THE CONSULAR SERVICE.

Mr. STERLING. Mr. President, I hold in my hand an article entitled "The American Consular Service and commercial attachés," written by Mr. J. J. Slechta, of New York, who for four years was in the Consular Service. The article first appeared in the New York Journal of Commerce. It has been revised and rewritten, and since there is a House bill on the subject now pending and in view of the importance of the matter I ask unanimous consent that the article may be printed as a Senate document.

Mr. SMOOT. I will ask the Senator from South Dakota to allow the article to be referred to the Committee on Printing, so that the committee may decide whether it should be printed as a public document. I do not want to go into details now as to why this course should be adopted, but simply ask the Senator to let it go to the committee. The committee will report upon it in a very short time one way or the other.

Mr. STERLING. I have no objection to the course suggested by the Senator from Utah.

The VICE PRESIDENT. The article will be referred to the Committee on Printing. The Chair is of opinion that all such requests ought to go to the Committee on Printing.

### ADDRESS BY HON. WILLIAM C. REDFIELD.

Mr. POMERENE. Mr. President, I have here a very interesting address delivered by Hon. William C. Redfield, Secretary of Commerce, before the Chamber of Commerce of New Haven, Conn., January 24, 1914. I ask that it may be printed as a public document.

Mr. GALLINGER. Let it be referred to the Committee on Printing.

Mr. POMERENE. I have no objection.

The VICE PRESIDENT. The address will be referred to the Committee on Printing.

### THE MISSISSIPPI RIVER.

Mr. NEWLANDS. I have here a copy of an article by Barnett E. Moses, a member of the Memphis bar, on the problem of the Mississippi River. I desire to have the article printed as a public document, and I ask that it be referred to the Committee on Printing, to determine if it shall be so printed.

The VICE PRESIDENT. The paper will be referred to the Committee on Printing.

### PROTECTION OF AMERICAN CITIZENS IN MEXICO.

Mr. FALL. Mr. President, I desire to give notice that on Saturday next, March 7, after the routine morning business, I shall address the Senate on the resolution (S. Res. 164) requesting the President to advise the Senate as to what measures have been taken to protect American citizens in Mexico.

### PROHIBITION OF SMOKING IN THE SENATE CHAMBER.

Mr. TILLMAN. Mr. President, I desire to give notice that to-morrow, immediately after the conclusion of the morning business, I shall call up Senate resolution No. 42 and ask for its consideration. It is the resolution proposing to amend the standing rules of the Senate to prohibit smoking in the Senate Chamber. I desire everyone to understand just what I am trying to do, and I give this notice as I do not wish to take snap judgment on anyone.

### PRESIDENTIAL PRIMARIES.

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from a preceding day, which will be read.

The resolution (S. Res. 284) yesterday submitted by Mr. CUMMINS, was read as follows:

*Resolved*, That the Committee on Privileges and Elections be discharged from the further consideration of Senate bill 773, being a bill to establish a primary election for the nomination by political parties of candidates for President and Vice President of the United States, and for other purposes.

Mr. CUMMINS. Mr. President, the bill referred to in the resolution came into the Senate in April, 1913. Nearly a year has gone by, and the Committee on Privileges and Elections has not yet, as I understand, taken up the bill for consideration. Nearly two months ago I publicly called the matter to the attention of the Senate and of the chairman of the committee. The reply to my inquiry was that the committee had been considering the cases of Mr. LEE of Maryland and of Mr. GLASS of Alabama, but as soon as those cases were disposed of the bill would receive the consideration of the committee, and a speedy disposition of the matter would be made. I am informed that there has been no meeting of the committee since that time.

The subject is one of very great importance; it engages the public interest, I think, profoundly; and no matter what our opinions may be with regard to the proposition, it is high time that the Senate should take it up. I therefore have offered this resolution, and I hope it will prevail.

Mr. KERN. Mr. President, I doubt if any committee of the Senate has done more assiduous work, to say nothing as to whether or not it has been good work, than has the Committee on Privileges and Elections. I had intended, as soon as the election cases referred to by the Senator from Iowa [Mr. CUMMINS] were disposed of, to call the committee together for the purpose of taking up the presidential primary bill referred to by that Senator. I have refrained from doing so until recently because of the illness of some members of the committee and of the necessary absence of others, as I thought it important that there should be a full attendance of the committee to consider the subject. A meeting of the committee has been called for Saturday of this week, at which time the bill will be taken up. I presume it will then be considered and that it will be reported upon as promptly as possible.

With this statement I am entirely indifferent as to what the Senate may do with the resolution. If it sees fit, under these circumstances, to take the bill away from the Committee on Privileges and Elections, I have nothing to say.

Mr. CUMMINS. Mr. President, I have no criticism to suggest in regard to the conduct of the committee. I have assumed there were reasons that were sufficient which have prevented the consideration of the bill.

### THE PRESIDENT'S ADDRESS (H. DOC. NO. 813).

The VICE PRESIDENT (at 12 o'clock and 27 minutes p. m.). The hour having arrived at which, in accordance with the concurrent resolution of the two Houses, the Senate is to proceed to the Hall of the House of Representatives and listen to a communication from the President of the United States, it will be necessary to dispense with the further discussion of the pending resolution until after that event has taken place. The Sergeant at Arms will proceed to execute the order of the Senate.

Thereupon the Senate, headed by the Sergeant at Arms and preceded by the Vice President and the Secretary of the Senate, proceeded to the Hall of the House of Representatives.

The Senate returned to its Chamber at 12 o'clock and 45 minutes p. m.

The address of the President of the United States, delivered this day to both Houses of Congress, is as follows:

The PRESIDENT. Mr. Speaker, Mr. President, gentlemen of the Congress, I have come to you upon an errand which can be very briefly performed, but I beg that you will not measure its importance by the number of sentences in which I state it. No communication I have addressed to the Congress carried with it graver or more far-reaching implications as to the interest of the country, and I come now to speak upon a matter with regard to which I am charged in a peculiar degree, by the Constitution itself, with personal responsibility.

I have come to ask you for the repeal of that provision of the Panama Canal Act of August 24, 1912, which exempts vessels engaged in the coastwise trade of the United States from payment of tolls, and to urge upon you the justice, the wisdom, and the large policy of such a repeal with the utmost earnestness of which I am capable.

In my own judgment, very fully considered and maturely formed, that exemption constitutes a mistaken economic policy from every point of view, and is, moreover, in plain contravention of the treaty with Great Britain concerning the canal concluded on November 18, 1901. But I have not come to urge upon you my personal views. I have come to state to you a fact and a situation. Whatever may be our own differences of opinion concerning this much debated measure, its meaning is not debated outside the United States. Everywhere else the language of the treaty is given but one interpretation, and that interpretation precludes the exemption I am asking you to repeal. We consented to the treaty; its language we accepted, if we did not originate; and we are too big, too powerful, too self-respecting a Nation to interpret with too strained or refined a reading the words of our own promises just because we have power enough to give us leave to read them as we please. The large thing to do is the only thing that we can afford to do, a voluntary withdrawal from a position everywhere questioned and misunderstood. We ought to reverse our action without raising the question whether we were right or wrong, and so once more deserve our reputation for generosity and for the redemption of every obligation without quibble or hesitation.

I ask this of you in support of the foreign policy of the administration. I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure.

PRESIDENTIAL PRIMARIES.

Mr. CUMMINS. Mr. President, when we suspended I was remarking that I had no criticism at all to suggest of the committee. I understand it is somewhat difficult to get the committee together at this time, in view of the great amount of labor imposed upon all of us. I have a great desire, however, to see the bill reported, or to see some measure upon the subject reported. In view of the assurance of the chairman of the committee that it will now be taken up and disposed of, I ask that the resolution may lie over without prejudice.

The VICE PRESIDENT. Is there any objection?

Mr. SMITH of Michigan. Mr. President, this is the so-called national primaries bill, is it not?

Mr. CUMMINS. It is one of them; yes.

Mr. SMITH of Michigan. Under the bill the idea is to vote directly for President and Vice President of the United States?

Mr. CUMMINS. The bill that I offered, and that is now pending before the committee, provides for a direct primary election in all the States.

Mr. SMITH of Michigan. Is there anything in the bill which provides for party platforms upon which candidates are to run for these high offices?

Mr. CUMMINS. Mr. President, I do not intend to be drawn into a discussion of the merits of the proposal. When the time comes I shall hope to be able to convince the Senate, as I am sure the country has long ago been convinced, of the wisdom of making nominations in this way. Answering very briefly, however, the question of the Senator from Michigan, I will say that there is nothing in the bill to prevent the party convocation or convention from declaring principles or platforms.

Mr. SMITH of Michigan. I had rather hoped the bill precluded any such error. The binding effect of party platforms has long since been abandoned. A party declaration amounts to very little now. We have just listened to a distinct disavowal of the binding effect of a party platform, and I had rather hoped the bill of the Senator from Iowa contemplated the absolute abandonment of any declaration of party principles hereafter.

Mr. CUMMINS. Now, Mr. President, while I sympathize with the grief which the Senator from Michigan now experiences, those questions are not connected with the bill I have introduced, and I do hope these party feelings will not be permitted at any time to enter into the consideration of a measure of this character. I am deeply serious about the proposal, and I intend to press it just as earnestly and persistently as I can.

Mr. SMITH of Michigan. Mr. President, I have no idea of antagonizing the measure introduced by the Senator from Iowa, but at the appropriate time I hope the Senate may seriously consider whether we ought not to provide, either under the Constitution or otherwise, for a complete abandonment of the enunciation of political principles in party platforms.

The VICE PRESIDENT. Is there any objection to laying aside the resolution without prejudice? The Chair hears none.

Mr. OWEN. Mr. President, I do not understand just what the proposal is.

The VICE PRESIDENT. The Senate has been discussing a resolution calling for the withdrawal from the Committee on Privileges and Elections of a certain bill with reference to presidential primaries. It is now requested that the resolution lie over without prejudice. Is there any objection? The Chair hears none, and the resolution goes over without prejudice.

INSPECTION AND GRADING OF GRAIN.

Mr. McCUMBER obtained the floor.

Mr. SWANSON. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Virginia?

Mr. McCUMBER. I yield.

Mr. SWANSON. I should like to ask the Senator from North Dakota if it would be equally agreeable to him to proceed after 2 o'clock?

Mr. McCUMBER. After 2 o'clock the unfinished business will be before the Senate. I have given notice from day to day that I would occupy time in the morning hour until I could finish my remarks.

Mr. SWANSON. I am very anxious that we shall proceed with the calendar at some time. I thought possibly it would suit the convenience of the Senator to proceed after 2 o'clock.

Mr. McCUMBER. This is a part of the business on the calendar, and I wish to complete my remarks on Senate bill 120 as soon as possible.

Mr. JONES. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Washington?

Mr. McCUMBER. I yield, Mr. President.

Mr. JONES. I simply wish to suggest to the Senator that on the 27th of February I gave notice that I should submit some remarks this morning, and upon referring to the calendar I saw a notice that the Senator expected to proceed to-day. I should like very much to proceed with my remarks. I do not like to interfere with the Senator's bill, but I supposed its coming up would not preclude the notice I had given heretofore.

Mr. McCUMBER. Mr. President, this bill, in some form, has been before the Senate for about 10 years. I rather think that in point of ancient history it precedes any bill the Senator from Washington desires to discuss. It has gone over again and again, and has been crowded out on account of appropriation bills; and I at least wish to get the matter before the Senate. Day in and day out, every time I have finished for the day, I have given notice for more than a week that I should take up the bill immediately after the close of the morning business. In closing my address each day on account of the time limitation I have stated that I should proceed the next morning after the close of the morning business.

Mr. JONES. I will state that I gave my notice before the Senator got his bill up for consideration. Of course, I can not make my notice effective while the Senator has the floor by taking him off his feet.

Mr. McCUMBER. Mr. President, I shall not put myself in a position where any right I may have will make any Senator feel aggrieved, even though I have been for 10 years trying to get a hearing upon this bill. At the Senator's request I will yield to him in order that he may submit his remarks. I wish to state, however, that I shall pursue my argument as soon as the Senator has finished, if he does so before 2 o'clock. If not, I shall ask to-morrow morning to take up the bill immediately after the close of the morning business.

Mr. GALLINGER. There is another notice for to-morrow.

Mr. McCUMBER. I can not give way to all the notices that may be given for the future.

Mr. JONES. I do not desire the Senator to yield any right he thinks he has. I do not ask him to do that. Of course I can take up this matter after 2 o'clock, and will do so at the first opportunity that I can get recognition.

Mr. McCUMBER. No, no; the Senator can go on, and I will follow him.

Mr. JONES. I will state to the Senator that I do not think I will take until 2 o'clock unless I am interrupted, as probably I shall not be. I appreciate very much the consideration of the Senator.

Mr. McCUMBER. Very well; I yield to the Senator from Washington.

WATER POWER ON PUBLIC LANDS.

Mr. JONES. Mr. President, on February 7 I introduced Senate bill 4415, to aid and to regulate the development, operation, and maintenance of water powers on lands of the United States, and for other purposes. I am not going into the bill in very great detail this morning, but simply desire to make some general statements in reference to the necessity of legislation of this kind, and also with reference to the terms of the bill I have introduced.

The VICE PRESIDENT. The Senator from Washington will proceed.

Mr. JONES. Mr. President, the time has come when we must examine a most acute situation in our national life, which affects in many intimate ways every feature of our industrial and social condition. I refer to the matter of hydroelectric power. Throughout all of our daily concerns, from the cultivation, transportation, and the ultimate cost of our daily food, to those comforts and conveniences of everyday living which in the past few years have rightly come to be regarded as man's necessities, the element of hydroelectric power is always at the forefront. It is hydroelectric power to which, now and in the future, we must look for the operation of many of our greatest industries, for the pumping of water to many of our cities and to millions of acres of arid lands of the West, for the pumping of surplus water from the more than 20,000,000 acres of our low-lying but enormously rich swamp and overflow lands, for the lighting of our houses and streets, for the operation of our transportation utilities, and finally for a thousand and one uses in the home and on the farm. Our present state of progress is entirely dependent on the utilization of artificially created energy, and even now over great portions of our country, and in a few years over all portions, the source of that energy must be our water powers.

In the United States there is an abundance of water-power opportunity. Very conservative estimates of power development possibilities place the amount that can be developed in the North Atlantic States at 4,910,000 horsepower; in the South Atlantic States 5,107,000 horsepower; in the North Central States 4,370,000 horsepower; in the South Central States 3,342,000 horsepower, and in the Western States 44,049,000 horsepower; and, with practicable maximum storage, the total available horsepower in the United States is conservatively estimated at 200,000,000. Of this amount the present development in the United States is only about 6,000,000 horsepower. Go where we will, even into those regions where the river courses are relatively flat, we find water-power privileges which are either in immediate demand for service of the people or which in the future will find important use. This great resource is not, like many others, exhausted by use, but wanton waste occurs in its nonuse. Wherever in all of this land a water power is now being wasted which might usefully be harnessed one of two things must be taking place—either the people are going without its benefits, to the detriment of themselves and the prevention of the upbuilding of the country, or those demands are being supplied by the use of coal, a resource which is exhausted by use.

My purpose is to show that despite this overwhelming necessity for water-power development the laws of the United States have made it impossible to finance the development of this power or energy, and that without sacrificing even a minute part of the public interest, without depriving the people of a single element of sovereign control or subjecting them to even the smallest corporate abuse, we in this Congress have it in our power to cut away the fetters, and put our water powers to a beneficial use.

It will be impossible for me, or anyone else, at this time, to discuss this subject in all its branches. Therefore I am going to confine my arguments to two of the most important uses to which our undeveloped water powers may be put. Both uses are agricultural, viz, the manufacture of nitrogen from the air as the basis of agricultural fertilizer, and the pumping of water for irrigation purposes on the arid lands of the West. More than 1,000,000 hydroelectric horsepower has been developed in European countries during the past five years for use in the manufacture of nitrate of lime and cyanamide through the fixation of the nitrogen of the air. While Europe has been making gigantic strides through development of these new uses for electricity, not a single horsepower in the United States has been devoted to these purposes. There are nearly 200,000,000 horsepower possible of development in the United States, a fact which indicates that there is no scarcity of this resource. While the United States has been carefully guarding and preventing the development of its water powers, certain European countries have been encouraging the development of theirs. Because of the fact that these great industries have been unable to locate in this country under terms that make investment practicable, they are turning to such places as Canada and Labrador, and also to Iceland, where a project is now proposed for the development of 1,000,000 horsepower. The great expenditure and the enormous benefits that will result will be lost to this country. We imported during the year 1913 over $41,000,000 worth of nitrogenous products, all of which could be made in the United States if we were possessed of a rational water-power policy. Of this importation 625,000 tons, having a value of $22,000,000, consisted of Chilean nitrates, the price of which is controlled by a European monopoly. Congress and other official and public bodies have spent much time and money investigating the reasons for the increased cost of living, and in practically every report the main cause has been found to be reduced per capita and per acre production of food. In this connection it has been shown conclusively that with an adequate supply of nitrogen as fertilizer it will easily be possible, by intensive methods of agriculture, so to increase the yield of cereals per acre as to bring down materially the present cost of living, and set forward the danger line of shortage of food for the ever-increasing population of the earth far into the next century.

In Belgium, where the soil is of no better average quality than in the United States, the yield of wheat, rye, barley, and oats is over double that of the United States, owing entirely to the continued application of fertilizers, principally nitrate of lime. The exact comparison of average yield per acre of these crops in Belgium and the United States is as follows:

| | Wheat. | Rye. | Barley. | Oats. |
|---|---|---|---|---|
| Belgium | 42 | 32 | 43 | 6 |
| United States | 14 | 15 | 25 | 3 |

German experiments have shown that by the introduction of 2,000,000 tons of nitrogen yearly into the soil the increased crop obtained in the German Empire would be 63,000,000 tons.

We well know that nitrogen is the basis of all explosives, and until it is manufactured in this country the United States will be dependent in time of war on foreign nations for its supply. This is surely a menace that can not be lightly considered. We can become independent producers of nitrogen if, by means of wise laws, we make it possible to establish a new industry in this country. This industry is to be obtained only through the development of the cheapest kind of electric power. Energy for this purpose must be furnished in great quantities at a price that will yield only a reasonable return on the investment, and which could not possibly absorb either direct taxation or indirect taxation in the form of forced amortization. Such being the case, the Government will fail of this beneficent purpose if it places even a small burden by taxation or restrictive conditions on the development of water power.

The second great use of hydroelectric power of which I shall speak, and which appeals particularly to the section of the country that I represent, is that of pumping water for irrigation purposes. Senators are all familiar with the irrigation of the arid West and the part that has been taken therein by the Government. Many of them probably do not know that such irrigation has, up to the present, been largely developed under gravity systems of water distribution, because this kind of development has generally been of lower cost than that involving the pumping of water. But the low-cost gravity systems are becoming fewer, if, indeed, there are any left. There still remain, however, many million acres of the best land of the West which for one or another reason can be reclaimed only through the operation of great pumping systems. These pumps can ordinarily be operated with success only by hydroelectric power. Thus will water-power development furnish homes and occupations for hundreds of thousands of people, and the high but fertile places which now seem destined to remain barren will bring into the store of national wealth their rich contributions. Right here let me say that the department's attitude on this matter of irrigation pumping furnishes one of the best illustrations of wanton waste of water-power resources and of

destructive governmental repression in water-power policy that could be cited.

It happens that under the right-of-way acts of March 3, 1891, and of May 11, 1898, Congress has clearly granted authority to construct water powers for the main purpose of irrigation and for purposes subsidiary thereto. But the department has, by construction, actually repealed these acts except in so far as they apply to irrigation. Any water power developed under that law must, by departmental stipulation, be devoted entirely to pumping purposes. If there is an excess of power over and above that needed for irrigation it must be allowed to pass on unutilized. Moreover, during the six to eight months of the year when no water is needed for irrigation the plant must lie idle, earning nothing and daily grinding out its toll of interest and maintenance charges, as well as those of depreciation and taxes. Manifestly the farmer has to pay those charges in extra water tolls. Usually, however, the project, because of this enforced idleness and waste of resource, becomes an impossible proposition from a financial standpoint. There is, however, one alternative. Right of way may be granted, revocable at will by the Secretary, under the act of February 15, 1901. It is this act of which I shall presently speak, and will anticipate my discussion thereof only to call attention to the fact that the department has in effect repealed this act of Congress and practically says to a community of prospective irrigators: "Unless you will consent to waste your surplus power and allow your plant to lie idle during all the fall, winter, and early spring seasons grant of right of way will be refused or you must take your power right of way under the revocable permit of the act of 1901." This is equivalent to a departmental ruling that unless an applicant accepts terms that will in 99 cases out of 100 make of his project certain financial failure he must withdraw and leave the land a desert. Can these consequences possibly commend themselves to a progressive people?

The only way by which a permit to use a water-power privilege on the public lands can be obtained, except when it is to be used for the sole purpose of irrigation, is under the act of February 15, 1901. As Senators are generally familiar with that act I will forbear reviewing it except to remind them that the permission given thereunder must be subject to such stipulations as the Secretary may prescribe and is revocable at will by the department without indemnity to the permittee. This is equivalent to a landowner saying to a prospective lessee: "You may take my land, place your factory thereon, and establish your business, but you must pay such rental as I from time to time see fit to impose, and whenever I decide that I want the land back you must move off." What is the result?

Hydroelectric systems are built with borrowed money and the money lender rightly demands security for his loan. There was a time when the real significance of a revocable permit was not so well understood and some large installations were made under authority of this act. But that day is passed. Except in the case of small subsidiary plants, attached to a great hydroelectric system, owned in fee, and which warrants the investment risk on the subsidiary plant, no investment banker is going to recommend to his clients and no wise investor is going to buy any securities based on so precarious a title as that which prevails under a revocable permit. The fact is not only self-evident, but is strongly testified to by our banking houses.

Good men, with excellent hydroelectric propositions, have gone from bank door to bank door in search of funds, only to be met with the reply, "Yes; your proposition is excellent, and we will recommend it to our clients on condition that you will furnish the most necessary thing of all, viz, a title that will make an investment secure." As a result of all this, water-power development, where the use of public lands is necessary, is at a standstill on account of the uncertainty and indefiniteness of the title that can be secured. Millions of horsepower could be made available if capital could be assured of a definite term of undisturbed investment and a reasonable return. It does seem that legislation can and should be enacted under which this development can take place and the rights of consumers to power at reasonable rates maintained.

The condition of stagnation of water-power development on the public lands is well illustrated by a statement of the Forest Service concerning the water-power permits issued for such developments in the national forests up to July 1, 1913. Permits covering the development of 783,600 horsepower had been granted. Of this amount 111,200 horsepower were constructed, and construction had been commenced on 122,500 horsepower. But on the remainder, covering 550,000 horsepower, or 70 per cent of the whole, no work whatever had been started, and examination shows that in all but a very small part of these cases the lack of development arises from the inability of the permittees to raise the money on such precarious security as is offered by the revocable permit. Examination of the financial history of the plants that were actually developed under this form of permit shows that more than 60 per cent of them have been financial failures. *Let it be understood, unconditionally and without the slightest qualification, that I stand for complete preservation of the public interest in all such matters. Every power development, made on the public lands or elsewhere, must be under complete control by the public through the State or Nation. I believe thoroughly in the proposition that the power sites now remaining in public ownership and control should forever so remain and be conveyed to States, to municipalities, or to their agents, the public-service corporations, under terms that will thoroughly conserve the public's highest good and which will yet be of a character that will attract investment and insure a reasonable return to capital. So far as I am able to find, no one denies the justice and equity of that doctrine. Therefore the question is, What form of grant shall be adopted in order that the public interest may be protected and water-power investment made attractive?*

There are those who insist that when a public-service corporation wishes to develop a publicly owned or controlled water-power site, it should be prevented from so doing, unless it will agree to give back to the public, free of charge, the property and improvements at the end of a definite period—say 50 years. It can not be denied that if the public eventually acquires a developed power site free of expense at the end of a designated period, said public must, in all equity, pay for it in extra rates during that period. Mark you, that during all the 50 years the public is to have absolute control of rates and service and must therefore penalize itself as to rates so that at the end of the period a future generation may absorb the plant.

*In any era of progress each generation is abler and more self-reliant than its predecessor. Unless we are anticipating American decadence, we are bound to believe that the average American 50 years hence will be better able to pay for water-power plants in a lump sum than we are now able to pay for them in installments. The gospel of conservation does not bid us make spineless beneficiaries of our descendants.*

A hydroelectric system can not be amortized. The concern is not like a mill or a factory. The mill stands as a relatively fixed investment with a definite capacity for production and a fairly determined earning power. When that capacity is reached a new mill is built which has the same definite investment characteristics as the first. The two mills are independent investment units. Burn one down and the other proceeds as before. Under such conditions the owner may amortize. Just the opposite is true of the hydroelectric system. The public demand for power constantly grows and the corporation is bound to supply that demand. The hydroelectric system is never completed and never becomes a fixed investment unit because every day sees some new line, connection, or instrument added in response to a new call. When the capacity of the power sources is reached, we do not build a new system as we would build a new mill, but we develop a new source of power and throw it into the same system. That new source of power loses its individuality and becomes a mere element in a large creation. A hydroelectric system is not the sum of its parts, but it is the whole thing, just as man is man and not the sum of sundry arms, legs, and organs. Could one amortize the value of a leg?

It would be easy enough to amortize if there were one power plant, one set of consumers, and the latter never demanded more than the former could furnish, but we are not considering peanut-stand propositions of that kind. Except in rare cases, the real hydroelectric system has several and sometimes many power sources. It usually begins with one or more sources in private ownership. Business grows, and then Government sites may be added, so that private and Government sites are merged and lose their identity in one great network. Now apply this 50-year surrender idea. After a while the time limit on one of these Government sites expires. Who is wise enough to amortize that improvement, or, in the final surrender to the Government, to determine what part of the distribution system is functional to that particular site? One may as well try to unscramble eggs.

Follow the idea to its logical conclusion and it will be apparent that the increase in utilization of power by the public will necessitate the progressive addition of new sites to the hydroelectric system. Therefore, it will certainly occur that at the very time when the public-utility company is acquiring a new site to meet a new demand, it would be surrendering to the Government, free of cost, a site acquired 50 years before and which is still needed in the system to supply current demand. Does the preservation of the public interest really require such a chaotic procedure?

It will probably be said in reply that the public will wisely adjust these difficulties in advance of their arrival. But this answer does not satisfy. *The present law is unsatisfactory, not because of any disposition to avoid public control or to deprive the public of its rightful property. The whole trouble goes back to the matter of investment—the investor demands not only security of title but also the unrestrained ability of his debtor to produce a rightful yield on his investment.* This involves stability of operation and such stability can not be achieved while chaos lies in the foreground. Brush away every complexity in amortization above described and there still remains this fatal uncertainty. Security of investment can not be accomplished by the assurance that the public will do the proper thing when the time comes. The prospective investor pertinently asks "Just what will the public do?"

Finally we are not obliged to speculate on probable events because a record of actual ones is at hand. The general dam act of June 23, 1910, involves almost the identical proposition from the investment point of view. Under the act there is a glimmering prospect that the grant may be renewed at the end of the 50-year period. Under the amortization plan this possibility is denied. Under the terms of the general dam act Congress has given consent to the erection of power plants on navigable streams in 18 cases. None has been built and only two have been started. The men who are backing the larger of these two are sorry they went in. The reason for this condition is that the public will not invest. How, therefore, can it be expected that a more restrictive proposition will be more successful?

Water-power developments intended to supply energy for the two purposes upon which I have concentrated my remarks could never be financed if the Government permit required the forced amortization of the property in order that it might be turned over to the Government free of cost at the end of 50 or 60 years, because the farmer could not stand the increased price for water to irrigate his land necessary to be charged for energy to operate pumping plants in order to provide for the amortization tax and the manufacture of nitrate of lime would be prevented because the addition of the amortization tax would make the price of power prohibitive for that purpose. Despite the assurance of those who advocate amortization that, under such conditions, no tax would be imposed, the fact remains that amortization is a tax of the most grievous and burdensome kind. If the property is to be turned over to the public at the end of 50 years the original investment must have been repaid in increased charges for service. Therefore the question is, What form of grant shall be adopted in order that the public interest may be protected, water-power investment made attractive, and the consuming public secure its power at the lowest possible rates?

After giving long study to these perplexing questions, I prepared and introduced into the Senate on February 7 a bill entitled "A bill to aid and to regulate the development, operation, and maintenance of water powers on lands of the United States, and for other purposes," to which I invite the consideration of Senators. It will be seen that under this bill the grant is made only to the State, a municipal subdivision thereof, or a duly organized public-service corporation. Before the grant becomes effective plans and specifications must be prepared and submitted to the Secretary having control over the lands to be used and are to be approved by him if he is convinced that the proposed development will promote "the highest and greatest practicable use of the water resources involved." When such plans are approved the fair market value of the Government lands to be occupied and used is determined, and the grantee is required to pay to the United States annually 5 per cent of such fair market value. At any time after 50 years the right to use such lands can be terminated and the property taken over by the United States, the State, or a municipal subdivision thereof, upon the payment of the fair value of the property, excluding the value of the right to use such Government land. It might well provide, too, for issuance of patent for such lands if the plant is taken over by the State or a municipality.

The work must be commenced within two years from the date of the determination of the value of the lands to be occupied, and within the further time of five years there must be completed and put in operation such parts of the ultimate development as may be determined necessary "to supply the reasonable needs of the then available market," and the ultimate development shall be made as required by the proper Cabinet officers. The rates to be charged consumers are to be reasonable and the service adequate and efficient, and the right to regulate the same is reserved to the United States as to interstate business and as to intrastate business if the State fails to do so. A most stringent provision is inserted against unnatural monopoly.

Mr. President, I have not made this bill applicable to navigable streams. Its fundamental principles can be easily made to apply to such development, and I would be glad if the whole subject could be covered by a single measure that may be enacted into law before the session adjourns. In this bill no tax is placed on the power developed, but an annual charge is made on the fair market value of the property of the National Government for its use. The right to do this, in my judgment, will not be disputed, and it would seem that if the National Government receives a fair return for the use of its property, no one would ask more. The charge exacted by the bill is 5 per cent of the fair market value of the land annually. The Government actually capitalizes its property at 5 per cent of its fair market value and will receive in interest three and one-half times the fair market value of its property. This is a fair return to the Government and will be no heavy burden on consumers, although it could well be made less.

Regulation of rates and service is left to the State. The only grantee permitted, aside from the State and a municipal subdivision thereof, is a public-service corporation, so there can be no question of the power of the State over such grantee. The people of a State can better control a local agency than anyone else. Different conditions in different States require different treatment and can be met better by those familiar with their varying conditions. Public sentiment will produce public-service commissions of able, faithful, and experienced men, and compel their retention in office, by which and through which reasonable rates and efficient service will be secured. To contend otherwise is to indict the people of the respective States for incompetency.

The right is reserved, however, to the National Government to regulate interstate rates, and if the State fails to do so to regulate intrastate rates. It might be well to provide in the law for some specified agency to do this. In my judgment it will never be necessary for the National Government to attempt to regulate intrastate rates even if it has the power to do so.

Water-power development is to a greater or less extent a monopoly, but unnatural monopoly is prevented by the express terms of the bill.

Provision is made for a definite term which it is thought is ample to encourage the investment of capital, and the consumers under proper regulation will not have to pay for the cost of the works. All they will pay will be a fair return on the investment. If the property is taken by any other agency the owner will then receive the fair market value, exclusive of the value of the permit or franchise.

Ample authority is given to the proper officers of the Government to compel the highest practicable development of any water-power resource and its development as rapidly as the needs of the people may require.

Security can not be found in a fixed term grant that involves a sacrifice of principal or amortization of investment. The amortization idea in public utilities is a relic of the days when the consumer had to pay all the traffic would bear. Public regulation of rates has changed the whole complexion of things, and amortization is now unnecessary, undesirable, and in the case of a hydroelectric system, impossible. Under an indeterminate grant, with a reasonable preliminary tenure of 50 years assured, consumers' rates can be reduced to the point of equitable return to capital, and when the public, in its wisdom, decides to recall its grant it will find no difficulty in paying the fair value of the improvements that it takes over.

Mr. President, the people of the entire West and South are looking to this Congress for some relief from the distressing circumstances that are now preventing their rightful and commendable progress. Each year in the past five they have hopefully expected that the Members of Congress would put aside their differences as to details of procedure and enact a law that would furnish both encouragement of investment and regulation of rates and service. The consequences of present inaction are all too grave to justify further neglect. May we not speedily proceed on a constructive course? The development and use of our water power is decidedly not a political question, but one which stands far above the level of partisan controversy. It is a great economic problem, the solution of which is a pressing matter of public duty. Let us solve it in a wise, practical way, with a due regard for the rights of the Nation, the powers of the States, and the interests of the people.

Mr. President, I have prepared here some memoranda with reference to the existing right-of-way acts, with some comments thereon, which I ask leave to have printed in the RECORD.

THE REPEAL OF THE RIGHT-OF-WAY ACTS OF MARCH 3, 1891, AND MAY 11, 1898, BY THE DEPARTMENT OF THE INTERIOR.

For convenience, the text of the various acts which enter into this discussion will be given as follows:

Act of July 26, 1866 (U. S. Stat. L., vol. 14, pp. 251–253):

SEC. 9. *And be it further enacted*, That whenever, by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes have vested and accrued and the same are recognized and acknowledged by the local customs, laws, and the decisions of courts the possessors and owners of such vested rights shall be maintained and protected in the same; and the right of way for the construction of ditches and canals for the purposes aforesaid is hereby acknowledged and confirmed: *Provided, however*, That whenever, after the passage of this act, any person or persons shall, in the construction of any ditch or canal, injure or damage the possession of any settler on the public domain the party committing such injury or damage shall be liable to the party injured for such injury or damage.

Act of July 9, 1870 (U. S. Stat. L., vol. 16, pp 217–218):

SEC. 17. *And be it further enacted*, That none of the rights conferred by sections 5, 8, and 9 of the act to which this act is amendatory (the act of July 26, 1866) shall be abrogated by this act, and the same are hereby extended to all public lands affected by this act; and all patents granted or preemption or homesteads allowed shall be subject to any vested and accrued water rights or rights to ditches and reservoirs used in connection with such water rights as may have been acquired under or recognized by the ninth section of the act of which this act is amendatory. But nothing in this act shall be construed to repeal, impair, or in any way affect the provisions of the "Act granting to A. Sutro the right of way and other privileges to aid in the construction of a draining and exploring tunnel to the Comstock lode, in the State of Nevada," approved July 25, 1866.

Act of March 3, 1891 (U. S. Stat. L., vol. 26):

SEC. 18. That the right of way through the public lands and reservations of the United States is hereby granted to any canal or ditch company formed for the purpose of irrigation and duly organized under the laws of any State or Territory which shall have filed, or may hereafter file, with the Secretary of the Interior a copy of its articles of incorporation and due proofs of its organization under the same, to the extent of the ground occupied by the water of the reservoir and of the canal and its laterals and 50 feet on each side of the marginal limits thereof; also the right to take from the public lands adjacent to the line of the canal or ditch material, earth, and stone necessary for the construction of such canal or ditch: *Provided*, That no such right of way shall be so located as to interfere with the proper occupation by the Government of any such reservation, and all maps of location shall be subject to the approval of the department of the Government having jurisdiction of such reservation, and the privilege herein granted shall not be construed to interfere with the control of water for irrigation and other purposes under authority of the respective States or Territories.

SEC. 19. That any canal or ditch company desiring to secure the benefits of this act shall, within 12 months after the location of 10 miles of its canal, if the same be upon surveyed lands, and if upon unsurveyed lands within 12 months after the survey thereof by the United States, file with the register of the land office for the district where such land is located a map of its canal or ditch and reservoir; and upon the approval thereof by the Secretary of the Interior the same shall be noted upon the plats in said office, and thereafter all such lands over which such rights of way shall pass shall be disposed of subject to such right of way. Whenever any person or corporation, in the construction of any canal, ditch, or reservoir, injures or damages the possession of any settler on the public domain the party committing such injury or damage shall be liable to the party injured for such injury or damage.

SEC. 20. That the provisions of this act shall apply to all canals, ditches, or reservoirs heretofore or hereafter constructed, whether constructed by corporations, individuals, or association of individuals, on the filing of the certificates and maps herein provided for. If such ditch, canal, or reservoir has been or shall be constructed by an individual or association of individuals, it shall be sufficient for such individual or association of individuals to file with the Secretary of the Interior and with the register of the land office where said land is located a map of the line of such canal, ditch, or reservoir, as in case of a corporation, with the name of the individual owner or owners thereof, together with the articles of association, if any there be. Plats heretofore filed shall have the benefits of this act from the date of their filing as though filed under it: *Provided*, That if any section of said canal or ditch shall not be completed within five years after the location of said section the rights herein granted shall be forfeited as to any uncompleted section of said canal, ditch, or reservoir to the extent that the same is not completed at the date of the forfeiture.

Act of May 11, 1898 (U. S. Stat. L., vol. 30, p. 404, ch. 292). An act to amend an act to permit the use of the right of way through public lands for tramroads, canals, and reservoirs, and for other purposes.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the act entitled "An act to permit the use of the right of way through the public lands for tramroads, canals, and reservoirs, and for other purposes," approved January 21, 1895, be, and the same is hereby, amended by adding thereto the following:

"That the Secretary of the Interior be, and he hereby is, authorized and empowered, under general regulations to be fixed by him, to permit the use of right of way upon the public lands of the United States, not within limits of any park, forest, military, or Indian reservations, for tramways, canals, or reservoirs to the extent of the ground occupied by the water of the canals and reservoirs, and 50 feet on each side of the marginal limits thereof, or 50 feet on each side of the center line of the tramroad, by any citizen or association of citizens of the United States, for the purposes of furnishing water for domestic, public, and other beneficial uses.

"SEC. 2. That the rights of way for ditches, canals, or reservoirs heretofore or hereafter approved under the provisions of sections 18, 19, 20, and 21 of the act entitled 'An act to repeal timber-culture laws, and for other purposes,' approved March 3, 1891, may be used for purposes of a public nature; and said rights of way may be used for purposes of water transportation, for domestic purposes, or for the development of power, as subsidiary to the main purpose of irrigation."

Approved, May 11, 1898.

Act of February 15, 1901 (U. S. Stat. L., vol. 31, pp. 790–791, ch. 372). An act relating to rights of way through certain parks, reservations, and other public lands.

*Be it enacted, etc.*, That the Secretary of the Interior be, and hereby is, authorized and empowered, under general regulations to be fixed by him, to permit the use of rights of way through the public lands, forest and other reservations of the United States, and the Yosemite, Sequoia, and General Grant National Parks, California, for electrical plants, poles, and lines for the generation and distribution of electrical power, and for telephone and telegraph purposes, and for canals, ditches, pipes and pipe lines, flumes, tunnels, or other water conduits, and for water plants, dams, and reservoirs used to promote irrigation or mining or quarrying, or the manufacturing or cutting of timber or lumber, or the supplying of water for domestic, public, or any other beneficial uses to the extent of the ground occupied by such canals, ditches, flumes, tunnels, reservoirs, or other water conduits or water plants, or electrical or other works permitted hereunder, and not to exceed 50 feet on each side of the marginal limits thereof, or not to exceed 50 feet on each side of the center line of such pipes and pipe lines, electrical, telegraph, and telephone lines and poles, by any citizen, association, or corporation of the United States, where it is intended by such to exercise the use permitted hereunder or any one or more of the purposes herein named: *Provided*, That such permits shall be allowed within or through any of said parks or any forest, military, Indian, or other reservation only upon the approval of the chief officer of the department under whose supervision such park or reservation falls and upon a finding by him that the same is not incompatible with the public interest: *Provided further*, That all permits given hereunder for telegraph and telephone purposes shall be subject to the provision of title 65 of the Revised Statutes of the United States, and amendments thereto, regulating rights of way for telegraph companies over the public domain: *And provided further*, That any permission given by the Secretary of the Interior under the provisions of this act may be revoked by him or his successor in his discretion, and shall not be held to confer any right, or easement, or interest in, to, or over any public land, reservation, or park.

Approved, February 15, 1901.

Under the act of 1866 rights to the use of water for mining, agricultural, manufacturing, and other purposes, together with rights of way necessary for the construction of ditches and canals, was "acknowledged and confirmed," and in the decision of the Supreme Court of the United States in the case of Jennison v. Kirk (98 U. S., 453) it was decided that rights of way for ditches and canals incident to such water rights were also acknowledged and confirmed.

Except in the case of the act of July 9, 1870 (Rev. Stat., 2340), which confirmed and extended the act of 1866 and the desert-land act of 1877 (U. S. Stat. L., vol. 19), in which Congress forever dedicated the use of the waters of the public lands for irrigation, mining, and manufacturing purposes, the act of 1866 remained undisturbed until 1891.

For some time previous to 1891 it had been apparent that the very free appropriation of waters and rights of way under the act of 1866 was leading to the utmost confusion. There was no public register of these diversions, and the need for a clear record was great. It was also noted that, under the act of 1866, right of way was conferred only by construction and use. There was a need for protection of the prospective developer in a way whereby he might register with the duly constituted authority his intentions as to development and have his rights protected while he advanced his project to the construction stage. This need was clearly shown by letters of the department to Congress; so the act of 1891 was passed, clearly providing for all the foregoing difficulties. Reading of the act shows that its intention was to provide for orderly procedure. Section 19 confers on the Secretary of the Interior no powers except the implied one of receiving papers. Section 20 provides for the Secretary's approval. Approval of what? Manifestly, the things required of the appropriator by the act. There is no authority of the Secretary to disapprove if the appropriator does the things specified in the act. Sections 18 and 19 refer only to canal and ditch companies formed for the purpose of irrigation, but section 20 extends those privileges to all individuals, corporations, and associations and covers all canals, ditches, or reservoirs.

Between 1891 and 1894 there is nothing in the Land Office decisions to show that irrigation was considered the sole object of the act of 1891. This is clearly indicated by Land Office Regulations, viz, 1891, 12 L. D., 429; 1892, 14 L. D., 338; 1894, 18 L. D., 168.

Some time subsequent to 1894 a marked change took place. See the following cases:

H. H. Sinclair (18 L. D., 573; 1894). Sinclair's map was denied approval because of the statement that the stored water was to be used for generating electricity for city lighting.

South Platte Reservoir Co. (20 L. D., 154 and 465; 1895). Map not approved because a part of the water was to be used for irrigating gardens and lawns in the city of Denver and for general municipal uses.

Chaffee County Ditch & Canal Co. (21 L. D., 63; 1895). Map failed approval because the applicant desired to transport timber in this waterway.

William Marr (25 L. D., 344; 1897). This applicant requested relief from the requirement of certifying that the right of way was to be used for the sole purpose of irrigation, "upon the grounds that while the right of way is to be used chiefly for irrigation, yet a declaration to the effect that it was for that sole purpose would endanger his water right under the laws of Colorado; that as settlements that will be made along the line of the outlet will require water for domestic purposes, it is also claimed for such use; and that the applicant also desires to make use of the water for a limited period of time for manufacturing purposes in the operation of hydraulic mining machinery," and so forth.

This application was also disapproved.

It should be noted that applications had been denied, as above, for transportation, for domestic purposes, and for the development of power in connection with irrigation. In the very next session after the Marr decision aforesaid Congress passed the act of 1898, which reads in part:

> And said rights of way may be used for purposes of water transportation, for domestic purposes, or for the development of power as subsidiary to the main purpose of irrigation.
> Approved May 11, 1898.

The specific things cited in the act indicate cognizance of what had gone before in the Land Office. Evidently Congress was not pleased with those Land Office decisions.

But the act of May 11, 1898, section 2, says much more than that above quoted. It provides that rights of way under the act of 1891 "may be used for purposes of a public nature"; (note the semicolon). That which comes after the semicolon is clearly additional to, and not in modification of, that which goes before. Adverse decisions of the Land Office (above cited), which had prompted Congress to include the last 31 words of this act, had referred to private as well as public cases. And so the clear, logical construction must be that Congress meant what it said in specifying purposes of a public nature and then added thereto the specifications above quoted, covering purposes of a private nature. It is apparent that for a short time the department thoroughly believed in the construction above recited.

Certain "General Regulations" (1898, 27 L. D., 200; 1900, 30 L. D., 325; 1902, 31 L. D., 503) show how the department construed the act of 1898 with respect to "purposes of a public nature." They state:

> Applications under the act of March 3, 1891, must include in the certificate (Form 4) the statement "And I further certify that the right of way herein described is desired for the main purpose of irrigation" or "for public purposes" as the case may be. If for public purposes, the applicant should submit a separate statement of the nature of the proposed use.

Form 4 referred to is true to the foregoing.

Now come the regulations of June 6, 1908. Contrast the following quotation therefrom with that quoted just above.

> Applicants under the act of March 3, 1891, must include in the certificate (Form 4) the statement: "And I further certify that the right of way herein described is desired for the main purpose of irrigation."

Form 4 in this case likewise faithfully adheres.

No new law was passed covering rights of way over public lands in the United States between the regulations of 1902 and 1908, yet "purposes of a public nature" have gone by the board. But this is not all.

In those same regulations of 1908, under the section dealing with the act of 1901, we find the statement that that act, in general terms, authorizes the Secretary of the Interior to grant permission for every purpose contemplated by the acts of (1) January 21, 1895 (28 Stat., 635); (2) May 14, 1896 (29 Stat., 120); (3) section 1 of May 11, 1898 (30 Stat., 404); and so forth.

Please contrast the foregoing with the supposedly equivalent statement in the regulations approved August 24, 1912, and March 1, 1913.

This act, in general terms, authorizes the Secretary of the Interior to grant permission for every purpose contemplated by (1) sections 18 to 21, act of March 3, 1891 (26 Stat., 1095, 1101); (2) the acts of January 21, 1895 (28 Stat., 635); (3) May 14, 1896 (29 Stat., 120); and (4) May 11, 1898 (30 Stat., 404).

In this collection of dead statutes are now numbered that of 1891 and section 2 of 1898. By departmental order we find laws repealed. In the meantime Congress has passed no act which by any righteous or logical interpretation can be construed as repellant to the acts of 1891 and 1898. "Purposes of a public nature" still stand justified, and the law of every Western State defines just what such purposes are. But even if this were not so, the department's present policy with reference to water power, under the act of 1898, is based on an erroneous construction of the final clause of that act, namely, "subsidiary to the main purpose of irrigation."

The word "irrigation" is a technical term, originally used to signify the process of artificially applying water to land. Like many other terms originally technical, it has by universal acceptance been broadened to cover not only the process but also the purpose and the final result. The main purpose of irrigation is agriculture, and the result of agriculture is to produce food. So it is that when one speaks of irrigation in its broad sense he means arid-land agriculture.

Section 2 of the act of May 11, 1898 (30 Stat., 404) reads in part:

> And said rights of way may be used * * * for the development of power as subsidiary to the main purpose of irrigation.

If this language be construed strictly, according to the warrant given by the punctuation, the main purpose of irrigation, and not irrigation itself, is clearly designated. If, however, we concede a very doubtful and remote interpretation, namely, that the final words above quoted, "of irrigation," were deliberately inserted by Congress to explain or define the "main purpose," or, in other words, that a comma should rightly be placed after the word "purpose," we are still warranted in applying the customary definition of irrigation discussed in the previous paragraph. Therefore, the logic, the language, and the obvious intent of Congress point to the conclusion that the words "subsidiary to the main purpose of irrigation" mean "subsidiary to arid-land agriculture."

What is the main purpose of arid-land agriculture? It is to produce food products and to market them—not merely to produce them and let them rot on the ground; the latter process is certainly not agriculture. The placing of agricultural products where they can be made available to the people dependent upon them is as essential a part of the purpose of agriculture as is the plowing, the seeding, or the harvesting. Agriculture would not be the dominant industry if any one of its essential processes were cut out. Therefore the use of hydroelectric power for transportation of agricultural products and of the people who have a part in the industry must of necessity be covered by the terms of the act of May 11, 1898. All of this applies to the main purpose of irrigation directly and is not forced to enter under the guise of a subsidiary.

Consider now that which may properly be regarded as subsidiary to agriculture. The word "subsidiary" means "furnishing aid," "assisting," "helping in an inferior position or capacity," and so forth. The use of hydroelectric power for pumping water to be applied to land is surely subsidiary; so also must be such use for making agricultural fertilizer, such as the fixation of nitrogen from the air. It surely extends to the lighting of rural roads and homes, for such service furnishes aid and markedly assists in agricultural maintenance by contributing to the contentment and welfare of the people engaged therein. There can be no question as to the subsidiary purpose of using hydroelectric power to drive agricultural implements.

If we may follow a precedent in the broad extension of a legislative term, we may also include as truly subsidiary purposes the use of hydroelectric power for the grinding of pulp and the making of paper for wrapping fruit; in the sawing of timber for making farm structures, implements, fruit boxes, and so forth; in the making of textiles for clothes, bags, tarpaulins, and so forth; in the making of cement for irrigation-canal linings, farmhouses, fence posts, and well curbs, or in a score of other purposes. Such a series of interpretations is admittedly remote and quite unnecessary to establish the present contentions, but it constitutes no greater stretch of original legislative intent than that which has been accomplished with the "commerce clause" of the Constitution under deliberate legislative acts and with judicial approval. It is more reasonable to assume that the framers of the words "subsidiary to the main purpose of irrigation" had in mind the making of cement fence posts than it is to assert that the framers of the "commerce clause" had in mind the prevention of child labor or the suppression of the social evil. Yet the latter is amply supported by popular as well as by judicial approval.

### THE CALENDAR.

Mr. McCUMBER. Mr. President, I observe, by a glance at the calendar, that the Senator from California [Mr. WORKS] has given notice that to-morrow morning, immediately after the close of the morning business, he will address the Senate on a specified subject; the Senator from Virginia [Mr. SWANSON] is quite anxious that we proceed with the calendar for a short time; and I can not, with the time now at my disposal, complete my address on the subject which I was discussing yesterday before the expiration of the morning hour. Therefore I wish now to give notice that to-morrow, after the completion of the address by the Senator from California, I shall ask to proceed with the discussion of the grain-inspection bill, and will now yield that the Senate may take up the calendar under Rule VIII.

Mr. BRANDEGEE. Mr. President, if the Senator from North Dakota insists on that motion, I think we ought to have a quorum present. I do not raise the question at present, however. Could not the Senator from North Dakota proceed with his address until 2 o'clock, and if he shall not then have finished, go on to-morrow?

Mr. McCUMBER. Mr. President, I am willing to go on with the discussion at this time, even though I dislike in so important a case to speak to empty seats, and especially in the absence of those who are in opposition to the measure, because it is those whom I wish to reach.

Mr. BRANDEGEE. If the Senator should express the desire, I shall be glad to suggest the absence of a quorum.

Mr. McCUMBER. I wish the Senator from Connecticut would do so.

Mr. BRANDEGEE. I suggest the absence of a quorum, Mr. President.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Fletcher | Perkins | Smith, S. C. |
| Bankhead | Gallinger | Pittman | Smoot |
| Borah | Hughes | Ransdell | Stephenson |
| Brady | Jones | Reed | Sutherland |
| Brandegee | Kenyon | Robinson | Swanson |
| Bristow | Kern | Root | Thomas |
| Bryan | Lane | Shafroth | Thompson |
| Burton | Lea, Tenn. | Sheppard | Thornton |
| Catron | Lodge | Sherman | Tillman |
| Chilton | McCumber | Shields | Townsend |
| Clark, Wyo. | Martine, N. J. | Shively | Warren |
| Cummins | Myers | Simmons | Williams |
| Dillingham | Norris | Smith, Ariz. | Works |
| Fall | O'Gorman | Smith, Md. | |

Mr. REED. I announce the absence of my colleague [Mr. STONE] on account of illness. I make this announcement for the day.

Mr. DILLINGHAM. I desire to announce that my colleague [Mr. PAGE] is unavoidably detained from the Senate.

The VICE PRESIDENT. Fifty-five Senators have answered to the roll call. There is a quorum present. The calendar under Rule VIII is in order.

The joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women was announced as first in order.

Mr. GALLINGER. Let that go over, Mr. President.

The VICE PRESIDENT. The joint resolution will be passed over.

The bill (S. 1240) to establish the legislative reference bureau of the Library of Congress was announced as next in order.

Mr. GALLINGER. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 1760) for the restoration of annuities to the Medawakanton and Wahpakoota (Santee) Sioux Indians, declared forfeited by the act of February 16, 1863, was announced as next in order.

Mr. SMOOT. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 655) authorizing the Secretary of the Interior to survey the lands of the abandoned Fort Assinniboine Military Reservation and open the same to settlement was announced as next in order.

Mr. BURTON. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

### DWIGHT MISSION SCHOOL, OKLAHOMA.

The bill (S. 2725) authorizing the sale of certain lands to the Dwight Mission School, on Sallisaw Creek, Okla., was considered as in Committee of the Whole.

The VICE PRESIDENT. The bill, on a previous occasion, has been read and amended as in Committee of the Whole.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

### BUSINESS PASSED OVER.

The joint resolution (S. J. Res. 41) authorizing the Secretary of the Interior to sell or lease certain public lands to the Republic Coal Co., a corporation, was announced as next in order.

Mr. SMOOT. Mr. President, the junior Senator from Iowa [Mr. KENYON] is not present, and I therefore ask that the joint resolution may go over.

The VICE PRESIDENT. The joint resolution will go over.

The bill (S. 2242) making it unlawful for any Member of Congress to serve on or solicit funds for any political committee, club, or organization was announced as next in order.

Mr. LODGE. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 3112) to authorize the Secretary of the Interior to acquire certain right of way near Engle, N. Mex., was announced as next in order.

Mr. SMOOT. I ask that the bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 2651) providing for the purchase and disposal of certain lands containing kaolin, kaolinite, fuller's earth, and other minerals within portions of Indian reservations heretofore opened to settlement and entry was announced as next in order.

Mr. THOMAS. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The resolution (S. Res. 156) limiting expenditures for telegrams sent or received by Senators was announced as next in order.

Mr. SMOOT. Let that go over.

The VICE PRESIDENT. The resolution will be passed over.

The resolution (S. Res. 84) providing that any Senator upon his own request may be recorded and counted as present in order to constitute a quorum was announced as next in order.

Mr. SMOOT. Let that resolution be also passed over.

The VICE PRESIDENT. The resolution will be passed over.

The resolution (S. Res. 218) proposing an amendment to the standing rules of the Senate was announced as next in order.

Mr. SMOOT. Let that go over.

Mr. LODGE. Let the resolution be read. I should like to know to what it relates.

The VICE PRESIDENT. Is there objection to the reading of the resolution? The Chair hears none, and the Secretary will read as requested

The Secretary read Senate resolution 218, reported by Mr. CUMMINS from the Committee on Rules on December 5, 1913, as follows:

*Resolved*, That there shall be a standing committee of the Senate known as the Committee on Public Documents. It shall be composed of three Senators elected in the same manner as the members of other standing committees.

No book, pamphlet, article, paper, address, or other matter requiring the consent or order of the Senate in order to be printed as a public document shall be so printed or an order therefor entered until the request or motion for such order shall have been referred to the above committee, and its report thereon received: *Provided*, That nothing herein contained shall be construed to interfere with the right of the Senate to discharge the committee from the further consideration of any such request or motion.

In making its report the committee shall describe the general character of the matter sought to be printed as a public document, and shall specifically state whether it is of such value to the country that it ought to be printed and circulated at the expense of the Government.

The VICE PRESIDENT. The resolution will be passed over.

### RECEIVER OF PUBLIC MONEYS AT SPRINGFIELD, MO.

The bill (S. 3403) to abolish the office of receiver of public moneys at Springfield, Mo., and for other purposes, was considered as in Committee of the Whole. It provides that the office of receiver of public moneys at Springfield, Mo., shall, from and after the 31st of December, 1913, be abolished and cease to exist; and that all the powers, duties, obligations, and penalties at that time lawfully imposed upon the receiver, and upon the register of the land office at Springfield, Mo., shall be exercised by and imposed upon the register, who shall, in addition to the duties thus imposed, have charge of and attend to the sale of public lands within the State of Missouri, as provided by law and official regulation, and shall be accountable under his official bond for the proceeds of such sales, and for all fees, commissions, and other moneys received by him under any provision of law or official regulation, etc.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

### PROPOSED AMENDMENT TO THE CONSTITUTION.

The joint resolution (S. J. Res. 26) proposing an amendment to the Constitution of the United States was announced as next in order.

Mr. LODGE. Let that go over.

The VICE PRESIDENT. The joint resolution will be passed over.

### LANDS IN HOT SPRINGS, ARK.

The bill (S. 3863) granting lands to Hot Springs Lodge, No. 62, Ancient Free and Accepted Masons, of Hot Springs, Ark., was considered as in Committee of the Whole.

The bill had been reported from the Committee on Public Lands with an amendment, in line 7, after the name "Arkansas," to insert "and that proper conveyance thereto be executed," so as to make the bill read:

*Be it enacted, etc.*, That lots Nos. 1 and 2 in block 114, in the city of Hot Springs, Ark., be, and the same are hereby, granted to the Hot

Springs Lodge, No. 62, Ancient Free and Accepted Masons, under the jurisdiction of the Grand Lodge of Arkansas, and that proper conveyance thereto be executed.

The amendment was agreed to.

Mr. ROBINSON. I offer an amendment, in line 5, after the word "the," to strike out all down to the beginning of the committee amendment, in line 7, and in lieu thereof to insert "Grand Lodge, Ancient Free and Accepted Masons, Grand Jurisdiction of Arkansas."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In line 5, after the word "the," it is proposed to strike out "Hot Springs Lodge No. 62, Ancient Free and Accepted Masons, under the jurisdiction of the Grand Lodge of Arkansas" and insert "Grand Lodge, Ancient Free and Accepted Masons, Grand Jurisdiction of Arkansas."

The amendment was agreed to.

Mr. ROBINSON. The title should be amended.

Mr. ROOT. Mr. President, I should like to ask whether there is any report on this bill?

The VICE PRESIDENT. There is a report.

Mr. ROOT. May I ask whether there has been a communication from the Interior Department regarding the matter?

Mr. ROBINSON. In reply to the Senator from New York I will state that two or three years ago a bill passed Congress granting to the Masonic lodge of Hot Springs the right to the use of these lots for certain purposes, but reserving the title in fee to the United States. Subsequently the lodge raised $20,000 with which to construct the buildings contemplated. It was then tentatively arranged that the Grand Lodge of Arkansas should issue bonds and raise an additional $50,000 with which to complete the buildings. In order to do that it has been found necessary to vest in the lodge the title in fee. It is said by the authorities of the grand lodge that they are unable to float the bonds necessary to raise the additional sum unless the title in fee is granted.

Mr. ROOT. I should like to know what the authorities of the United States in charge of the Hot Springs Reservation say about this bill. I say that because there is no property of the United States which is not subject to a perfectly honest and sincere effort, by people who would like some of it, to take pieces which do not seem to be in present and immediate use and secure conveyances of them.

The Government is spending a large amount of money in maintaining the health reservation at Hot Springs, Ark. I do not think we ought to convey away any of the property that belongs to that reservation without having a mature and considered expression of opinion from the authorities of the Government who know all about it.

Mr. ROBINSON. In reply to the suggestion of the Senator from New York, I will say that when the former bill was under consideration it met with the approval of the department. This bill is intended only to give the title in fee and to remove the restrictions contained in the former act which have made it impossible for the lodge to carry forward the work.

The Interior Department did approve the passage of the former bill. This bill, granting the fee, has not been submitted to the department for the reason that the committee did not think it necessary to do so. I had a copy of the act before me on my desk, but have been unable to lay my hands on it.

Mr. SMOOT. It is in the report.

Mr. ROBINSON. My attention is called to the fact that the act is embraced in the report.

Mr. WARREN. May I ask the Senator where these lots are located? Are they on the margin of the reservation or in the central portion of it?

Mr. ROBINSON. They are not on the permanent reservation.

Mr. WARREN. They are on the margin of it, are they—adjoining it?

Mr. ROBINSON. No; they are not adjoining the permanent reservation, if my memory serves me correctly, but they are part of the Government reservation. I will state that a large number of lots belonging to the reservation, but not a part of the permanent reservation, were ordered sold by the Interior Department and the funds placed to the credit of the reservation. These lots were reserved from sale by the department, and subsequently Congress passed the bill a copy of which is embraced in the report on this bill.

Mr. ROOT. I will ask the Senator whether there is not a great difference between permitting temporary occupation, as the former bill did, and giving the fee to the property?

Mr. ROBINSON. No. I will say to the Senator from New York that the act already in force did not grant the mere right of temporary occupancy, but granted the right of permanent occupancy and use, and provided for a forfeiture when not used for the purposes specified in the grant. The reservations were designed to compel the lodge to use the property for the purposes set forth in the bill; that is, for the construction of certain buildings to be used by the lodge. The only effect of this bill is to remove those reservations, it having been found necessary to do so in order to raise the additional amount of money necessary to carry out the purposes of the original act.

Mr. WORKS. Mr. President——

The VICE PRESIDENT. Does the Senator from Arkansas yield to the Senator from California?

Mr. ROBINSON. I do.

Mr. WORKS. I desire to ask the Senator from Arkansas if he is certain that this bill was not referred to the Secretary of the Interior. I am a member of the Committee on Public Lands, and I understand that it was referred to him, and that all bills of that nature are referred to the department.

Mr. ROBINSON. I do not recall that it was referred.

Mr. WORKS. I know the bill was very carefully considered in committee.

Mr. ROBINSON. The bill was very carefully considered by the committee, but I have no recollection that it was referred, and I think the memory of the Senator from Utah [Mr. SMOOT] will confirm my recollection. It was not such a matter as the committee thought required a report from the department, considering the status of the present legislation on the subject.

Mr. ROOT. I think the bill had better be passed over, Mr. President.

The VICE PRESIDENT. The bill will be passed over, on objection.

## PENSIONS AND INCREASE OF PENSIONS.

The bill (S. 4167) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy and of other wars than the Civil War, and certain widows and dependent relatives of such soldiers and sailors, was announced as next in order.

Mr. OVERMAN. Mr. President, I have no objection personally to the consideration of this bill, but I understand the Senator from Georgia [Mr. SMITH] wishes to be present when it is taken up. He is absent on account of sickness. I therefore should be glad to have the bill go over, and also the next one.

Mr. SMOOT. Mr. President, we have passed over these pension bills now two or three times. If the Senator insists upon the objection——

Mr. OVERMAN. I have no objection, except that I heard the Senator from Georgia say he would like to be here when the bills were called up. I do not know that he is going to make any contest over any of them. So far as I am personally concerned, I have no objection.

Mr. SMOOT. I do not wish to move to proceed to the consideration of these bills notwithstanding the objection; but I will say that the Senator from Indiana [Mr. SHIVELY] intended to do that, if necessary, and he left——

At this point Mr. SHIVELY entered the Chamber.

Mr. LODGE. The Senator from Indiana is present now.

Mr. OVERMAN. I am not going to make any objection. I simply wished to inform the Senate that I heard the Senator from Georgia [Mr. SMITH] say that he desired to be here when the bills were considered.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill. It proposes to pension the following-named persons at the rates stated:

Isabella S. Snyder, widow of James A. Snyder, late captain, Third Regiment United States Infantry, $30 per month in lieu of that she is now receiving.

Louis E. Brusher, late of Company A, First Regiment United States Mounted Rifles, $20 per month in lieu of that he is now receiving.

Charles L. Stevens, late of Troop E, Fifth Regiment United States Cavalry, $16 per month.

Thomas W. Michael, late of Hospital Corps, United States Army, War with Spain, $50 per month in lieu of that he is now receiving.

John H. Broadwell, late of Company I, Third Regiment Connecticut Volunteer Infantry, War with Spain, $12 per month.

William S. Curtis, late of Company F, Second Regiment Oregon Volunteer Infantry, War with Spain, $12 per month.

Agnes E. Brown, widow of Alonzo L. Brown, late of Company A, First Regiment Mississippi Volunteer Infantry, War with Mexico, $20 per month in lieu of that she is now receiving.

Oscar C. Shull, late of Company L, Thirty-first Regiment United States Volunteer Infantry, War with Spain, $12 per month.

Schuyler C. Pool, late of Company K, One hundred and fifty-eighth Regiment Indiana Volunteer Infantry, War with Spain, $25 per month.

Jennie E. Howell, dependent mother of George E. Howell, late of Company D, Twenty-seventh Regiment United States Volunteer Infantry, War with Spain, $12 per month.

George V. Shaffer, late of Company L, Sixteenth Regiment Pennsylvania Volunteer Infantry, War with Spain, $20 per month in lieu of that he is now receiving.

Mary Meade Sands, widow of James H. Sands, late rear admiral, United States Navy, $50 per month in lieu of that she is now receiving.

Maria Howell, widow of Thomas C. D. Howell, late of Company E, Mormon Battalion, Iowa Volunteers, War with Mexico, $20 per month in lieu of that she is now receiving.

Barbara B. Haws, widow of William Haws, late of Capt. Robert Thomas's and Coleman Boren's companies, Utah Volunteers, Utah Indian war, $12 per month.

Mary A. Connolly, widow of Thomas Connolly, late first lieutenant, First Regiment United States Infantry, $25 per month in lieu of that she is now receiving.

Edward G. Goodbub, late of Company E, Twenty-ninth Regiment United States Volunteer Infantry, War with Spain, $16 per month.

George W. Robinson, late of Company E, Second Regiment Arkansas Volunteer Infantry, and Company E, Thirty-third Regiment United States Volunteer Infantry, War with Spain, $20 per month in lieu of that he is now receiving.

Isabella Workman, widow of Oliver G. Workman, late of Company B, Mormon Battalion, Iowa Volunteers, War with Mexico, $20 per month in lieu of that she is now receiving.

James E. Embury, late of Company F, Thirty-third Regiment Michigan Volunteer Infantry, War with Spain, $50 per month.

John Doughty, late of Company I, Eighth Regiment United States Cavalry, $17 per month in lieu of that he is now receiving.

Kate Sloan, invalid and dependent daughter of William H. Sloan, late of Company D, District of Columbia and Maryland Volunteers, War with Mexico, $12 per month.

Fred L. Bush, late of Company E, First Regiment Wisconsin Volunteer Infantry, War with Spain, $30 per month in lieu of that he is now receiving.

Paul L. Bahr, late of Company A, Seventh Regiment United States Infantry, $20 per month.

Mary C. Whitson, widow of Kaolin L. Whitson, late first lieutenant, Ninth Regiment United States Infantry, $25 per month in lieu of that she is now receiving, and $2 per month additional on account of each of the minor children of the said Kaolin L. Whitson until they reach the age of 16 years.

Otto Weber, late of Company B, Sixteenth Regiment United States Infantry, War with Spain, $16 per month in lieu of that he is now receiving.

A. Fannie Prevatt, widow of Joseph F. Prevatt, late of Capt. Coffee's independent company, Florida Volunteers, War with Mexico, $20 per month in lieu of that she is now receiving.

Mary E. Perry, dependent mother of Herbert S. Perry, late of Company C, Thirty-third Regiment Michigan Volunteer Infantry, War with Spain, $12 per month.

Frank J. King, late of Company E, Twelfth Regiment Minnesota Volunteer Infantry, War with Spain, $17 per month in lieu of that he is now receiving.

Helen M. Gleed, widow of Charles W. Gleed, late of Company D, First Regiment Vermont Volunteer Infantry, War with Spain, $12 per month, and $2 per month additional on account of each of the minor children of the said Charles W. Gleed until they reach the age of 16 years.

Albina M. Williams, widow of Thomas S. Williams, late of Company D, Mormon Battalion, Iowa Volunteers, War with Mexico, $20 per month in lieu of that she is now receiving.

Mr. SHIVELY. I move to strike out, on page 2, lines 1, 2, 3, and 4, inclusive.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed, on page 2, to strike out lines 1, 2, 3, and 4, in the following words:

> The name of Louis E. Brusher, late of Company A, First Regiment United States Mounted Rifles, and pay him a pension at the rate of $20 per month in lieu of that he is now receiving.

Mr. SHIVELY. I will state that the soldier is deceased.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and of other wars than the Civil War, and certain widows and dependent relatives of such soldiers and sailors."

The bill (S. 4168) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, was considered as in Committee of the Whole. It proposes to pension the following-named persons at the rates stated:

Caroline Adams, widow of Joseph W. Adams, late first lieutenant Company B, Thirty-fourth Regiment Kentucky Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Mary Hammack, widow of Andrew J. Hammack, late of Company H, Seventh Regiment Kentucky Volunteer Cavalry, $20 per month in lieu of that she is now receiving.

Alfred Lewis, late of Company F, Twelfth Regiment United States Colored Volunteer Heavy Artillery, $30 per month in lieu of that he is now receiving.

Minnie A. Thornhill, widow of French W. Thornhill, late acting assistant surgeon, Eighth Regiment Wisconsin Volunteer Infantry, $12 per month.

Mary U. Hull, widow of Frank Hull, late of Company C, One hundred and seventh Regiment New York Volunteer Infantry, $12 per month.

Cora H. Griswold, widow of Hamilton Byron Griswold, late of Company K, Sixth Regiment Massachusetts Volunteer Infantry, $12 per month.

Albert L. Church, late of Company D, Twenty-first Regiment Connecticut Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Franklin Ball, late of Company C, Tenth Regiment Connecticut Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Daniel R. Billington, late of Companies G and H, Seventh Regiment Rhode Island Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Margaret M. Cady, widow of William H. Cady, late first lieutenant Company I, Second Regiment Vermont Volunteer Infantry, $25 per month in lieu of that she is now receiving.

Mahala M. Clark, former widow of George C. Clark, late of Company H, Third Regiment Minnesota Volunteer Infantry, $12 per month.

Jerome P. Patten, late of Company H, Sixth Regiment Minnesota Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Sarah A. Wess, widow of William Wess, late of Company E, Thirty-eighth Regiment Wisconsin Volunteer Infantry, $12 per month.

George W. Shuck, late of Company A, Sixth Regiment Delaware Volunteer Infantry, and Company F, Seventh Regiment Delaware Volunteer Infantry, $12 per month.

Ida Florence Baylor, helpless and dependent child of Leander Baylor, late of Troop K, Fourth Regiment United States Cavalry, $12 per month.

Alexander Patterson, late of Company F, One hundred and forty-seventh Regiment Pennsylvania Volunteer Infantry, $24 per month in lieu of that he is now receiving.

Bella E. Timmens, widow of Benjamin Timmens, late of Company G, Eighty-seventh Regiment Pennsylvania Volunteer Infantry, $12 per month.

John Finegan, late of Company B, One hundred and forty-fifth Regiment, and Company D, One hundred and seventh Regiment, New York Volunteer Infantry, $30 per month in lieu of that he is now receiving.

James M. Wells, late captain Company M, Eighth Regiment Michigan Volunteer Cavalry, $50 per month in lieu of that he is now receiving.

Ann E. McGrew, widow of William T. McGrew, late of Company A, First Regiment Ohio Volunteer Light Artillery, $20 per month in lieu of that she is now receiving.

John J. Byrne, late of Twenty-ninth Unattached Company, Massachusetts Volunteer Heavy Artillery, $24 per month in lieu of that he is now receiving.

Lucy Lowry, widow of James Lowry, late of Company C, Forty-eighth Regiment Indiana Volunteer Infantry, $12 per month.

Mary E. Murphy, widow of Percival Murphy, late of Company K, One hundred and second Regiment United States Colored Volunteer Infantry, $12 per month.

Jacob C. Yorty, late of Company E, Third Regiment Wisconsin Volunteer Cavalry, $24 per month in lieu of that he is now receiving.

Ada Hess, widow of William H. Hess, late of Company B, Eighty-eighth Regiment Ohio Volunteer Infantry, $12 per month.

Angelia L. Shaw, widow of William H. Shaw, late of Second Battery Minnesota Volunteer Light Artillery, $20 per month in lieu of that she is now receiving.

Barney L. Bull, late of Company G, Twenty-fifth Regiment Wisconsin Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Sarah A. Higby, widow of Sidney C. Higby, late of Chicago Mercantile Battery, Illinois Volunteer Light Artillery, $20 per month in lieu of that she is now receiving.

Lucy M. Martin, widow of Alfred Martin, late of Company I, Twentieth Regiment Connecticut Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Henry M. Tillinghast, late second lieutenant Company D, Twelfth Regiment Rhode Island Volunteer Infantry, $36 per month in lieu of that he is now receiving.

Benjamin F. Havens, late first lieutenant Company F, Eighty-ninth Regiment Indiana Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Frances F. Godown, widow of John M. Godown, late first lieutenant Company K, Twelfth Regiment Indiana Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Norman P. Wood, late of Company D, Forty-ninth Regiment Wisconsin Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Lydia A. Tinstman, widow of Henry O. Tinstman, late of Anderson Troop, Pennsylvania Volunteer Cavalry, and first lieutenant Company G, Fifteenth Regiment Pennsylvania Volunteer Cavalry, $20 per month in lieu of that she is now receiving.

George A. Marks, late of Company A, Nineteenth Regiment Iowa Volunteer Infantry, $36 per month in lieu of that he is now receiving.

Elizabeth Chapman, late nurse, Medical Department, United States Volunteers, and widow of James W. Chapman, late of Company C, Third Regiment Iowa Volunteer Cavalry, $24 per month in lieu of that she is now receiving.

Mahala E. Warmoth, widow of George M. Warmoth, late assistant surgeon Forty-first Regiment, and surgeon Fifty-third Regiment, Illinois Volunteer Infantry, $25 per month in lieu of that she is now receiving.

Elizabeth Garland, former widow of Elmer E. Starr, late of Company A, Sixteenth Regiment Kansas Volunteer Cavalry, $12 per month.

Andrew F. O'Neill, late first lieutenant Company A, One hundred and forty-fourth Regiment Indiana Volunteer Infantry, $36 per month in lieu of that he is now receiving.

Holland Myers, late of Company G, Thirty-third Regiment Iowa Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Julia A. B. Andrews, widow of Warren Andrews, formerly Samuel A. Heath, late of Company B, Thirtieth Regiment Maine Volunteer Infantry, $20 per month in lieu of that she is now receiving.

John W. Ferguson, late of Company I, Twenty-sixth Regiment Maine Volunteer Infantry, $24 per month in lieu of that he is now receiving.

Daniel Dickey, late of Company D, Twenty-sixth Regiment Maine Volunteer Infantry, $24 per month in lieu of that he is now receiving.

Henriettn B. B. Hayman, widow of Robert M. Hayman, alias Kelly, late of Second Independent Battery, Massachusetts Volunteer Light Artillery, $20 per month in lieu of that she is now receiving.

Edgar S. McDonald, late mate, United States Navy, $30 per month in lieu of that he is now receiving.

George O. Colby, late of Company H, Fourteenth Regiment New Hampshire Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Terence O'Dowd, late of the United States Marine Corps, $30 per month in lieu of that he is now receiving.

Sarah M. Stone, widow of George F. Stone, late of Companies E and B, First Regiment Rhode Island Volunteer Cavalry, $20 per month in lieu of that she is now receiving.

David B. Ormiston, late of Company D, Fourth Regiment West Virginia Volunteer Cavalry, $30 per month in lieu of that he is now receiving.

James Jameson, late of Company D, Thirty-seventh Regiment Wisconsin Volunteer Infantry, $30 per month in lieu of that he is now receiving.

John Eagan, late of Company D, Thirty-seventh Regiment Wisconsin Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Lucie A. Hicks, widow of Robert W. Hicks, late of Company A, Eleventh Regiment Rhode Island Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Andrew Reese, late of Company E, One hundred and ninety-seventh Regiment Pennsylvania Volunteer Infantry, $24 per month in lieu of that he is now receiving.

Martin Parker, late of Company H, Eleventh Regiment Kansas Volunteer Cavalry, $50 per month in lieu of that he is now receiving.

William W. Pinkerton, late of Company D, Eighty-third Regiment Illinois Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Cyrus Reiley Pennell, late of Company I, Eleventh Regiment Iowa Volunteer Infantry, $30 per month in lieu of that he is now receiving.

James M. Carpenter, late of Company F, Ninth Regiment Vermont Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Andrew P. Duff, helpless and dependent son of William Duff, late of Company D, One hundred and sixtieth Regiment Ohio National Guard Infantry, $12 per month.

Harvey H. Carr, late of Company B, Fifteenth Regiment New Jersey Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Nancy J. Sandusky, former widow of Sylvester K. Rollins, late of Companies I and C, Twenty-third Regiment Missouri Volunteer Infantry, $12 per month.

Irvine Carman, late of Company K, Seventy-eighth Regiment New York Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Thomas F. Gardner, late of Company E, Seventh Regiment Illinois Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Harriet C. Spoor, widow of Austin O. Spoor, late of Company K, First Regiment Vermont Volunteer Heavy Artillery, $20 per month in lieu of that she is now receiving.

Aniceto Abeytia, late first lieutenant Company C, Second Regiment New Mexico Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Thomas H. Crapo, late of Company E, Third Regiment Michigan Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Charles Newton Eddy, late of Companies E and C, Fiftieth Regiment New York Volunteer Engineers, $40 per month in lieu of that he is now receiving.

John F. Bennett, late acting master's mate, United States Navy, $24 per month in lieu of that he is now receiving.

George Winding, late of Company G, Second Regiment West Virginia Volunteer Cavalry, $24 per month in lieu of that he is now receiving.

General Taylor Garrison, imbecile and dependent son of Jacob Garrison, late of Company G, Fifteenth Regiment, and Company G, Tenth Regiment, West Virginia Volunteer Infantry, $12 per month.

William Axe, late of Company G, Two hundred and seventh Regiment Pennsylvania Volunteer Infantry, $24 per month in lieu of that he is now receiving.

Gilbert A. Irons, late of Company I, Eleventh Regiment Rhode Island Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Amelia H. Sawyer, widow of Leicester J. Sawyer, late of Company H, Twenty-seventh Regiment Connecticut Volunteer Infantry, and former widow of James Dowsland, late of Company I, Third Regiment New York Volunteer Infantry, $12 per month.

Peter Calnacy, late of U. S. S. *Great Western* and *Ibex*, United States Navy, $24 per month in lieu of that he is now receiving.

Laura E. Peavey, former widow of Daniel S. Bedee, late first lieutenant and adjutant Twelfth Regiment New Hampshire Volunteer Infantry, $12 a month.

Asa S. Hugill, late of Company E, Twelfth Regiment, and Company D, Tenth Regiment, West Virginia Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Sallie E. Patrick, widow of William H. Patrick, late of Company A, Ninth Regiment Missouri State Militia Cavalry, $20 per month in lieu of that she is now receiving.

William H. Gregory, late of Company C, Eighth Regiment United States Infantry, $36 per month in lieu of that he is now receiving.

John Graffam, late of Company C, Twelfth Regiment Maine Volunteer Infantry, $24 per month in lieu of that he is now receiving.

Caroline M. Wallace, widow of William L. Wallace, late of the U. S. S. *Colorado*, *Fearnot*, and *Glasgow*, United States Navy, $20 per month in lieu of that she is now receiving.

John How, late of Company K, Fifty-fifth Regiment United States Colored Volunteer Infantry, $30 per month in lieu of that he is now receiving.

John J. Porter, late of Company A, First Regiment New York Volunteer Light Artillery, $50 per month in lieu of that he is now receiving.

William A. Custer, late of Companies I and B, Forty-sixth Regiment Indiana Volunteer Infantry, $36 per month in lieu of that he is now receiving.

Benjamin McKimmy, late of Company E, Sixth Regiment West Virginia Volunteer Cavalry, $40 per month in lieu of that he is now receiving.

Cremora J. Huffman, widow of Levi W. Huffman, late of Company I, Seventh Regiment New Jersey Volunteer Infantry, $12 per month.

William Jackson, late of Company K, Twenty-ninth Regiment Indiana Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Rebecca Harris, widow of Isaac Harris, late of Company F, Second Regiment New Jersey Volunteer Infantry, and first lieutenant Company A, Seventh Regiment United States Veteran Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Elinor F. Rodenbough, widow of Theophilus F. Rodenbough, late colonel Eighteenth Regiment Pennsylvania Volunteer Cavalry, and brigadier general, United States Army, retired, $30 per month in lieu of that she is now receiving.

William A. Rhoades, late of Company E, Second Regiment Maine Volunteer Cavalry, and Company F, Twenty-first Regiment Maine Volunteer Infantry, $36 per month in lieu of that he is now receiving.

Sarah M. Pond, widow of Levi T. Pond, late of Company K, Fifth Regiment New York Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Mary A. V. Sanger, widow of Austin T. Sanger, late of Company B, Second Regiment New Hampshire Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Eva E. White, helpless and dependent daughter of Robert C. White, late of Company E, Ninth Regiment Provisional Enrolled Missouri Militia, $12 per month.

David N. Landers, late of Company F, Seventh Regiment Maine Volunteer Infantry, and Company F, First Regiment Maine Veteran Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Mary C. Jackson, widow of Allen H. Jackson, late lieutenant colonel One hundred and thirty-fourth Regiment New York Volunteer Infantry, and major and paymaster, United States Army, $30 per month in lieu of that she is now receiving.

John W. Lively, late quartermaster sergeant Nineteenth Regiment United States Infantry, $36 per month in lieu of that he is now receiving.

William Wilson, late of Company F, One hundred and thirty-third Regiment Ohio National Guard Infantry, $30 per month in lieu of that he is now receiving.

John Thompson, late of Company D, Seventy-sixth Regiment Ohio Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Abby T. McCarthy, widow of Richard McCarthy, late of Company A, First Battalion, Seventeenth Regiment United States Infantry, and Company K, First Regiment Maine Volunteer Cavalry, $20 per month in lieu of that she is now receiving.

John O. Ackerson, late second lieutenant Company C, Eighty-eighth Regiment United States Colored Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Anne E. Milliken, widow of Luther S. Milliken, late surgeon One hundred and twelfth Regiment Illinois Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Lucy B. Hickox, widow of Chauncey Hickox, late second lieutenant Company A, Eighth Regiment Massachusetts Volunteer Militia Infantry $20 per month in lieu of that she is now receiving.

Caroline M. Ulio, widow of James Ulio, late captain Company K, Sixth Regiment California Volunteer Infantry, and major, United States Army, retired, $20 per month in lieu of that she is now receiving.

Vincent Knapp, late of Company F, Seventh Regiment Iowa Volunteer Cavalry, $30 per month in lieu of that he is now receiving.

Hiram Kibbey, late of Company A, Second Regiment New York Volunteer Mounted Rifles, $40 per month in lieu of that he is now receiving.

David Armstrong, late of Company F, Forty-ninth Regiment Ohio Volunteer Infantry, $36 per month in lieu of that he is now receiving.

Henry T. Peck, late of Company D, Fourteenth Regiment Vermont Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Maurice C. Stafford, late second lieutenant Company D, Thirty-seventh Regiment, and captain Company D, Fortieth Regiment, New Jersey Volunteer Infantry, $24 per month in lieu of that he is now receiving.

Lucinda Holmes, widow of George Holmes, late of Company D, Seventy-second Regiment Pennsylvania Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Catherine Holbrook, widow of David R. Holbrook, late of Company H, Third Regiment Wisconsin Volunteer Cavalry, $12 per month.

Nettie Jackson, widow of Andrew Jackson, late of Company B, Third Regiment New Hampshire Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Mr. SHIVELY. I move to amend, on page 3, by striking out lines 9, 10, 11, and 12, inclusive.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 3, it is proposed to amend, by striking out lines 9, 10, 11, and 12, in the following words:

The name of Margaret M. Cady, widow of William H. Cady, late first lieutenant Company I, Second Regiment Vermont Volunteer Infantry, and pay her a pension at the rate of $25 per month in lieu of that she is now receiving.

Mr. SHIVELY. The beneficiary in this case is dead.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. SHIVELY. On page 16, I move to amend, by striking out lines 4, 5, 6, 7, and 8. In this case the beneficiary, Elinor F. Rodenbough, is also dead.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 16, it is proposed to strike out lines 4, 5, 6, 7, and 8, in the following words:

The name of Elinor F. Rodenbough, widow of Theophilus F. Rodenbough, late colonel Eighteenth Regiment Pennsylvania Volunteer Cavalry, and brigadier general, United States Army, retired, and pay her a pension at the rate of $30 per month in lieu of that she is now receiving.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BILLS PASSED OVER.

The bill (S. 3023) relating to the duties of registers of United States land offices and the publication in newspapers of official land-office notices was announced as next in order.

Mr. BURTON. I ask that that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The joint resolution (S. J. Res. 94) to authorize the Secretary of Commerce to investigate the condition of trade in China, for the purpose of determining the desirability of establishing there a permanent exposition of the products of the United States of America, was announced as next in order.

Mr. GALLINGER. Let that go over, Mr. President.

The VICE PRESIDENT. The joint resolution will be passed over.

The bill (S. 2425) to authorize the Roanoke River Development Co. to construct and maintain a dam across the Roanoke River in Mecklenburg County, in the State of Virginia, approximately 20 miles below the town of Clarksville, in said State, was announced as next in order.

Mr. SMOOT and Mr. BURTON. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

MISSISSIPPI RIVER BRIDGE.

The bill (S. 1618) granting to the Inter-City Bridge Co., its successors and assigns, the right to construct, acquire, maintain, and operate a railway bridge across the Mississippi River, was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

REGISTERS OF LAND OFFICES.

Mr. MYERS. Mr. President, I will ask what has become of Senate bill 3023. Was there an objection to it? I was speaking to another Senator just for a second.

Mr. LODGE. It went over on objection.

The VICE PRESIDENT. The bill was passed over on objection.

Mr. MYERS. May I ask who objected?

The VICE PRESIDENT. The Chair understands that several Senators objected.

Mr. GALLINGER. I ask for the regular order.

JOEL J. PARKER.

The bill (S. 2226) for the relief of Joel J. Parker was considered as in Committee of the Whole.

The bill had been reported from the Committee on Claims with an amendment, in line 6, after the words "sum of," to strike out "$5,000" and insert "$400," so as to make the bill read:

*Be it enacted, etc.*, That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Joel J. Parker, or his legal representatives, the sum of $400, as full compensation for permanent injuries received by the said Parker on the 24th day of July, 1909, at Fort Lawton, Wash., while in the performance of his duties as an employee of the United States transport service.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

BILLS PASSED OVER.

The bill (S. 2590) to reimburse Charles C. Crowell for two months' extra pay in lieu of traveling expenses was announced as next in order.

Mr. MYERS. I object to the consideration of that bill.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 3971) to provide for a permanent exhibit of the resources of the States of the Union in or near Washington, D. C., was announced as next in order.

Mr. GALLINGER. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 2069) for the reimbursement of Jacob Wirth for two horses lost while hired by the United States Geological Survey was announced as next in order.

Mr. SMOOT. Mr. President, I have received a communication from the United States Geological Survey on this bill. I thought I had it with me this morning, but I must have left it over in my office. Therefore I ask that the bill be passed over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 4200) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and of wars other than the Civil War, and certain widows and dependent relatives of such soldiers and sailors, was announced as next in order.

Mr. MYERS. I object to the consideration of that bill, Mr. President.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 4261) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors was announced as next in order.

Mr. MYERS. I object, Mr. President.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 1759) to reimburse certain fire insurance companies the amounts paid by them for property destroyed by fire in suppressing the bubonic plague in the Territory of Hawaii in the years 1899 and 1900 was announced as next in order.

Mr. MYERS. I object.

The VICE PRESIDENT. The bill will be passed over.

The joint resolution (S. J. Res. 10) proposing an amendment to the Constitution of the United States, fixing the time for the convening of Congress and commencement of the terms of the President, Vice President, Senators, and Representatives was announced as next in order.

Mr. LODGE. Let that be passed over, Mr. President.

The VICE PRESIDENT. The joint resolution will be passed over.

The bill (S. 4352) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors was announced as next in order.

Mr. MYERS. I object, Mr. President.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 4353) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and of wars other than the Civil War, and certain widows and dependent relatives of such soldiers and sailors was announced as next in order.

Mr. MYERS. I object, Mr. President.

The VICE PRESIDENT. The bill will be passed over.

The bill (H. R. 10138) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war was announced as next in order.

Mr. MYERS. I object.

The VICE PRESIDENT. The bill will be passed over.

The joint resolution (S. J. Res. 104) for printing as a public document the publication of the State Department known as the Documentary History of the Constitution of the United States was announced as next in order.

Mr. GALLINGER. Let that go over. It has been reported adversely.

The VICE PRESIDENT. The joint resolution will be passed over.

The bill (S. 120) to provide for the inspection and grading of grain entering into interstate commerce, and to secure uniformity in standards and classification of grain, and for other purposes, was announced as next in order.

Mr. GALLINGER. Let that bill go over, Mr. President.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 1980) to remove the charge of desertion from the military record of Henry Fuller was announced as next in order.

Mr. GALLINGER. There is an adverse report on this bill.

Mr. SMOOT. Yes; I understand it was reported adversely.

Mr. GALLINGER. The question is upon its indefinite postponement.

The VICE PRESIDENT. The bill has been read as in Committee of the Whole.

Mr. SMOOT. Then I move the indefinite postponement of the bill if it is to be discussed to-day.

Mr. GRONNA. I do not see the Senator who made the report in his seat. I ask that the bill may go over.

The VICE PRESIDENT. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which is Senate joint resolution No. 1.

WOMAN SUFFRAGE.

The Senate resumed the consideration of the joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. WORKS. Mr. President——

The VICE PRESIDENT. The Senator from Illinois [Mr. SHERMAN] is recognized as entitled to the floor.

Mr. SHERMAN. If the Senator from California has any reason out of the ordinary to proceed at this time, I would be glad to yield to him.

Mr. WORKS. Not at all. I understood that the Senator had concluded his address yesterday. I do not want to interfere with him at all.

Mr. SHERMAN. Mr. President, I resume at the point where I left off yesterday evening, when the Senate proceeded to the consideration of executive business. I had suggested that certain peace officers of the city of Chicago were women. I believe the very short experience they have had indicates that they would deal with women offenders quite as effectively, and perhaps with a more accurate result in justice, than when male officers deal with them. There is no gallantry shown by women to women offenders; they mete out the law; whereas the sterner sex as a rule do not set their jaw quite as firmly when they are dealing with a woman offender.

I wish to definitely place in the RECORD a matter that was suggested by the Senator from Oklahoma [Mr. OWEN]. It was in effect that a primary law in Illinois prevented a voter who participated in the primary from thereafter voting any except the party ticket so voted at the primary; that that vote binds them in the ensuing election. It necessarily would make a much smaller number who would register or attend a primary if it were possible that they were to be so bound. The provision of the act of June 27, 1913, which is a reenactment of a prior law of 1910, contains the following:

No person shall be entitled to vote at a primary:

* * * * * * *

If he shall have voted at a primary held under this act of another political party within a period of two years next preceding such primary.

This in no manner binds the person who votes at a primary from voting any ticket he or she pleases at the ensuing general election.

I do not care to pursue in detail many of the subjects that have been suggested in the discussion of the pending joint resolution. It has been urged with some degree of force that a State has no right to fix the qualifications of a voter or to thrust upon another State voters that that State does not desire. California is cited as an illustration that States outside ought not to compel her to receive as citizens Asiatics, or that they ought not to interfere with the alien land law of a State. This could not be done, as was suggested yesterday, unless because of a required number of States ratifying an amendment. It could not be done in the matter of alien land laws unless in observance of a treaty obligation.

If I had any objections to the treaties of arbitration that were pending here it would be that they left the matter of the California statute on the alien ownership of land open to arbitration under the terms of that treaty when concluded. It is in effect, it is feared, and with some foundation, would submit to arbitration the interpretation of a treaty between this country and Japan. If an award should be made contrary to the act of the California Legislature, that treaty so interpreted would be the supreme law of the land. It would be binding upon every State. It would nullify every conflicting act of the legislature.

California is not the only State in the Union that would be affected in this way. There are numerous States having similar provisions. My own State, for instance, has had an alien land law for many years. No alien is permitted to hold beyond a fixed time the title to real estate lying within its borders. If they do not sell within the time fixed, public proceedings are provided under which the land shall be forfeited and sold, and the alien shall receive the money less the costs.

In other inland States they would feel as keenly upon this question as the citizens in California do. This is a matter of treaty obligation. If it comes to us in this body to ratify a treaty that would in effect nullify the alien land laws of a State, the proper time to object is on the ratification of that treaty. If we do not then have enough votes here to defeat it, it becomes the law and the States are bound thereby.

I wish to conclude here what I have to say on the woman-suffrage resolution especially by suggesting that at the outset yesterday I said in a government by law it was proper for women to participate as voters. If this is a government by law, and I am firm in the belief that it is, in fact as well as in theory, it certainly is obligatory upon every woman who contends the right ought to be extended to her that she shall obey the law herself, not only as it is now but as it shall be made hereafter.

I have no sympathy whatever with the militant suffragette. It is a mistake in any country where the law is the basis of the government, and it is equally a mistake here if it should ever be for a moment contemplated. It will result in nothing but unmixed evil. It will retard the cause by many years. It will lose useful labor done, public sentiment aroused, and postpone the ultimate triumph of the woman-suffrage cause by many weary years.

I see no difference, Mr. President, between militancy and any other form of lawlessness. I see no difference between the Industrial Workers of the World and the militant suffragettes. I see no difference between either and any other form of lawlessness, whether it be an individual outburst or an organized concerted effort to set aside the laws of the States or of the country.

I am for this resolution, and because I am for it I can say this, I think, without having my motives suspected. I urge upon every woman in this country that she array herself upon the side of law and order in the community. I urge upon them particularly, if they be disappointed in the adoption of this resolution by the necessary two-thirds vote or, in the event of its submission, even, if it be rejected by the States, that that disappointment do not lead them to despair and, so despairing, to lawlessness. Nothing will be gained by it. On the contrary, everything will be lost.

The Senator from New York [Mr. O'GORMAN] yesterday asked if it were not possible under the end sought by this resolution to force upon unwilling States, by 8 or 10, possibly, who constitute the majority in population and electorial strength, such a resolution as this contrary to the wishes of many other States, or by 36 States having a minority from forcing the amendment on 12 States having a majority of the total population of the United States. I do not think it is possible under our present system of government. I replied briefly to that subject on yesterday. I desire more thoroughly to examine it today. It perhaps is not directly connected with the subject of woman's right to vote in this resolution. I shall assume, however, that what I have to say on a primary, as it may be controlled by 8 or 10 votes, in response to the query of the Senator from New York, is pertinent upon this resolution.

I have reflected somewhat on this subject since last summer. In that time several things have happened. To illustrate, a presidential message has been written that has given considerable impetus to thought on these questions. I have always regarded political parties as so intimately connected with the administration of government that the parties themselves are impressed with a public interest. I think legislation can be sustained on that ground alone. Primary laws are in effect in every State in the Union interwoven with the general election laws of that State, whether they be for local or general elections. Primary laws limiting expenditure of money and requiring publicity, prohibiting the promising of appointments as a means of influencing votes, have been passed in many States. Publicity laws, limiting the expenditure of money, have already been passed by Congress and have gone unquestioned through campaigns nation wide.

A political party is always a voluntary association. The results of that association, however, place candidates for public office before the voters. Practically every voter in this country is a member of some political party. State election laws recognize these underlying conditions at all times and places. The first party tickets were nominated by neither convention nor primary many years ago. I shall not go at length into this, but ask leave to print some tables to save time.

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). Without objection, leave will be granted.

Mr. SHERMAN. The first party tickets were nominated neither by convention nor primaries. Before 1831 or 1832 the caucuses or the legislatures of the several States ordinarily were the nominating authority. In 1832 political parties had assumed form and power. In 1831 and 1832 tickets were nominated under the national delegate system for the first time. In the ensuing election the Democratic Party cast for Andrew Jackson fewer than 700,000 votes against 530,000 cast for Henry Clay. There were then 24 States in the Union. The total vote cast in all of the States was 1,250,000. In 1832 New York's total vote, in round numbers, was 323,000; Pennsylvania's was 147,000; and Ohio's was 157,000. Illinois struggled into the returns with 19,000 total, of which 14,000 were Democratic. Jackson was then and in 1836 the popular candidate. It may be presumed he drew out a very high percentage of the potential vote of the country. In 1836 his second campaign polled a total of 1,500,000 for all candidates.

Difficulties in preserving the purity of the ballot and accurate and honest returns were not so great or numerous as now, because dense populations and large cities were few. It may now be assumed without question that the large cities present the most difficult questions affecting elections. Stringent laws seek to minimize the dangers presented in densely populated cities.

| | |
|---|---|
| In 1832 the population of United States approximated | 13,700,700 |
| The total vote cast was | 1,250,810 |
| The per cent of the population to her voters was | 9.12 |
| Or a rate of nearly 1 voter to every 10 in population. | |
| Population per square mile then approximated | 6.4 |
| In 1912 the population of United States was | 95,410,503 |
| Total vote cast in 1912 was | 15,493,009 |
| Per cent of the population that are voters was | 16.17 |
| Or approximately about 1 voter to every 6¼ in population. | |
| The population per square mile approximated | 32.8 |
| Or over five times that of 1832. | |
| In 1830 the per cent of the population living in cities of 8,000 inhabitants or more was | 6.7 |
| In 1910 the per cent of population living in cities of 8,000 inhabitants or more was | 28.9 |
| In 1910 the per cent of population living in cities of 2,500 or more was | 46.76 |

The foregoing conditions show both the drift of population to cities and the settlement there of a large part of our immigrants. It furnishes the reason why the several States in which larger cities of the country are found have enacted many laws to regulate both primary and general elections. State legislatures and some State courts have treated the power to nominate as an integral part of the power to elect public officers. The time and place of residence, registration, and detailed provisions to guard against fraud, improper practices, and undue influences have been provided. The purity of primaries and elections, the fullest opportunity to the voter affiliated with a political party to express his choice, have been provided in many States.

After the old system passed away for many years the delegate convention system was the sole method of placing candidates in nomination on behalf of the several political parties either in localities in the States or in national politics. Then conditions changed. The great cities grew. Large numbers of voters and powerful business interests more or less connected with public affairs were concentrated in those cities. Questions vital to party control and equally vital to the public welfare mingled in the nomination of tickets. Under the stress of great temptation unfair practices sprang up. Sometimes tickets were defeated. Rancorous feuds were created as the result. The tendency for politics and business to blend became apparent in every State where a city of any size rendered the temptation sufficiently strong.

These elements produced discord. They produced in many instances evil legislation and sometimes equally bad administration. These conditions, not reforms but these conditions, coupled with a sense that the voters of a party were sometimes not

needed, gave strength to primary legislation. It was argued that the same power that elected those tickets ought to be permitted to nominate them.

It is not my purpose to enter into the merits or demerits of this controversy at all. Much of it is settled. I only wish to advert briefly to these conditions in this sketch. This direct primary legislation grew apace. Many States in the Union have enacted those laws. When they affect candidates local to the State, no controversy can arise between those laws and the nominations for Federal officers. When the nomination of candidates for Federal offices in general is affected congressional remedies must be sought. If any efficient remedy is to be procured, a national political party like a local one must be regulated by law. It now creates a nominating system and can alter, amend, and abolish it at pleasure. The organization is said to be the supreme court of party regularity. It may or may not heed the voters in whom rests the sole power of electing the candidates nominated. However, there is really but one supreme court in politics, and that is the ballot box at the ensuing election, and most of us have learned that.

The developments in the last 10 years are marked. Sometimes I think they are not fully noted or understood. Many States have already enacted primary laws not only regulating the nomination of candidates for Representatives in Congress, but have provided how the voters of such States shall elect delegates to the national convention. Some have provided, further, the method for nominating United States Senators, and they have anticipated by several years the adoption of the seventeenth amendment. Eleven States out of the 48 States of the Union now select delegates to a national convention on a blanket ticket by a State-wide vote, regardless of congressional districts. They are all entitled, under the last basis of representation, to 106 delegates in the Republican national convention out of a total of 1,078.

The call of the last national convention issued by the Republican national committee contained the following. I will not read it, but ask that it be incorporated. We are all familiar with it.

The PRESIDING OFFICER. Without objection, the request is granted.

The matter referred to is as follows:

> The Republican electors of the several States and Territories, including the District of Columbia, Alaska, Porto Rico, and the Philippine Islands, and all other electors without regard to past political affiliations, who believe in the principles of the Republican Party and indorse its policies are cordially invited to unite under this call in the selection of delegates to said convention. Said national convention shall consist of four delegates at large from each State and two delegates at large for each Representative at large in the Congress, two delegates from each congressional district, six delegates from each of the Territories, and two delegates each from the District of Columbia, Alaska, Porto Rico, and the Philippine Islands. For each delegate elected to this convention an alternate delegate shall be chosen who shall serve in case of the absence of his principal.

Mr. SHERMAN. The congressional district is by this call made the unit of representation. It asks—

> The Republican electors of the several States * * * and all other electors without regard to past political affiliation, who believe in the principles of the Republican Party and indorse its policies, to unite under this call in the selection of delegates to said convention.

This call is in direct conflict with the statutes of the 11 States named. It is likewise in conflict with some of the State laws that prohibit one who is a member of the party from voting in a primary of that party.

The call of the Republican national convention in 1912, for instance, removes this limitation created by State statute. It requires all delegates selected except those at large to be by congressional districts. The congressional district has been the unit of representation in the Republican Party for more than 30 years. The State legislation enacted on the blanket-ticket plan was had, with the congressional district as the unit, in full force and effect under the rules adopted by political conventions.

The sole power now exists in a Republican national committee to prepare the temporary roll of delegates for the convention of 1916. The temporary roll so prepared for all practical purposes becomes and is the permanent roll, and so the permanent organization of that convention. Under present practices the Republican national committee, by the course of the 1912 convention, not only impliedly has the sole power to prepare this temporary roll of delegates but delegates to the national convention shall be chosen in such manner as the national committee shall provide. It may therefore, by the exercise of its power, unseat on the temporary roll such delegates as it thinks proper. It may unseat every delegate from the 11 States named because the statutes of those States are in contravention of the call for a convention. That committee may go further if the emergency of politics require it. They may nullify the qualification of party voters imposed by State statutes.

We have uniformly gone, in many instances, on the theory that a man ought to be affiliated with the party and have some known habitation within that party before he should be allowed to participate in the nominating of a ticket to be voted for by all the members of that party. This provision of many local statutes therefore may cause to be unseated delegates from States or districts in whose election voters of other parties may have been denied participation because of such prohibition in State laws. Either of these foregoing causes is a constant menace to party harmony.

I shall assume here that the sole question or purpose of nominating a ticket is to elect it. It is possible that other motives might at times influence, but generally that is what leads to a given line of conduct. It will be difficult to convince one who is familiar with his own State that a national committee of a political party can deliberately set aside the verdict of the people of that State expressed in a fairly conducted primary and expect to secure the electoral vote of the State by the candidates so nominated.

These State primary laws are surrounded by many safeguards. In many instances they are the product of a great deal of experience.

I only state these issues very briefly. I state them for the purpose of showing that the solution is by legislation. I do not think it can be safely left to party faction to decide in time of stress these questions. The temptation to wrest power from an adversary by unfair means in modern political warfare is too great to be resisted. I am not dealing with the ideal at all. That age has passed away in politics, if it ever did exist. Legislation upon this question applies itself to the practical side of public affairs. A national primary law, as I see it, is a fit remedy for these evils. In the absence of such legislation the danger is always present; the element of injustice may be injected into party affairs whenever the emergency is great enough to cause it.

There are three divisions on this question. One wants to leave it alone. I need apply no descriptive term to those who think that way. I am not a political scientist, anyhow.

Another school wish to enact legislation that will adapt itself to existing conditions, seeking, if possible, to correct the evils without overturning any of the conditions which now prevail in the jurisdictions where the election laws are in force. They recognize public sentiment in the States in almost every instance and seek to keep in line with that sentiment.

Many of those States where the sentiment is the strongest are those presenting sharp contrasts with the population in great cities and rural districts. That contrast makes inevitable intense political struggles.

One group wish to ignore any existing State laws with existing systems of taking public sentiment on the question and desire nation-wide presidential primaries.

The 48 States would merely be outlying election districts. The footings of the aggregate vote from all the States would stand in lieu of delegates under the convention system. Unless a second primary election should be had in the course of affairs, it is inevitable that a plurality shall nominate. That plurality may be a very small percentage of the total vote cast by the respective parties at the polls.

This plan is recommended by President Wilson in his message of December 2, 1913. I am opposed to it. I will vote against any such measure. The nation-wide presidential primary totally obliterates the State. The aggregate returns are massed in such way that the small State in voting population ceases to be a factor in party affairs.

Those who believe in this method go a step further. They almost universally favor the abolition of the present system of electing a President and the substitution of a direct vote of the people for the electoral college.

This introduces into the election in November the same principle as in the Nation-wide primary preceding it. That is a radical reconstruction of the present system of government. It destroys the relative importance of the small States. It multiplies the power of the large States. The Senate here is the equalizing power of government between the large States and the small, the adjustment of 48 sovereignties with an inadequate federation at the beginning into a union of enumerated powers surrendered by the States. The debates which preceded the formation of the present Government show what the purpose was. I shall not enter into that.

A representative Government was deliberately created. This system represents both population and States. The smaller of the thirteen States were induced to participate in and ratify

the unamended Constitution by preserving their relative importance. This guaranty is found in an oft-quoted paragraph of an article in this Chamber:

No State, without its consent, shall be deprived of its equal suffrage in the Senate.

Under this guaranty the equal voice of the smaller States in the Senate has been preserved and the Constitution was ratified. It is a covenant between the thirteen original States and of the thirty-five that have been admitted on an equal footing with them since that time.

The power to elect a President and Vice President is found in the second clause of Article II of that document:

Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in Congress.

It will be noticed that this clause is in entire accord with that portion of Article V already quoted. The right of the electors of a State to have at least two electors representative of its two Senators is secured by the Constitution. It is vital to the existence of the smaller States in their relative position to the larger ones guaranteed in the original creation of the Government. It is an enduring basis of the Union that the smaller States be not shorn of their strength in the election of a President. It was intended to be and is a vital element representative of the States in the original plan of our democracy.

Rhode Island, with its 1,250 square miles and population of 542,610, has an equal vote in this Senate with Illinois and its 56,650 square miles and population of 5,638,591. However great future populations of the several States may be, however territory may expand, this equal suffrage of the States must endure. The number of electors based on Representatives in the lower House increases or decreases with the population in the several States. It is responsive to mere numbers. The Senate is responsive in this particular to States, and to States only, without regard to population, area, or industrial, commercial, or financial strength.

I wish here to assert deliberately that those who in the name of progress desire to destroy a representative democracy and to convert it into a pure democracy are themselves retrogressive. The mere lapse of time does not prove that there has been any real progress. Everybody can grow old if he lives long enough. So can a government. The mere fact that it becomes old by lapse of time does not show that anything is out of date. The men who prepared the Constitution of the United States in Philadelphia knew something of the history of human affairs; they knew something of the experience of men who had framed governments in times past. With all that knowledge, with all the history of the republics that had been framed which had endured for a season and had fallen, they were familiar. Recorded time is full of pure democracies. They began as favorably as any governments; they proceeded along the lines of their development; but ultimately there was not a pure democracy in the world that grew to any dimensions, with any great population, that survived the strain and stress of the multitude in a tumultuous assault upon the citadel of human rights. So these men when they framed a representative democracy, it seems to me, were the real progressives of their times.

If it be sought to turn back the hands of the clock of human experience and try to convert this Government again into a pure democracy, then President Wilson is right, and those who are sponsors and sympathizers with the Nation-wide primary system are right. This originally was a federation of 13 States. Since that time 35 more have been admitted upon an equal footing with the original 13. Both are represented—the State and the population. It is not a pure democracy now and it was not in the beginning; it was not intended to be. The design was for something more enduring, more preservative of justice because more protective of minorities. They refused to reduce it to the terms of a pure democracy.

Another thing let me advert to here. It would be a gross breach of faith with the smaller States to change the method of electing the President and Vice President. It is desirable that a primary system and an election system be in harmony with each other. If there be a nation-wide primary, no sufficient reason would exist why, if the one is justified, the electoral college ought not to be abolished, and that we ought not to elect the President and Vice President in the same way, and take the high vote in the returns from all the States, and by that vote, without the intervention of an electoral college, choose our Chief Magistrate. I think that would be a breach of faith in more ways than in a moral one. It is a legal breach of faith. Forty-eight States in the Union now send 192 convention delegates; they, in addition, have 96 electors in the Electoral College. If there be a nation-wide election as well as a primary, the nation-wide election instantly destroys 96 electors; it takes away from every State in the Union, large or small, two electors representative of the two Senators. It is a violation of the governmental condition on which the Republic was founded.

Delaware, with its 2,050 square miles and population of 202,322, and Texas, with its 265,780 square miles and 3,896,542 population, are equal in votes in this body. Nevada, with its 110,700 square miles and 81,875 population, is equal to New York, with its 49,170 square miles and population of 9,113,279. The direct election of President destroys the equalizing influence of the States, and places it in mere population.

I have heard a good deal here, Mr. President, which seems to suggest that all human history began with the Declaration of Independence, and those who may not subscribe to that doctrine at least think it began in the valley down toward Lexington, or, at any rate, when the Constitution was written. I do not think either. I think human history and the history of this country, so far as it affects public affairs as a world power, began a long time before 1776 or 1787; it began 500 years before.

Direct democracies ended in ruin, and the fathers knew it as well as or better than some of us who can not subscribe to the doctrine of a pure democracy believe it now. I quote here from President Wilson's message of December 2, 1913, which I shall not read, but shall ask to have inserted as a part of my remarks.

The PRESIDING OFFICER (Mr. LEWIS in the chair). The Chair hears no objection, and permission to do so is granted.

The matter referred to is as follows:

I turn to a subject which I hope can be handled promptly and without serious controversy of any kind. I mean the method of selecting nominees for the Presidency of the United States. I feel confident that I do not misinterpret the wishes or the expectations of the country when I urge the prompt enactment of legislation which will provide for primary elections throughout the country at which the voters of the several parties may choose their nominees for the Presidency without the intervention of nominating conventions. I venture the suggestion that this legislation should provide for the retention of party conventions, but only for the purpose of declaring and accepting the verdict of the primaries and formulating the platforms of the parties, and I suggest that these conventions should consist not of delegates chosen for this single purpose, but of the nominees for Congress, the nominees for vacant seats in the Senate of the United States, the Senators whose terms have not yet closed, the national committees, and the candidates for the Presidency themselves, in order that platforms may be framed by those responsible to the people for carrying them into effect.

Mr. SHERMAN. Mr. President, I think, under existing conditions, minority rule is sufficiently strong. As proposed by this amendment—on the theory, now, that this amendment might pass and the women participate in elections—instead of having 16,000,000 votes in the United States we would have double as many. The larger the vote grows the more the evils of minority rule become apparent. The evils of minority rule are, I think, sufficiently aggravated now without precipitating into the situation a nation-wide presidential primary.

Along with that comes the public thought stimulated to change the method of electing Presidents with the evils I have suggested.

I am moved to inquire here when the President wrote this paragraph on what authority he did so? Was he the spokesman of the organic body of the Democracy when he uttered it? Did he confine himself to something which had been embodied as a promise to the people at an election? I am quoting this. Had such a primary had the organic consideration of the Democratic Party? Did Mr. Wilson himself run on the Baltimore platform? Was the primary plank of that platform also juggled? Is his message his private view on primaries or is it his party's view? If so, what segment of the party? These questions were suggested on a certain recent occasion when the Baltimore platform was a refreshing shelter from "starting anything," to use the vernacular of the street employed on that occasion.

I am somewhat curious—I know I have often paid a high price for my curiosity; but it is a strong human trait—I am somewhat curious to know whether Democratic Senators will yield to this message or not, and whether any innocent Republican Senators will be seduced thereby. Democratic Senators know well where it leads, and especially those who have studied maturely the relation between their States and the National Government, and who know the dividing line. On very little, Mr. President, is there a twilight zone to students, to those who have examined these questions practically in either governmental matters or in litigation. Some here and there are in a nebulous state, but they are only matters waiting for judicial decision or congressional action. Democratic Senators know

where this leads. Once embarked on this swift current of direct and tumultuous discord, the States will be obliterated, and we shall return to the rejected system that the fathers put behind them in 1787, not because they were wiser than we—I shall not argue that; I shall not wound the sensibilities of any statesman; but concede that we know as much as they did; that Ben Franklin had no more experience than we have had; that Charles Carroll of Carrollton was just as circumscribed in his vision as are we; that George Washington was no more patriotic than are we; that Madison, too, had his limitations; that Hamilton penetrated the future no more than we—let us concede all that, and say we know just as much as they knew; but the fathers rejected pure democracies on historic evidence, because they had been tried in the balance and found wanting. No experience since then has argued to us to revert to the ancient pure democracy rejected by them.

They deliberately rejected pure democracy and wrote into this charter a representative democracy and preserved every one of the smaller States of the ancient confederation. The 35 States which have been added since that time have the same rights as had the 13 original States. A direct nomination of candidates for President and Vice President would result in a highly concentrated control. When the Senator from New York [Mr. O'GORMAN] propounded the interrogatory on yesterday, Mr. President, he opened the gate to this interesting inquiry. Let me give the States. I do not think we shall ever have any more time, and I will be as brief as I can.

A direct nomination of candidates for President and Vice President would result in a highly concentrated control. Ten of the larger States of the 48 could nominate. In 1908 in the 10 States of California, Illinois, Indiana, Iowa, Massachusetts, Michigan, Missouri, New York, Ohio, and Pennsylvania Taft had 4,452,532 out of a total of 7,637,636, or in those 10 States of the total vote in the United States 58¼ per cent. Bryan had 3,623,175 out of a total of 6,293,182, or in those 10 States of the total vote in the United States 52⅝ per cent.

In 1912 in the 10 States named Wilson had 3,284,901 out of a total of 6,293,454, or in those 10 States of the total vote in the United States 52⅛ per cent. Roosevelt had 2,541,835 out of a total of 4,119,538, or in those 10 States of the total vote in the United States 61.95 per cent. Taft had 2,050,397 out of a total of 3,484,980, or in those 10 States of the total vote in the United States 58.83 per cent.

In 1908 Bryan's total vote in the United States was 6,393,182. A nominating majority of this vote is 3,196,592.

The eight States of New York, Pennsylvania, Ohio, Illinois, Indiana, Missouri, Iowa, and Kentucky combined polled over 51 per cent, or 3,264,882, being 68,290 more than a majority of the total vote.

In 1912 Wilson's total vote in the United States was 6,293,454. A nominating majority of this vote is 3,146,728.

The nine States of New York, Pennsylvania, Ohio, Illinois, Indiana, Missouri, California, Kentucky, and Texas polled over 51 per cent, or 3,216,539, being 69,811 more than a majority of the total vote polled in the United States. It ought to be recorded here that Wilson's total vote in the United States was 99,728 lower than Bryan's vote in 1908 of 6,393,182, and lower than Bryan's vote in 1900 of 6,358,076 by 64,622, but the candidates received in 1912 the following per cent of the electoral vote:

| | Per cent. |
|---|---|
| Wilson | 81.92 |
| Roosevelt | 15.25 |
| Taft | 2.83 |
| Debs | 0.00 |

These returns show in a striking way the influence of the States in the election of a President. It is not a pure democracy. It was not intended to be such by its founders. Neither ought it to be. The relative importance of the individual State continues throughout. To ignore or weaken it is decay, not development. The influence of the State can be abated only by destroying its integrity as one of the original units of governmental creation.

It will interest our Democratic brethren further to note that in 1904 Parker's total vote in the United States was 5,079,041. A nominating majority of this vote is 2,539,522. With several candidates a plurality nominates and a much smaller number of votes than the majority given would nominate. The eight States of New York, Ohio, Pennsylvania, Illinois, Missouri, Indiana, Kentucky, and Texas combined polled over 52 per cent, or 2,646,718, being 107,196 more than a majority of the total 1904 Democratic vote in the United States. With more than two candidates a much smaller number could nominate on the plurality plan.

The foregoing data show that control could be exercised successfully by the 8 or 10 States named. The other 38 or 40 States might have no decisive control in the nomination. Distance and geography vanish before modern transit and communication of intelligence. The tendency is among the larger States named to become affiliated by commercial, financial, and business ties. Politics largely follows the lines of interest. Territorial contact no longer unites neighboring States as in the early day. Primary nominations are influenced by personal acquaintance coming from association along the lines of mutual interest. The natural tendency in such a condition would be for the control to gravitate inevitably into the power of the large States.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Utah?

Mr. SHERMAN. Yes, sir.

Mr. SUTHERLAND. In connection with the statement which the Senator has made with reference to the proportion of the popular vote which would be represented by the 10 States named, can the Senator tell us what proportion of, say, the Republican national convention the delegates from these 10 States constituted?

Mr. SHERMAN. I have not the delegate basis figured out; I could do that, but I have not investigated that.

Mr. SUTHERLAND. It would be somewhere in the neighborhood of 25 or 30 per cent, I imagine.

Mr. SHERMAN. Oh, yes.

Mr. SUTHERLAND. It would not be anywhere near a controlling number?

Mr. SHERMAN. Nothing like it; no, sir; because the smaller States, without regard to population, each have four delegates, corresponding to the two Senators. I should say, roughly speaking, that instead of the 10 States casting 52 to 61 per cent of the popular vote under the delegate system their voting strength in a convention would not much exceed in any instance, I should think, 40 per cent even if they were all consolidated on a single candidate.

Mr. SUTHERLAND. That very arrangement affecting national conventions tends to equalize the difference between the larger States and the smaller States and to prevent a few of the larger States controlling the smaller ones, just as a somewhat similar arrangement in the constitution of the Senate and the House of Representatives tends to do the same thing.

Mr. SHERMAN. Yes, sir; that evidently was the purpose in framing the actual government on that basis. Political control, as it has existed to the present, has followed out very closely the government. This shows the harmony that results between the management of political parties and the actual administration of government.

It ought to be further recorded here that the total popular presidential vote in the United States in 1912 was 15,033,639, of which was received by Wilson, 6,293,454; Roosevelt, 4,119,539; Taft, 3,484,980; Debs, 900,000; or, of which was received of the popular vote by Wilson, 41.86 per cent; Roosevelt, 27.40 per cent; Taft, 23.18 per cent; Debs, 5.98 per cent. I cite these figures for the purpose of illustrating the equalizing power of the double system of government, showing where the balance was made between the representation of States and the representation of population. That balance exists; it is not always seen by the multitude, but it exists as a potent factor in the control of public affairs.

This is the electoral vote: Wilson, with 41.86 per cent of the popular vote, received 81.92 per cent of the electoral vote. There is a concentration represented in that percentage in the smaller States and the voting power given the smaller States in that system. Roosevelt received 27.4 per cent of the popular vote and got 15.25 per cent of the electoral vote. Taft had 23.18 per cent of the popular vote and got 2.83 per cent of the electoral vote. Debs had nearly 6 per cent of the total popular vote, but got nothing in the electoral vote, not carrying a single State.

This illustrates conclusively that this country at present is not a pure democracy. It was created on the other basis deliberately; there was a purpose in it; and it was to equalize these differences. The relative importance of the individual State continues throughout all these operations. To ignore or weaken it, it seems to me, is decay, and not development; it is not progress, but it is retrogression; it is not creative, but it is destructive. To my mind, it is taking the hands of the human clock of destiny and moving them back on the dial plate of recorded events. Nor can it improve or strengthen government, secure justice, or promote the public welfare. I do not think the influence of a State can or ought to be abrogated in any way by destroying its integrity as one of the original units of governmental creation.

There is another subject to which I desire to allude. I do not want to speak at length upon it, but just enough to put it in line here with the other matters. The electors chosen on the general ticket by a State-wide vote can vote for anybody; they are bound by no human law after they are elected. It will be found on examination of the State statutes that every State in the Union at present elects presidential electors by State-wide vote, and whoever carries the State takes the electors; but neither in the constitutions nor in the statutes of the States, nor in any law known to this country, is there anything to compel an elector to vote for the candidate who carries the State at the election at which the elector himself is elected. That has remained since this country began a matter of honor among men. It is like politics. I think human government would cease to exist; that party organization would be impossible if honor ceased to exist among men. So the electors, bound upon their honor, ordinarily vote for the candidate who carries the State, not because they are legally bound to do so, but because the higher law of human nature enforces upon them its obligation. The popular vote is solely advisory.

How does the name of a candidate for President get on the ballot in a presidential election? Is there anything in the Federal Constitution to authorize it? Nothing. Is there anything outside of the statutes of a State? No. Each State controls. It is provided by statute that candidates for President may have their names printed upon the ballot, so that an advisory vote is had under the forms of law, although it is extra legal in its operation.

It has been argued here—and I have heard it a great many times outside of this Chamber by men whose judgment I sincerely respect and in whose wisdom I have great confidence—that all primary legislation by Congress is unconstitutional and void; that there is no provision to be found in the Constitution to justify it. I do not know of any provision which refers to the voter except in the clause relating to the election of Representatives in Congress, and then, later, in the fifteenth and then the seventeenth amendments, providing for the popular election of Senators. When it comes to the election of President and Vice President the Constitution simply provides that "Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives" from that State.

So, if we seek to justify the exercise of this power, I can see two grounds on which to base it. The one is the general police power of the General Government. The police power inheres in every sovereign. Courts decline uniformly to bind the police power by definition; they hesitate even to limit its application by general expressions; they are usually content to decide on a specific case of its exercise before them for adjudication. No sovereign can barter away the police power or absolve itself from the exercise of this salutary authority. It is of universal application. You will not find it in the Constitution. It springs from no specific enumeration of power; but it comes from the same high source from which government itself is derived. It ranges the whole vast field of the public welfare—the health, morals, good order, the regulation of property in both public and private hands, and in a numerous body of specific cases that promotes the common purposes of civil society. It is a reasonable interpretation to say it might be found in the list of enumerated powers in section 8 of the first article, which gives Congress power—

To make all laws which shall be necessary and proper to carry into execution the foregoing powers—

If it stopped there, it would be questionable, but it continues:

and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof.

If it is valid for Congress or a State to take a popular expression on the election of the President, it follows that the power to regulate the nomination by primary laws exists. Congress may regulate primaries and elections of any elective Federal officer under its general police power, or in the case of Senators and Representatives under section 4 of Article I of the Constitution.

It was said by one Senator who discussed this matter in a very fair way, and who is opposed to the exercise of this power, that primaries have nothing to do with the purity of popular elections. It seems to me they have. It occurs to me that primaries lie at the root of the trouble. The threshold of political decency begins in primaries. If a man will stuff a ballot box in a primary, if he will forge a tally sheet, if he will repeat an organized horde of voters, if he will chalk-mark a voter between the shoulder blades and vote him once, take him down an alley, wash his face, take his coat off, put a different chalk mark on him, and vote him again—when he does that in a primary, whether it is a soap-box or a legalized primary, it is the same thing; it does not make a bit of difference. Fraud is no respecter of persons or regulations. It is the character of the act that stamps the character of the man. A man who will do that in a primary, with or without a law, has laid the moral foundation for evil citizenship in defrauding you or me at an election.

So I think decent primaries are at the threshold of decent elections. A man who swindles me in a primary I would not trust at the November election, because one is equally reprehensible with the other.

Again, Congress has legislated on this question. We have publicity laws. We have laws placing a limitation on expenditures. We must make oath whom we have promised to appoint to office, if anybody. I do not think there have been any promises made since those reports have been coming in here. Nobody ever promises to appoint anybody to office now to get his vote. Possibly they never did it before. I do not know. There have been grave suspicions, however, that it has occurred.

Congress has already recognized party committees, candidates, campaign expenses, the reprehensible feature of bartering away things we do not own, of contaminating the public welfare by plundering public office as a means of control. It has not been attacked in the courts. It has not yet passed the gamut of litigation, but it is in the hands of Congress. Some of us have run under those provisions. So, if it be said that this matter is one beyond the power of Congress, our reply is that we have actually exercised it without question.

I think upon both of the grounds named the power exists.

Now, I want to hurry along. I have a great deal of this matter. It has been growing a long time. It is not a subject that sprang up over night. There are some authorities here on the question of construction. I cite only one. I wish to insert various parts of the text without reading them.

The PRESIDING OFFICER. The Chair hears no objection. The suggestion of the Senator will be accepted as acted upon.

Mr. SHERMAN. Construction of constitutional power is always permissible. The conditions attending the authors of the text and the developments of new conditions related to the whole are proper to consider. If the range of the text or the spirit of the purpose that animates it can reasonably include subjects which develop from subjects admitted to be within the letter of the text, construction will apply to permit the exercise of the claimed power. Constitutions are not codes of law. They declare and embody principles governing a wide sweep of governmental power. Enumeration of specific cases defeats their end. Human wisdom is inadequate to the enumeration of all cases. Constitution writers therefore limit themselves to the expression of principles. The spirit of the principle and not the letter of the text is the life of the law. Human wisdom can not foresee either cases or conditions in the distant future.

I quote from Lieber:

In the application of "ancient charters to cases arising out of entirely and radically new relations which have sprung up, and which cases nevertheless clearly belong to that province of human action for which the charter was intended."

Francis Lieber, in his "Hermeneutics," therefore defined "construction as the drawing of conclusions respecting subjects that lie beyond the direct expression of the text from elements known from and given in the text, conclusions which are in the spirit though not within the letter of the text."

Section 4 of Article I authorizes Congress to make or alter State statutes on the times and manner of holding elections for Senators and Representatives. At the time its authors penned section 4 nomination difficulties did not exist; election difficulties did. It is not a violent construction with changed conditions to extend the operation of this section so as to cover primary elections for Senators and Representatives. Neither is it a departure from a sound construction to hold that public policy and the police power justify Congress in regulating the manner of nominating candidates for President and Vice President. The nomination imposes upon the presidential electors of the respective parties the moral obligation to respect and obey the popular choice on candidates so nominated who carry the State within which electors are chosen. The fact that such electors may lawfully ignore the popular verdict does not weaken the reasoning to justify the passage by Congress of a primary act; it rather strengthens it. The legislation of the 48 States, with few, if any, exceptions, provides for the election of presidential electors on a general State ticket. The same ballots on which the electors are chosen give them the instruction of their political party previously ascertained by primary or convention or both. The text of section 1, Article II, and the twelfth amendment to the Constitution concerning that article have in the history of this country been so universally subordinated to the popular will as of itself to place a practical

construction upon both the public policy and the police power of Congress.

If the text is itself a declaration of the fundamental principles which we are bound to follow in a certain sphere of action and of certain fundamental forms which are to regulate our actions in this case, constructions signify the discovery of the spirit, principles, and rules that ought to guide us according to the text, with regard to subjects on which that declaration is silent, but which nevertheless belongs to its province. If, for instance, a political constitution or charter has been adopted or granted to regulate our political actions, and a case occurs which has not been directly provided for but which is of an undoubted political character, we have faithfully to search for its true spirit and act accordingly in the case under consideration. Analogy, or rather parallel reasoning, in this signification of construction, is the essential means of effecting it.

In most general adaptation of the term, construction signifies representing of an entire whole from the given elements by just conclusions. Thus, it is said "A few actions may sometimes suffice to construe the whole character of a man."

The spirit of the Constitution is to create a representative republic and not a pure democracy. The preservation of the representative type of government is guaranteed by providing adequate means for public expression in peace and orderly procedure. The Constitution was written in the spirit of a just medium, a moderate course between arbitrary power and popular violence. Every congressional act that preserves this balance adds to the stability of the system. Every bill which speaks in the spirit of the Constitution is the genesis of progressive legislation. It is such legislation that keeps pace with the progress of succeeding generations. It prevents the living from being bound by the pulseless letter of the dead. It seeks rather the spirit that makes alive the text of the wise men of other generations and carries it by comprehensive construction to the affairs of the present. A charter of freedom so construed will never be burst by revolution nor lapse into unrestrained power of either popular caprice or executive despotism nor lose the respect and allegiance of its citizens.

In a bill submitted by the senior Senator from Illinois, known as Senate bill 3922, he has sought to work out a method of making national nominations that respects basic conditions. The figures on which delegates are based are susceptible of change. The bill may not be correct in detail, but it follows out the ideas I have advanced.

Let me tell you where I got most of my authority for writing this bill. The Baltimore platform of the Democratic Party, in 1912, contains the following, the only citation I shall read:

PRESIDENTIAL PRIMARIES.

The movement toward more popular government should be promoted, through legislation, in each State which will permit the expression of the preference of electors for national candidates at presidential primaries.

We direct that the national committee incorporate in the call for the next nominating convention a requirement that all expressions of preference for presidential candidates shall be given and the selection of delegates and alternates made through a primary election conducted by the party organization in each State where such expression and election are not provided for by State law. Committeemen who are hereafter to constitute the membership of the Democratic national committee, and whose election is not provided for by law, shall be chosen in each State at such primary elections, and the service and authority of committeemen, however chosen, shall begin immediately upon the receipt of their credentials, respectively.

That is a plank in the Baltimore platform. It is flatly contradictory to the President's message of December 2, 1913. Which shall control—the platform or the President? For which plan will you vote, Senators on the other side of the Chamber? For the Baltimore platform, preserving the local right of expressing sentiment in States, preserving the integrity of the State respecting local conditions in the State under laws you either have now or may hereafter enact, or, if you have no such laws, under rules to be formulated by your State committee? Will you take that, preserving the right of the State to be heard within its own borders and by the terms of its own election law, or will you take the nation-wide primary contained in the President's message?

If you will take the method that respects the right of the State to be heard, I will vote for your bill. I do not care who draws it or who introduces it. There is no politics in that. It is respecting conditions that are as vital to my State as they are vital to any of yours. If, however, you ask me to throw all of the States into the melting pot of a nation-wide primary—Nevada and Rhode Island with Texas and Illinois, Delaware and Connecticut with New York and Pennsylvania—if you ask me to put them all together and obliterate in the management of party affairs the right of the smaller State to be heard, I am against your bill; I will vote against it and do what little I can to defeat it. I believe in respecting basic conditions.

Mr. VARDAMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Mississippi?

Mr. SHERMAN. Yes, sir.

Mr. VARDAMAN. I simply wanted to congratulate the Senator upon the expression of such strong Democratic doctrine. I commend him in his good work, and hope he will go on.

Mr. SHERMAN. I value the approval highly, not only because of its high source, which I respect, but because of its inherent soundness. [Laughter.]

I wish now to read from the platform of a party, or a mass meeting. I do not know just how to designate it yet. It is one of the things that nobody but the Lord and the future can tell.

The national Progressive platform of 1912, to be specific and earnest about it, contains the following plank:

Rule of the people.

That sounds familiar. We have all heard it.

The Progressive Party, committed to the principle of government by a self-controlled democracy expressing its will through representatives of the people, pledges itself to secure such alterations in the fundamental law of the several States of the United States as shall insure the representative character of the Government. In particular the party declares for direct primaries for the nomination of State and National officers.

Why, they did not have hardly a vote in any State of the Union where direct primaries had not been the law for a long time. In our State we passed a law on the 30th of March, 1912, to give them that right in an extraordinary session of the legislature. We were glad to do it. It cost, as I remarked here once before, $130,000; but the fellow that won thought it was worth the money, and the one that lost thought it was a horrible waste of public funds. [Laughter.]

In particular, the party declared for direct primaries for the nomination of State and National officers and for nation-wide presidential primaries. Now, get in line. Let the people rule. I am in favor of the people ruling, but I am in favor of the thinking people ruling. I do not believe in government by ungoverned impulse.

For nation-wide preferential primaries for candidates for the Presidency, for the direct election of United States Senators by the people; and we urge on the States the policy of the short ballot, with responsibility to the people, secured by the initiative, referendum, and recall.

I shall not discuss the last three, since that would be out of order and not pertinent to this inquiry.

This plank executed in legislation would create a primary system in discord with our election system. The enactment of such a measure providing for nation-wide presidential primaries, whether it is advocated by President Wilson in his message of December last or demanded by the Progressive Party platform, would be a reckless plunge into the gulf of experiment. I am saying that to the galleries to carry home with them. I think they can all hear me.

I believe in the maintenance of political parties. No more effective way of directing the operations of great multitudes of men who think alike on vital and elementary questions has ever yet been devised. Some time a better way may be invented, but any destructive critic that comes along must show me the way.

I have no use for a solely destructive critic. I have use for a constructive critic, who can destroy something that has served out its time and can substitute for it something better than the old. I had rather, myself, be the builder of a hut than the destroyer of a palace. I had rather keep political parties as they are now until something better can be devised by the wit of men, than to plunge into the chaos of an unrestrained pure democracy.

I believe in preserving the integrity and purity of political parties. I have no right to intrude myself into another party's affairs and seek to control the nomination of their candidates.

These are the platforms of two political parties. The Republican Party of 1912, in the platform of the Chicago convention, is silent upon that question; so on that subject I am at liberty to follow the Progressive plank or to vote the Democratic ticket, or to take to the woods. As already announced, on that subject I intend to vote with the Democratic Party in this Chamber if the question comes to an issue. I think on that subject they are right. I had rather vote the Democratic ticket on that subject than to vote either the Republican vacancy or the Progressive plank on it.

Mr. SMITH of Michigan. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Michigan?

Mr. SHERMAN. Certainly.

Mr. SMITH of Michigan. The Senator from Illinois is predicating his statement upon the idea that the Democratic platform is regarded seriously.

Mr. SHERMAN. Yes.

Mr. SMITH of Michigan. Does not the Senator think that very recent revelations indicate that it is only a very temporary affair, intended to get into power on?

Mr. KENYON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Iowa?

Mr. SHERMAN. I do.

Mr. KENYON. To what does the Senator from Michigan refer?

The PRESIDING OFFICER. The Senator from Iowa propounds a query to the Senator from Michigan.

Mr. SMITH of Michigan. I refer to the degree of vigilance with which the majority party are observing the tenets of their party faith. I have been very much surprised to find that they stand so vociferously for a principle to get in on, and abandon it so quickly at the behest of a single member of their party. I am referring particularly to the back somersault on the tolls question that we recently witnessed in another branch of Congress.

Mr. SHERMAN. Mr. President, the inquiry is certainly justified both by recent events and by some not recent. I confess that I have been sorely afflicted in spirit, in meditating over this question, to know whether the Baltimore platform were a sober document or one that was intended to be airy persiflage or a bit of dry humor.

Mr. SMITH of Michigan. The Senator from Illinois is a very well-informed and conservative and distinguished Member of this body. I should like to ask him what his present opinion is upon that question.

Mr. SHERMAN. After great travail of spirit I have arrived at the conclusion that it is like it was when Greeley ran for President—that there are irreconcilable differences in our midst. [Laughter.] Now, which is going to win I can not say to the Senator from Michigan. I have my sympathies. I am against the administration on the bill on that subject.

Mr. SMITH of Michigan. That is, the Senator from Illinois does not recognize that all branches of the Government center around and are in absolute control of one man?

Mr. SHERMAN. No, sir. I might add here, in order to show that my opinions are not born of prejudice, that I intend to vote with the President on the recommendation for the repeal of the exemption-from-tolls clause.

I was not over to-day to hear his message; but I understand he recommended it, and I am in perfect accord with him. I shall vote accordingly.

Mr. SMITH of Michigan. I am sorry the Senator from Illinois failed to witness that scene. The historic Chamber where it took place has been the scene of many important events in the history of this Government. To-day the setting was particularly attractive. The main body of the hall was filled to overflowing with the representatives of the people. The galleries were rich in color and personnel. One particular gallery, however, attracted my notice more than the others. That was the diplomatic gallery, where the representatives of all European countries were assembled; and in their midst, as though by prearrangement, the author of the free-toll plank in the Democratic platform, the premier in the Cabinet of the President of the United States, occupied the most conspicuous place, amid surroundings so rare and so becoming for such a scene, rather than upon the floor, where Americans were gathered for the purpose of listening to an abandonment of an American policy.

Mr. SHERMAN. In order that the CONGRESSIONAL RECORD may be translated into language which the common people will understand, what does the Senator from Michigan mean by "the premier"?

Mr. SMITH of Michigan. I think I ought to change the term. I do not think I should have said "premier." I think I should have said "primer."

Mr. SHERMAN. I am not cavilling upon the pronunciation, but upon the gentleman who possesses the dignity. What is his name? I want it in the RECORD, as the lawyers say, to go up on.

Mr. SMITH of Michigan. I think it is generally admitted that he is the author of the part of the platform adopted by the Democratic Party at Baltimore which has been so ingloriously abandoned.

Mr. SHERMAN. That sufficiently identifies the gentleman.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER (Mr. THOMPSON in the chair). Does the Senator from Illinois yield to the Senator from Ohio?

Mr. SHERMAN. Certainly.

Mr. POMERENE. Mr. President, I am quite sure that the very distinguished Secretary of State was not aware of the fact that the Senator from Michigan was in the House of Representatives. Otherwise he would have come down and would have sat beside him. [Laughter.]

Mr. SMITH of Michigan. Oh, no, Mr. President.

The PRESIDING OFFICER. The galleries must refrain from demonstrations.

Mr. SMITH of Michigan. I think that if he had known I was there he would have been quite content to remain away. [Laughter.]

Mr. SHERMAN. Mr. President, the Senator from Michigan has rendered a most valuable public service. There would not appear in the future history of to-day's proceedings, unless it were preserved in the CONGRESSIONAL RECORD, the mad riot of color that prevailed in the diplomatic corps and the distinguished visitor that adorned the gallery as a fit frame to this magnificent setting. I am sure that we all appreciate that, and I am glad to digress long enough to make that acknowledgment. I am glad, too, to say that this is not one of the cases where it is an expensive frame and a cheap work of art. The picture probably is as valuable as the frame. That might arouse some sentiment of antagonism; but in view of the recommendation for the repeal of the law granting exemption from tolls to American coastwise shipping, I am inclined to think that the rich adornment was justified by the result.

To return to the subject in hand, as far as the Republican Party is concerned, we have reached the point where there must be a representation based upon the voting strength of the party. That involves a reorganization of the method of selecting delegates. I have sought to work that out in Senate bill 3922. The principles are elastic. There is no fixed way that we ought to fall out about in executing the purpose. If my first impression is not right, I am willing to take a second or a third or a further view in order to produce the needed results.

Let me generalize. I have some figures here that I will put in, if no objection is made, without reading.

The PRESIDING OFFICER. Is there objection? The Chair hears none.

Mr. SHERMAN. Mississippi cast for Representatives in Congress, out of her 7 districts, in 1908, not a Republican vote.

In South Carolina out of 7 districts 4 in 1908 and 5 in 1912 cast for Representatives in Congress no Republican votes.

Out of the 36 districts of Texas not a Republican vote for Representatives in Congress got into the returns of a single district.

In other words, there was not a Republican vote for Representatives in Congress in 1908 in 4 districts in Alabama, 2 districts in Arkansas, 9 districts in Georgia, 1 district in Louisiana, 7 districts in Mississippi, 4 districts in South Carolina, and 10 districts in Texas—a total of 42 districts in 7 Southern States entitled to 84 delegates. This delegate voting strength in conventions does not have behind it at the November polls the power of a solitary Republican vote for Representatives in Congress.

The vote for presidential electors in such States is nearly as insignificant. The delegate representation from some 10 States is grossly unfair and demands a radical change, so that voting strength and not mere population shall be represented.

These figures show that there are 42 congressional districts in the United States in which in 1912 there was not a solitary Republican vote cast for Representative. In 1908 there were a few. It is the general history of things political from that part of the Union that the Republican Party, or any party other than the Democratic Party, is conspicuous by its absence. These 42 districts sent 84 delegates. Forty delegates controlled in the last Republican convention. Many times, on controverted questions of nominations, the 84 delegates controlled the nomination. When it comes to the election of a President, not one of the States from which the 84 delegates came can furnish a solitary electoral vote; so it seems to me that it is eminently fit to have some reformation in that line.

Further, I spoke about the Baltimore platform on presidential primaries. I do not know whether that is going to be the end of the difficulties or not. There are several planks that are in discredit. Let us leave temporarily the nation-wide preferential primary, eliminating conventions, throwing everything into a pure democracy, converting every State into an outlying province as in the days of ancient Rome, serving only to foot up the return and send it to the Capitol, and the high candidate takes the nomination. The man with 15 per cent, 20 per cent, or any plurality, just so that it is more than the next high man, is the nominee.

I do not know whether it is going to end there or not, but it is sufficient to say that the Baltimore platform is now in process of dismemberment. Candor would induce me to say that the more it is torn to pieces the better it looks to me. How much of this platform was made by "select spirits," to quote from a senatorial friend of mine, "active, ingenious, and strenuous"; how many planks crept in; and how many detailed suggestions not fully digested procured a lodgment there no one, not even

its responsible authors, seems to know. If the disintegration of this historic document continues, ultimately every plank instead of being a life preserver will become a millstone around the neck of the party which, amid great enthusiasm, before the tumult and the shouting died and the captains and the kings departed, hailed that document as proclaiming the new charter of freedom.

I read in the same platform: "Death to the trusts! Away with the judicial interpretation put upon the Sherman anti-trust act by the judicial tribunal sitting a few feet from this Chamber!"

Then we have a bill for a trade commission, one of the five brothers affectionately so called by those who hate them. What will the trade commission do? It is to investigate, to find out things, to search into the vital organs of the trust and see whether it is framed right, whether it is behaving itself, whether it is a good one, in other words, or a bad one.

The antitrust plank criticizes the decision of the Supreme Court on that subject. Then this bill that comes in here, to my profound, unspeakable astonishment, as I read it, creates a perambulating commission to go to and fro upon this continent selecting the good from the bad. Upon whom will its maledictions fall? Upon whom will the lightning descend? Upon bad trusts? Who will decide the bad trusts? From what high authority does the commission spring? From the same one that recommends nation-wide primaries and sets aside the Baltimore plank on the same subject. It is his recommendation. It is executive legislation proposed. His will governs every appointment on that commission.

For my part, as a believer of the judicial system framed by the men in Philadelphia, if this much-criticized document called the United States Constitution is preserved, I prefer that whether a corporation be a good one or a bad one shall be decided by the judicial tribunal a few hundred feet from here, in accordance with the law and order that prevail in representative democracy. I believe that the decision of the Supreme Court, commonly known as the rule-of-reason decision, is a safer code under which the business of this country may be conducted than a perambulating commission of the President's appointment, who rise and fall with the fluctuations of successive campaigns. So there is another plank out of gear.

The publicity plank I turn to in that same platform. That was good reading at the time it was first written. It fell like a refreshing shower upon the agitated multitude in pit and gallery. The publicity plank favors giving the world the recommendations, verbal and written, upon which presidential appointments are made.

If you want my private opinion about that, I think it is unadulterated moonshine. Of course the Senators on the minority side undertook to give them some of their own medicine. They must justify themselves that way whatever they may believe. But I do not think anything of the original merit of the principle. I suppose Senators were a good deal like Tom Sawyer was when his aunt's cat came into his room. The cat curled his feline tail and squalled and let on like he wanted something. Tom was playing sick and was home that day, and his aunt had put him to bed. She had taken him at his word. She had located the scene of trouble some place down in the digestive tract and had been giving him pain killer. Tom construed the cat's conduct to mean that he wanted some of the pain killer. He said, "If you don't want the pain killer don't you ask for it," but the cat continued, and he slipped a tablespoonful down the cat's esophagus with tremendous results.

If you did not want it, why did you ask for it? It is fine to run a campaign on, but it is most uncomfortable to make an administration out of. You know it is not practicable. There is not a Federal judge fit to be appointed who would likely favor that those who recommend him be published to the world. That is the province of the Chief Executive, and I want to talk to some of the people in the gallery who listened to his message. You conduct a campaign on one plank, but when you are elected it is repudiated as impracticable.

I drop down a little further and I come to another horrifying spectacle that adds supremely to the gaiety of nations, a single presidential term. It has not made a bit of progress. The silence on that subject is something that borders on the abysmal depths of the boundless infinite.

The canal-tolls exemption I come to. I agree with the President on that. I do not agree with his party platform.

That plank seems to be what sailors call up in the lake country a stowaway. I do not know what they call it on salt water. I am not a salt-water sailor. But this plank seems to be a stowaway. It got into the platform and away it went over the high seas of American politics flying the befitting flag of economy and reform. Nobody discovered it until the party craft arrived in port at the following November election, and now to-day there is an effort to throw the stowaway overboard and to execute every member of the crew who mutinies on board. There is where you are drifting to now.

As I said yesterday, sometimes we travel so fast that we lose sight of the milestones; and I think some of my Democratic friends are a little color blind. [Manifestations of laughter and applause in the galleries.]

Mr. VARDAMAN. Mr. President, if the Senator will turn this way—there are a large number of Democrats present who can not hear him with his face toward the east.

Mr. SHERMAN. Yes, sir.

Mr. VARDAMAN. I want to hear the Senator, because he always speaks entertainingly and instructively. I can not understand him when his back is turned toward me.

The PRESIDING OFFICER. The occupants of the galleries must refrain from demonstrations. Under the rules it is absolutely incumbent upon the presiding officer to preserve order in the galleries, and order will have to be maintained. The Chair hopes he will not have to call attention to it again.

Mr. SHERMAN. I have not taken very much time, and I speak with becoming modesty, I think; but I am remembering that they declared in favor of an income tax. Well, we got one at last. How does it work out? Let me tell you. Most of us have made our returns by this time and sent them to the internal-revenue collector of our district. I have helped some of my friends, by correspondence and otherwise, who did not have that lucid understanding of the law that the general public is by force of circumstances compelled to have. Everybody knows the law, but nobody knew what this law was—not even a lawyer. So I went to figuring it out about exemptions. A man running a grocery shop over here in the northwest part of Washington, where I live, has a horse and a delivery wagon and a stock of groceries. He can insure his stock, he can pay the rent on his house, he can pay the plumber's bill and the clerical help and the driver of the wagon, and insure the wagon, and get a live-stock policy on the horse, and take every dollar of it out as a deduction. He may have half a dozen children and as good a wife as ever lived, and if he has a $5,000 insurance policy on his own life he can not take out a penny of the cost of the insurance. That is the way it works. It promotes the insurance of horses and discourages the insurance of human beings.

I do not think I ought to take any more time, Mr. President, and I will not, except to state that the Republicans had a great factional struggle in 1912. Our Democratic friends have been talking consecutively for many weary months about the rule of the people. The votes of 41 per cent of them, 6,300,000, went into the ballot box in November, 1912. The votes that were not Democratic, coming from the two wings of the Republican Party, aggregated nearly 8,000,000, against the six million and nearly three hundred thousand Democratic votes. When the rule of the Democratic people is considered, therefore, it is the minority rule. I can understand why the President is in favor of a presidential nation-wide primary. It will promote and continue minority rule instead of a rule of the majority of the people.

I want to refer briefly to the Republican national convention held in Chicago in June, 1912, and its result, a remarkable instance of a divided majority defeated by a united minority.

Of the 7,604,518 voters who separated on that day, practically all believed alike on every vital permanent public issue before the American people for 52 years then and to-day. All are protectionists. All resisted free silver. All believed in the anti-trust laws and reasonable changes in them when needed. All believed in the just regulation of the common carriers of the country, in the great elementary acts that safeguard the life and health of the people seen in pure-food and meat-inspection laws. All believed in an efficient national health service. All believed in the conservation of our resources by reasonable laws. All believed in adequate public defenses on land and sea, in the building and maintaining of a Navy, in the adequate development and maintenance of the Regular Army. They believed in stable government for our island possessions and in extending to their people self-government only to keep steady pace with their ability to wisely exercise it. The wage earners had received at their hands legislation that kept step with the progress of events. Safety appliance and inspection laws, the limitation of hours of labor, and the liability law marked acts of Congress within its constitutional power. Many Republican administrations and many Republican States, through their legislatures, had given laws to safeguard, to sanitate, and compensate labor. Publicity provisions and child-labor laws had worked out social justice of a practical and progressive character. Constitutional amendments, both State and National, were then and are now in a fair way to be adopted that will sufficiently relax undue delay or difficulty in amending the Constitution. The

law-abiding people who compose both elements of the Republican Party do not wish constitutional amendments to be made so easy and expeditious as to lose the necessary stability and useful permanence that gives value to our Constitution in this country.

Impeachment proceedings were then and are now the subject of investigation, with a view of relaxing somewhat the rigid practice under which procedure is now had. The party had uniformly in itself for more than half a century of its existence been keenly responsive to every practical progressive movement.

In the regulations of interstate commerce both elements are in substantial accord. A corporation, though State created, if it engage in commerce among the several States or with foreign nations becomes an instrument of such commerce and subject to its laws. All believe and know that the Constitution of the United States designedly carries general powers, national in character, within its grasp and was and is not a code of laws. It was a comprehensive charter of national life. Its principles, not burdened with enumerated details, carried in their sweep all unenumerated, but necessary, and incidental powers. These express powers written in the Constitution have been construed, interpreted, and applied by wise and just decisions of Federal courts. Many acts of Congress have exercised in detail the great sovereign powers conferred upon that department of Government. The spirit of the Constitution has been kept and its vital powers administered with singular fidelity by each department as distributed to it. In peace and in war it has stood the strain and steadily met the purposes intended by the fathers who wrote it and the people of the original States who ratified it. Seventeen amendments testify to the responsive character of its structure to organic change.

It emerged from a great Civil War unimpaired, with its vital forces undiminished. All the 35 States that have since been admitted on the same footing as the Thirteen Original States have but added strength to this indispensable bond of our national life. No departure from constitutional lines is justified by any seemingly imperative wants of the hour. All of the voters of the Republican Party, of both elements, believe in following the established channels of procedure in adopting constitutional amendments. All believe if the great expansion of national life has produced problems with which the States can no longer successfully deal, the Nation will assume that authority in a lawful way. The interval of sober reflection, when the saving second thought has been taken, will, however, reject impatient haste to destroy these wise safeguards of civil liberty by ignoring the salutary restraints that constantly attend constitutional amendment.

The Republican voters believe that wherever a corrupt union of business and politics has interfered with the proper powers of Government the voters themselves, acting as a united party, can remedy it by union more speedily than by division, and the resulting success of the Democratic Party. The publicity law, limiting the expenditure of candidates for the nomination and election of Representatives and Senators in Congress, and requiring the sources of contribution to be published, was originally passed by a Republican Congress. Such laws are an aid in reforming the abuses complained of. There is no more invisible government possible in the one element of the Republican voters than in the others. The voters of neither element believe in an invisible power behind public officers. Government is public. Republican voters united can be depended upon to make it and keep it public, so that all may know to whom public officers owe their allegiance. Political parties do exist now and always have to secure responsible government and to execute the will of the people. They are instruments to promote the general welfare. The Republican voters, united by such common beliefs, can not promote that public welfare by dividing their strength and placing the Democratic minority party in power to administer the Government and deal with current issues.

The destruction of the protective system in the recently enacted tariff law is a heavy blow to the wageworkers and producers of our country. Under the pretense of reducing the high cost of living the Democratic Party has cut our pay rolls in two and reduced nothing but the ability of American labor to earn a living. The industrial depression we now feel is the result of our division in the last election. The injurious effect of the Democratic practice of giving our markets away and transferring our pay rolls to foreign countries is now plain. Nearly 8,000,000 voters who oppose such Democratic legislation have it in their power to repeal it and restore our industries and pay rolls to more prosperous conditions. The nearly 8,000,000 voters believe in an income tax properly imposed. They do not believe in the present income-tax law, that is impracticable, vexatious, and unreasonable. Its classifications are unjust. The method of its collection is burdensome and annoying. The cost of its administration is excessive.

The civil-service laws, State and National, have been enacted by the Republican Party. Such measures have been stamped with the approval of the Republican voters. Such laws have been broken down in national affairs by covert attacks by a Democratic Congress and in a Democratic administration.

The internal-revenue employees of the income-tax section of the new tariff law are by express provision removed from the operation of the civil-service laws.

The appointments provided for in the currency bill are exempted from the civil-service law and made party patronage. In the Senate there was a tie vote on an amendment placing such employees under the civil-service law, which was broken by its ex officio presiding officer, whose vote exempted all those appointments from the law.

All questions of industrial and social justice can be advanced much more speedily and with greater certainty by a union of those who think alike. If there be evils in party management, the Republican house can be cleansed from within more certainly and much sooner than to pull it down and undertake to build a new structure that will prevail against a united but minority Democratic Party.

These considerations appeal to the nearly 8,000,000 voters who cast a divided vote in the ballot boxes in November, 1912. The ambitions of those who assume to be leaders, who seek to serve personal ends by continuing this division, ought to be disregarded.

Certain methods of the Republican national convention in Chicago in 1912 can be justified by an appeal to neither fairness nor justice. Neither can those who attempt to make this a basis for the destruction of the Republican Party in the future justify that course if they persevere. Shall the quarrel of alleged leaders disrupt and destroy the union of 8,000,000 voters? Whose party is it—the organization's party, the candidates', their managers and lieutenants'? Is it owned by officeholders, by those who dispense or wish to dispense patronage, by those who are ambitious of place or power? Is the national committee the party?

Every man in active politics in the Republican Party to-day, or between 1908 and 1912, knows that the same rules governed the convention of 1912 that governed the convention of 1908. They were useful to the candidate or persons who were able to invoke the rules for their purposes. Those rules were wrong in 1908. They were equally wrong in 1912.

The Republican Party is too vitally interwoven with the fortunes and destinies of the American people to be destroyed by a single defeat or a series of defeats. Its record is the most illustrious in the field of American politics. Its legislation and its administrations have been the most potential for good and the most progressive since constitutional government began on this continent. It can not be hoped by those once or yet of the Republican household who have raised their hand to destroy that they can succeed. They can reform, quicken, and make more efficient agencies for good within the party structure. To go beyond means many years of weary defeat, of delayed purposes, of hindered progress, of continued minority rule of the Democratic Party, and ultimate failure. Party life, like government, reorganizes, reforms, readjusts itself and its instrument of service to new ends and new issues born of changing time.

Republicans who are Progressives, or Progressives who are Republicans need not spend time in fruitless controversy about whether the division of the 1912 election will or will not destroy the Republican Party. What both want is results. Can we produce them by separating and electing Democrats? It will be useless to discuss whether separation will create a third party which will eventually become a victorious one. Politics, like history, repeats itself. The Democratic Party met its great division and disaster in 1860. It, too, is an ancient party. It divided on the vital questions of disunion and slavery. The convention at Charleston, S. C., split asunder. In the ensuing election Douglas received 1,375,157 votes. Breckinridge received 847,514 out of a total Democratic vote of 2,222,671. Reduced to percentages, Douglas received 62 per cent and Breckinridge 38 per cent of the total Democratic vote. As stated, Roosevelt had 54 per cent and Taft 46 per cent of the total Republican vote. Breckinridge had but a little over 60 per cent of Douglas's popular vote, while Taft had nearly 85 per cent of Roosevelt's vote. Douglas had 24 per cent more than Breckinridge, and Roosevelt 8 per cent more than Taft. This division, great as it was, did not destroy the Democratic Party. Breckinridge, while receiving but 18 per cent of the popular vote, had 72 electoral votes to 12 electoral votes for Douglas. Even John Bell, Constitutional Union Party candidate, received 39 electoral votes, although he had but a little over 12

per cent of the popular vote as against nearly 30 per cent of the popular vote cast for Douglas and nearly 40 per cent cast for Lincoln, who received 180 electoral votes, while Taft had over 23 per cent, Roosevelt over 27 per cent, and Wilson 41 per cent of the total vote cast in 1912, with 15, 81, and 435 electoral votes, respectively. All of the States that gave their electoral vote to Breckinridge passed ordinances of secession save three. Even this terrific chasm in the Democratic Party by a civil war did not destroy it. The rebellious States did not participate in the subsequent election of 1864. The tremendous influence of union sentiment solidified the loyal States for many years. Gradually that sentiment relaxed as the danger of disunion became more remote following reconstruction and rehabilitation of the union on a stronger, broader basis.

The Democratic Party, however, survived the cataclysm and is to-day in this Senate, the House of Representatives, and the administration, the same Democratic Party as in 1860 and prior years, save that it has disowned and repudiated disunion and slavery. The party organization, its spirit and party name, survived a series of defeats and a mighty rebellion. Is not this lesson of party vitality and solidarity instructive to those who propose to destroy the Republican Party? Those who seek to lay fratricidal hands on the party life ought to reflect that its great organic principles have not materially varied since the days when Lincoln inspired it with purpose and a long line of Republican Presidents has illuminated its path with splendid achievements. Such a party with vital principles of government as its basis and a capacity for future good is not destined to perish by a single defeat or a series of defeats. Political history does not justify such a prediction nor present issues or conditions warrant such an assertion.

It is for us to say whether we will so conduct ourselves that nearly 8,000,000 voters in this country who are anti-Democratic to the core will again unite their differences, compose their divisions, and march to the ballot box in sufficient numbers to overwhelm minority government and restore government that will permit business to be done under the decisions of the Supreme Court; that will permit business in this country to be done by our own people and not transfer pay rolls to another country; that will not land 8,000,000 bushels of corn from Argentina at New York City in the last two months breaking the price of corn in this country 10 cents a bushel. That is the only reduction in the high cost of living that has been made up to this time. They mention reform and economy in a platform, and then after having changed the fiscal system of the country show a deficit of $12,000,000 in three months; and the only way it can be met is to promise that on the 30th day of next June there will be enough of this income tax collected to make good the deficiency. That is the only thing that is promised up to this time.

I thought, Mr. President, so long as woman suffrage was under discussion and it was proposed to extend to her one of the sovereign rights of an American citizen, it would be proper to give information along with this question about a little practical politics and what a plank means. If you do not mean to keep a platform you ought not to write it.

Mr. SMITH of Michigan. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Michigan?

Mr. SHERMAN. Certainly.

Mr. SMITH of Michigan. I do not quite agree with the Senator on the extent of three months' deficit. It certainly amounts to more than $12,000,000. Perhaps the Senator would welcome a correct statement.

Mr. SHERMAN. If the Senator has a correction, I would be very glad to have it. It is about $4,000,000 a month, as I figure it.

Mr. SMITH of Michigan. In December, 1912, we sold $29,000,000 worth of products to Canada. In December, 1913, we sold $26,000,000 worth to Canada. In December, 1912, we sold $40,000,000 worth of products to Germany. In December, 1913, $33,000,000. Meanwhile we were buying $17,000,000 from France in 1913 compared with $14,000,000 in December, 1912; and we were buying $18,000,000 from Germany as compared with $14,000,000 in December, 1912. In other words, the balance of trade is running against us at both ends of the line, and the second promised advantage of near free trade fails utterly to materialize.

Our customs receipts for December, 1912, were $24,000,000, as compared with $21,000,000 in December, 1913, a loss of a little over $3,000,000. Our customs receipts for January, 1913, were $29,000,000, and for January, 1914, $23,000,000, a loss of about $6,000,000. The policies that our political opponents have seen fit to put upon the country in practical legislation have not only destroyed our selling market but have increased our purchasing market in Europe, to the great detriment of our domestic producers.

Mr. SHERMAN. The Senator's statement is undoubtedly correct. It refers to the balance of trade between imports and exports and the customs duties collected. I refer to the Treasury account, the bank book of the Nation, what is taken in each month in cash and what is paid out; and in November, December, and January the expenditures exceed the income, in round numbers, by $12,000,000. In other words, there is a deficit in the cash account of about $4,000,000 a month, making about $50,000,000 if it runs that way in the course of 12 months, unless the prophetic insight of the income tax will be sufficient to meet it on the 30th day of June, 1914.

Mr. SMITH of Michigan. That does not take into account the reckless indifference to the domestic sugar industry, which has not yet felt the full blighting effects of the new free-trade bill.

Mr. SHERMAN. That is certainly true and material. So, it seems to me, in view of the appropriation bills pending and of the deficit——

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Iowa?

Mr. SHERMAN. Certainly.

Mr. CUMMINS. The Senator from Illinois is making a very comprehensive speech, and I am sure he wants to be not only accurate but desires to cover the whole ground. He suggested a moment ago that corn was the only product or article which had been reduced in price by the tariff law lately enacted. I want to remind him that not very long ago, according to the newspapers, a very distinguished member of the administration was challenged to point out some article the price of which had fallen since the enactment of the tariff law, and he very promptly replied that he could think of but one article upon which the tariff had had such an effect, and that was golf balls, it having been generally understood that we can buy golf balls a little cheaper now than we could before the tariff law was passed. I want the Senator from Illinois not to overlook that very important item in his review of the situation.

Mr. SHERMAN. That is a splendid addition to my repertoire. I thank the Senator.

Mr. McCUMBER. May I call his attention to another matter?

Mr. SHERMAN. Certainly.

Mr. McCUMBER. The Senator says that the price of corn has gone down. Has the price of corn meal gone down? Has the dear, ultimate consumer gotten any benefit? The price of barley has gone down. Does the ultimate consumer get his beer any cheaper than he did before? The price of oats has gone down. Are Quaker Oats less at the retail store than they were before? So we can take all the things the Senator has mentioned and we will find that the ultimate consumer has not got anything cheaper.

Mr. SHERMAN. No, sir; it is absorbed between the consumer and the producer some place. At least there is no material difference to the man who pays the bill at the last end of it.

Now, there were many highly entertaining avenues which I desired to explore, but I am reminded by looking at the clock that I have already exceeded the limits of senatorial courtesy. At some future occasion, if I am spared by an indulgent Lord, I will complete my chapter.

Mr. WORKS. Mr. President, I am an earnest believer in woman suffrage. I was an active participant in the campaign in California which resulted in granting to the women of my State the suffrage. I have never had reason to doubt the wisdom or the justice of that course. I have never yet heard what seemed to me to be a legitimate, reasonable, or even persuasive argument against the right of women to vote.

Women are American citizens. They are just as intelligent and just as well educated, and probably better educated, than the men. They have just as much interest in the welfare of the country as the men. They have a greater interest in the preservation of the home and the protection of the children of the country. They are allowed to own and do own property under the laws of every State in the Union, and they are entitled to have it protected the same as is the property of men. Then why should they not be granted the franchise? The only answer is that they are women.

Some maintain that politics is so corrupt and the elections are such that women can not go to the polls and participate in the politics of the country without contamination. Is it not a humiliating confession for the men of this country to make that they have made politics so corrupt that a respectable woman can not participate in an election without contaminating her?

If that be the condition of things, then we men had better step aside and turn over this Government to the women.

One of the things that has been accomplished by allowing the women to participate in elections has been to elevate and purify the politics of my State. Where we formerly held our elections behind livery stables and, in some parts of the State, behind saloons, our election booths are now in the schoolhouses or in tents; and any woman of my State can go to the polls and be treated just as politely and with just as much consideration as she would be treated in her own parlor.

Some people maintain—among them, I am sorry to say, some of the women—that women are too good to participate in the politics and the elections of the country. I want to say that there is no one man or woman who is too good to be an American citizen with all that that means.

I am not going to detain the Senate by any lengthy discussion of this question. It has been thoroughly discussed by others. The women of my State can speak for themselves much better than I can speak for them. I had printed in the RECORD a few days ago an address from a committee of women in my home city dealing with this question. I do not know whether Senators have taken the time or have had the opportunity to read what they say on the subject. I know all these good women. I know them personally. They are women of high character, splendid American citizens capable of dealing with a great question like this. I want to read to the Senate some extracts from what they say on the subject. Under the head "Results of woman suffrage," they say:

Suffrage has given a new interest, purpose, and effectiveness to the thousands of women's clubs throughout the State and has brought scores of new organizations into being for the express purpose of equipping the women with a knowledge of government and civics.

Women have registered and voted at regular and special elections in practically the same, and in some instances larger, proportion than the men.

Equal suffrage has stimulated the men as well as the women to a greater interest in civic affairs.

It has resulted in putting better, cleaner, and more public-spirited men into office.

It has given us more convenient and respectable polling places.

It has been the means of accomplishing what male suffrage alone never has accomplished and probably never would accomplish—the recall of an unfit judge.

It has resulted in the enactment of laws concerning health, morals, child welfare, and female civil rights, for which the women while unenfranchised had for years pleaded in vain.

It has not resulted in a scramble for office on the part of women; on the contrary, the women, as a class, recognizing their lack of political training, have so far deliberately refrained from seeking office.

It has not resulted in corrupting the women; it has resulted in bettering the men, precisely as men always are uplifted and strengthened in any field of endeavor in which women are permitted to share with them their labors and problems.

It has not resulted in breaking up the home; it has strengthened the home ties by reason of a broader mutuality of interests.

It has not caused the women to neglect their duties; both as citizens and as mothers, it has enabled them to meet their responsibilities with greater intelligence and efficiency.

Further than this brief summary of results, it is right that some of the lessons of the suffrage campaign and the consequent enfranchisement of women should be further developed.

Further along, under the head "What women want," they have this to say:

Women are asking simply for the right to fulfill their traditional duties, to do those things for which they are fitted by their natural instincts and long training as protectors of the home and the guardians of children. They are citizens, they have responsibilities, and yet the right to do their duty and fulfill these responsibilities is denied them.

It is proper to ask what are the results of suffrage, what women are doing with the ballot, and whether they are using it. But these things are, after all, only incidental to the main issue, which is that responsibility develops character and that the strength of a democracy rests on the intelligence, morality, and character of its citizens.

Suffrage is the right of every citizen in a democracy, and it belongs to women by every right of reason, logic, and justice. Women, as human beings and as citizens, should have the right to every possible means of education, every developing experience, every avenue of self-expression, and the opportunity of service.

Verily, the woman of California has found in the ballot an added responsibility. But the responsibility born of her being, as she earnestly believes, is one to which she promptly responds. Instinctively she welcomes it as a means to a broader and more effective expression of life. Never in the history of the world has woman asked for any right, any privilege, save only that she might make of it a responsibility for the better discharge of her duties to the race. In the evolution of government, the State has been gradually taking unto itself the duties that the Creator Himself has labeled as feminine—the care and education of the child and the preservation of the purity and health of the home. Therefore it is that the woman of to-day is demanding a voice and a place in the political household; and therefore it is that the woman of California rejoices in spirit that this new civic responsibility is truly hers.

To her sisters throughout the Nation and the world she extends the hand of fellowship and of good cheer, and the glad assurance that in this larger significance of life she is finding increased strength and power and manifold possibilities for good, and she hopes that her own political life will be such that it will make the entrance into political equality easier for all other women. She does not wish to take man's place in the world, but because she is a woman and man's complement, she wishes to be his comrade and coworker for the good of the community and the uplift of the race.

Mr. President, women who can present their case as these women have done ought not to be compelled to plead with the men of this country to allow them the privilege of taking on the responsibilities of American citizenship; and we have thousands of such women in the State of California. There is no more intelligent class of citizens anywhere in this country or anywhere else, better educated, better fitted to take on the duties and responsibilities of citizenship than the women of my State.

Some women do not vote, and neither do some men, Mr. President. They have not yet learned the duties and the responsibilities of citizenship in a country like ours. That, in part, accounts for the condition of apparent neglect on the part of women to respond to this duty; but there are other reasons, for which the men themselves are responsible. There are too many men who, after the franchise had been granted to women, used their influence with their wives and their daughters to prevent them from going to the polls, and much of the lack of interest on the part of the women in my State and many of the cases where they have not gone to the polls and voted have been the result of this sort of influence on the part of the men of the State. Whatever may be said in defense of the man who opposes woman suffrage, there is absolutely no defense that can be made for him, after suffrage becomes a part of the law of his State, if he undertakes to influence his wife or his daughter or anybody else to stay away from the polls. He is to that extent a traitor to his country, and is violating its laws. I have no sympathy and I have no respect for the man who uses his influence upon anyone, whether it be his wife or not, to induce her to neglect the duties of citizenship.

Mr. President, I have had but one doubt in my own mind in dealing with this question. I have no doubt of the justice of granting the franchise to women; I do not believe that the men of this country can justify themselves upon any ground for withholding it, but I have had my doubts about the wisdom or the propriety or the justice of reaching this question by an amendment to the Constitution of the United States by which we propose, if it has its full effect, to practically force woman suffrage upon States where neither the men nor the women desire it; but, looking at it from the legal standpoint, there is no reason why this may not be done. The Constitution provides for it. The separate States came into the Union under the express provision of the Constitution that three-fourths of their number might modify or change the Constitution after such a proposition had passed the Congress of the United States by the requisite number of votes. A good many amendments to the Constitution have been made that were distasteful to some of the States in the Union; that will doubtless be so in this instance, but the right can not be questioned. It is only a matter of propriety as to whether it should be done in this way or not. While I have doubted about that, I have concluded, notwithstanding, as I believe so sincerely in the principle of woman suffrage, that I shall for that reason support the joint resolution proposing this amendment.

Mr. FOMERENE. Mr. President, in the few remarks I shall make this afternoon I want it distinctly understood that I speak as a friend of woman suffrage, but I am unalterably opposed to this joint resolution. I do not believe that it is proper for the people of any State to deny to the people of another State the right to vote if they want it. I do not believe that it is the right of one State to force upon another State the obligation to vote if that State does not want it.

Probably 10 or 15 years ago in my own State of Ohio the women were given the right to vote on all school questions. Since that time not 2 per cent of the women of that State have exercised that privilege. When the law was passed I felt that it was simply the first step toward complete suffrage to the women of my own State. In my judgment, they have shown by the fact that they do not exercise it that they do not want the right to vote. If there can be any doubt about this proposition, it seems to me that there was a very clear expression of opinion in 1912, when the people of my State voted upon the question of amending the constitution. During that fall 42 amendments to the State constitution were submitted. Thirty-four of those amendments were adopted and eight were defeated. Those votes were discriminating in character. Some of the amendments were defeated by a very large vote; some by a very small vote; some were adopted by a very large vote and some were adopted by a very small vote.

There were less than 600,000 votes cast out of a total voting population of over 1,250,000. For those amendments which were carried the highest majority was 220,584 and the lowest majority 4,069. For those amendments which were defeated the highest vote against an amendment was 87,455 and the lowest was 1,079. On the woman-suffrage amendment, after a very

strenuous campaign throughout the State, the vote was for the amendment 249,420, the vote against the amendment was 336,875. The majority against it was 87,455. In that campaign I had the privilege, because of engagements here in Washington, to speak only once, but I spoke in favor of woman suffrage and I voted in favor of woman suffrage; and if it is proposed again to amend the constitution of my own State I will vote for any amendment granting to the women of my State the right of suffrage; but because the people of my State have voted against it, do the people of some other State claim the right to say she shall have it? As one of those who voted for woman suffrage and on behalf of the 249,420 people who voted for it, I deny to Mississippi or any of the other Southern States the right to say that we shall not have it. On the other hand, on behalf of the 336,875 men who voted against it, I deny the right of Nevada, Wyoming, Colorado, or any other State to say that we shall have it, whether we want it or not.

I recognize the fact that the Congress has the right to pass this joint resolution if we consider it from the standpoint of power alone; but if we are to consider it from the standpoint of policy, I deny that it should be done. If because it is requested of Congress we shall say that no State shall discriminate against woman because of her sex, then, likewise, if some one sees fit to do it, a similar resolution could be presented denying to the States the right to grant women the suffrage. I would not do that; I do not believe that any Senator would present such a resolution; but if it were presented, what an outcry there would be from the States which have already granted the right of suffrage to women; and they would be justified. If they have the right—and they do have the right—to declare what shall be their own policy within their own boundaries, they ought not to claim the right to say what shall be done in other States where the environment and conditions may be entirely different.

Mr. President, there are, I believe, nine States that have granted to women the right of suffrage. In those nine States of Wyoming, Colorado, Utah, Idaho, Washington, Oregon, Arizona, Kansas, and California there is a population in round numbers of 7,800,000. If the proposition were to submit an amendment of this character to a popular vote in the United States, and it could be done under the Constitution, it would not be so objectionable; but let us analyze the figures for a moment and see what justice there is in it. None of us know it to be a fact, but I believe if it had been suggested at the time the Federal Constitution was adopted that the Government at large should control the right of suffrage and other local matters in the several States, the Constitution would never have been adopted.

In the 12 smallest States of the Union—North Dakota, Rhode Island, New Hampshire, Montana, Utah, Vermont, New Mexico, Idaho, Arizona, Delaware, Wyoming, and Nevada—there are 3,943,009 people, according to the census of 1910. In the 12 largest States—New York, Pennsylvania, Illinois, Ohio, Texas, Massachusetts, Missouri, Michigan, Indiana, Georgia, New Jersey, and California—there are 50,775,616 people, according to the census of 1910, out of a total population by that census in the 48 States of 91,972,266; so that the 12 States last referred to embrace more than one-half the population of the entire country. In the 12 smallest States to which I have referred there are less than 4,000,000 people. In those 12 States, with 3,943,009 people, they would have 12 votes in determining whether or not an amendment should be attached to the Constitution.

In the State of New York, according to the last Federal census, there were 9,113,614 people. In other words, the Empire State has about two and one-half times as many people as the 12 smallest States which I have named, and yet, when it comes to engrafting upon the Constitution of the United States an amendment of this momentous importance we are giving to less than 4,000,000 people twelve times the voice that we are giving to the more than 9,000,000 people of the State of New York.

Let us go further with this. Suppose, for the sake of the argument, that the people of the State of New York were unanimously against this amendment, with her 9,000,000 people, she would be powerless against the less than 4,000,000 people in the other 12 States. But, more than that—I am speaking now of the people as a whole—when it comes to this amendment, the people as a whole have no voice. There is no way by which we can count heads on this proposition. In the State of Nevada, the smallest State in point of population in the Union, where, according to the last Federal census, there were 81,875 people, there are, I am told, 75 members of both branches of the general assembly of that State. It is possible for a mere majority of a quorum in each house in the General Assembly of Nevada to adopt this amendment. In other words, a quorum of 75 people in both houses would have the right to say that the women of New York shall have the right to vote; and New York can not determine that question for herself, even though the voice of that State would be unanimously against the proposition.

Let me suggest, if we are to assume that this is a movement for moral uplift, that there is no movement in favor of morality at any time that dares or can afford to adopt unfair measures or unfair means to obtain it. I hope that my own State shall soon be added to the number of those that will give to women the full right of suffrage.

Mr. BRISTOW. Mr. President——

Mr. POMERENE. I hope that the movement of woman's empire will be eastward.

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Kansas?

Mr. POMERENE. In just a moment; but I hope that each State will have the right to determine that question for itself.

I now yield to the Senator.

Mr. BRISTOW. Would not the argument the Senator is making against amending the Constitution in this way apply to all amendments? If 12 States contain a majority of the people of the United States, then the smaller States may force upon those 12 States an amendment upon suffrage or anything else that will be obnoxious to them.

Mr. POMERENE. Undoubtedly the Senator's statement is correct from the standpoint of law.

Mr. BRISTOW. Then does the Senator think the majority which the Constitution requires for an amendment to the Constitution is not great enough? Does the Senator think a smaller number than 12 States ought to be able to prevent the amendment of the Constitution?

Mr. POMERENE. I do not. When it comes to matters which are national in character, I have no objection to the present form of amendment provided for in the Constitution; but when it comes to matters which address themselves particularly to a locality or to a State, the situation is quite different. It is now within the power of the people in every State to give to her women the right to vote if they see fit; and I hope they will see fit so to do. It is not necessary to amend the Constitution of the United States in order to secure suffrage to women within the limits of any State. Each State can do that now for itself.

Mr. OWEN. Mr. President——

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Oklahoma?

Mr. POMERENE. I do.

Mr. OWEN. I venture to suggest to the Senator that since the people of Ohio select Members of Congress and United States Senators who pass laws to control the remainder of the people of the United States, it would imply an interest on the part of the other people of the United States in the manner in which these representatives are selected. I will ask the Senator if that is not really true?

Mr. POMERENE. I am not sure that I catch the import of the Senator's question.

Mr. OWEN. The import is that the remaining parts of the Union are much concerned in the manner in which Senators and Members of Congress are elected in Ohio or in New York or Pennsylvania, because those Representatives and those Senators vote upon the rights and interests of other parts of the Union, and therefore other parts of the Union have really a genuine interest in their election.

Mr. POMERENE. Undoubtedly there is an indirect interest in everything which pertains to the welfare of the people; but we have not arrived in this country at the point where we are willing to blot out State lines. We are forty-eight sovereignties, joined together in the Federal Union; and when a question relates to matters which apply so peculiarly to each of the States, as the right of suffrage and kindred subjects, in my judgment, the States should control them.

Mr. President, I have heard during this discussion many stock arguments against woman suffrage and many stock arguments in favor of it. I do not attach any weight to the arguments of either class. We have heard Senators on the floor of the Senate speak of the splendid laws that have been adopted in their various States where there is woman suffrage. I am glad they have been. I am particularly glad they have woman suffrage if they can not get those laws any other way; but if we will examine the record, I think we will find that for every good law that has been passed in a woman-suffrage State a correspondingly good law has been passed in nearly every other State.

I may not be entirely exact in this statement; but I dare say that an examination of the statute books of the State of Ohio will show a good law, one for the betterment of womankind and for children and for men, for every good law that

was passed in Oregon or Colorado or Wyoming. As an abstract proposition, I am for woman suffrage for this reason alone—that I do not ask any political privilege which I do not want my good wife to have.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Idaho?

Mr. POMERENE. I do.

Mr. BORAH. If I understand the position of the Senator with reference to the right of the States to preserve their individuality, I do not disagree with him; but I wish to say to the Senator with reference to the passage of laws in woman-suffrage States, that there are a number of instances in which laws bearing upon particular subjects were sought to be passed for years prior to the adoption of woman suffrage in those States the passage of which followed immediately after the adoption of woman suffrage. It demonstrates the fact that there is a class of laws, very important in these days, that pass through the legislative halls much more rapidly where there are women voting in the State than where they are not.

Mr. POMERENE. Mr. President, the Senator's statement is entirely correct, but it does not state the whole truth. In the other States, where man suffrage exists alone, for years and for years efforts have been made to get through good laws; and all at once the scales seem to have fallen from the eyes of the legislatures, and bills that were pending became laws. In the United States Senate, time and time again, efforts have been made to pass laws, but because there was some mysterious influence at work or perhaps because there may have been a change of viewpoint these laws later were passed; and yet there was not woman suffrage here.

I think we are nearer the truth when we say that the average of both man and woman is advancing, and that the good legislation we are now getting is the result of that advanced opinion. It is not due to one sex more than to the other. It is due to both.

Mr. President, shortly after I came to the Senate there was a joint resolution pending for the purpose of admitting to the sisterhood of States the Territories of New Mexico and Arizona. The Federal administration at that time used every effort to exclude those Territories because they insisted upon having in their constitutions a provision for the initiative and referendum. Those who were friendly to the admittance of the States and favored that doctrine insisted that that was a matter which addressed itself solely to the people of those Territories.

I can imagine, when that campaign was going on, the righteous indignation which filled the breast of the present Senator from Arizona as he pleaded for the right of that Territory to control her own internal affairs. Yet now that the State of Arizona is admitted to full sisterhood with the other States of the Union she has a doctrine which is dear to her heart which she is seeking to enforce upon other States, willing or unwilling.

Mr. CUMMINS. Mr. President——

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Iowa?

Mr. POMERENE. I yield.

Mr. CUMMINS. Does the Senator from Ohio believe in the referendum?

Mr. POMERENE. I do.

Mr. CUMMINS. Why not, then, allow the people of this country to determine the question the Senator is now discussing?

Mr. POMERENE. Mr. President, that is a very pertinent question. When I spoke as I did of the referendum I was speaking of it as we have adopted it in the several States by the States. The people now in each of the States of the Union have the right to adopt woman suffrage if they wish; and, in my judgment, they will adopt it in most of the States at a very early day if left to themselves to do it. If the proposition here to-day, as I said in the opening of my remarks, could be left to a popular vote, it would not be so objectionable as in the form the resolution has taken.

Mr. CUMMINS. Mr. President——

The VICE PRESIDENT. Does the Senator from Ohio further yield to the Senator from Iowa?

Mr. POMERENE. I do.

Mr. CUMMINS. Unfortunately, our Constitution does not provide for the initiation of an amendment to it through either the action of State legislatures or the petition of the people.

Mr. POMERENE. The Senator is correct.

Mr. CUMMINS. If the Senator from Ohio really believes in the referendum, does he not think a sufficient number of the people of this country desire an opportunity to vote upon this amendment to warrant its submission to that vote?

Mr. POMERENE. The Senator's question is a purely hypothetical one. He prefaces his proposition with the statement that there is no way of submitting the matter to a vote of the people. If it is a vote of the people that the Senator from Iowa wants, he can not have it by the amendment which is pending before the Senate now.

Mr. CUMMINS. Unfortunately, no; but we can have a vote of the several legislatures of the States, and we must assume that in their votes they will embody the desires of the people whom they represent. My view of it is—and I should like to have the Senator's comment upon it—that inasmuch as there is no way of initiating amendments to the Constitution save through the action of Congress, whether the Senator believes in woman suffrage or not, if he believes in the referendum and also believes that there is a sentiment in this country that is fairly equivalent to the petition that would be required under the ordinary operation of the referendum, he ought to vote for the submission of this amendment without regard to his opinion as to its merits. We ought not to stand in the way of the advanced thought of the age, and deny to the people of this country the only opportunity they possibly can have to determine what kind of Constitution they want.

Mr. POMERENE. Mr. President, the trouble is that the Senator is not entirely consistent when he speaks of the referendum. He speaks of getting a vote of the people by a referendum to the legislatures. With all due respect to the legislatures, I am bold enough to say that the legislatures very often do not represent the voice of the people. Each State can now have a referendum vote on this question if it desires. It can order its house on this subject now as it sees fit. It ought to permit this same right to other States.

Mr. VARDAMAN. Mr. President——

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Mississippi?

Mr. POMERENE. I yield.

Mr. VARDAMAN. I rise simply to suggest to the Senator from Ohio, in answer to the question propounded by the Senator from Iowa, that this is not the only method by which woman suffrage may be obtained. The States in the Union could act separately and independently; and in less time than it would take to adopt this amendment woman could be given the suffrage in every State in the Republic, if the States so desired.

Mr. CUMMINS. Mr. President, if the Senator from Ohio will yield to me for just a moment longer, that may or may not be true. I do not know. I know that there are a great many good people who believe that the qualifications of voters in the several States are of national concern, and that there ought to be a uniform rule with regard to this matter. I know that they want an opportunity to determine whether or not this amendment shall become a part of the Constitution of the United States. It seems to me that if we believe in the referendum we ought not to interpose our own view with regard to the wisdom or policy of the resolution, and thus prevent the people, through their legislatures, from enjoying the opportunity to determine whether the rule shall be uniform or whether it shall vary according to the views of the several States.

Mr. POMERENE. Mr. President, in my own State we have had a referendum; and by that referendum, by a vote of more than 87,000, this proposition was defeated. I dare say that if there were a referendum of that kind in the State of Iowa on any proposition, no one would feel more obligated to be bound by it than the distinguished Senator from Iowa.

Mr. CUMMINS. But I see nothing whatever inconsistent between the vote to which the Senator has referred in his own State and his vote in this body in favor of the submission of this amendment. I am entirely unable to see any inconsistency between the two.

Mr. POMERENE. I think I have made myself entirely clear; and if the Senator is not in accord with my views we shall have to differ upon that proposition. I am convinced of one thing—that the very moment it becomes known in the great State of Ohio that the majority of her women want to vote that right will be accorded to them by the men of the State. I know that in very many instances women have said to their husbands and their brothers and their fathers and their sons that they did not want the right to vote; and the vote in the State indicates that that is the prevailing opinion.

Mr. President, we have heard Senators speak of "the privilege of voting" which is accorded to man. It is a privilege when it is granted to man, and it will be a privilege when it is granted to woman; but in my humble judgment the minute it is granted it ceases to be a privilege and becomes an obligation. With the majority of the women in my own State, as I believe, not asking for it, I am not willing, until they shall register their votes or their voice or the majority of the men of my State shall register their votes or their voice in favor of it, to impose that serious obligation upon them.

If it were within my power in my own State to prescribe the conditions of suffrage, I should say to every man: "This is an obligation, and unless you exercise it you shall be penalized." When that privilege is granted to woman I hope all womankind in the State to whom it is accorded will regard it as an obligation. I believe the majority of men and the majority of women are good men and women, actuated by the best of impulses and the most intense desire for the elevation of citizenship. When we have bad laws, or when we have bad men on our tickets, it is because the good men have not gone to the polls. If at our primaries all of the Republicans would go and vote, or all of the Democrats, or all of the Prohibitionists, we should not be confronted by the spectacle, as we sometimes are, of having men on either of the tickets who do not deserve the confidence of their party associates.

Mr. President, it has seemed to me that if the very good women who are interested in the proposition now before the Senate would devote their influence and their energies to cultivating a desire for suffrage among the women of their respective States they would be advancing the cause of woman suffrage much more rapidly than they can by seeking to amend the Federal Constitution.

Mr. VARDAMAN. Mr. President, I am placed in rather a unique position in the consideration of this great question. I am not of those who share the apprehension that woman will be injured by giving her the ballot; nor do I believe that her participation in politics will lower the standard of citizenship or result detrimentally to the country. The truth about the matter is, I believe, the inherent virtues and superior qualities of woman will necessarily improve anything with which she has to do. I think we are indebted to her more for what has been accomplished in America than we are to man. I would rather rely upon her intuition to lead me right—I would rather trust her heart than the ratiocinations or the painful logical processes of man. The woman usually thinks in straight lines because her mind follows her heart. In matters involving the welfare of human beings the maternal instinct, the mother heart, seldom deviates from the way of truth. Nor am I of those who regard her as the weaker vessel—

For I tell you at this hour
The worth of this world's future depends upon her power;
And down the stream of ages, as life's flood tides are told,
The record of its excellencies will be marked by the place that women hold.

Man has never done anything—he has never accomplished anything or achieved anything—worthy of being remembered, but that he had behind him, sustaining him with her prayers, encouraging him with her love, and guiding him with her unerring intuition, some good, true, noble woman.

That she will become a voter in all the States of this Republic in the very near future I have no more doubt than I have that to-morrow's sun will rise. That the ballot will be purified, that the influences surrounding the polling places will be improved, that the moral sentiment her sacred presence will generate will write more just and wiser laws, I have not the slightest doubt, because her influences are always elevating, always purifying, always ennobling. When the time shall come that women want to vote, when the women of the different States desire the ballot, as has been stated upon this floor, it will be placed into their hands.

In some of the States in this Republic, however, a large majority of the women do not care to vote at this time. That is, in some of the States the conditions are such that women would not go to the polls if permitted by law to do so. In the settlement of this question I would much prefer, and I think it would be infinitely better and more in accord with the original plan upon which our Government is builded, to leave this matter with the States. It is my great privilege to represent in part in this Chamber a State where conditions are such that the women who ought to vote in the very nature of things could not and would not go to the polls.

A decent white woman will not put herself in a position where she is to be elbowed, pushed around, and insulted by a vulgar, vicious, and ignorant negro woman who has no more conception of the importance or the significance of the elective franchise than the chimpanzee is capable of comprehending or understanding the nebular hypothesis. The question may be asked why, if negro men are capable of voting, why not negro women? To one who understands the nature of the negro an answer to that question would be superfluous. Neither the man or the woman are capable of performing properly the supreme function of citizenship, but the negro man is much more easily controlled, less turbulent, and more tractable. Verily, "the female of the species is more deadly than the male" in this instance. I think the most lawless and abandoned creature on earth is the drunken, insolent negro woman.

And, further, the white man has the physical strength and ability to command obedience and defend himself.

It is unfortunate, Mr. President, that when an economic or governmental question is presented the people of the South are confronted at once with that overwhelming, monumental, Apennine, paramount problem, the race question, which has been discussed at some length in dealing with this resolution. This question has resulted in the political isolation of the Southern States. The white people can not divide at all on economic issues in those States. There are probably 50,000 more adult male negroes in Mississippi than there are white men and fully 60,000 more negro women than there are white women. A large majority of the negroes, as stated a moment ago, are congenitally, eternally, racially, and unalterably incompetent and unfit to perform the supreme function of citizenship. You can not educate them so as to make them capable of governing the white man, either.

That accounts for the fact, Mr. President, that our white women naturally shrink, involuntarily recoil, from participation in those public or civic functions which usually belong to men. It is the overwhelming influence which prevents them from considering even the question of participating in government at the ballot box. Remove that barrier, take that impediment away, and then the women of Mississippi, the women of Arkansas, and the women of the other Southern States, where this great problem is in its most acute, intense, aggravated, and difficult form, may consider the question of participating with their brothers, their husbands, and their fathers in matters of government.

I wish to say, in addition to what I have already said about woman's capacity to govern, that the governments in ancient and modern times where women have exercised the largest element of control have been the greatest governments, and their civilization has progressed further and higher, and grander achievements wrought, than in the other governments where she had less power.

This is particularly true of ancient Greece. It is said that no Spartan citizen ever thought of performing a public duty without first consulting his wife. You will remember the story of Gorgo, the wife of Leonidas, who was taunted on one occasion by the statement that "Sparta was the only country where the women ruled the men. Her apt and pertinent reply was that "Spartan women are the only ones who give birth to men."

Mr. President, I regard the home as the realm over which woman is best fitted to reign. I think motherhood the supreme function of woman. In that realm and in the performance of that function she does her greatest work, because her influence there begins with infancy and ends only in eternity. If you will give me the influence of the mothers, I will write the laws of the land, I will preserve our institutions in all their pristine vigor, and I will transmit them unimpaired in their usefulness to posterity. As the better expression of my own thoughts:

They talk to me of woman's sphere
As though it had a limit;
There is not a place in earth or heaven,
There is not a task of mankind given,
There is not a blessing or a woe,
There is not a whispered yes or no,
There is not a life or death or birth
That has a feather's weight of worth
Without a woman in it.

But that influence, Mr. President, can be felt, it can be exercised, and the end sought to be attained by this amendment can be reached without forcing it upon States that are not ready for it. If Illinois, if Iowa, if Pennsylvania, if Georgia, if Mississippi, if any State in the Republic wants to give women the right of suffrage equal with the men, they have a right under their State constitution to do so. There is no difficulty about that.

One of the Senators in this Chamber on yesterday asked a Senator who was opposing the amendment: "If you favored the election of Senators by the people, you could not insist upon it here, for the reason that it takes from another State the right to elect Senators by the legislature if it so desired." But the cases are not analogous at all. No State could elect Senators by the people without an amendment to the Federal Constitution. You had to change the Constitution of the United States in order to permit any State that wanted to do so to elect its Senators by the people. But that is not the case with reference to conferring the right of suffrage upon women. My State or your State, without regard to the will of the other States, can confer that right upon her just as soon as the measure could be passed by the legislature and referred to the people and approved by them.

There is another thing, Mr. President, the importance of which we all understand and appreciate. We understand the influence of environment and the heterogeneous element in our population. The framers of this Government understood that when they

gave to the States the right to regulate this very thing. What will suit the people of one State may not be adaptable to conditions in another State. If you are going to preserve the Federal Union, if you are going to preserve that harmony so essential to perfect government, you must maintain, you must preserve inviolate, the autonomy, the sovereignty of the States by permitting them to exercise the sovereign power of regulating the suffrage, giving to men, and giving to women if they see fit, the right to vote.

Mr. President, I am going to propose an amendment to the joint resolution. While I am very much in favor of the States exercising exclusively this peculiar function, if the amendment which I send to the desk shall be adopted I will vote for the joint resolution. As a matter of fact, Mr. President, I am almost prepared to say that I will vote for a measure reducing the representation of Mississippi in the Congress of the United States to two Senators and two Representatives if I could thereby remove that horrible, that soul-terrifying incubus upon the moral, material, and intellectual progress of the Southern States—the race question.

I would rather have Mississippi represented here by 2 Senators and 2 Representatives with the race problem solved by eliminating the negro from politics by repealing the fifteenth amendment and modifying the fourteenth amendment so as to make this country what it ought to be and what its founders intended that it should be—a white man's Government—a Government by white men, of white men, for all men—than to have 4 Senators upon this floor and 16 Representatives in the other House of Congress.

The fifteenth amendment was not adopted for the purpose of promoting the welfare of the negro. It was one of the cruel, remorseless acts which resulted from war, designed to punish the white man and to use the negro as a pliant tool by which the country was plundered and the people of the Southland humiliated. It was the child of hate. Mr. President, it has no place in the economy of this Government. It has outlived its usefulness, if there was ever any use for it. The question was asked on the floor of the Senate "if it could ever be repealed." The answer of the shortsighted pessimist is that it will not. I do not agree to that view. I have faith in the honesty and patriotism and intelligence of the American voter. I have hope for the permanency of our Government. I have hopes for the future of this Republic. I believe the American people are agreed that an error was committed when these amendments were adopted, and I believe that when the question is properly presented to them that they are going to correct that error. My views on this question have been sneeringly referred to by certain mole-minded statesmen, men with the voices of counsel that roar like the bull of Bashan, but with the voices of vision that are no louder than the chirping of the cricket. They call it a dream. It may be. I think it is. The dream has always been the pillar of cloud by day and the pillar of fire by night to lead peoples out of the wilderness of difficulty.

> The dreamer stands within the shadow of the night
> And looks beyond it toward the coming light,
> And sees far off with trance-prophetic eyes
> The consummation of the centuries.

One of the most interesting lessons that history teaches is the unmindfulness of what is taking place on the part of those who were prominent actors in what have proven to be the turning points of time. When the crisis of the late Civil War was upon us many talked of the breeze that would blow over in 90 days. When Luther nailed his thesis to a church door at Wittenberg, Europe saw only one disaffected monk, and little thought that really the modern world had roused itself to shake off the dogma-drugged sleep of the Middle Ages. When Copernicus died after one look at his speedily forgotten volume, few understood that the old heaven had folded away like a scroll, that a new earth was given to man, and that former things had passed away. And after the self-sufficient dollar-hearted Pharisees, whose representatives are still with us, had gotten rid of the troublesome meddler from Nazareth and lay down to their triumphant sleep, they little thought that they had pulled down their own temple about their ears and turned the disgrace of the cross into the symbol of a world-conquering religion.

Somebody has said that "the dream of the philosopher to-day is the creed of the persecuted minority to-morrow, the next day to be the faith of a nation."

Revolutions come suddenly in Republics for the reason that law is but public opinion crystallized, and the public opinion emanates, grows out of—in truth it is the composite will and the wish of the voter.

I repeat, Mr. President, we of the South are isolated. No question of economics, no governmental scheme can be presented to the Representatives from that section in the consideration of which they are not forced up against this grave problem, a problem which to me and to my people overshadows all other problems that confront the civilization of this century. Oh, that I might make you feel the gravity, the importance, of the issue.

I wish to assert again upon the floor of this Chamber that my attitude on this question does not grow out of any hostility, hatred, or animosity to the black man, but I know from reading history, I know from my knowledge of him—morally, mentally, ethnologically, and every other phase of his being, that it was never intended by the framers of this Government, it was never intended by the Supreme Ruler of the universe, that the two races should live together on terms of equality in this or any other country.

One of the Senators said here on the floor the other day he "knew" that the two races would never live on terms of perfect equality; that while the two races existed the white man would rule. That is true, but I want to say to him, Mr. President, and the Members of the Senate, we rule in the South. The white man rules there and he has ruled up to this time without violating the fourteenth or fifteenth amendment. And he will continue to rule regardless of whatsoever law this Congress may enact. There is no doubt about that.

When Mississippi, the protagonist in the movement to get around the fourteenth and fifteenth amendments in 1890, passed a law which legislated against the moral qualities and intellectual acquirements of the negro race and thereby eliminated him from politics by law, it did so by the employment of an expedient. Expedients at best are only truth-veneered falsehoods. When the people of the United States forced the South to resort to expedients in order to preserve white supremacy, in order to preserve the civilization which really was the product of the genius of your father and mine, glorified by their patriotism and cemented with their blood, you did us an infinite injustice. You know, as I know, the effect of a law upon public morals. It is the prototype—the model—after which private character is formed. While the white man, because of his superior power, because of his superior mentality, because of his capacity, may rule the black man, you know, as I know, that he has been forced to resort to methods which only serve to injure him and work harm upon the black man.

If the Congress of the United States would only look this question squarely in the face, view it in its due proportions, understand it as you ought to understand it, and have the courage to let your votes here register your honest convictions, without regard to partisan political advantage, you would not only be doing a service to your brothers of the white race in the South, but you would at the same time be doing a great service to the black man in the South, who should be looking to the white man to lead him onward and upward—I should speak more accurately probably if I should say—save him from the inherited backward tendency to which 10,000 years of uninterrupted savagery subjects him.

Mr. President, I desire in this connection to pay the tribute of my respect and gratitude to my friend the distinguished Senator from Idaho [Mr. BORAH] for the sentiment expressed by him a day or two ago, which manifested a disposition not to crowd and pile up other difficulties upon the white people of the South. He understands, as all other thoughtful, patriotic men ought to know, that there is enough black virus in the body politic in the South already to greatly impair the health of the patient without injecting any more. I thank him for his generous consideration.

Mr. President, if I thought the passage of this joint resolution would promote the settlement of this great problem, as I said a moment ago, I would vote for it; I would vote for anything.

I ask that the amendment may be read.

The VICE PRESIDENT. The Secretary will read the amendment proposed by the Senator from Mississippi.

The SECRETARY. On page 1, line 12, after the word "sex" and before the period, insert a comma and the following words:

> But in all other respects the right of citizens to vote shall be controlled by the State wherein they reside.

Mr. VARDAMAN. Mr. President, I can not understand how any Senator from the South can fail to support the amendment. While I believe the right ought to be left to the States to regulate suffrage, yet we are willing to take this as a compromise; and I submit the amendment to the Senate, hoping that it may be adopted.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Mississippi.

Mr. VARDAMAN. On that I ask for the yeas and nays.

Mr. CLAPP. In the first place, I call for a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Fall | Martine, N. J. | Sherman |
| Brady | Gore | Myers | Shively |
| Brandegee | Gronna | Newlands | Simmons |
| Bristow | Hughes | Overman | Smith, Ariz. |
| Bryan | James | Pomerene | Smith, S. C. |
| Catron | Kenyon | Reed | Smoot |
| Chamberlain | Kern | Robinson | Swanson |
| Chilton | Lane | Root | Thomas |
| Clapp | Lea, Tenn. | Saulsbury | Warren |
| Dillingham | Lodge | Shafroth | Williams |
| du Pont | Martin, Va. | Sheppard | |

Mr. SHEPPARD. I wish to announce the unavoidable absence of my colleague [Mr. CULBERSON] and to state that he is paired with the Senator from Delaware [Mr. DU PONT].

Mr. CLAPP. I wish to state that the senior Senator from Wisconsin [Mr. LA FOLLETTE] is unavoidably detained by illness.

The VICE PRESIDENT. Forty-three Senators have answered to the roll call. There is not a quorum present.

Mr. THOMAS. I move that the Senate adjourn.

The motion was agreed to, and (at 5 o'clock and 25 minutes p. m.) the Senate adjourned until to-morrow, Friday, March 6, 1914, at 12 o'clock meridian.

## HOUSE OF REPRESENTATIVES.

THURSDAY, *March 5, 1914.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Thou God and Father of us all, whose providence has shaped and guided the destiny of our Republic from its inception, continue to guide us to a happy solution of all the problems, national and international, which confront us. We can afford to err on the side of right, truth, justice, mercy, but we can never afford to err on the reverse side, for right is right and wrong is wrong in the life of the nation as in the life of the individual. If we should ever be called upon to defend our honor, then we shall be sure we have honor to defend, and Thy strong right arm will uphold us and bring to us victory.

Take the lead of our thought, that we may be the instrument in Thy hands for yet greater achievements and thus demonstrate to the world the efficiency of popular government. And Thine be the praise through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

### RAILROADS IN ALASKA.

Mr. HOUSTON. Mr. Speaker, I ask unanimous consent for permission to withdraw the conference report on the bill S. 48, an act to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes, for the purpose of making a correction.

The SPEAKER. The gentleman from Tennessee asks unanimous consent to withdraw the conference report on the Alaskan railroad bill, S. 48, in order to correct a typographical error. Is there objection?

There was no objection.

### POST OFFICE APPROPRIATION BILL.

Mr. MOON. Mr. Speaker, I call up for consideration the conference report on the bill H. R. 11338, the Post Office appropriation bill, and move its adoption.

The SPEAKER. The Clerk will read the report.

Mr. MOON. Mr. Speaker, I ask unanimous consent that the statement be read in lieu of the report

The SPEAKER. The gentleman from Tennessee asks unanimous consent that the statement be read in lieu of the report. Is there objection?

There was no objection.

Mr. STAFFORD. Mr. Speaker, I wish to reserve a point of order on the report.

The SPEAKER. The gentleman from Wisconsin reserves a point of order on the report. The Clerk will read the statement.

The conference report is as follows:

### CONFERENCE REPORT (NO. 338).

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 11338) making appropriations for the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendments of the Senate numbered 2, 3, 5, 6, 8, 9, 15, 16, 17, 18, 19, 20, 21, and 22; and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "And hereafter the appointment and assignment of clerks hereunder shall be so made during each fiscal year as not to involve a greater aggregate expenditure than the sum appropriated"; and the Senate agree to the same.

Amendment numbered 4: That the House recede from its disagreement to the amendment of the Senate numbered 4, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "*Provided*, That after June 30, 1914, the pay of substitute letter carriers employed in the places of regular employees absent from duty with pay and of auxiliary and temporary carriers employed at offices where the city free delivery service is already established or may hereafter be established, and of substitute clerks employed in the places of regular employees absent from duty with pay, and of auxiliary and temporary clerks employed in first and second class post offices, shall be at the rate of 35 cents an hour"; and the Senate agree to the same.

Amendment numbered 7: That the House recede from its disagreement to the amendment of the Senate numbered 7, and agree to the same with an amendment as follows: In lines 9 and 10 of the amendment, strike out the words "March 4, 1915," and insert in lieu thereof the words "December 1, 1914"; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$3,250"; and the Senate agree to the same.

Amendment numbered 11: That the House recede from its disagreement to the amendment of the Senate numbered 11, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$2,350"; and the Senate agree to the same.

Amendment numbered 12: That the House recede from its disagreement to the amendment of the Senate numbered 12, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$2,250"; and the Senate agree to the same.

Amendment numbered 13: That the House recede from its disagreement to the amendment of the Senate numbered 13, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$2,100"; and the Senate agree to the same.

Amendment numbered 14: That the House recede from its disagreement to the amendment of the Senate numbered 14, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$28,521,440"; and the Senate agree to the same.

Amendment numbered 23: That the House recede from its disagreement to the amendment of the Senate numbered 23, and agree to the same with an amendment as follows: At the end of the amendment, after the word "postage," insert the following: "*Provided*, That the Postmaster General may, in his discretion, by order, fix the time within which all parcels of the fourth class shall be delivered"; and the Senate agree to the same.

JOHN A. MOON,
D. E. FINLEY,
S. W. SMITH,
*Managers on the part of the House.*

J. H. BANKHEAD,
CLAUDE A. SWANSON,
W. O. BRADLEY,
*Managers on the part of the Senate.*

The Clerk read the statement, as follows:

### STATEMENT OF THE MANAGERS ON THE PART OF THE HOUSE.

The managers on the part of the House of the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, submit the following written statement in explanation of the effect of the action agreed upon in the accompanying conference report on the Senate amendments, viz:

Amendment No. 1: This amendment is a limitation on the amount to be expended. The House agrees with amendments for the purpose of making it permanent law.

Amendment No. 2: This amendment increases the amount of appropriation $250,000. The House agrees.

Amendment No. 3: This amendment increases the amount of appropriation $25,000. The House agrees.

Amendment No. 4: This amendment provides for the payment of substitutes for letter carriers and post-office clerks in first and second class post offices at the rate of 40 cents an hour instead of 30 cents an hour. The House agrees with an amendment, making the rate of pay 35 cents an hour.

Amendment No. 5: This amendment increases the amount of appropriation $300,000. The House agrees.

Amendment No. 6: This amendment increases the amount of the appropriation $225,000. The House agrees.

Amendment No. 7: This amendment provides for the continuance of the personnel of the membership of the committees and commissions created and provided for in sections 1 and 8 of the act entitled "An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1913, and for other purposes," approved August 24, 1912, viz, Commission to Investigate the Pneumatic Tube Post System, Joint Committee on Federal Aid in Construction of Post Roads, Joint Committee to Investigate General Parcel Post, Joint Committee on Postage on Second-Class Mail Matter and Compensation for Transportation of Mails. The House agrees with an amendment.

Amendment No. 8: This amendment to appropriation for screen wagon service reads as follows: "*Provided*, That out of this appropriation the Postmaster General is authorized, in his discretion, to use such amount thereof as may be necessary for the purchase and maintenance of wagons or automobiles for and the operation of an experimental combined screen wagon and city collection and delivery service." The House agrees.

Amendment No. 9: This amendment increases the amount of appropriation for railway mail pay $1,000,000. The House agrees.

Amendments Nos. 10, 11, 12, and 13: These amendments provide for increases in the salaries of the division and assistant division superintendents, assistant superintendents, and chief clerks of the Railway Mail Service; the House agrees with amendments.

Amendment No. 14: This amendment increases the amount of appropriation $39,800 on account of amendments 10, 11, 12, and 13; the House agrees, with an amendment reducing the amount $19,900.

Amendment No. 15: This amendment increases the amount of appropriation $280,000; and the House agrees.

Amendment No. 16: This amendment reads as follows: "For travel and miscellaneous expenses in the service of the Postal Savings System, office of the director, $500." The House agrees.

Amendments Nos. 17 and 18: These amendments are transfers from one bureau to another; the House agrees.

Amendment No. 19: This amendment strikes out of the paragraph items provided for in another bureau; the House agrees.

Amendment No. 20: This amendment decreases the amount of appropriation $100,000; the House agrees.

Amendment No. 21: This amendment increases the amount of appropriation $4,350,000 on account of amendment No. 22, which provides: "That on and after July 1, 1914, letter carriers of the Rural Delivery Service shall receive a salary not exceeding $1,200 per annum." The House agrees.

Amendment No. 23: This amendment reads as follows: "That seeds, cuttings, bulbs, roots, scions, and plants shall hereafter be embraced in and carried as fourth-class matter, and for the same rates of postage." The House agrees, with an amendment as follows: "*Provided*, That the Postmaster General may, in his discretion, by order, fix the time within which all parcels of the fourth class shall be delivered."

Amount of appropriation:

| | |
|---|---|
| Amount of appropriation, 1914 | $283,444,171 |
| Correct amount by items, 1914 | 285,406,271 |
| Estimate for 1915 | 306,953,117 |
| Amount carried in House bill, 1915 | 305,401,767 |
| Correct amount, 1915 | 307,013,867 |
| Bill as passed by Senate, 1915 | 311,772,067 |
| Increase over amount appropriated, 1914 | 26,365,796 |
| Increase over estimates, 1915 | 4,818,950 |
| Increase over House bill | 4,758,200 |

The bill as finally agreed upon in conference carries $311,752,167.

JOHN A. MOON,
D. E. FINLEY,
S. W. SMITH,
*Managers on the part of the House.*

Mr. MOON. Mr. Speaker, the reading of the statement is perhaps a sufficient explanation of the bill, except I might say that the various amendments by the Senate to which the House agreed, as set forth without amendment, were increases in the amount of appropriation reaching the amount of estimates made by the department and not, I believe, in excess of them, except in one instance. And in another there was quite a reduction. So, as a matter of fact, most of the items of disagreement between the two Houses were finally settled on the basis of the estimates of the department.

Mr. MURDOCK. Will the gentleman yield?

The SPEAKER. Does the gentleman from Tennessee yield to the gentleman from Kansas?

Mr. MOON. I yield to the gentleman from Kansas.

Mr. MURDOCK. Does that statement which the gentleman has just made apply to the item of inland transportation by railroad routes?

Mr. MOON. The item of $55,000,000; yes.

Mr. MURDOCK. What was the change made in regard to the provision as to commissions? Was it a mere change of date?

Mr. MOON. The conference committee on the part of the House was largely disposed to abandon the commissions, but after a full consideration we found that a great deal of valuable work had been done by all of these commissions, and they would be ready in a short while to report. The Senate amendment to the bill provided that a report should come by the 1st of March, 1915, but the House conferees thought that that was a little too long and that they ought to report before the meeting of the next Congress, so that they would expire by limitation of law if they did not report before that time. So we changed the date to the 1st of December, 1914.

Mr. MURDOCK. I would like to ask the gentleman in regard to a change in the law in that connection. The language in the Senate amendment is to the effect that these commissions shall continue with the same authority, powers, and provisions for expenses, and so forth. If no action had been taken at this session of Congress toward continuing these commissions, when would they have expired?

Mr. MOON. They would have expired at 12 o'clock yesterday.

Mr. MURDOCK. Now, can we continue a commission after the passing of that hour?

Mr. MOON. I think so.

Mr. MURDOCK. Although that would be subject to a ruling?

Mr. MOON. It is in effect a new enactment of the statute.

Mr. MURDOCK. If the commissions really did expire yesterday at noon, then could we "continue" them in the statute?

Mr. MOON. This is a new enactment continuing them. I think the commissions have expired now.

Mr. MURDOCK. We can not continue them after they have expired?

Mr. MOON. Yes; we can continue the law under which they operated. We refer to the law and the section, and revive it by this act.

Mr. MADDEN. All of the commissions have been doing a large amount of very valuable research work that they have not completed. They have done so much of it that is of great value to the Government that it would be unwise to discontinue them until they have completed what they have undertaken, and they would have completed the work before the time limit fixed in the law if it were not for the fact that some of the information which they thought essential was not obtainable until a month or so ago. And inasmuch as none of the members of these commissions is drawing any compensation from the Treasury, it would be unwise to discontinue them and fail to get the very valuable information which they have obtained as the result of their efforts up to the present time.

Mr. SHERWOOD. Mr. Speaker——

Mr. MOON. I yield to the gentleman from Ohio [Mr. SHERWOOD].

Mr. SHERWOOD. How does the bill as agreed upon in conference compare with the estimates of the department? How much more or how much less?

Mr. MOON. The department's estimates were $306,953,117. The bill as finally agreed upon in the conference carries $311,752,167. The increase over the estimates was $4,418,970. The increase over the House bill is $4,758,200.

Mr. SHERWOOD. Yes; that is what I understand.

Mr. STAFFORD. Mr. Speaker, the purpose of my reserving the point of order as to the conference report—and I believe the conference report is subject to a point of order—was to obtain information as to the provision contained in amendment

numbered 23, which was added in conference, and which is as follows:

*Provided*, That the Postmaster General may, in his discretion, by order, continue the time within which all parcels of the fourth class shall be delivered.

So far as I can recall, neither the Postmaster General in his report nor any of his assistants has made any such recommendation, nor has any such recommendation been made in the hearings of the committee. I would like to have the chairman of the Committee on the Post Office and Post Roads explain to the House, inasmuch as there is nothing in the statement submitted and just read that elucidates that provision, the reason why the conferees inserted that provision in this conference report.

Mr. BUTLER. Which amendment does the gentleman refer to?

Mr. STAFFORD. Amendment numbered 23.

Mr. BUTLER. The gentleman said "numbered 3."

Mr. STAFFORD. Numbered 23.

Mr. BUTLER. I thank the gentleman.

Mr. MOON. The Postmaster General, it is true, made no suggestion along that line either to the House committee or to the Senate committee, but when the conference met he did make the suggestion and furnished the language that is now incorporated in this section; and the conferees agreed to it. The reason of it is this, that while the parcel post adds but little to the rural carrier's duties in the greater portion of the country, yet there are portions of the country now where a very large amount of heavy goods is being delivered at one time. For instance, 4 tons of flour in 50-pound sacks were presented for delivery at one place in one zone in one day, and a number of tons of ore, and things of that sort.

Mr. STAFFORD. Do I understand the chairman of the committee to say that the instances he cites are actual cases of delivery for parcel post of these large quantities at one place in a single day?

Mr. MOON. The proposed delivery. The gentleman will recollect the speech of the gentleman from Montana on this floor with reference to the immense deliveries in his district. While there has been little of that so far, the weight having been increased to 50 pounds, the department is apprehensive that there may be such heavy deliveries of large packages at particular offices at a particular time that they will be incapable of moving them in the interests of the shipper, and this is to give the Postmaster General the power, when he has an accumulation of matter in the office that can not be moved for some time, to indicate to the shippers that the matter can be delivered within a certain time by order.

Mr. STAFFORD. Let me ask the chairman this question: Suppose the shipper deposits in the post office a large quantity of parcel-post matter which the postal facilities are unable to handle and which the order of the Postmaster General indicates to the shipper the department can not handle expeditiously, and the shipper nevertheless leaves it for delivery. What is the purpose of the Postmaster General in dispatching by mail that amount of parcel post?

Mr. MOON. Well, the Postmaster General, having the discretion, may notify the shipper that the Government can not move it except in a designated time, or he may make provision for the removal of it within a specified time.

Mr. STAFFORD. Is it contemplated that the Postmaster General under this authority may refuse to accept the mail for delivery in case it can not be dispatched within a certain time?

Mr. MOON. Not at all.

Mr. STAFFORD. My inquiry was prompted by my acquaintance with the conditions that beset the Postal Service around the Christmas holidays. Then the service is taxed to the limit, and it is impossible for the Postal Service to dispatch all the mail immediately, as is usually the case when conditions are normal.

Mr. MOON. Under normal conditions sometimes the removal can not be had within a given time, and it is a great advantage to the shipper if the Postmaster General shall have the power to notify the shipper that the matter can not be moved except within a fixed time. The shipper under those circumstances, if he desires, may change the mode of transportation.

Mr. STAFFORD. Nothing in this provision states that the Postmaster General is to notify the shipper as to whether it can be carried or not.

Mr. MOON. Of course not; but he fixes the time, of which the shipper takes notice. In general words it is an enlargement of the discretion of the Postmaster General as to the time of delivery, in order to expedite the removal of mail matter.

Mr. STAFFORD. I thought under this provision the Postmaster General might be authorized to employ outside facilities for emergent cases for the shipment of this heavy mail.

Mr. MOON. He may, under other sections of this bill, do that, perhaps; but this does not confer any additional power along that line, I think.

Mr. STAFFORD. Mr. Speaker, with the explanation furnished by the chairman of the committee, I will withdraw the point of order that I made previously. I would like to have the gentleman at a later time yield me some time.

Mr. BUTLER. I would like to ask the gentleman from Tennessee a question.

Mr. MOON. I shall be glad to yield to any gentleman. I will now yield to the gentleman from Wisconsin [Mr. STAFFORD].

The SPEAKER. How much?

Mr. MOON. Ten minutes.

The SPEAKER. The gentleman from Wisconsin [Mr. STAFFORD] is recognized for 10 minutes.

Mr. BUTLER. I will ask the question later.

Mr. STAFFORD. Mr. Speaker, the bill as agreed upon in conference carries the largest sum ever appropriated in the history of the Government not only for the Postal Service but for any branch of the governmental service, the total amount being $311,752,000. This amount is nearly $5,000,000 in excess of the estimates, the estimates for the fiscal year being $306,953,000.

Mr. SHERWOOD. Has not the Postmaster General stated that under his estimate it would exceed the revenue by four and a half million dollars?

Mr. STAFFORD. The Postmaster General may have made that estimate, but the increases have been continuing so rapidly that perhaps he will later revise his estimate. It is only fair to say to the House that $4,350,000 of this increased estimate of nearly $5,000,000 has been occasioned by the increase of the salaries of rural carriers from $1,100 to $1,200. As the gentleman knows, there are some 42,900 carriers in the service, and it is contemplated that, with the extension of the service, there will be 1,200 more added during the next fiscal year.

Mr. SHERWOOD. Twelve hundred?

Mr. STAFFORD. Yes; making a total of 44,000 carriers in the service at the end of the fiscal year, which will occasion an increased appropriation, as estimated by the department, of $4,350,000 for increases of rural carriers' pay alone.

The other increases in the conference report have been largely the substitution of the amounts of the estimates of the department. For instance, the House committee cut down the railway-mail pay $1,000,000. There was no testimony before the committee to warrant the reduction, but the committee, in their judgment, thought it was an inordinate increase, and so reduced it; but the department has shown clearly that this increase has been brought about largely by the introduction of the parcel post, and their estimate has been finally agreed to. I believe that the estimate of the department will not nearly be adequate, even with the increased appropriation carried here, to meet the cost of this service when the full returns are made.

As the House knows, the weighings of the mails on the railroads were taken in the first contract section, a year ago last fall, in the New England States, and that before the parcel post was established; and last spring in the Middle Atlantic States. The returns there show that in the middle section, comprising New York, Pennsylvania, Delaware, New Jersey, Virginia, and West Virginia, the increase over the average increase of railway-mail transportation was more than $2,000,000, which is largely traceable to the establishment of the parcel post, and this when it was hardly established and before the weight limit of parcels had been increased to 20 pounds and later to 50 pounds. The weighing of the mail during the present season is in the Far Western States, that weighing having just begun and will continue for the period of 105 days. There the parcel-post mail is not so heavy as in the great middle section, known as the third contract section, where the weighings of the mail will take place next year.

I venture the assertion—and I have made it before—that when the railroads receive their full return for the increased tonnage of parcel post, when all the weighings have been completed three years hence, it will result in an added appropriation of more than $10,000,000 for railway mail pay, provided the same basis of pay is followed as now exists.

Mr. SHERWOOD. Will the gentleman yield for a question?

Mr. STAFFORD. Certainly.

Mr. SHERWOOD. Does the gentleman claim that the parcel post under the present system is going to pay?

Mr. STAFFORD. The gentleman from Ohio asks me whether the present parcel post will pay. We all recognize that the parcel post, so far as cost of service is concerned, is in the experimental stage. During the consideration of this bill in the House I took occasion to make some remarks on the question of the revised rates that had been established by the Post Office

Department. I then stated that those revised rates took no account whatsoever of the cost of the service by the railroads or the cost of handling on the railroads; that to carry a parcel weighing 1 pound 150 miles for 5 cents and allow for the cost of collection, cost of carriage on the railroad, cost of handling on the railroad, and cost of delivery was absolutely impossible; that it was absolutely impossible to carry a 1-pound parcel for that low rate without a decided loss.

Now, the excess rate for longer distances, where the rates are higher than those charged by express companies, may compensate for the loss on the short-distance hauls, and in those instances there may be a profit, but it is largely problematical. Everyone agrees that the railroads are not receiving any additional compensation for the carriage of the parcel post except the sum of $1,700,000 which was authorized under general terms in the last Post Office appropriation act, authorizing the Postmaster General to grant increases of 5 per cent on their total pay to those railroads whose weighings took place after January 1, 1913, and that average increase was only 3.7 per cent and the total allowance a little more than $1,700,000.

Mr. J. M. C. SMITH. Will the gentleman yield?

Mr. STAFFORD. I yield to my friend from Michigan.

Mr. J. M. C. SMITH. I have heard it said that the weight is increasing very rapidly. As one instance I was told of a mail carrier who was required under the parcel post to carry 6 hogs which had been cut up and wrapped in 50-pound packages. I am told that some of the rural-mail carriers are contemplating the purchase of automobile trucks, and that one of them is keeping 6 horses to do the increased work. I will ask if that will not require an increase of pay and if it is a common occurrence?

Mr. STAFFORD. There is no question but that if you are going to allow 50-pound packages to be carried in the mails, in some instances it is just going to swamp the rural carrier, and he will not be able to carry the mail with one team. He will be required to have two teams to carry it, and there must be some means devised to carry this excess weight. If they are going to be swamped with this freight matter from the department stores, from commercial houses, and the like, instead of the rural carriers receiving $1,200 a year, in a short time they will be before us asking for $1,800 compensation, and this item of $53,000,000 will increase rapidly to $100,000,000, and then what will be the condition of your surplus? In my brief service here I have seen the rural carriers' salaries raised $100 a year on three successive occasions, directly traceable to the parcel post. We raised it three years ago in expectation of the establishment of the parcel post, that increase being from $900 to $1,000. A year ago we raised it $100, and at this time we are raising it $100 because of the parcel post. There are instances where the burden is being increased on these rural carriers, where they will be obliged to have two horses to do the work, and in some instance not one team but two teams. If this increased burden is to be placed upon them, you can readily understand how this appropriation will mount into great amounts until it will virtually swamp the Government. Now, I have been one of those who thought it would have been wise——

Mr. BUTLER. Will not the compensation from the parcel post pay the Government?

Mr. STAFFORD. As I have just stated in answer to the question of the gentleman from Ohio, under the revised rates of 5 cents for a carriage of a pound 150 miles and under it is absolutely impracticable and impossible to collect parcels, carry them on railroads, and pay the proportion of cost for handling by the railway mail clerks and for delivery for 5 cents.

Mr. BUTLER. Could not that be rearranged and the rates fixed?

Mr. STAFFORD. As to heavier parcels and for long hauls the rates are higher than the revised express rates and very likely are profitable to the Postal Service. But there is demand to-day from many to have these rates reduced. If all the rates are going to be reduced so that they are not compensatory, there is going to be a deficit and a tremendous deficit. I am one that thought it wise to proceed slowly in this matter. I have been for a long time a supporter of the parcel post and the zone system. But when you jump at one leap to a 50-pound package, with no reliable data as to the cost of the service, without having anything to determine what that additional expenditure will be by reason of the additional weight, I think it is, to put the matter mildly, going at high speed.

Mr. HAUGEN. Will the gentleman yield?

Mr. STAFFORD. I will yield to the gentleman.

Mr. HAUGEN. Does the gentleman believe that the rates now fixed by the department will be compensatory?

Mr. STAFFORD. As I stated in reply to the gentleman from Ohio [Mr. SHERWOOD]—and this is the third time I have answered it—I believe some rates are not compensatory. There may be other rates that will pay a profit, but these rates are for long hauls, which are higher than the express companies' rates. The express companies are carrying heavy packages at a less rate than those of the Postal Service, and they will get the traffic. It is in the experimental stage, but it seemed wise to the Postmaster General to do it, and the responsibility is his. He claims to have figures that warrant him in doing it. I have examined those figures, and I find that he has not taken into consideration the cost of the service of transportation and handling on the railroads and other items of cost. It is true that we are not now paying the railroads anything for this additional service, except an allowance of $1,700,000, whereas the increased tonnage entitles them to more than $5,000,000. With the 50-pound limit in universal use in the first two zones, it will entitle them to $10,000,000. It is mere guesswork as to the extent this service is going to cost the Government. There is no question, Mr. Speaker, that this bill carrying $311,000,000 as a total appropriation will double in another 10 years. In another 10 years it will be $600,000,000, and it would not be a rash prediction to say that in 15 years it will reach the billion-dollar mark.

Mr. MOON. Mr. Speaker, I yield to the gentleman from Michigan [Mr. SAMUEL W. SMITH] 10 minutes.

Mr. SAMUEL W. SMITH. Mr. Speaker, when this bill passed the House it carried an appropriation of $307,013,867; when it passed the Senate it carried $311,772,067. The bill as finally presented to us to-day carries an appropriation of $311,752,167.

The increase over that of 1914 was $26,345,896. The increase over the House bill is $4,738,300.

I have no doubt, Mr. Speaker, if this money is wisely and honestly expended, as it will be, that, as large as the appropriation seems to be, it will be entirely satisfactory to the people of the country. I know of no money that is expended in behalf of the people that is more appreciated than that which is expended through this committee.

During the brief time I have at my disposal I desire to present to the House some remarks with reference to the committees or commissions that are provided for on page 14.

There are four commissions affected by this amendment. The first commission is on the Government purchase of pneumatic tubes. The chairman of it is the Hon. HOKE SMITH, Senator from Georgia. I desire to say with reference to that commission that it is expected that they will report in the near future, and that of the $25,000 appropriated they have expended in investigating this matter, in round numbers, $10,000.

Mr. SHERWOOD. Will the gentleman state what the nature of their investigation is?

Mr. SAMUEL W. SMITH. I understand that $10,000 has been largely used in paying engineers and experts.

Mr. SHERWOOD. For what purpose?

Mr. SAMUEL W. SMITH. For the purpose of ascertaining the utility and value of the pneumatic-tube service. The gentleman will understand that this service is in the great cities. This committee expects to be able to report in about 30 days.

The next committee is the joint committee on Federal aid in the construction of post roads, which is presided over by ex-Senator Jonathan Bourne, jr., of Oregon. This committee has expended so far $7,750, in round numbers.

Mr. BUTLER. Will the gentleman yield?

Mr. SAMUEL W. SMITH. Certainly.

Mr. BUTLER. How could they expend $7,500 in making investigations of this sort—as to the wisdom of the expenditure of public money to assist in maintaining public roads?

Mr. SAMUEL W. SMITH. This has been expended for clerical hire, postage, engineers, and so forth. I desire to say to the gentleman that they have made an investigation into the road systems throughout the civilized world. I understand they have a large amount of data which I hope will be collected, put into print, and that the volumes will be put into the Congressional Library. It is the most valuable collection of data on this subject the country has ever had.

Mr. BUTLER. How can that help us to determine whether we should expend public funds to assist in the maintenance of roads over which the mails are carried?

Mr. SAMUEL W. SMITH. I suppose they will make recommendations later on.

Mr. BUTLER. But the conditions in our country and Europe are not the same. I have no criticism to make of it, but I was wondering how they could expend that much money on a subject which the most of us now know something about.

Mr. SAMUEL W. SMITH. Mr. Speaker, the next committee that is to be affected by this amendment is the joint committee on postage on second-class mail matter and compensation for transportation of mails. This committee is also presided over by ex-Senator Jonathan Bourne, jr., and this committee has expended so far, in round numbers, $4,000. The next is the joint committee to investigate general parcel post, presided over by JOSEPH L. BRISTOW, Senator from Kansas. This committee has expended $460. It is hoped it will report soon.

I know that there are some in the House who feel that these committees or commissions ought to have reported by this time. I am not saying that they should not have reported, but I want to say this, in behalf of at least one or two of these commissions, that they have collected, as I said a moment ago, a great amount of data and information which they have not yet put in shape in the form of a report, and they are not ready to report to Congress at this time. I want to say another thing in this connection, that there is no member of any of these commissions or committees who is receiving any salary. It is not as though there were some retired Members of the House or Senate who had been placed on these commissions or committees, receiving salaries, who were drawing out and extending the life of these commissions for the purpose of getting the salary. Nobody is receiving a dollar of salary, and I undertake to say whatever money is expended is honestly, judiciously expended in making these investigations.

Mr. STEPHENS of Texas. Mr. Speaker, will the gentleman yield?

Mr. SAMUEL W. SMITH. Certainly.

Mr. STEPHENS of Texas. Mr. Speaker, I desire to ask the gentleman with reference to the item about the District of Columbia, appearing on page 19 of the bill, beginning with line 3:

For rent, light, heat, fuel, telegraph, miscellaneous and office expenses schedules of mail trains, telephone service, and badges for railway postal clerks, including rental of offices for division headquarters, and chief clerk, Railway Mail Service, in Washington, D. C., and rental of space for terminal railway post offices for the distribution of mails when the furnishing of space for such distribution can not under the Postal Laws and Regulations properly be required of railroad companies without additional compensation, and for equipment and miscellaneous items necessary and incidental to terminal railway post offices, $770,000. That the Postmaster General may hereafter make leases for terminal railway post offices for terms not exceeding 10 years.

Mr. SAMUEL W. SMITH. Mr. Speaker, I see the chairman of the committee is desirous of answering that, and I will yield to him.

Mr. MOON. Mr. Speaker, is that on page 19?

Mr. STEPHENS of Texas. Yes; beginning with line 3 and ending with line 16. The bill as it passed the House carried $490,000.

Mr. MOON. That does not mean that this is to be expended altogether in Washington City. The reason for that is this, that it is very much cheaper to rent terminal railway facilities than it is to retain the mail in storage cars.

Mr. MANN. Mr. Speaker, if the gentleman from Tennessee will permit, the gentleman from Texas in his question intimates that he thinks this money is to be expended wholly in the District of Columbia. I do not understand that to be the case.

Mr. MOON. Mr. Speaker, I have just stated to the gentleman that that was not the case.

Mr. MANN. I did not hear the gentleman.

Mr. STEPHENS of Texas. Where are the other expenditures?

Mr. MOON. Wherever there are terminal stations, and the department estimates they will save four or five dollars to one by this increase. So far as the saving of money in the bill is concerned, perhaps this is the very best section in the bill.

The SPEAKER. The time of the gentleman from Michigan has expired.

Mr. SAMUEL W. SMITH. Mr. Speaker, I will ask the chairman of the committee to yield me one minute more.

Mr. STEPHENS of Texas. Mr. Speaker, I desire to ask why it was found necessary to increase the expenditure for inland transportation on railway rates, being lines 17 and 18, page 15, the increase being from $55,188,000 to $56,188,000?

Mr. MOON. Mr. Speaker, I will say to the gentleman that the increase made by the Senate just goes to the estimates made by the department. The House cut that million off the bill, not for the purpose of keeping it off permanently but for use in conference with the Senate.

I now yield two minutes more to the gentleman from Michigan.

Mr. SAMUEL W. SMITH. Mr. Speaker, I want to say in conclusion, with reference to these commissions, a word respecting ex-Senator Bourne. As I have said, there is no member of these commissions or committees who is receiving a dollar of salary, and I am informed that ex-Senator Bourne is not only receiving no salary whatever, but he is so deeply interested in the work of these commissions, two of which he has the honor to be the chairman, that he is paying his own expenses.

I think the Congress and the country will be amply repaid by granting further time for these committees and commissions to report. They have all been very busy with practically no vacation for a long time.

Mr. MOON. Mr. Speaker, I yield five minutes to the gentleman from Kansas [Mr. MURDOCK]

Mr. MURDOCK. Mr. Speaker, I had hoped that the conference committee would agree upon an earlier date for the report of these four commissions, and I was particularly anxious that an earlier report should be made by the parcel-post commission. I believe that there is no present need for the parcel-post commission, and I think there is adequate proof of that in the inactivity of that commission since its appointment months ago. I am very much in favor of lodging with the Postmaster General a wide latitude and discretion in the control of the parcel post.

This morning I had occasion to look into the postal documents to find out what the revenue to this Government is from first-class postage. It is now running close to $200,000,000 a year. It is one of the greatest items of revenue in the Government, and it is possible for us to have that income from the circumstance that 70 years ago we as a Government asserted our right of monopoly in the carriage of the first-class mail. For the first 40 years of the postal history of this country we had as competitors in the carriage of first-class mail the express companies, and by the time we had reached 1840 there were more letters transported by the express companies than by the Government. About that time we took over a monopoly in the carriage of letters, and on that monopoly we built up the magnificent postal system of to-day. We have not asserted our monopoly over other classes of mail matter, and in our failure to do that we must take the other alternative, which is to give the Postmaster General or some other administrative officer, or a combination of administrative officers, such as the Postmaster General and the Interstate Commerce Commission, power to give flexibility in parcel-post rates. Otherwise, in this class of mail matter, we will have for our competitors, and always to our detriment, the express companies. If you leave it to Congress to establish rates, fixing rates by statute, necessarily stationary, you give the express companies on the remunerative short hauls the chance to undercut the Government's rates and get the business, and leave to the Government on the longer and unremunerative hauls an unprofitable monopoly. There is only one way out of that situation if you are not to assert your monopoly, and that is to give power and latitude to the Postmaster General in fixing parcel-post rates.

Recently a very serious and almost successful attack has been made upon that right. The movement, if successful, would have hamstrung the system. Now, I do not believe that the continuation of the parcel-post commission is a good thing for the parcel post. I think it is to the distinct injury of the parcel post, for I fear that out of this commission, which this bill is continuing until December 1, is likely to come an attack upon the Postmaster General and his right to fix parcel-post rates, when in the period of formation in this splendid system he ought to have a free hand.

Mr. STAFFORD. Will the gentleman yield?

Mr. MURDOCK. No, I will not; I want to say another thing. Now, I happen to have served upon one of these commissions—the pneumatic-tube commission. Its work is finished; it is prepared to report. It would not be just to the Government or to anyone else for that commission to continue its labors longer. It has thoroughly examined the subject; it had engineers examine the systems to ascertain their physical value; it has examined witnesses galore, and there is no reason at all why the life of that commission should not terminate within a month.

Mr. MANN. I will say if the gentleman from Kansas made the report right now that would terminate it.

Mr. MURDOCK. I am prepared to report on that and the rest of the members are. I do not think there is any question at all that the commission on second-class matter and railroad transportation could report within a month or two, and I think that is also true about the other commission incorporated here, if it has not finished its labors, the roads proposition. Now why should this parcel-post commission be continued? Why should not the commission report within even a month's time?

Mr. MANN. Under the existing law when do these commissions report; take, for instance, the pneumatic-tube commission?

Mr. MURDOCK. The law says at as early a date as possible, which, of course, does not mean anything. Now, let me say

this to the gentleman from Illinois: As a matter of fact, these commissions expired yesterday at noon.

Mr. MANN. That is it; but they have not made a report.

Mr. MURDOCK. No.

Mr. MANN. And therefore it must be extended.

Mr. MURDOCK. But why extend it to December 1?

Mr. MANN. I do not say——

Mr. MURDOCK. I do not think there is any reason for it.

Mr. MANN. If they have finished their labors, why do not they make a report?

Mr. MURDOCK. I think there is a distinct menace in the continuation of the parcel-post commission.

Mr. MOON. The reason is the members of that commission are busy at work in the House, and they assert that they have not the time aside from their other duties to finish the work. This just gives them a vacation in which to do that.

Mr. MURDOCK. The gentleman from Tennessee understands these commissions are ready to report, all except the parcel-post commission, which has done no work virtually at all.

Mr. ROUSE. When does the pneumatic-tube commission expect to report.

Mr. MURDOCK. Right away. I would like to ask the gentleman from Tennessee this: Is it a fact the parcel-post commission has been preeminently inactive since its appointment?

Mr. MOON. I have had no connection with it, but I presume that is true.

Mr. MURDOCK. Has the gentleman any assurance that December 1 next we will not have a request from the parcel-post commission for a further extension of time?

Mr. MOON. I have the assurance that Congress will not meet until the first Monday in next December, and this commission will have expired by that time, and it will take another act to revive it, as it did to create it.

The SPEAKER. The time of the gentleman has expired.

Mr. TUTTLE. Will the gentleman yield?

Mr. MOON. I yield one minute additional to the gentleman from Kansas.

Mr. TUTTLE. I do not know in regard to the other commissions, but I want to say the commission on railway-mail pay and rates of postage on second-class postal matter will be ready to report upon the first half of their work within probably the next 30 or 60 days at the outside.

Mr. MURDOCK. That is what I thought, and all these commissions save one are ready to make immediate report. The only commission which is holding back is the parcel-post commission.

Mr. SAMUEL W. SMITH. No; they say they will not report until the last half.

Mr. TUTTLE. I want to say we are not prepared to devote the time necessary to go into rates on second-class mail matter, and that is the reason we want the extension of time.

Mr. MURDOCK. Does the gentleman think that commission needs an extension until the 1st of December next?

Mr. TUTTLE. I am inclined to think that it needs an extension. It is a very important matter, and Congress will be in session probably well into the summer, and if it is extended, why, we will be able to report upon the matter.

Mr. MURDOCK. This commission of which he speaks was created in August, 1912.

Mr. TUTTLE. I want to say the commission itself has worked diligently. It has taken a mass of testimony of all kinds.

Mr. MURDOCK. I do not deny that; but that is not true of the parcel post commission.

Mr. TUTTLE. I want to say the delay in our report has been due to the delay on the part of the Post Office Department, which has had an immense amount of work to do in establishing the Parcel Post System.

The SPEAKER. The time of the gentleman has again expired.

Mr. MOON. Mr. Speaker, I yield 10 minutes to the gentleman from South Carolina [Mr. FINLEY].

How much time have I remaining?

The SPEAKER. The gentleman has 11 minutes remaining.

Mr. MOON. Then I can not yield more than five minutes to the gentleman from South Carolina.

The SPEAKER. The gentleman from South Carolina [Mr. FINLEY] is recognized for five minutes.

Mr. FINLEY. Mr. Speaker, it would be impossible in five minutes to go over in detail the various items that are covered by this conference report. I want to say that I believe that no more money is appropriated than is necessary to give the people of this country a proper and efficient mail service for the ensuing fiscal year. The bill as agreed upon by the conferees amounts to $311,752,167.

Now, I am one of those who believe in stating what I believe to be true. Some time ago I came to the conclusion that commissions and joint committees were largely created for purposes of delay. I believe that. And I have tried in every instance where I could to place as short a limitation on the life of a joint committee or joint commission as was possible, and, generally speaking, I have been against their creation.

I propose only to speak of one, but before I do that I will say, in a general way, that I think some of these joint committees have worked faithfully. I refer to the one on good roads. I think that the one having in charge railway mail pay has worked, and what the results of their labor will be I do not know. And I could mention one or two others. But for more than a year I have been satisfied that the joint committee on parcel post should die as speedily as possible. I am a member of that joint committee. I know what it has not done. I know what the gentleman from Maryland and the gentleman from South Carolina, the two Members of the present House, have tried and wanted to do. I know that we have not succeeded. I know that since August, 1912, when this joint committee was created, there has been one meeting lasting about 30 minutes. At that meeting it was organized by the election of a chairman and a vice chairman, and the chairman Senator BRISTOW, appointed the clerks. Since that time that joint committee has been, for all practical purposes, so far as being a committee goes, substantially dead. I do not believe they are going to do anything.

So, Mr. Speaker, I have expressed my opinion of one of these committees, the one of which I am a member.

Mr. SHERWOOD. Have the clerks been drawing their salaries in the meantime?

Mr. FINLEY. My recollection is that the compensation of clerks has not yet been fixed. As I remember, a motion was offered by me that that would be fixed later on, and it has not been fixed yet. That is my recollection. So, Mr. Speaker, I have done what I could to end the life of the joint committee on parcel post. I regard it as useless. I think it has done nothing and will do nothing; that it cumbers the ground, and its continuance can only be a clog to the proper development of the parcel post. I yield back the balance of my time. [Applause.]

The SPEAKER. The gentleman yields back one minute.

CHANGE OF VOTE.

Mr. MOON. Mr. Speaker, I yield one minute to the gentleman from Georgia [Mr. HARDWICK].

The SPEAKER. The gentleman from Georgia [Mr. HARDWICK] is recognized for one minute.

Mr. HARDWICK. Mr. Speaker, on page 4303 of the RECORD of March 4, 1914, I am recorded as voting "nay" on the convict-goods bill. I want to say that I came in on the floor of the House and voted under a misapprehension. While the Clerk correctly recorded my vote, I want to ask unanimous consent of the House that my vote be recorded in favor of the bill. I thought the bill should add the provision "before delivery to the consignees." Inasmuch as it does, I want to vote for the bill and want to have the permanent RECORD corrected accordingly.

The SPEAKER. The gentleman from Georgia [Mr. HARDWICK] asks unanimous consent that the RECORD and Journal shall be corrected in such a way as to show that he voted "yea" on the convict-labor bill instead of "nay," he having voted "nay" under a misapprehension. Is there objection?

Mr. MANN. Mr. Speaker, I shall not object to the request of the gentleman from Georgia—although I regard it as a bad and dangerous precedent—because the vote which was had was practically all one way. I hope the gentlemen will not regard this as a precedent for coming in and asking the privilege of changing votes in the future.

Mr. HARDWICK. If that had been true, I would not have made the request. There was no opposition to the bill, and I voted under the misapprehension of what it contained.

Mr. MANN. Well, many Members of the House vote under a misapprehension and change their mind after they vote.

The SPEAKER. Is there objection to the request of the gentleman from Georgia [Mr. HARDWICK]? [After a pause.] The Chair hears none.

POST OFFICE APPROPRIATION BILL.

Mr. MOON. Mr. Speaker, I yield five minutes to the gentleman from Illinois [Mr. MADDEN].

Mr. MADDEN. Mr. Speaker, to begin with, I want to congratulate the House conferees on the expedition with which they have been able to settle the questions involved in this great supply bill and the manner in which they have been settled. Now, there has been some question raised here as to the

propriety of continuing the commissions. It has been stated that the time certainly ought to be limited to within about 30 or 60 days from now.

The report of the committee of conference provides that the time shall be limited to December 1 next, and it seems to me that that is a reasonable recommendation. Many of these commissions will be able to report before; but if, perchance, they are not able to, the time ought not to be so limited as to prevent a report from any of these important commissions. They have given a great deal of time to their work. They have accumulated a large amount of very valuable information. It has cost the Government very little. The information, when submitted to the House with the recommendations of these commissions, will be the foundation upon which we can base salutary legislation for the future conduct of the departments affected by the work of these commissions. For example, the commission appointed to examine into the propriety of Government cooperation with the States in the construction of good roads has accumulated information from all over the world. This information is now being tabulated so as to be presented to Congress, and a recommendation will be made within the next 30 or 60 days, without doubt, upon which we may be able to base legislation for Federal cooperation with the States in the matter of constructing good roads that will lead to the enactment of laws that will be of infinite benefit to the people of the Nation in the future.

Now, as to the commission investigating the question of railway mail pay, that commission has been constantly at work every day since its appointment. I believe that it has accumulated more valuable information than has ever been accumulated before by any like commission, and from the advance information I have as to what it has done and what it will report I believe that we shall be able to enact laws for the payment of the railroads for the transportation of the mails in the future that will save the Government a vast amount of money and at the same time expedite the movement of the mails.

The SPEAKER. The time of the gentleman from Illinois has expired.

Mr. MOON. Mr. Speaker, I move the previous question on the adoption of the conference report.

The SPEAKER. The gentleman from Tennessee [Mr. MOON] moves the previous question on the conference report.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the conference report.

The conference report was agreed to.

### RAILROADS IN ALASKA.

Mr. HOUSTON. Mr. Speaker, I desire to submit for printing under the rule the conference report on the Alaskan railroad bill as corrected.

The SPEAKER. The gentleman from Tennessee submits the corrected conference report on the Alaskan railroad bill, which the Clerk will report by title.

The Clerk read as follows:

Conference report on the disagreeing votes of the two Houses on the bill (S. 48) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

The SPEAKER. The conference report is ordered to be printed under the rule.

Mr. MANN. Mr. Speaker, I desire to ask the gentleman from Tennessee [Mr. HOUSTON] whether, the conference report having been printed, it is his expectation to ask unanimous consent to consider it to-day or whether it will go over until later, under the rules?

Mr. HOUSTON. I think perhaps later in the day I shall ask unanimous consent to take it up to-day.

Mr. MANN. I raise the question now because there is quite a considerable membership present in the House, and I think if the gentleman intends to prefer that request at all it ought to be preferred now, to see whether anybody objects while the membership is fairly full.

Mr. MADDEN. Mr. Speaker, if the gentleman from Tennessee intends to prefer the request for the consideration of this conference report to-day, I serve notice that I shall object.

Mr. HOUSTON. Then I shall not make the request, Mr. Speaker.

### RECESS.

Mr. LEVER. Mr. Speaker, I move that the House take a recess for 10 minutes.

The SPEAKER. The gentleman from South Carolina [Mr. LEVER] asks unanimous consent that the House stand in recess for 10 minutes. Is there objection?

There was no objection.

The SPEAKER. The House stands in recess for 10 minutes.

Accordingly (at 12 o'clock and 15 minutes p. m.) the House stood in recess.

### JOINT MEETING OF SENATE AND HOUSE.

At the expiration of the recess the House resumed its session and was called to order by the Speaker.

At 12 o'clock and 30 minutes p. m. the Doorkeeper announced the Vice President of the United States and the Members of the United States Senate.

The Members of the House rose.

The Senate, preceded by the Vice President and by their Secretary and Sergeant at Arms, entered the Chamber.

The Vice President took the chair at the right of the Speaker, and the Members of the Senate took the seats reserved for them.

The SPEAKER. All gentlemen will resume their seats. On the part of the House, the Speaker appoints the gentleman from Alabama [Mr. UNDERWOOD], the gentleman from New York [Mr. FITZGERALD], and the gentleman from Illinois [Mr. MANN] a committee to wait on the President and escort him into the House. The Vice President will make his own announcement.

The VICE PRESIDENT. On behalf of the Senate, the Vice President appoints the Senator from Indiana [Mr. KERN], the Senator from Virginia [Mr. SWANSON], and the Senator from New Hampshire [Mr. GALLINGER].

At 12 o'clock and 34 minutes p. m. the President of the United States, escorted by the committee of Senators and Representatives, entered the Hall of the House and stood at the Clerk's desk, amid applause on the floor and in the galleries.

The SPEAKER. Gentlemen of the Senate and the House, I introduce to you the President of the United States. [Applause.]

### ADDRESS OF THE PRESIDENT (H. DOC. NO. 813).

The PRESIDENT. Mr. Speaker, Mr. President, gentlemen of the Congress, I have come to you upon an errand which can be very briefly performed, but I beg that you will not measure its importance by the number of sentences in which I state it. No communication I have addressed to the Congress carried with it graver or more far-reaching implications as to the interest of the country, and I come now to speak upon a matter with regard to which I am charged in a peculiar degree, by the Constitution itself, with personal responsibility.

I have come to ask you for the repeal of that provision of the Panama Canal act of August 24, 1912, which exempts vessels engaged in the coastwise trade of the United States from payment of tolls, and to urge upon you the justice, the wisdom, and the large policy of such a repeal with the utmost earnestness of which I am capable.

In my own judgment, very fully considered and maturely formed, that exemption constitutes a mistaken economic policy from every point of view, and is, moreover, in plain contravention of the treaty with Great Britain concerning the canal concluded on November 18, 1901. But I have not come to urge upon you my personal views. I have come to state to you a fact and a situation. Whatever may be our own differences of opinion concerning this much-debated measure, its meaning is not debated outside the United States. Everywhere else the language of the treaty is given but one interpretation, and that interpretation precludes the exemption I am asking you to repeal. We consented to the treaty; its language we accepted, if we did not originate; and we are too big, too powerful, too self-respecting a Nation to interpret with too strained or refined a reading the words of our own promises just because we have power enough to give us leave to read them as we please. The large thing to do is the only thing that we can afford to do, a voluntary withdrawal from a position everywhere questioned and misunderstood. We ought to reverse our action without raising the question whether we were right or wrong, and so once more deserve our reputation for generosity and for the redemption of every obligation without quibble or hesitation.

I ask this of you in support of the foreign policy of the administration. I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure. [Applause.]

At 12 o'clock and 39 minutes p. m. the President retired from the Hall of the House.

Thereupon the Vice President and the Members of the Senate returned to their Chamber.

The SPEAKER. The message of the President just delivered to the House will be printed and referred to the Committee on Interstate and Foreign Commerce.

### AGRICULTURAL APPROPRIATION BILL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 13679)

making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill, H. R. 13679, with Mr. HAMLIN in the chair.

Mr. LEVER. Mr. Chairman, I yield to the gentleman from Missouri [Mr. DICKINSON].

[Mr. DICKINSON addressed the committee. See Appendix.]

Mr. LEVER. Mr. Chairman, I now yield 30 minutes to the gentleman from Mississippi [Mr. CANDLER], a member of the Committee on Agriculture. [Applause.]

Mr. CANDLER of Mississippi. Mr. Chairman, the specific bill under consideration appropriates the sum of $18,947,232, an increase of $960,287 over the appropriation for last year. This, with the fixed appropriations, will make the total appropriation about $25,000,000 for agriculture for the coming fiscal year. In view of the great interests with which this bill deals, I do not believe it needs any defense by me or anybody else; but, if it ever needed any, I am sure it does not need it now, since the eloquent and forceful speech delivered by the distinguished chairman of this committee [Mr. LEVER] on this floor a day or two ago, taken in connection with the very elaborate and full report which he made when this bill was presented to the House. [Applause.]

The difficulty oftentimes with reports that are made in reference to bills is that they do not explain the bills and do not give information in reference to them. The report submitted by this distinguished chairman went into the details in reference to the provisions of the bill, called attention to the appropriations, and even pointed out the page and line where they could be found. Hence anybody who desired to know anything in reference to the bill could be informed by reading the report, which gives full, complete, and detailed information in reference to it.

I have had the honor to serve upon this great committee during several terms of Congress. It is true that a few years ago, in a Republican House, by reason of my activity, as I understood it, in reference to certain matters concerning which the Speaker at that time [Mr. Cannon] did not agree with me, he saw proper to remove me from this committee, because he said I was too aggressive and too active; but I am glad that when the Democrats came into power they promptly put me back on this committee, and not only restored me to the committee, but restored me to my place upon it. [Applause.] That action was taken by the unanimous vote of the Committee on Committees, composed of 14 Democrats of this House, and I know it met the approval of our distinguished Speaker, the Hon. CHAMP CLARK. Not only did I receive the unanimous vote of the committee and the approval of the Speaker, but I received the unanimous vote of the Democratic caucus and the unanimous vote of the House of Representatives. That demonstrates I was all the time for the people. [Applause.] I have served on this committee since then and prior to my removal with the gentleman who now has the honor of presiding over this, in my judgment, one of the greatest committees of the House.

Mr. CAMPBELL. Mr. Chairman, a point of order. Owing to the noise in the galleries, we have difficulty in hearing the distinguished gentleman from Mississippi. We are always anxious to hear him, and he never fails to interest the House.

Mr. CANDLER of Mississippi. I thank the gentleman from Kansas, and I feel sure order will soon prevail.

Mr. CAMPBELL. I am only asking for order so that Members of the House may hear the gentleman.

Mr. LANGLEY. If the gentleman from Mississippi will address himself to this side of the House, we shall be very much obliged to him. He seems to be addressing himself at the present time to the Democratic side of the House. We all want to hear him, as we have great confidence in his ability and capacity to give information.

Mr. CANDLER of Mississippi. I thank my good friend from Kentucky. Although a Republican, he is a good enough friend of the farmer to come over here, where he can hear me. But if he and other gentlemen will be patient for a little while, until the natural exodus from the galleries on the part of those who came only to hear the President is concluded, I am sure they will have no difficulty in hearing me. The Members on the floor are kindly giving me their attention, and for their kindness in this regard I am grateful.

Having served on this committee during these years with this distinguished gentleman, I have had an opportunity to observe how he does things. This committee has never been presided over in its existence by a more distinguished, patient, able, or energetic chairman than it possesses to-day, and I assert that he has as much constructive legislation to his credit as any man on this floor of the same length of service. [Loud applause.]

I want to call attention on this occasion to one of the constructive features of legislation of which my friend is the author. You remember that in 1862 there was passed what was known as the Morrill Act for the endowment, support, and maintenance of at least one college in each State where the leading object should be the teaching of such branches of learning as are related to agriculture and the mechanical arts. In 1887 there was passed what was known as the Hatch Act, which provided for the establishment of experimental stations and scientific investigations and experiments respecting the principles and application of agricultural science. Then there are subsequent acts, one known as the Adams Act, which enlarged the appropriation for experimental stations.

Then followed what is known as the Lever bill, for the purpose of carrying the knowledge which had been accumulated and acquired through the other sources to the public. The essential idea of the Lever bill is to bring to the farmers on the farm this information of scientific truths and to teach them the better methods of agriculture which the colleges and experiment stations have during these years been gathering. Past legislation had resulted in the accumulation of very valuable information. This bill proposes to disseminate it in the most practical and far-reaching manner through the men in the field.

The gentleman from South Carolina [Mr. LEVER] is the author of that bill. He drew it himself, introduced it into the House, it was referred to the Agricultural Committee, referred to a subcommittee of which he was chairman, and of which I had the honor to be a member; that subcommittee unanimously reported it back to the full committee, which unanimously reported it to the House, and he stood by it through its vicissitudes, and when it came to a vote on the floor of the House it received practically the unanimous vote of the House and went to the Senate of the United States and there received practically the unanimous vote of the Senate.

As was remarked by the distinguished Secretary of the Navy, Hon. Josephus Daniels, in a speech the other day on the soil of the State of South Carolina, that with a man who can formulate and present a bill such as the "Lever bill," procure its unanimous passage on the floor of the House of Representatives and the approval of the Senate of the United States, it is not necessary to go back to the days of John C. Calhoun to find a statesman within the borders of the State of South Carolina, but in Mr. LEVER, the chairman of the Agricultural Committee, you must recognize a constructive statesman who will always live in the history of this country. [Applause.]

I have watched his course with admiration, with pleasure, and indeed with affection, and I predict that as the days go on his record will grow brighter and brighter and rise higher and higher, and will only approximate its zenith when South Carolina does that, when occasion comes, which it ought to do, elevate him to the position of Senator of the United States. [Loud applause.]

As I stated Mr. Chairman in the outset, I do not believe this bill needs any special defense at the hands of anybody. I desire, however, to call attention to some of the features of the bill to show the benefits which will be derived from it and the interests which are involved.

As I stated, the appropriation in this specific bill is a little more than $18,000,000, which, with permanent appropriations, runs it up to about $25,000,000. The appropriations for the past years, beginning in 1900, run from $3,009,727.73 up to about $25,000,000 at the present time. When I became a Member of the House of Representatives the appropriation in the bill of that year was, in round numbers, $3,000,000. I have contended from that day until this that the appropriations for this great business of agriculture should be increased from time to time in proportion to the development of this great interest in the country.

I have made a speech on the floor of this House almost if not every session of Congress whenever the bill was under consideration, calling attention to the development throughout the country of the agricultural interests and showing the value and extent of it and the necessity for enlarged appropriations to meet the increasing necessities of the people and to carry to them the scientific knowledge and teaching which they should have, not only in their own interest but in the interest of all the people throughout the country. [Applause.]

In other words, I believe whenever you help agriculture you help all the people. I have said on previous occasions that I believe in my heart that whenever you help the farmer you

help every other calling, every other trade, every other profession. You help the lawyer, you help the doctor, you help the preacher, you help the merchant, you help the banker—you help everybody when you help the farmer, because he is the bulwark and the mainstay in the prosperity and development of this great Republic. [Applause.]

My friends, have you any definite idea as to what the value of the agricultural interests of this country is? In 1900 it amounted to $20,439,901,164. In 1910 it amounted to $40,991,449,090. It increased in value a little above 100 per cent in 10 years. The value of agricultural products last year was about $9,000,000,000, and still some people complain, as was called attention to by the distinguished chairman a few days ago, of the appropriations for agricultural interests when we spend $18,000,000 to $25,000,000 a year. Why, Mr. Chairman, the total appropriations for agriculture since 1839 up to now is only $217,265,368.51, as follows:

*Appropriations for the Department of Agriculture since its organization to the present time.*

| | |
|---|---|
| 1839 | $1,000.00 |
| 1840 | |
| 1841 | |
| 1842 | 1,000.00 |
| 1843 | |
| 1844 | 2,000.00 |
| 1845 | 2,000.00 |
| 1846 | 3,000.00 |
| 1847 | 3,000.00 |
| 1848 | 4,500.00 |
| 1849 | 3,500.00 |
| 1850 | 5,500.00 |
| 1851 | 5,500.00 |
| 1852 | 5,000.00 |
| 1853 | 5,000.00 |
| 1854 | 10,000.00 |
| 1855 | 50,000.00 |
| 1856 | 30,000.00 |
| 1857 | 75,000.00 |
| 1858 | 63,500.00 |
| 1859 | 60,000.00 |
| 1860 | 40,000.00 |
| 1861 | 60,000.00 |
| 1862 | 64,000.00 |
| 1863 | 80,000.00 |
| 1864 | 119,770.00 |
| 1865 | 150,604.05 |
| 1866 | 167,787.82 |
| 1867 | 199,100.00 |
| 1868 | 279,020.00 |
| 1869 | 172,593.00 |
| 1870 | 156,440.00 |
| 1871 | 188,180.00 |
| 1872 | 197,070.00 |
| 1873 | 202,440.00 |
| 1874 | 257,690.00 |
| 1875 | 337,380.00 |
| 1876 | 249,120.00 |
| 1877 | 194,686.96 |
| 1878 | 198,640.00 |
| 1879 | 206,400.00 |
| 1880 | 199,500.00 |
| 1881 | 275,460.31 |
| 1882 | 363,011.05 |
| 1883 | 456,396.11 |
| 1884 | 416,641.13 |
| 1885 | 655,930.25 |
| 1886 | 677,973.22 |
| 1887 | 657,641.81 |
| 1888 | 1,027,219.06 |
| 1889 | 1,134,480.60 |
| 1890 | 1,170,139.11 |
| 1891 | 1,372,049.21 |
| 1892 | 2,478,655.75 |
| 1893 | 2,540,060.72 |
| 1894 | 2,603,855.58 |
| 1895 | 2,507,148.74 |
| 1896 | 2,584,013.22 |
| 1897 | 2,448,763.53 |
| 1898 | 2,468,551.56 |
| 1899 | 2,856,861.60 |
| 1900 | 3,009,727.73 |
| 1901 | 3,303,500.00 |
| 1902 | 3,862,420.00 |
| 1903 | 4,503,960.00 |
| 1904 | 5,258,160.00 |
| 1905 | 5,942,040.00 |
| 1906 | 7,112,690.00 |
| 1907 | 13,079,523.98 |
| 1908 | 13,037,802.62 |
| 1909 | 16,153,534.74 |
| 1910 | 17,115,410.35 |
| 1911 | 20,888,449.28 |
| 1912 | 22,405,016.00 |
| 1913 | 24,743,044.81 |
| 1914 | 24,105,314.61 |
| Total | 217,265,368.51 |

This Government spends more than $217,000,000 every two years for the Navy and about that much every two years for the Army, and then some people complain that we have spent that much since 1839 to date—a space of 75 years—for agriculture, without which we would have neither an Army or a Navy or anything else. [Loud applause.]

When the valuation of the farm values in this land is over $40,000,000,000 and when our yearly crop is about $9,000,000,000 it is idle to talk to me about spending the insignificant sum of $25,000,000 to take care of this great and far-reaching interest, extending as it does throughout the length and breadth of this land, an interest which enters into every neighborhood and every home of every citizen in the land. Instead of complaining about appropriating $25,000,000, I say without hesitancy we could well appropriate a good deal more and then not be extravagant. No reasonable appropriation in the interest of agriculture could be extravagant, because all money spent for this purpose benefits all the people. [Applause.] The items composing farm values which I mentioned consist of farm lands, buildings, implements, machinery, and live stock. The five items combined make this enormous sum of $40,991,499,090. The truth of it is that everybody else in the country, every business interest in the land, has had special attention at the hands of the law makers from the foundation of the Government up to the present time. The great banking interests, the great mercantile interests, the great railroad interests, the great shipping interests—every interest in the land has been looked after in legislative bodies, and they have especially been looked after and taken care of by the Congress of the United States. In my judgment the time has come, and now is, when the people who produce the wealth of this land, who produce the prosperity of the Nation, who not only take care of us at home, but produce the balance of trade abroad, should receive the very best consideration of the Congress of the United States. [Applause.] The time has arrived and now is when we should look after the man behind the plow, when we should look after the interest of the man who makes the land to blossom like a rose, the man who in the sweat of his face brings forth the wealth of the land and the prosperity of the Nation. [Applause.] The statistics show that the balance of trade in farm products from 1894 up to and including 1913 is as follows:

*Foreign trade of the United States in farm products, 1894–1913.*

| Year ending June 30— | Excess of exports over imports of farm products. | Exports of domestic— | | |
|---|---|---|---|---|
| | | Grain and grain products. | Packing-house products (meat, etc.). | Cotton (raw). |
| 1894 | $281,060,304 | $166,838,415 | $143,617,952 | $210,869,289 |
| 1895 | 193,203,991 | 114,715,103 | 132,998,681 | 204,900,990 |
| 1896 | 194,285,587 | 141,483,935 | 133,702,945 | 190,056,460 |
| 1897 | 298,591,507 | 198,034,511 | 134,721,831 | 230,890,971 |
| 1898 | 555,136,498 | 334,199,716 | 162,494,627 | 230,953,219 |
| 1899 | 449,431,120 | 274,379,021 | 172,434,687 | 210,089,570 |
| 1900 | 435,740,495 | 263,021,542 | 179,898,782 | 242,988,978 |
| 1901 | 570,990,325 | 275,844,717 | 192,485,205 | 315,165,947 |
| 1902 | 453,677,282 | 213,401,238 | 196,743,099 | 291,598,355 |
| 1903 | 435,786,575 | 221,495,083 | 179,412,354 | 317,065,271 |
| 1904 | 410,350,439 | 149,366,054 | 177,441,554 | 372,049,264 |
| 1905 | 285,370,088 | 108,075,761 | 170,308,231 | 381,398,939 |
| 1906 | 432,728,121 | 187,067,354 | 207,673,774 | 401,005,921 |
| 1907 | 439,182,127 | 184,399,150 | 203,456,136 | 481,277,797 |
| 1908 | 488,004,797 | 215,462,142 | 196,187,091 | 437,788,202 |
| 1909 | 274,210,364 | 160,076,479 | 169,991,850 | 417,390,655 |
| 1910 | 198,118,937 | 133,320,418 | 135,959,373 | 450,447,243 |
| 1911 | 365,254,018 | 124,262,836 | 157,302,666 | 585,318,839 |
| 1912 | 279,277,316 | 123,095,651 | 161,434,714 | 565,849,271 |
| 1913 (preliminary) | 322,674,000 | 210,309,555 | 162,483,127 | 547,357,195 |
| Total | 7,363,073,891 | 3,798,848,684 | 3,370,748,679 | 7,084,401,523 |

That $7,363,073,891 is the balance of trade in farm products alone. The truth is that if you take into consideration all other articles of every kind and description that enter into our export trade and exclude farm products, and take that in comparison with the imports that come into the country, we will all the time be indebted to foreign nations, but by taking into consideration all of the exports from this country of every kind and description, including farm products, there is a balance of trade in favor of the United States of billions of dollars. That does not come from manufactures; it does not come from the other sources of trade in this country or other sources of business, but for this balance in trade we are indebted to the farmer alone, the producer in this land. [Applause.] So, as I said a moment ago, we ought to look after his interest, we ought to continue to do what we can to help him along, as he is helping along everybody else and benefiting everybody in the country.

Mr. QUIN. Mr. Chairman, will the gentleman yield?

Mr. CANDLER of Mississippi. With great pleasure.

Mr. QUIN. Can the gentleman suggest some way to extend the Bureau of Markets so as to bring the producer of the farm product and the consumer of that product together, and cut out all of the waste and stealage of the middleman?

Mr. CANDLER of Mississippi. Mr. Chairman, I will state to my good friend from Mississippi [Mr. QUIN] that that is one subject I intended to discuss a little later on in my remarks, but I shall be glad to respond to his inquiry now. He is always on the alert for the farmer and the producer has no more faithful friend in this House than he has proven himself to be since he entered Congress. I will state that there is a provision in this bill making an appropriation of $200,000 for this purpose, in order to give to the bureau of markets sufficient money to study this question and to carry out the work and research which they have now begun. The bureau has been organized only a short time, but it is at work in earnest and I am sure will materially help the farmer and the people generally by working out this complex question of markets.

The following statement, furnished me by Dr. Charles J. Brand, Chief Office of Markets, shows the work and purposes of the Office of Markets of the Department of Agriculture:

THE NECESSITY FOR THE WORK.

The agricultural operations of the United States have reached the point where further production waits upon more economical and efficient distribution. In the case of some of our staple crops we have already been confronted with the anomaly of a small crop selling in the aggregate for more money than a large crop. In other words, our arrangements for supplying the consumer with what he needs are so inadequate that he is often forced to pay more in the aggregate for an insufficient supply than he pays in other years for an abundance of the same article. This is not primarily a matter of freight rates or legitimate transportation charges, nor does it necessarily imply an unwillingness upon the part of the middleman to perform his legitimate functions, but it does indicate that the relations between middlemen are not properly adjusted and that the service which they render is often so manipulated that an immense amount of food materials are permitted to spoil before they are offered to the consumer at a price which will tempt him to increase his purchases. In other words, ruinously low prices to producers are not accompanied by corresponding advantages to consumers. The distributing system, though it may be fairly well adjusted to provide for normal conditions, breaks down utterly under the burden of marketing an exceptionally large crop and lends itself too readily to speculative manipulation when crops are short.

LOSSES UNDER PRESENT METHODS.

Producers sustain enormous losses under present methods from a number of causes. In the case of perishable products primarily, perhaps, because the greater part is sold to middlemen who are not directly answerable either to the growers themselves or to the consumers, there is a very general belief that the average commission merchant would rather swindle a consignor and take his chances upon catching a new victim than to do a strictly legitimate business, confining himself to the commission which he is supposed to charge. There are in the country certain producing organizations which have their own selling system and which establish certain grades for their products, decide upon the prices to be asked, and determine a minimum below which price the products will be allowed to rot at home thus avoiding the possibility of sending out shipments which will not pay freight charges. The lack of any general accepted system of grading for farm products which is understood and applied by the producers themselves is another source of immense loss. In the case of the cotton crop the failure to receive proper credit for his grades is perhaps the greatest loss which the grower sustains, but in the case of practically all perishable farm products the promiscuous and ungraded consignments which comprise the bulk of receipts are slaughtered in price in favor of the carefully standardized products of a few growers or localities.

BETTER CONDITIONS HOPED FOR.

We see to-day apples from the Pacific Northwest, the citrus fruits and fresh grapes of California in practically every eastern market. Potatoes and truck crops from the eastern shore of Virginia find their way to 40 States. This looks as though our distributing system were efficient, but as a matter of fact in each of these cases the distribution is under the control of a thoroughly organized body of producers who have their own selling system and who have some assurance as to what the price will be before the goods arrive at destination, usually before they are even shipped. Instances of such effective cooperation among producers are, however, all too few in this country. We must multiply our existing cooperative activities at least by 10 before we will make a serious impression upon the food-distributing business of the country. Every possible legitimate encouragement should be given our farming community in the adoption of efficient methods in marketing and distribution as we have educated and assisted it in production. To study the methods of these successful producers' organizations and to give practical advice and assistance to such others as may be operated in less efficient fashions is one of the prime missions of the office of markets.

A general study of those problems of supply and demand, of the consumptive power of our principal markets, a study of the natural division of territory as between the various sections of the South which produce early fruits and vegetables are all among the activities which should tend to prevent useless and ruinous competition between producers, which, when it occurs, is the more to be regretted because our retail system is so lacking in elasticity that the price of the individual cabbage in the green grocery is but little reduced when carloads of cabbages are being dumped into the river because the commission houses can not move them.

The office has taken up the interests of the consumer in a direct fashion by making a study of city distribution and marketing facilities, the organization and efficiency of municipal markets, etc., and at the solicitation of various municipalities has undertaken to advise on the more general problems relating to the municipal food supply, such as the location of terminal wholesale markets, retail producers' markets, municipal market buildings, and the like.

Coming closer still to the individual producer, experiments and demonstrations are under way to bring out the greatest possible extent to which the parcel post may be used as a method of direct marketing and to increase the number of products which can be economically handled thereby. This field of investigation promises immediate result and is possibly of as great importance to the average small farmer and to the average consumer as any other one feature of this work.

The following are a few specific instances showing the necessity for the study of the question of markets.

GRAPEFRUIT.

In the case of a particular consignment of grapefruit from Cuba, consumed in Boston, the price paid to the producer was $2.75 for a box of 48s. The Boston consumer paid at the rate of $6 for the box of four dozen, so that $3.25 was distributed between the various agencies handling the product between the producer and the consumer. This difference went into the following charges and profits: Freight, 60 cents; duty, 65 cents; hauling, loss through deterioration, and retailer's profit, $2. In other words, 50 cents more than the producer received was distributed to intermediaries.

LETTUCE.

In the case of a shipment of lettuce from Charleston, S. C., consumed in the New York market, the price received by the producer was $2.44 per hamper of from 30 to 40 heads. The price paid by the consumer was $4.37½ per hamper, making a difference between the price received by the producer and that paid by the consumer of $1.93¾ per hamper. As nearly as could be determined, the following represents the distribution of the "spread": Commission, 15 cents; freight, 25 cents; refrigeration costs, 16 cents; hauling, loss, and profit to retailer, $1.37½.

POULTRY.

In the case of a shipment of poultry from eastern Massachusetts for consumption in Boston, the price received by the producer was 26 cents per pound. The price paid by the consumer was 60 cents, leaving a difference of 34 cents for division between the transportation and handling factors. The difference was actually divided up as follows: Transportation charges and commission, 7 cents; wholesaler's participation, 11 cents; retailer's share to cover costs and profit, 16 cents.

PINEAPPLES.

Florida pineapples shipped to Boston for which the producer received $1.65 per crate of 2 dozen cost the consumer $3.60 per box, a difference of $1.95. Sixty cents of the difference was consumed by transportation charges, while the retailer received for the services that he performed $1.35 per box. In other words, the producer who took all of the risks through a long season and furnished all the labor received only 30 cents more than the retailer who had a small investment in the product for a very short time.

MILK.

The milk situation varies with practically every center of population. Milk produced at Delphi, Montgomery County, Pa., and consumed in Philadelphia returned 4 cents per quart to the producer. The consumer paid 8 cents per quart. The difference of 4 cents is distributed over selling charges, freight, hauling, cooling, bottling, delivery, and retailer's profit.

PEACHES.

Elberta peaches produced at Paonia, Colo., and sold by the producer at 26 cents per flat sold in Boston at 90 cents. It is not possible to account for the distribution of all the difference, but the commission charges were 3½ cents, wholesaler's share 30 cents, retailer's share 15 cents.

In this particular case, which may not be considered the rule, the wholesaler received more for the short time that the product was in his hands than did the producer who took all the hazards and costs of production.

CABBAGES.

Early cabbage produced at Beaufort, S. C., for which the producer received $4.29 per 100-pound crate, sold in New York at only $5 per crate, a "spread" of 71 cents. As the price received by the producer was a delivered price in New York, the 71 cents is divided between a commission of 21 cents and retailer's cost and profit of 50 cents.

HAY.

Hay produced in Wyoming and sold in the field at $5 per ton sold to the consumer in Denver at $18 per ton. The difference, $13, between the producer and the consumer.

STRAWBERRIES.

Strawberries produced at Hempstead, Long Island, and consumed in Brooklyn, N. Y., yielded 14 cents per quart box to the producer and sold to the consumer at 25 cents per quart. The difference of 11 cents was divided between the commission man, who received 4 cents, and the retailer, who received 7 cents.

Individual instances of the character given above could be multiplied greatly, but what has been given is sufficient to show the possibilities of economy as well as the comparatively small percentage of the retail price that ultimately goes to the producer in the case of many products.

In addition to above statements, I have some remarkable figures here that are taken from a speech made by Mr. Yoakum a few years ago—I do not remember the exact date—to which I invite attention. Mr. Yoakum says:

The consumer pays a dollar for food; the farmer gets less than 50 cents for it. Who gets the balance?

On a crop worth $9,000,000,000, farm value, of which the farmer sells produce worth $6,000,000,000, and for which the consumers pay $13,000,000,000, by diverting 20 per cent of this $7,000,000,000 from an unnecessary economic waste to the pockets of the farmers would mean $1,400,000,000 additional a year.

A bushel of beans for which the producer in Florida receives $2.25, with the transportation 50 cents for the 800-mile haul, should not cost the consumer in New York $6.40 a bushel. The producer receives 35 per cent of what the consumer pays, the transporter 8 per cent, and the dealers 57 per cent. This is not a fair division.

A bale of cotton, which sells for $60 at the southern gin, should not become a speculative article costing the spinner $70 per bale, with the transporter receiving only $4.50 per bale for the thousand-mile haul from the farms of the South to the cotton mills of New England. The cost to the spinner should be the farmers' price with the transportation cost added. Any additional profit should go to the farmer.

The average price of eggs to the consumer in New York throughout last year was 30 cents a dozen. The average price paid to the farmers in the States of Arkansas and Missouri for eggs was 15 cents a dozen. The railroad charge for the 1,300-mile haul was 2 cents a dozen, including breakage, which the Government estimates at 10 per cent. The men who receive the eggs in New York in the morning and deliver them during the day take 13 cents a dozen profit, equal to 43 per cent.

The rice farmers of Texas, Louisiana, and Arkansas can not sell their rice for more than 2½ cents a pound. The consumer in New York is paying 10 cents a pound for rice. It costs to transport rice from

Texas, Louisiana, and Arkansas to New York one-half cent a pound. If the rice farmer was paid 3½ cents a pound and the dealer received 1 cent a pound, which is 25 per cent profit, rice could be sold in New York at 20 pounds for a dollar.

The appropriation in this bill is $200,000 for the bureau of markets. Last year it was $50,000, and we have increased it in this bill $150,000, for which increase I voted in subcommittee and in full committee and will cheerfully vote for it on this floor, and would vote for more if necessary to do the work, because I believe this bureau of markets has a great field before it and that it can help the people a great deal in finding out why it is that the products when they leave the producer sell for but a very small proportion of the value in accordance with what they bring when they reach the consumer. There is too much difference between the price obtained by the producer and the price paid by the consumer, and if we can find out where this waste goes, or, as my friend from Mississippi [Mr. QUIN] called it a while ago, stealage, it will help the people very much. We want to discover that if we can, and the bureau of markets is trying to do that, and I think is succeeding wonderfully well. Therefore I am heartily in favor of the work; and there is another great work in which I think we can help the farmer, and that is to give him a system of farm credits. [Applause.] Just exactly what this system should be must necessarily be worked out by proper investigation and by full and free discussion, but there is no question in my mind but that we can help the farmer along this line, and that we should do so without delay. Practically every business interest has received attention at the hands of Congress. When the banking and currency bill was before us, when it was in committee, it was given very serious and very careful attention, and the banking interests throughout the country were consulted and were heard and given opportunity to present their views, and it was sought to frame a law along lines that would be beneficial to that interest and be beneficial also to the people, and as a result the currency law was framed and passed, for which I voted with pleasure.

Now, I want to make the appeal that when we come to consider the question of farm credits the farmer ought to have the opportunity to express his views and state what he wants and tell us what will best subserve his interests and the interests of the people.

Mr. YOUNG of North Dakota. Will the gentleman yield?

Mr. CANDLER of Mississippi. I do.

Mr. YOUNG of North Dakota. In that connection, is it not a fact that the expenses of some of the witnesses who appeared before the committees in connection with the banking and currency bill were paid by the Government; and if so, should not the present joint committee investigating the facts and conditions having to do with farm credits throughout the country have farmers represented in the hearings before that committee, even if at the expense of the Government?

Mr. CANDLER of Mississippi. Witnesses before the Money Trust committee and other investigating committees were paid, but I do not know whether any witnesses who appeared before the Banking and Currency Committee were paid by the Government or not.

Mr. YOUNG of North Dakota. If so, ought not the same facilities be extended now in reference to those interested in farm credits?

Mr. CANDLER of Mississippi. Certainly, when a committee is considering a question of such vital importance to the agricultural interests of the country, if it becomes necessary to bring witnesses here to get full information, they should be paid their expenses and a reasonable per diem, just like witnesses before any other committee. [Applause.] If it is necessary to secure information in behalf of the farmers and for their benefit, so far as I am concerned I will be glad at any time to vote for an appropriation for that purpose.

The farmers of this country in the past have borne more of the burdens of government and received less returns for their labor and capital than any other class of our citizens. Their work is more important to all of us than any other. If the day shall come when our very national life shall tremble in the balance, their treasure and their blood will be our Rock of Gibraltar. The fife and drum never sounded in vain a the farmer's gate when our country was in danger, and in this new day when the streams of nativity are diluted with hordes of immigrants in our congested cities we must more and more look to the farmers, who produce our national wealth, for the sustaining strength of our free institutions. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. Mr. Chairman, the gentleman's speech is very interesting, and therefore I yield him five minutes more. [Applause.]

The CHAIRMAN. The gentleman from Mississippi is recognized for five minutes additional.

Mr. CANDLER of Mississippi. Mr. Chairman, I am grateful for this extension to the chairman of the Committee on Agriculture. I did not expect to occupy as much time as I have, but there is one matter to which I want to refer before I close, and that is the charge of sectionalism made against this bill a few days ago by the gentleman from Minnesota [Mr. ANDERSON]. I am surprised that anybody from any part of this country or from anywhere would for one moment charge that this bill is in any sense of the word a sectional bill, because it goes into all of the ramifications of this country from one end of it to the other, and there is not a single solitary section of the country which is not interested in it and which is not represented in its appropriations. [Applause.]

Mr. Chairman, take for example, as an illustration, the total expenditures in this bill, which are a little over $18,000,000, and the appropriation in the Secretary's office for administrative work, which is $329,830. This is for the general work. For the Weather Bureau the appropriation is $1,668,270, and the Weather Bureau does work throughout the country in every part and section of it. The Bureau of Animal Industry appropriation is something like $5,000,000, and this work is done throughout the whole land. The appropriation for plant industry is a little over $3,000,000, and that work is done throughout the country. Take the appropriations together, and go through this bill from one end of it to the other, and you will see they cover the whole country and there is no sectionalism about it. I regret at this late day, when the clouds have rolled away and when the sun shines bright over this land and over all its people, and when peace is in every heart, anybody upon the floor of the House of Representatives, I do not care who he is or where he comes from, should charge that there is sectionalism in this bill, which is intended to help agriculture in every section of this country. [Applause.] There is no East, no West, no North, no South, no sections, when it comes to the agricultural development of this country. [Applause.] We have a common country which we all love, an indissoluble Union, a galaxy of indestructible States all clustered around and bearing allegiance to the Stars and Stripes, the emblem of liberty, our country's glory—a country our ancestors fought to secure, a country for which we would, if necessary, die. [Applause.] I am glad to-day to be an American citizen, and from the time I entered Congress up to the present hour I have done what I could to advance the interest of every part of this country, and will do so as long as I remain here. [Applause.]

I have devoted all the talent I had and what ability I possessed to trying to build up the country from one end of it to the other, and I have labored as best I could to build up the great agricultural interests, because I believed in building it up—I would help to build up every part of the country and every substantial interest underneath the prosperity of this great Republic.

I thank you, gentlemen of the House, for your very kind attention. [Loud applause.]

The CHAIRMAN. The time of the gentleman has again expired.

Mr. CANDLER of Mississippi. Mr. Chairman, I ask unanimous consent to extend and revise my remarks in the RECORD so as to include some data to which I have referred.

The CHAIRMAN. The gentleman from Mississippi asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

[Mr. LANGLEY addressed the committee. See Appendix.]

Mr. LEVER. Mr. Chairman, I yield 10 minutes to the gentleman from Wisconsin [Mr. REILLY], a member of the committee.

[Mr. REILLY of Wisconsin addressed the committee. See Appendix.]

Mr. HAUGEN. Mr. Chairman, I yield 45 minutes to the gentleman from Oregon [Mr. HAWLEY].

The CHAIRMAN. The gentleman from Oregon [Mr. HAWLEY] is recognized for 45 minutes.

Mr. HAWLEY. Mr. Chairman, I wish to discuss the Agricultural appropriation bill from a standpoint from which I have never yet heard it discussed, asking the questions: Have we a national agricultural policy? If so, what is it? How do we purpose to realize it? What is being done from year to year to carry it out? What more should be undertaken and done?

These are the questions to which I desire to call the attention of the House and the country. The expenditure of some $20,000,000 of the public funds in connection with so important an interest should be made in pursuance of a well-defined policy, consistently followed out.

The items in the Agricultural appropriation bill are, for convenience in making the appropriations, arranged under the titles of the different bureaus, divisions, and offices. This arrangement, however, conceals rather than discloses the system of agricultural development upon which the bill is based.

It is my intention to reconstruct and explain as far as possible within the limit of time at my disposal the general system embodied in the bill, but resolved here into its elements. It is not a system struck off at one time by the brain and purpose of man, but a gradual evolution, which for a period grew with the development of the country, but within the past 15 years has aimed at agricultural leadership, sometimes voluntarily assumed by the department, sometimes urged upon it by the country and the Congress; incomplete in many of its phases, limited by the funds under which its work must be done, and the scientific and constructive ability which can be secured, but which is steadily developing into a great and invaluable system, growing with the growth of the country and destined, I believe, to become the greatest agricultural program in the world.

Under our system not all the appropriations or legislation which relates to agriculture, directly or indirectly, comes from the Committee on Agriculture, and to present a complete statement I shall need to include a few matters not in the Agricultural bill. I hope also in a measure to forecast the future expansion of our agricultural policy, and to state the ultimate object at which it aims, and to point out in friendly criticism the opportunities for improvement. But on the whole I shall accept the policy as I find it in the bill, reassemble it, and reconstruct it into an ordered whole.

Of the six purposes stated in the Constitution of the United States, the fifth is "to promote the general welfare," whether it be taken in a political or economic sense. Since the Committee on Agriculture eschews politics, the millions appropriated in this bill are for the economic benefit of the people, and while the work done generally relates to the farmer and his activities, everyone is interested in the character, quality, and quantity of his production.

Our general prosperity is dependent upon the fortune attending the work of those who appeal to the soil, whether they produce grain, vegetables, fruits, or meats; and as a body they are the most important business section of our people, since their $10,000,000,000 or more of annual production exceeds very materially the results of the labors of any other portion of the population.

The difficulties attending successful agriculture, horticulture, and stock raising are many and serious, and are not confined to small areas, generally; nor are they capable of being limited in extent except by the most expert investigation and general cooperation. That is, a local outbreak of plant or animal disease tends to become nation-wide; soil problems repeat themselves, with variations, over the whole country; and the successful solution of a difficulty in one place will probably apply with equally favorable results elsewhere with proper adaptation. And while many of the items in this bill make appropriations to deal with localized problems, the country is benefited as a whole either by the prevention of the spread of diseases of plants or animals or by having the production of a certain locality protected and increased, or by the solution of soil or other problems that have a country-wide interest or occurrence.

If all of the hundreds of different kinds of pests had as great an activity nation-wide as they have in certain localities, the day of agriculture would be nearly over. Our hope is, as Napoleon said, in keeping our enemies scattered and defeating them in detail. At my request the department has kindly furnished me the following statement:

DEPARTMENT OF AGRICULTURE,
*Washington, March 6, 1914.*

Hon. WILLIS C. HAWLEY,
*House of Representatives.*

DEAR MR. HAWLEY: Referring to your letter of February 28, 1914, requesting a list of the bugs, beetles, spiders, etc., and of the fungi and other pests that make life a burden to the farmer, I am sending you herewith two memoranda—one from Dr. Howard, in reference to the insects, and the other from Mr. Taylor, in reference to the fungi.

Very truly, yours,

B. T. GALLOWAY,
*Assistant Secretary.*

---

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF PLANT INDUSTRY,
*Washington, D. C., March 5, 1914.*

MEMORANDUM FOR THE ASSISTANT SECRETARY.

DEAR DR. GALLOWAY: It is estimated that there are about 600 diseases of cultivated plants in the United States which are of economic importance. A list of the most important is attached hereto. These are arranged by host plants, for convenience of reference.

Yours, very truly,

WM. A. TAYLOR,
*Chief of Bureau.*

*List of common names of plant diseases.*

DISEASES OF FRUITS.

Apple: Bitter-rot, black-rot or canker, blackspot canker, blight, brown-rot, crown-gall, European canker, fly-speck, fruit-blotch, hairy-root, Illinois canker, leaf-spot, physiological fruit-spot, powdery mildew, rot, volutella rot, rust, scab, scurf, spray injury, winter injury.

Pear: Blight, leaf-blight, leaf-spot, rust, scab.

Quince: Black-rot, blight, leaf-spot, rust.

Cherry: Black-knot, brown-rot, leaf-spot, powdery mildew.

Peach: Black-spot, brown-rot, crown-gall, die-back, frost injury, frosty mildew, gumming disease, leaf-curl, little peach, powdery mildew, pustular spot, root-rot, rosette, rust, yellows.

Plum: Black-knot, black-spot, brown-rot, leaf-spot, plum-pockets, powdery mildew, rust.

Blackberry: Anthracnose, crown-gall, leaf-spot, rust.

Cranberry: Anthracnose, hypertrophy, rot, scald, blast.

Currant: Anthracnose, cane blight, leaf-spot, powdery mildew, rust, knot.

Gooseberry: Leaf-spot, powdery mildew.

Grape: Anthracnose, black-rot, downy mildew, crown-gall, powdery mildew, root-knot.

Raspberry: Anthracnose, crown-gall, leaf-spot, rust.

Strawberry: Leaf-spot.

Avocado: Anthracnose.

Citrous fruits: Anthracnose or wither-tip, blight, die-back, frenching, gumming, root-rot, scab, scaly-bark.

Fig: Fruit-rot, root-knot, rust.

Loquat: Anthracnose, or blossom blight.

Mango: Anthracnose.

Papaya: Fruit-rot.

DISEASES OF VEGETABLES AND DRUG PLANTS.

Asparagus: Rust.

Bean: Anthracnose, bacteria. spot, blight, downy mildew, leaf-spots, rust, stem and pod rot.

Beet: Crown-rot, curly-top, leaf-blight, nematode disease, root-rot, root-knot.

Cabbage: Black-rot, club-root, downy mildew, wilt, root-knot, black-leg, soft-rot, malnutrition, white-rust, leaf-blight, powdery mildew, damping off.

Cassava: Leaf-spot.

Cantaloupe: Anthracnose, downy mildew, leaf-blight, wilt, root-knot, powdery mildew.

Cauliflower: Black-rot, spot disease.

Celery: Leaf-blight, leaf-spot, heart-rot.

Collards: Leaf-blight, black-rot.

Cucumber: Anthracnose, damping-off, downy mildew, mosaic, scab, wilt.

Eggplant: Anthracnose, blight, fruit-rot, leaf-spot.

Ginseng: Blight, stem anthracnose, Bordeaux injury, mildew, papery leaf-spot, damping-off, wilt, root-gall, rust, soft-rot, white-rot, black-rot.

Golden seal: Alternaria blight, stem rot.

Horse-radish: Leaf blight, leaf spot.

Lettuce: Anthracnose, downy mildew, drop, rosette, tipburn.

Okra: Root knot.

Onion: Brittle, downy mildew, smut.

Parsley: Crown rot.

Parsnip: Leaf spot.

Pea: Ascochyta blight, powdery mildew.

Peanut: Leaf spot.

Pepper: Anthracnose.

Potato: Blackleg, dry-rot, early blight, leaf blotch, late blight, common scab, russet scab, powdery scab, potato wart, silver scurf, wilt, internal brown spot, celworm, leaf roll, curly dwarf, rosette, mosaic.

Roselle: Powdery mildew.

Salsify: White rust.

Spinach: Downy mildew.

Squash: Bacterial wilt.

Sugar cane: Eyespot of leaf, pineapple disease, red rot of stem, rind disease, ring spot of leaf, clathrus root disease, ithyphallus root disease, marasmius root disease.

Sweet potato: Black rot, dry-rot, soil rot, soft rot, stem rot, white rust, foot rot.

Tobacco: Bed rot, mosaic disease, root knot, wilt.

Tomato: Anthracnose, bacterial blight, leaf mold, leaf spot, mosaic disease, point rot, root knot, western blight, wilt.

Turnip: Downy mildew.

Watermelon: Anthracnose, downy mildew, root knot, wilt, leaf blight, other leaf-spot diseases.

DISEASES OF CEREALS.

Barley: Ergot, leaf rust, stem rust, scab, covered smut, loose smut, yellow leaf disease.

Corn: Dry-rot, leaf blight, rust, smut.

Millet: Spot, smut, leaf blight.

Oats: Leaf rust, scab, smut.

Rice: Black smut, blast, green smut.

Rye: Ergot, rusts, scab.

Sorghum: Blight, head smut, kernel smut.

Wheat: Powdery mildew, leaf rust, stem rust, scab, loose smut, stinking smut.

DISEASES OF FORAGE CROPS.

Alfalfa: Leaf blight, anthracnose, bacterial blight, dodder, downy mildew, leaf spot, rust.

Blue grass: Rust.

Clover: Anthracnose, black spot, dodder, leaf spot, rust, winter injury.

Cowpea: Wilt, leaf spot, root knot.

Quack grass: Smut.

Timothy: Rust, smut.

Vetch: Spot.

DISEASES OF FIBER PLANTS.

Cotton: Angular leaf spot, anthracnose, aerolate leaf spot, root knot, Texas root rot, wilt.

Flax: Wilt.

DISEASES OF FOREST, NUT, AND SHADE TREES.

Alpine fir: Heart rot.

Ash: Rust.

Aspen: Leaf blight, heart rot, sap rot.

Balm of Gilead: Leaf spot.

Balsam: Sap rot.

Black walnut: Leaf spot.

Bull pine: Heart rot, leaf blight, sap rot, damping off, root rot.
Butternut: Heart rot.
Catalpa: Leaf spot.
Cedar: Rust, root disease, leaf blight.
Chestnut: Anthracnose, sap rot, bark disease.
Cottonwood: Rust, sap rot.
Douglas spruce: Sap rot, heart rot, root rot, freezing.
Elm: Black spot, leaf spot.
Engelmann spruce: Rust, heart rot, sap rot, frost injury.
English walnut: Blight.
Green ash: Rust.
Hemlock: Heart rot, sap rot.
Hickory: Leaf spot.
Hornbeam: Heart rot.
Horse chestnut: Leaf spot.
Jack oak: Sterile fungus.
Jack pine: Leaf blight.
Locust: Heart rot.
Lodgepole pine: Heart rot, sap rot.
Lowland fir: Heart rot.
Maple: Anthracnose, leaf spot, sun scald, leaf scorch.
Mountain maple: Heart rot, sap rot.
Mulberry: Leaf spot, root knot.
New Mexican locust: Heart rot.
Oak: Leaf curl.
Oregon maple: Leaf spot.
Osage orange: Rust.
Paper birch: Sap rot.
Pecan: Rosette, scab.
Pitch pine: Leaf blight, heart rot.
Privet: Anthracnose.
Red juniper: Rust.
Red oak: Nut rot.
Red pine: Twig blight.
River birch: Heart rot.
Rocky Mountain maple: Leaf spot.
Sassafras: Heart rot.
Scotch pine: Damping off, leaf blight.
Scrub pine: Rust.
Silver maple: Heart rot, leaf spot.
Striped maple: Heart rot.
Sugar maple: Heart rot, sap rot.
Sugar pine: Sap rot, heart rot.
Sycamore: Anthracnose.
White ash: Heart rot.
White birch: Sap rot.
White elm: Leaf spot, heart rot.
White pine: Damping off, leaf blight, root rot.
White spruce: Heart rot, sap rot.
Willow: Rust, black spot.
Yellow birch: Heart rot.

DISEASES OF ORNAMENTAL PLANTS.

Aster: Rust, wilt, yellows.
Carnation: Bud rot, fairy ring disease, root knot, rust, stigmonose.
Chrysanthemum: Leaf spot, rust, ray blight, powdery mildew.
Dahlia: Powdery mildew.
Hollyhock: Leaf blight, rust.
Lilac: Powdery mildew.
Lobelia: Root knot.
Peony: Wilt.
Rose: Crown gall, leaf blotch, leaf spot, root knot, rust, powdery mildew.
Sweet pea: Anthracnose.
Violet: Leaf spot, root knot.
Virginia creeper: Leaf spot, powdery mildew.

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF ENTOMOLOGY,
*Washington, D. C., March 3, 1914.*

MEMORANDUM FOR THE ACTING SECRETARY.

[To accompany letter from Congressman HAWLEY.]

DEAR DR. GALLOWAY: The inclosed letter from Mr. HAWLEY includes plant diseases, and this memorandum will simply cover the entomological part of the answer to his letter. I have called him up by telephone and find that he does not wish a complete list, but wishes to know about how many there are of these drawbacks to the farmer. The following paragraph will serve as an answer:

It is estimated that there are about 400,000 different kinds of insects in the United States, and that about half of these are injurious to man. Of insect enemies to farmers' crops in this country there are about 500 species of first-class importance, the combined work of which seriously reduces the value of our crops every year, while there is an army of additional species which together bring about great loss but which individually are not so dangerous. It is estimated that we lose every year from 10 to 15 per cent of our crops through the work of insects. Some of our principal insect enemies are the cotton-boll weevil, gypsy moth, brown-tail moth, codling moth, chinch bug, Hessian fly, army worm, San Jose scale, plum curculio, Colorado potato beetle, tussock moth, tent caterpillar, the pine-bark beetles, rice weevil, Argentine ant, the white fly, Mexican range caterpillar, alfalfa weevil, clover-seed midge, clover-seed chalcis, corn root worms, the bollworm, cotton caterpillar, horn fly, ox warble, red spider of cotton, pear thrips, grape phylloxera, grape root worm, grape berry moth, the purple scale, the red scale, the black scale, white grubs, cabbage worm, onion thrips, cabbage and onion root maggots, the fire worm of cranberries, round-headed appletree borer, flat-headed appletree borer, peach borer.

Yours, respectfully,

L. O. HOWARD, *Chief of Bureau.*

The Agricultural appropriation bill has two distinct purposes—to promote the general welfare of the people of the United States and to discourage the activities of pestiferous bugs. The larger mammals which roamed this country have mostly yielded to the encroachments of civilization and have faded away into the dim land of dreams. High-browed and earnest scientific experts are trying to rehabilitate some of them and to induce them to bear a part of the white man's burden. For instance, take that midnight-coated chap with the lightning stripe down his back whom we as country boys used to chase away from our hen palaces at dead of night and transform into a fragrant memory. We are now earnestly desiring him to multiply and replenish the earth so that, after a blameless life, he may yield his integument to adorn my lady's person as lordly sable or marten.

But the little bug and his numerous kin are not easily discouraged, and refuse to fade away into gentle memories.

It is the little bug that gets the farmer's goat; also his sheep, cow, horse, pig, wheat, oats, corn, barley, apple, pear, peach, potato, and all that the farmer has, including the farmer himself sometimes. In almost every instance said little bug is a foreigner, a most undesirable immigrant, who carries on a competition, un-American in character, against the farmer. Since it is to be hoped that from the American farmer the American people will always derive their principal food supplies, we think our Democratic friends, who historically "view with alarm," can find something in this situation to justify a fear; yet I think I ought to say that just now the American farmer appears to be viewing the Democratic Party with alarm. [Applause and laughter on the Republican side.]

And the little bugs have dangerous allies. Some of our good citizens are greatly exercised over what seems to them to be the early disappearance of our forests. I am, however, just now more troubled by the rapid increase of fungi and other growths of small size, short life, and great persistence, which, like Attila's hordes, blast alike the farmers' crops and hopes. The farmer has other troubles. The experts in the Weather Bureau, speaking in fun, have so mixed the elements that it rains now on new-mown hay and shines with fervent heat on cabbages freshly set. Damp weather prevails and keeps Mrs. Honey Bee at home when the fruit trees ought to be pollenized; but when thirsty crops sigh for water a summer sun shines from an untroubled sky, while Fifth Avenue dudes say to each other in passing, "Fine growing weather, old chap," in their blissful ignorance, not knowing that useful things are not as freshly green as they are.

Mr. SLOAN. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN (Mr. BOOHER). Does the gentleman from Oregon yield to the gentleman from Nebraska?

Mr. HAWLEY. Certainly.

Mr. SLOAN. I would like to ask the gentleman in all fairness why he did not raise those objections in the committee? If he had, they would have been arranged for in the bill.

Mr. HAWLEY. I refer the whole subject to the able gentleman from Nebraska. [Laughter.]

The farmer's days and nights are spent in labors to improve his crops and stock, or in fighting the pests that rob him of the results of his toil.

The agricultural advance in this country began many years ago. Among the causes for it, in addition to the instinct of the American to make progress, were the so-called wearing out of the soils, the increase of pests, need of new crops for lands already under cultivation, and crops for lands for which this country had none suitable, small returns from crops and farm animals, and the diseases that attacked farm animals.

The solution of the difficulties in which agriculture was involved included, for fruits and plants, the study of the factors of soil composition and fertility, better seed, new varieties of old crops, rust and drought resistant varieties, acclimatization, new crops from abroad, rotation of crops, diversification of agriculture, better methods, fertilizing used lands, drainage, and irrigation; and for animals improving the breed, quality, and numbers of the stock, and eradicating or restricting disease.

It is impossible to break the bill up and rearrange it so that any arrangement of headings will have under each only one particular matter, as many of the items deal with several phases of a problem or with several problems. The arrangement given below presents, I believe, the best systematic statement of the purposes and policy of the Government in matters relating to agriculture in all its forms. Some items in the bill will necessarily be omitted without comment. Nor will it be possible to state in detail all the work that is being done, interesting and useful as such detail would be. Details will be used, however, when they are illustrative of the general policy.

INVESTIGATION AND PRACTICAL APPLICATION.

The work of the department may be divided into two parts—investigation and practical application, which are the two phases in the solution of any problem. The research work in general is done with a definite purpose in view. It arises out of the problems connected with practical agriculture. The application of the results of the research work is kept constantly in view. That is, the department does not do its work as if it were an organization for pure scientific investigation only, interested alone in solving problems, but takes the wider view

that such solutions are undertaken for the benefit of agriculture and incident to the attainment of such benefit. That purely scientific work is subordinated to the promotion of the public welfare does not impair, but rather enhances its value.

Because the bill is made up on a "project" basis and many items contain provisions for several different kinds of work, I have not found it possible at this time to give the amounts expended under each division. But in a discussion of the policy of the bill it is hardly necessary to give these amounts.

I have made, after careful consideration and an experience of several years on the committee, the following systematic arrangement in elucidation of our national policy for the promotion of agriculture in all its forms as essentially contained in this bill, bearing in mind that investigation and practical application are the beginning and the end of the work under each heading with many processes and stages of progress between such beginning and end:

PREPARING FOR THE CROP.
I. THE SOIL ITSELF.
II. SELECTION OF THE SOIL—THAT IS, CHOOSING THE PROPER CROP FOR EACH SOIL.
III. COLLECTING AND SELECTING THE SEED.
IV. IMPROVEMENT OF THE CROP IN CONNECTION WITH PLANTING.
V. PREPARING THE SOIL AND PLANTING.
GROWING THE CROP.
I. CROP ENEMIES: PESTS AND DISEASES.
II. STOPPING THE IMPORTATION OF PESTS.
III. WEATHER RELATIONS.
GATHERING THE CROP.
DISPOSING OF THE CROP.
I. FINDING THE MARKET.
II. PREPARING THE CROP FOR TRANSPORTATION TO MARKET.
III. TRANSPORTING THE CROP.
WASTES—PREVENTION OF WASTES AND UTILIZING WASTE PRODUCTS.
USING THE RESULTS FROM THE CROP.
FROM PRODUCER TO CONSUMER.
NEW FIELDS FOR THE FARMER.
UTILIZING THE CROP.
TAKING THE RESULTS OF INVESTIGATIONS TO THE FARMER.
COOPERATION.
ANIMAL HUSBANDRY.
EXTENSION OF AGRICULTURAL AREAS.
DAIRYING.
MEAT PRODUCTION.
POULTRY AND EGGS.
OTHER PRODUCTS—WOOL, HIDES, AND SO FORTH.
MISCELLANEOUS.
THE FARM HOME.

At every stage in the process of producing all of the general and practically all of the special crops the department is prepared to obtain and supply expert information concerning the nature and solution of the problems as they arise, and to furnish the practical application of the remedies determined upon.

That is, the department performs certain investigational work under every subject and every subdivision, and goes into the matter very exhaustively, obtaining through its own experts and the experts in the agricultural colleges and the experts of every other country in the world all the knowledge they have on any given problem, digests it, arranges it, and then transmits it to the farmer, either by bulletins or through the press or other publications or by sending men directly from the department in Washington, in the case of a very important problem, or by cooperating with State agents or county agents or with other people who are interested in carrying the information to the farmer; so that there is, in connection with all the above topics, a most systematic and thoroughgoing investigation and solution of problems, and then an equally careful and detailed application of the solutions.

I have studied this bill with a great deal of care for many years. When I first became a member of the Committee on Agriculture it appeared to me, upon reading the Agricultural bill, with the items under the different bureaus, that it was without a system; that problems were taken up because somebody urged or because some scientist was especially interested in the discussion of other problems, or because it was a matter submitted by some State authority; but after many years of hearings and careful investigation and an examination of the expenditures, and, in the district I have the honor to represent, a personal investigation of the work done, I have found in this bill a great agricultural policy, in the carrying out of which great industry and learning have been gathered in Washington or have been assembled in the various State agricultural colleges and other institutions for the promotion of agriculture; and that there is general cooperation and general extension of the work all along the line. For, as has been said many times here and elsewhere, if we can not induce the farming population to increase with the growth of the country, a farming population which owns its own homes, but are to have rather a system of tenant production and tenant farming, the day of our agricultural advance is nearly over. [Applause.]

It has been proven by history, and I think it will still be the fact of history, that governments finally rest upon a foundation of people who make the first appeal to the soil.

I wish I had the time and you the patience that I might speak at necessary length upon each of these subdivisions and point out the character and the nature of the work undertaken by the department. Not having that time, I shall discuss the topics briefly, beginning with the first:

PREPARING FOR THE CROP—FIRST, THE SOIL ITSELF.

The place of beginning is with the soil itself. The Bureau of Soils is making a comprehensive soil survey of the entire United States so that in time our whole area will have been scientifically investigated, determined, and mapped, first by reconnoissance and then by detail surveys. In conjunction with this work, physical and chemical analyses of the soil are made—the physical analyses to ascertain the important properties of the soil that are determining factors in production, including moisture relations, aeration, heat conductivity, and texture; the chemical analyses to determine types, composition, minerals, solubility, texture, and productivity of soils. Soils are frequently deficient, and the organic causes of infertility must be ascertained and its capacity to produce be established, first, by investigating the problem of the properties and composition of humus already in the soil, its transformation, and the formation and increase of soil humus by soil organisms; second, by explorations to discover sources of supplies of potash, nitrates, and other natural fertilizers, including city garbage and the taking of nitrogen from the air by electrical methods in order to supply the natural deficiencies of soils.

The Bureau of Plant Industry makes investigations of soil bacteria to determine the distribution, kinds, numbers, and functions of microorganisms in soils (and distributes to farmers for experimental purposes pure cultures useful in the growth of legumes), and plant nutrition to ascertain what may be called the feeding qualities of plants and the results of their feeding habits.

The Office of Experiment Stations investigates the problems involved in removing the surplus waters from swamp and other wet lands preparatory to their use for agricultural purposes.

This, in brief, is the work done in and upon the soil to find out what qualities it has for sustaining plant life, its excellencies and its deficiencies, and how it may be improved, so that when all the investigations are concluded and the problems solved, the soil of our country, the fundamental basis of our prosperity, may be kept in an efficient state continually, if those who use it will do for it the things necessary to be done.

II. SELECTION OF THE SOIL.

The second step in preparing for the crop is the selection of the soil; that is, choosing a proper crop for each soil. It would be of great advantage to every farmer to have a soil survey made of his farm, so that he might know what every acre of it contained, and from that information given by competent authority he could tell what crops to plant for the most profit upon any given acre; if the chemical and physical effect of the growing of the crop of this year upon the content, texture, and condition of the soil is known, the succeeding year a crop may be planted which will tend to counteract any evils which the present crop in growing may have produced, keep the soil in good condition, and measurably prepare the soil for the succeeding crop.

If the proper relationship of crops to one another is observed and the succeeding crop properly chosen, the capacity of the soil to produce will be conserved and production increased.

Then there are questions of water drainage, and in fruit growing the important question of air drainage.

III. COLLECTING AND SELECTING THE SEED.

The third step in the preparing for the crop is collecting and selecting the seed, and in the word "seed" I intend to include plants, scions, and so forth, as well as seeds, using the word in the wide sense. It has been the practice sometimes to plant poor seed and to sell the best seed, because it would bring a greater price in the market. The head of the herd in the stockyard is no longer a mongrel bull, boar, stallion, or buck, possibly of large size but without the qualities of stamina and long-established race.

In the general stock raising of the country more attention has been paid to getting good stock animals for the increase of the herd than has been paid to getting good stock seed for the increase of the crops grown from the soil. The hardy, vigorous,

well-grown specimens from the crop from the proper seed to be sown for the succeeding crop. A vigorous seed will produce a vigorous progeny. A well-bred seed having an ancestry that goes back several generations true to type, of established productivity, able to withstand pests and drought and disease and inclemencies of the weather, will produce a greater crop on the same soil and with the same care than poor seed will. Mr. Burbank, a justly celebrated citizen of the United States, laid emphasis on the breeding of plants for seed and for variety. He bred a potato called the Burbank seedless, and after years of work established a strain that, having been planted for many years, now reproduces itself practically the same as the original strain that he put into commerce, just as Hereford bulls and Percheron stallions will reproduce in their posterity the valuable qualities they have in themselves.

But while less has been heard about it, the experts in the Department of Agriculture have pursued the same plans with, I think, equal success and with a wider intention. The experts in the Department of Agriculture have the opportunity of attacking every problem that affects agricultural development in the United States; and if as much publicity had been given to the results of their investigation and practical application of their work as has been justly given to Mr. Burbank, the value of that department and some of the men in it would be greatly increased in the public mind. They are breeding varieties, for instance, for localities. Corn in the early history of this country was a crop that was confined to small areas. By breeding it has been extended over all the United States. It was said out in certain portions of the West where there is considerable moisture and cool nights in summer that corn could not be grown; but within the last few years, to my own personal knowledge and at my instance, there has been bred in the western part of Oregon corn that will mature within the season, will stand the coolness of the nights, and will produce a profitable return.

Besides breeding for locality, they have been breeding to resist disease. Take the case of the boll weevil. When that pest appeared it looked as if the entire cotton industry of the South was to be destroyed in time. The coming of the boll weevil and his multiplication in enormous numbers, and with no natural way to limit his activities, seemed to indicate to the southern farmer "the day of your cotton agriculture is over." But the experts in the department took up the problem first from the standpoint of investigation. What can be done? What has been done? The most important problem in all the growth of the crop was involved. There are two things that go side by side. First, there is an investigation of the strength of the seed and of the sprouts that the seed sends up, their developing vigor, until the day when the plant comes into flower, and by the succeeding changes to the maturity of the crop. Side by side with that is the development of pest or disease. The pest, for illustration, may begin as a microscopic egg. What can be done to destroy the egg? What is the vigor of the little chap that emerges from the egg? What particular transformations does he go through in his life history? Where is the place in his growth that you can hit him the hardest? Does his vigor correspond with the vigor of the plant or is he weak at some time when the plant is strong? If it is found in the investigation that the pest has a weak spot in his life history at a time when the plant is strong, then plant at such a season as to get the plant to a condition of strength while the insect is in his position of weakness. That is, plant early or plant late.

It may be that the feeding habits of the pest afford an opportunity of attack. If so, use sprays; and in order to make the spray successful there is an appropriation in this bill for the testing of sprays offered in the commercial market to see that when the farmer applies them to the plants in order to destroy the activity of the pest they will accomplish the result it was intended they should accomplish. A study of both the life history of the plant and the pest individually and in their relations to each other is essential. The plant may have a stage in its growth when it will become immune to the ravages of the pest; if not, and the pest can not be eliminated, it will probably mean the growing of new crops. But the pests have weak places in their life history. It may be in connection with feeding habits, and sprays will prove effective, or it may be in connection with reproduction or seasonal conditions; whatever and wherever it is, it is the duty of the scientist to discover the stage of its existence most open to attack. This involves the painstaking and unremitting study of, we might say, every hour of the pest's life, from the earliest infancy, through a ravenous youth, up to the period of reproduction and death.

I should have said a moment ago that there is an appropriation in this bill under which the department goes out into the general market where seeds are offered for sale and buys them unknown to the dealer and tests them in the laboratories of the department to see whether the seeds furnished to the farmer, where he does not grow his own, are of the quality, character, and kind that they profess to be.

But one of the most valuable activities in this field of the collection of the seed is that of the agricultural explorer. There is no land he has not visited. There is no sun that he has not seen, no winter that he has not experienced. There is no parallel of latitude along which he has not traveled. There is no day of the year that he has not or will not view foreign countries and their products. There is no crop that he has not found or is not now seeking to find.

Mr. SLOAN. May I ask the gentleman a question?

Mr. HAWLEY. Certainly.

Mr. SLOAN. Has this explorer gone through all the wilds and jungles of far-off Oregon?

Mr. HAWLEY. The gentleman from Nebraska may be pardoned that question, in view of the fact that he has never seen that glorious country.

But if he will come to Oregon, he will find that there is no land under the shining sun that would so delight his heart, fire his imagination, stir his emotion, or fill his purse.

Mr. SLOAN. I accept the invitation. [Laughter.]

Mr. HAWLEY. We who have lived in Oregon love her. It reminds me of a story of a little boy who was very naughty. His mother said, "Johnny, to-morrow you must behave yourself." He said, "What is that?" She said, "To-morrow you must behave yourself, and I will show you how to do it." In the morning at 8 o'clock she called him up with an armful of switches—hazel branches, I think; at least, they are the educational branch in Oregon—and she said, "Johnny, I am going to call you up every hour, and if you have done anything naughty, I will punish you." She called him at 9 o'clock, and he had painted old Deacon Brown's white cow red and blue in honor of the Fourth of July, which was the next day. She whipped him. At 10 o'clock, "Had he been naughty?" He had. He had thrown the kitten down the well. She whipped him. At 11 o'clock, "Had he been naughty?" He had, and so she punished him again. And at 12 o'clock and at 1 o'clock and at 2 o'clock she gave him a rehearsal, 3 o'clock a matinee, and 4 o'clock a full-dress rehearsal with orchestra, and Johnny furnished the orchestra. Wearied with the apparently fruitless labors of the day, she threw her last switch behind an old-fashioned perforated cardboard motto, worked in crewel yarn, in which was the motto, "God bless our home," and said with discouragement, "You are the worst boy in town." Our mothers would admit that to us when they would not to the neighbors. Johnny rubbed the spots that hurt him—he was not seriously injured—and said, "Mother, don't put that switch behind that motto which says 'God bless our home'; put it behind this one on this side which says 'I need Thee every hour.'" [Laughter.]

Mr. SLOAN. I would like to ask the gentleman if the switches that he mentions grew on the stumps for which we provide an appropriation in this bill for the removal?

Mr. HAWLEY. Those stumps produce good switches; that is true.

Mr. Chairman, before the interruption by the gentleman from Nebraska I was endeavoring to picture one of the most important activities of the department. What have these agricultural explorers done? Have their travels into Africa and its desert, into Asia and her deserts, into Europe and into Siberia, and to islands and all foreign lands been of any value to the farming population of the country? As a result of them we have the Algerian, durum or macaroni, wheat. The appropriation for the investigation of that grain made a few years ago was some $10,000, as I recall, and two years ago the output of that wheat in this country was valued at $50,000,000.

There are vast areas in the West that have insufficient quantity of moisture, and the Siberian alfalfa or the Turkestan alfalfa are proving exceptionally valuable. For places where rust strikes the grain, rust-resistant grains have been found and are now being introduced here in sections where grain has had to contend with rust for centuries, as well as with drought. In all the activities of the department, this activity, for the amount of money expended, has made as valuable returns as any.

Mr. HAUGEN. Will the gentleman permit a question?

Mr. HAWLEY. Certainly.

Mr. HAUGEN. If I understand the gentleman correctly, he suggests that there should be greater cooperation in the departments he has referred to—the Soil Survey and Bureau of Plant Industry. Does the gentleman suggest that there should be greater cooperation in the two bureaus with a view that the

two bureaus should determine what plants are best adapted to certain soil and what soil is adapted to certain plants?

Mr. HAWLEY. I think the gentleman's suggestion is sound. There should be a systematic development of work in the department, viewed as one enterprise, and then the results of their investigations would admit of practical application and should be distributed among the farmers and to the agricultural experiment stations and other people active in farm work for distribution among the farmers.

Mr. HAUGEN. I agree with the gentleman.

Mr. ANTHONY. Will the gentleman yield?

Mr. HAWLEY. Certainly.

Mr. ANTHONY. I just heard a part of the gentleman's remarks. He said that they had discovered, as I understood him, a preventive of rust in small grains, or some preventive measure.

Mr. HAWLEY. I said that they are endeavoring to find rust-resistant grains.

Mr. ANTHONY. Is not rust due to climatic conditions, to an excess of moisture?

Mr. HAWLEY. Yes. If we can find in an older country, where they have rust-resistant grains that have been growing under similar climatic conditions for centuries, a grain that has established itself so that it will mature and develop in spite of the rust—such a grain introduced here would doubtless be rust-resistant.

Mr. ANTHONY. The same way the department discovered the durum wheat from the Mediterranean that withstands the drought.

IV. IMPROVEMENT OF CROPS.

Mr. HAWLEY. The increase in yield in quantity and quality is as possible in agricultural products as in stock raising by solving the problems of their physiology, breeding possibilities, and adaptation to soil and climate, as in the case of corn, flax, broom corn, sugar beets, dates, and so forth. By a study of wild plants, lands chiefly valuable for grazing may be recovered by the natural plants or plants suitable for such conditions when the diseases which causes their failure to persist are discovered. Plants which resist alkali and drought, or which will grow profitably upon semiarid or dry lands, are being found, and the studies of farming under such conditions are rendering habitable large areas.

V. PREPARING THE SOIL AND PLANTING.

The investigations made in such problems as plowing and other mechanical treatment of the soil, cover crops, green manures and other fertilizers, early or late planting, freeing the seed from disease, use of machinery for planting, fertilizing, and cultivation are extensive, but so well known as to require no further comment.

VI. GROWING THE CROP—PESTS AND DISEASES.

Probably no problem is more serious than that involved in saving the crops from pest and disease. Special methods of cultivation will promote the growth of the plant and its power to resist and destroy some of its enemies. A change in times of planting will, so to say, outwit the plant's enemies and give it an advantage. Fungicides and insecticides anticipate their ravages or destroy them. But they number millions of individuals, with varying powers of resistance and vitality, and their activities are never ended. When I asked for a complete list of these crop and stock enemies I was informed that while they now number many thousands of species, the list is never complete, but continually growing.

The lines of work carried on cover the diseases of cotton, potatoes, truck crops, forage crops, drug plants, ginseng, fruits, vineyards, nuts, cereals, tobacco, rice, sugar cane, beets, oranges, lemons, grapefruit, mango, and all other products, and insects attacking all the above. We are threatened continually with the importation of new pests and diseases. Some of the most dangerous have not yet secured entrance into this country, but only the most stringent measures and greatest watchfulness can prevent their entrance. We have enacted a plant-quarantine act and authorized the establishment of quarantines against foreign localities from which importations might introduce pests or diseases into the United States, including diseased live stock; and the law relating to insecticides and fungicides authorizes the department to take necessary steps to protect the purity and efficiency of these articles when offered in commerce.

DEALING WITH PESTS.

Why should the Government appropriate money to aid in the solution of these problems? Because their solution in the last analysis will demand the knowledge and training of scientific experts, and practically as many kinds of experts as there are different problems. The scientists in the several bureaus, offices, or divisions that deal with these problems might be called plant doctors, animal doctors, soil doctors. Each must and should confine his work to a very limited sphere, so that as his sphere of activity decreases his knowledge of what is involved in his work and his efficiency will intensify. For instance, take the gipsy moth, cotton-boll weevil, or any other insect pest. What method shall be used to combat and to destroy it? Spraying, rotation of crops, improved cultivation, new crops, or early planting, and how? And after the scientist has solved these problems the next step is to get the information to those who must eventually make use of it and to show them how to use it effectively. Shall it be by printed matter or personal demonstration? The former was first most generally used, and is now in use, but it was found some years ago that the department had accumulated a vast amount of invaluable information which was lying like unminted gold in its bureaus. A policy of farm-demonstration work was inaugurated some years ago and is being developed and extended in cooperation with the States by which this information can be conveyed to the farmer, fruit grower, stockman, and others by demonstrators in person and by actual exemplification to show how to put the results of scientific investigation to work.

This farm-demonstration work is provided for in a number of items in the bill. Sometimes the pests have natural parasites which attack them. Frequently it is necessary to send an expert to the place from which the pest came to find the natural parasites, and then to import them, acclimatize them, breed them, and distribute them to combat the pests. Scientific work to ascertain how to attack pests of other kinds is needed along the lines above given. It is manifest that generally the farmer, fruit grower, or stockman has neither the time, opportunity, nor means to do such work, although many farmers and growers have rendered valuable service in their localities and to the country by special work and experiments. The pests may come suddenly, spread rapidly, or develop new pernicious activities. The farmer does his full share in the work when he intelligently and diligently uses the methods and processes discovered by the scientists for the restriction of the damages done by the pests or for their destruction. He is earnest in his demand for definite information, intelligent in its use, and as I know him he is progressive in his methods. The pests and diseases are hundreds in number. Some of them work openly, some in secret. Frequently the activities of a pest or disease are known only by its ravages becoming apparent. Parts of their life histories can hardly be ascertained in the natural wild life of the pest or the natural course of the disease, and can only be discovered by laboratory methods. They infest or infect the soil. Hundreds are so minute that recourse must be had to the microscope in dealing with them. It is a great battle to stay the invasion and plundering of hungry hordes. If what the farmers lost last year from the attacks of pest and disease could have been saved, it would more than have sufficed to feed and care for the needy all over the United States during the winter.

II. STOPPING THE IMPORTATION OF PESTS.

The pests and diseases are mostly imported. Some were brought in by the curiosity of experimenters or collectors, others on nursery stock, fruits, grains, and vegetables. We have enacted a plant-quarantine act and given authority to quarantine against importations from infested districts in foreign countries. There are several exceedingly dangerous pests which we do not yet have, but which can be kept out only by great vigilance. Action has been and is being taken to maintain the purity and efficiency of commercial insecticides and fungicides and the ingredients for making them. Animal pests and diseases were brought in on infested or diseased stock, which there is now power to prevent, and importations of animals are carefully examined.

III.—WEATHER RELATIONS.

While the work done by the Weather Bureau is useful to others than the farmers and special services are done for others its services to agriculture are important. By the aid of the telegraph, telephone, maps, and mails it advises concerning the movement and incidence of storms and their probable continuation, or of periods of drought and heat, of frosts and sudden changes in temperature during all the cropping season. It enables the farmer in a general way to anticipate favorable or unfavorable periods and to make his plans accordingly. This information also has an important relation to seasonal variations in prices.

GATHERING THE CROP.

The gathering of the crop involves the questions of what use it can be most profitably put to, whether for silo, hay, grain, and so forth, and the use of implements for harvesting and utilizing the crop; methods of harvesting; in the case of fruits and berries methods of gathering and the proper stage of

growth at which fruit should be picked, especially for distant delivery; and all related questions.

I. DISPOSING OF THE CROP—FINDING THE MARKET.

There is proposed in this bill the expansion of a work already in progress, and its segregation into a separate office of markets, to enable the Secretary of Agriculture to acquire and to diffuse among the people of the United States useful information on subjects connected with the marketing and distribution of farm products, and there is hereby appropriated the sum of $200,000.

For many years the work done by the department along these lines has been growing. The department, the Committee on Agriculture, and the farmers have thought that this work should be further extended and its activities increased.

It appears that the increase in price paid by the consumer over that received by the farmer for any given product was too great; careful examination convinces me that it is; and that either some one between was taking from both an undue toll or else our marketing methods were inefficient, wasteful, and expensive. Probably both things are true. In any event a reform of our methods of marketing should be made. The products should be taken from the producer and delivered to the consumer with only such increase as is reasonable for the work of distribution. This will result in the farmers receiving more and the consumer paying less.

The farm products are generally produced in comparatively small quantities by each farmer, but aggregate great quantities of certain commodities, which coming on the market at one time makes it comparatively easy to subject the price to artificial fluctuations by those interested in profiting thereby.

The office of markets can render many special services, as, for instance, in the case of seasonal products, by keeping producers advised as to what markets are not overstocked.

II. PREPARING THE CROP FOR TRANSPORTATION TO MARKET.

Under this title are included the handling, cooling, freezing, drying, precooling, packing and packages, moisture content, grading of cotton, grain, corn, and fruits, storage, and other similar questions of all crops, and meats, dairy products, poultry, and eggs. These investigations seek to ascertain the cheapest and most effective methods of dealing with these problems and of getting products to market with as little change in character, deterioration, and loss as possible. Experimental shipments are made illustrative of the practical application of the principles determined upon or large shipments are made under the supervision of the department.

III. TRANSPORTING THE CROP.

When the crop is ready for market, the public road becomes an essential factor. A good road decreases the cost of getting the crop from the farm to place of initial shipment.

So far as the department is concerned, its work in matters of transportation is chiefly confined to the service rendered by the Office of Public Roads. But so far as the agriculture of the country is concerned, it is interested not only in public roads but all forms of transportation, railroad and rate regulation, river and harbor improvement, shipping, and the Panama Canal.

The Office of Public Roads has undertaken investigations into the systems of road management; into the varying conditions of moisture, soil, and use; into road construction, available materials, and costs; into the several kinds of roads that may be built, especially ordinary sand-clay and dust roads, and the ability of any locality to bear the cost of road construction and maintenance; into the physical and chemical character of road-building materials and their wearing qualities; road building equipment; and, in brief, into every question affecting road construction in this country and abroad. It proposes to make practical application of the results of its investigations by giving expert advice, in person or by printed information; by constructing experimental roads; by aiding localities in constructing roads with expert supervision of actual construction; and by other field demonstrations. I wish to say in passing that I believe in national aid in road construction and Federal appropriations for this purpose, and have so voted on several occasions.

I shall not at this time comment on railroad-rate regulation other than to emphasize its importance and to say I have actively given my support to it in several acts passed by Congress for this purpose; or on river and harbor improvements, further than to say that in this, too, I have taken an active interest, especially, of course, in those affecting the first congressional district of Oregon.

PANAMA CANAL TOLLS.

But the present crisis in the matter of Panama Canal tolls calls for more extended notice. The canal is a part of our coast waters, as much as any of our harbors are. Our policy has been to give the free use of our harbors to our vessels doing a coastwise traffic, and our coastwise vessels alone are affected by the proposed repeal of free tolls. Our vessels going from the United States to foreign ports, or returning from them, are to pay tolls. We own the canal and have exclusive national control of it. We pay for its construction. So far as to our own ships using it, it is a question of policy for the United States alone to determine. We might charge our coastwise vessels tolls in order to raise a revenue, and so depart from our historic policy. But we do not have to charge them tolls at the instance of any other nation. I do not believe the national honor is at stake in this question, or that in order to preserve it we must charge our coastwise vessels tolls. There is national honor in upholding the inherent rights of the American people.

But hear the evidence.

The treaty of December 22, 1815, between the United States and England provides:

> No higher or other duties or charges shall be imposed in any of the ports of the United States on British vessels than those payable in the same by vessels of the United States; nor in ports of any of His Britannic Majesty's territories in Europe on vessels of the United States than shall be payable in the same ports on British vessels.

That is very clear and explicit. Are coastwise vessels exempted by the language of the treaty? Apparently all vessels are included; and if coastwise vessels use ports of the United States or England free of pilot, tonnage, or other charges, the vessels of the other nations are entitled to a like free use.

But that is not the case. The practice under that treaty for nearly a century is that it has no reference to coastwise vessels, and no question was ever raised about the matter.

The treaty known as the treaty of 1901, approved and published February 21–22, 1902, relating to the Panama Canal and which is now in dispute, reads as follows, so far as it relates to the question of tolls:

> The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

The question of coastwise ships is not referred to. There had been a practice of 86 years under which coastwise vessels were held not to be concerned in treaties which regulated international shipping relations. If England had wished to have them included in the treaty of 1901, she should have raised the question and insisted on having the treaty provide that they should be subject to the terms of the treaty as well as vessels engaged in foreign trade. But she did not have them included in the treaty and is now estopped from demanding a construction of the treaty that will include them in its terms. It can not be held to have been overlooked, for here was a practice of 86 years, followed daily, which showed that the coastwise trade of a nation is a matter for its exclusive regulation. I do not believe we have any reason on treaty grounds for repealing the free-tolls provision for our coastwise vessels.

The Pacific coast has long waited for an isthmian canal. We have borne a serious handicap in transportation charges, and I am unwilling to surrender our just and agreed rights. I have been informed that certain transcontinental railroad lines, domestic and foreign, are active in urging that our coastwise ships be denied free passage through the canal. If that is the case, there is all the more reason for letting the law stand as it now is.

WASTES.

Inquiry is made into the possibility of finding some use for products that are not used on the farm, either by discovering some market for products for which no market exists in the places where they are produced; by using them as fertilizer, or using them in mixture as feed. What use can be made will depend upon the nature of the product.

USING THE RESULTS FROM THE CROP.

This involves the improvements to be made on the buildings, for sanitation, for feeding stock, for better stock, drainage, home comforts, and a large number of similar matters for the improvement of the farm and conditions of farm life.

AGRICULTURAL BANKS.

In order to enable the farmer to secure the funds needed to carry on his business at low rates of interest, two kinds of national banks are proposed:

A bank for long-term loans, the money for which is to be obtained by the issuance of bonds based on farm lands. There is no security better than the farm, and by this plan the credit of the farmer becomes a liquid credit. The bonds will find a ready market. They will be paid off through a long series of years, or in a shorter period, at the option of the farmer.

Also a cooperative bank for short-time loans and savings.

It is the intention to use local existing institutions as far as possible, if they wish to take up this business. I favor such legislation properly worked out, and expect to speak at length on it later.

FROM PRODUCER TO CONSUMER.

It will have been observed from the preceding that at all stages of the processes of producing crops the department has been keeping step, finding out difficulties, providing a solution, supplying the practical information to the farmer, discovering advantages, demonstrating their utility, and distributing the information.

The farms must produce wholesome products, or, under the meat-inspection act or pure-food law, animal and dairy products may prove unsalable. To overcome these dangers, remedies are found and their use exemplified.

The office of markets proposed in this bill will not only enable farm products to be more readily disposed of but will bring producer and consumer closer together, whether in the home or foreign market.

NEW FIELDS FOR THE FARMER.

By introduction from abroad, by breeding, and in other ways, new crops are constantly being added to those already grown. A crop that is old in one section may be, for some reason, a new one in another; as, for instance, the bill provides $50,000 to enable the department to make investigations and demonstrate to cane-sugar planters, who will abandon cane growing for sugar under the new tariff law, how to produce live stock on their plantations. Demonstrations are being made on reclamation projects, where problems new to those not accustomed to irrigation have arisen; also in the breeding of hardier and better range sheep, cattle, and horses.

UTILIZING THE CROP.

Under this heading would be placed such investigations as those in the ginning, grading, and determining the spinable qualities of cotton; testing flax straw for paper making; inquiries into the milling of grains and the slaughtering of animals; the nutritive values of products as food for man and animals; new uses for wastes; and many such questions. This work is followed, as in every case, with the dissemination of this information. Dissemination of information, in spite of press, bulletin, book, and speech, is an exceedingly difficult matter. It must be clearly presented, it must impress the reader or hearer, he must be moved to act, he must clearly understand what to do and when, he must do what he does effectively, else all the laborious work of investigation fails to produce results.

TAKING THE RESULTS OF INVESTIGATIONS TO THE FARMER.

The end and justification of all work of investigation, so far as production is concerned, is that the producer, as speedily as possible, be informed of the results obtained and how to make practical use of them; and the growing opinion is that the most effective method of conveying information is the contact of man with man—explanations and demonstrations to groups on the ground of remedies for diseases and preventive measures in the case of pests.

Through the Division of Publications the scientific experts seek to convey the results of their work in available permanent form. Many bulletins, circulars, and so forth, are in print, covering every subject in which definite results have been attained.

The Bureau of Agricultural Forecasts, in addition to making crop and live-stock forecasts and estimates, periodically collects, compiles, abstracts, analyzes, summarizes, and interprets data relating to agricultural industries.

Nearly $800,000 will be available for farm-demonstration work on improved methods of farm management and practice; and this, in addition to the provision made for experiment stations and farmers' institutes. Settlers on reclamation projects are to be shown how to solve their problems. Irrigation questions receive attention.

The teaching of agriculture in the schools, and especially the development of agricultural high schools, affords an avenue of transmitting information to the coming generation of farmers.

VOCATIONAL EDUCATION.

In passing, I wish to speak a word in favor of vocational education. It is a legitimate development of our policy and is intended to fit the youth for his life's work while he is receiving his mental education in the public schools.

COOPERATION.

Cooperation is used in two senses: First, that the States, counties, towns, or other civil units shall provide funds to be used with appropriations made by Congress in carrying out specific work or works. And the policy of the committee has been to enlarge the sphere of such cooperation. Cooperation also means that the producers shall make the practical application of the results attained by the scientific investigation of the experts. Unless they work together little can be accomplished. That the farmer is eager to cooperate every Representative from an agricultural district, as well as the officials of the department, knows. Under the Hatch and Adams Acts $1,440,000 are appropriated for the support of the experiment stations in the several States.

There has been a growing willingness on the part of the States to assist in the agricultural development within their borders by the appropriation of considerable sums. The committee have considered this a most encouraging indication of practical interest and have regarded such cooperation as wise and to be encouraged.

EXTENSION OF AGRICULTURAL AREAS.

When the forest reserves were created considerable areas of agricultural lands were included within their exterior borders. Under the act of 1906 such agricultural land was made available for settlement. There is in this bill an appropriation of $100,000 to be used for the selection, classification, and segregation of these lands in order that they may be surveyed out by metes and bounds for homestead entry and settlement; and a further amount of $20,000 to be used by the Soil Survey to examine and classify these lands in case questions as to their value for agricultural purposes should arise. All the agricultural lands in the forest reserves should become available for settlement so that the homesteader may know where they are situated and to enable him to make entry without difficulty or delay. The homesteader has difficulties enough arising out of natural conditions without putting upon him avoidable burdens. In this connection I wish to say here, although I expect to discuss this whole subject a little later at some length, that the methods of the General Land Office and the Department of the Interior, in dealing with entrymen on the public lands, should be modified to conform to the practices of natural justice. The right of appeal to the United States courts should be allowed the entryman and he be given his day in court before he is deprived of his property and the work of years.

USE OF NATURAL FORESTS FOR PURPOSES OF RECREATION.

There is included in this bill the following item: "That hereafter the Secretary of Agriculture may, when necessary for the purpose of increasing the public benefits or public use of the national forests, rent or lease to responsible persons or corporations, for periods of not to exceed 20 years, suitable spaces or portions of ground for the construction of summer residences, hotels, stores, or any structures needed for recreation or convenience."

LOGGED-OFF LANDS.

Lands formerly covered with timber, which have been cut over for lumber purposes, include large areas, especially in the West. Considerable portions of these areas are valuable for agricultural purposes. Clearing them for stock growing and dairy purposes is expensive, both in labor and money, but where they are to be cleared clean for meadow or grain or fruit the cost under practices formerly used was burdensome. There has been included in the present bill and in former acts, at my instance, an item of $5,000 for the purpose of studying the problems involved in clearing these lands, in whole or in part, and to see what could be salvaged in the process of clearing to reduce the cost. The results thus far obtained justify this small expenditure. The greatest value of this work, in my opinion, will be to show how these lands can be most quickly and cheaply cleared. The ship's knees, firewood, posts, turpentine, and so forth, that may be salvaged in clearing will aid the home maker, but unless there is a good near-by market the amount received from them will be small. In the West for many years lands covered with logs have been cleared by boring and burning the logs, and small stumps could be burned by charpitting. But to get rid of the large stumps and snags, sometimes very numerous, with their large and wide-spreading roots, and of large and numerous logs, was very difficult. The large amount of this land and its value when cleared has caused the inventor and associations of men to apply natural genius to the solution of the problem. Many methods have been evolved, with varying degrees of cost and efficiency, which expert investigation can improve, and I believe make cheap and practicable. For instance, the method of boring large stumps and burning them in place by confining the heat, either with or without a forced jet of air, has worked well so far as experience to date shows. The necessary machinery, including a small gasoline engine, is not expensive, and the settler can use the process in all kinds of weather, and with only his own labor can destroy the stumps as far below the plow as he wishes, and can burn them with comparative rapidity. When it is understood that

the lands of the West already or to be logged off soon equal in area practically all the arable area of New England, and include some of the most fertile soils, capable of large and diversified production, the value of this work will appear.

ANIMAL HUSBANDRY.

Promoting the production of dairy products, of meat animals and fowls, and the raw materials for clothing are its chief purposes. These first should be so produced as to bring a profit to the grower. The product should be clean and wholesome in the case of foods, and free from any taint or disease that makes it improper for or dangerous as food. Such protection to it is a benefit both to the producer and consumer. The foundation of the work is good stock animals, and educational work is done in breeding both for dairy products and for food. The elimination of the unfit and unprofitable animal, and the substitution in its place of the useful animal is a serious and difficult problem, because the former is everywhere and in large numbers. A similar situation exists in regard to horses and mules. The difference between the cost of producing a poor animal and a good animal is negligible when compared with the returns which each will bring. The substitution is necessarily gradual, but it is being made. Investigation is being made and the resulting information distributed on feeding, breeding, and housing animals.

The work under this heading may be divided into four general parts, each presenting its particular problems in production, handling, and marketing.

First. Dairying.

Second. Meat production.

Third. Poultry and eggs.

Fourth. Other products, including wool, hides, and so forth.

All the questions involved have been and are being carefully investigated, and the results are being conveyed to growers by bulletins, the press, personal information, through the experiment stations, farmers' institutes, fairs, stock shows, and other agencies.

Prevailing high prices of meats, an apparent diminution in the country's supply, and the importation of meat products free from abroad make the question of our domestic supply and its continued profitable production a vital one.

In the solution of the problems connected with the improvement and increase of domestic animals the American farmer has been especially active and successful. Individuals and breeders' associations have rendered useful service. But animal diseases still present many dangers. To detect them, find the remedy, prevent their spread or recurrence, and to eradicate them require the labors of the scientific experts. Some of the largest problems, both in kind and extent, are those connected with the eradication of the southern cattle tick, hog cholera, dourine, tuberculosis, scabies, inspection, and quarantine, and questions arising in the use of toxins, serums, and viruses.

FOR CAREFUL CONSIDERATION.

The Department of Agriculture is divided for administrative purposes in bureaus, divisions, and offices. There is a tendency, I think, to lay stress on the maintenance of the integrity of these and the individuality of their operations. In my judgment the department should be organized so as to secure the greatest efficiency from its personnel and the greatest result from the appropriations made for its support. Its organization should be so flexible as to avoid duplication of work and to enable its higher officials to use its men and money in any combination of effort any emergency may require. That is, instead of its several subdivisions being separate organizations, connected loosely together by subordination to a single head, they should be regarded as the parts of a single army capable of having the men used in small or large combinations, detached and assembled in new forms, so as to cooperate together, not as members of a subdivision, but as members of a single great organization.

I believe it is the desire of the department to do this, and the criticism does not lie that they do not earnestly endeavor to enable their men to render the greatest service and the money to accomplish the largest amount of good possible. A realization by the department, the committee, the Congress, and the country that there is being developed a systematic policy for the promotion of agriculture, so that every appropriation bill shall not only provide for the support of the projects undertaken, but also be a consistent step in the development of a great system, will not only give encouragement and support to the responsible head and leaders in the department in their endeavor to formulate and carry out the policy as the work develops, but will also result in great good to the country. Bureaucracy is a vice that always threatens every form of administration, and bureaucracy is harmful and expensive.

In the development of our national agricultural policy and work, and its maintenance, during recent years, I have taken an active interest—and think I can also claim to have had a useful part in its upbuilding and extension. As the only member of the committee from the Pacific coast, I have given the interests of that section especial attention to make sure the welfare of the part of country most distant from the seat of government was not neglected and that all proper attention was given and provision made for its thriving and vigorous agricultural industries.

Its recent development has been most gratifying, and the industries of Oregon, with which I am naturally most familiar, have shown remarkable activity and increase.

THE FARM HOME.

The American citizen has the right to choose what his occupation shall be in life, according to his opportunities, natural aptitude, and preference. One occupation competes with another in attractiveness. The city lures the farmers' boys and girls and the farm appeals to city people. Comfort, convenience, freedom, and income are important factors. Our rural population and those who have come from it, more than any other one class, have been the substantial foundation of our national prosperity and character. In aiding in solving the farmers' problems, and in making farm life comfortable, profitable, and attractive, as in the establishment of rural free delivery and the parcel post, we are serving all the people not on farms even more than the farmer. The food and clothing which he produces in the raw state are indispensable. I do not regard appropriations made for agricultural development as made especially in the interest of the farmer. They are based on sound economic policy and with the patriotic motive of promoting the general welfare of all the people.

Mr. Chairman, no speech on agricultural development would be complete without a tribute to the farmer's wife and the farmer himself.

I suppose if men and women, good and great, were called upon from all times and places to state to whom they owed the fundamentals upon which they builded, more would look back with loving reverence to a place beside the chair of some farmer's wife than to any other one class of mothers. The most important crop ever produced on this green globe is its well-trained, well-mothered boys and girls. [Applause.] The farmer's wife had to combat all sorts of pests and diseases and bring her sons and daughters to full flower and maturity unblasted and sound. Her boys and girls as a body have conquered our wild domains, fed the people, built and sustained the cities, bridged the spaces with roads, fought our wars, and kept sweet on earth the savor of justice, piety, and patriotism. [Applause.] Her daughters have her virtues and, moreover, are America's glorious womanhood in full bloom. And I would praise all other women who have done well. [Applause.]

THE END TO BE ATTAINED.

Herein is a great policy for a great nation. Its final accomplishment may be in a somewhat distant future; but in due time, if we faint not, it will be reached. Comfortable, well-furnished dwelling houses will appear in endless vistas on all the arable land of our wide domain. There will be well-built barns, silos, pig houses, hen houses, and machinery sheds as adjuncts to the dwelling house. Stock of good blood and pedigree will be the rule. Efficient roads will traverse the country. In each community there will be a conveniently located civic center, with schoolhouse, church, town or grange hall, and agricultural credit bank, making a social center. Each farmer will know every acre of his land and how to treat it when remedy becomes necessary to counteract some deficiency. There will be no idle acres. He will know how to cure his stock when sick. He will know his trees and plants, their possibilities, their diseases and the remedies. Through cooperation he will market his products more directly than at present and will receive on the whole a more adequate compensation for the work he does. As other business men, he will be able to have office hours and work reasonable hours. Nor is this a picture of something earnestly to be desired but in the nature of things unattainable. If it can not be in some measure realized, where will we get our farmers in another century? A republic can not exist under a system of tenant farming, and under conditions as they have existed there has been a tendency for the country born to leave the farm. But the farmer as I know him is capable of doing what I have outlined.

To picture the modern farmer as a booted, bewhiskered individual with an oat straw in his mouth is a caricature. He has become a business man, with the capacity and instincts of a shrewd man of affairs. The difficulties under which he labors are due to the conditions at present surrounding farm life rather than to himself. Pests by the thousand attack everything he

grows—plants, fruit, stock. Soils are largely unknown quantities. Roads are not efficient. He has no comprehensive organization, although granges, societies of equity, and similar organizations are bringing into a union of sentiment and endeavor a body of men and women who have so much in common and can derive so much good from cooperation. The millions the Federal Government is spending, that the States are spending, that counties and farmers are spending to analyze the farmer's problems, find their solution, and carry the knowledge of the remedy to every farm, all are hastening the coming of that day. The country has no more useful man than a good farmer, and when you multiply him by millions there is reason to confide in the perpetuity of the Republic. So I say to the scientific experts in the Department of Agriculture and in the agricultural colleges and to the great American farmer, yearly growing more expert:

Go to your work and be strong,
Halting not in your ways,
Balking an end half won
For an instant's dole of praise.
Stand to your work and be wise,
Certain of brain, hand, and pen,
Who are neither children or gods,
But men in a world of men.

[Applause.]

Mr. LEE of Georgia. Mr. Chairman, I yield to the gentleman from New York [Mr. OGLESBY].

Mr. OGLESBY. Mr. Chairman, the conservation of our soil and the development of our agricultural resources are matters so vital to our national prosperity as to forbid their being ranked second in importance to any question that can be presented for our consideration. And it is a matter, Mr. Chairman, that I regard as so correlated to and to a large extent so dependent upon our immigration policy that I desire to discuss briefly that question with a view to showing the effect upon our food supply that will inevitably result from forbidding those aliens willing to work to land on our shores.

There is a quite general acquiescence in our now settled policy to refuse admission to undesirables, but there exists a great difference of opinion as to what class of immigrants come under that category. Our present laws exclude all idiots, imbeciles, feeble-minded persons, epileptics, insane persons, and persons who have been insane within five years previous; persons who have had two or more attacks of insanity at any time previously; paupers; persons likely to become a public charge; professional beggars; persons afflicted with tuberculosis or with a loathsome or dangerous contagious disease; persons mentally or physically defective, such mental or physical defect being of a nature which may affect the ability of such alien to earn a living; persons who have been convicted of or admit having committed a felony or other crime or misdemeanor involving moral turpitude; polygamists, or persons who admit their belief in the practice of polygamy; anarchists, or persons who believe in or advocate the overthrow by force or violence of the Government of the United States, or of all government, or of all forms of law, or the assassination of public officials; prostitutes, or women or girls comnig into the United States for the purpose of prostitution or for any other immoral purpose; persons called contract laborers, who have been induced or solicited to migrate to this country by offers or promises of employment or in consequence of agreements, oral, written, or printed, expressed or implied, to perform labor in this country of any kind, skilled or unskilled; those who have been within one year from the date of application for admission to the United States deported as having been induced or solicited to migrate as above described; any person whose ticket or passage is paid for with money of another, or who is assisted by others to come, unless it is affirmatively and satisfactorily shown that such person does not belong to one of the foregoing excluded classes, and that said ticket or passage was not paid for by any corporation, association, municipality, or foreign government, either directly or indirectly; all children under 16 years of age unaccompanied by one or both of their parents, at the discretion of the Secretary of Labor, or under such regulations as he may from time to time prescribe.

It is now proposed to enlarge the list of mental, moral, and physical defects on account of which aliens are to be excluded, to provide for a more rigid enforcement of the exclusion features of the law, and in addition to deny admission to those unable to read, and thus to erect a new barrier to immigration, wholly indefensible as a test of fitness, but potent to further restrict the number of those who would otherwise come to us—the admitted purpose of the adoption of this arbitrary standard.

There is undoubtedly a very strong sentiment in many parts of the country in favor of greatly restricting immigration. Some of our best and most intelligent citizens believe we are rapidly approaching the time when our population will be as great as our resources will support, and that many of the immigrants now coming to our shores are nonassimilable, remain segregated in congested quarters, and injuriously affect our own people by the example of a low standard of living.

It is also true that the ranks of unskilled labor are largely recruited from immigrants, and the fear is expressed by some that this class of labor is being so rapidly augmented that the demand will not keep pace with the supply.

I received several requests to support the Burnett bill when it was up for consideration, but upon giving it careful study found myself unable to do so, so long as it contained the literacy requirement.

Literacy is not a test of character, of honesty, of industry, of integrity, of a man's desire to improve his condition, of his purpose to make a home for himself and his family, or of his intention to become a useful and law-abiding citizen. If he possesses these qualities, he is a producer of wealth and is by no means a menace to our institutions.

In those States which have the largest immigrant population you will find the greatest commercial enterprise, the largest manufacturing establishments, the most prosperous agricultural sections, the best-paid labor, and the most wealth. The State of New York has by far the largest immigrant population of any State in the Union, and exceeds all others in the magnitude of its business activities and in wealth. Pennsylvania, Illinois, and Ohio follow in the order given in immigrant population, in industries, and in wealth.

What a man knows is of less importance than is his desire for knowledge. Inability to read is usually because of lack of opportunity, and at most is only a temporary disability that opportunity will ordinarily cure.

Experience has shown that the children of illiterate immigrants are most eager to learn and enthusiastically take advantage of our free educational institutions.

Statistics show that in those States where so many so-called illiterate foreigners have settled the percentage of illiteracy is very low as compared with the States which have the smallest immigrant population. Also that the percentage of illiteracy in the different sections is due not so much to the number of illiterates coming into a State as to the efforts put forth to decrease illiteracy. In New York, where 30.2 per cent of the population is foreign born, the illiteracy is 5.5 per cent; in Pennsylvania, where 18.8 per cent of the population is foreign born, the illiteracy is 5.9 per cent; in Massachusetts, where 31.5 per cent of the population is foreign born, the illiteracy is 5.2 per cent; in Illinois, where 21.4 per cent of the population is foreign born, the illiteracy is 3.7 per cent; in Wisconsin, where 22 per cent of the population is foreign born, the illiteracy is 3.2 per cent. In the State of Alabama, in which only nine-tenths of 1 per cent of the population is foreign born, the illiteracy is 22.9 per cent; in Georgia, where six-tenths of 1 per cent of the population is foreign born, the illiteracy is 20.7 per cent; in Kentucky, where 1.8 per cent of the population is foreign born, the illiteracy is 12.1 per cent.

In justice to the Southern States it must be said that the very considerable colored population materially increases their illiteracy percentage, and that there has been a most gratifying decrease in the percentage of illiteracy in the South during the last decade. But excluding this colored population from the calculation, and taking into consideration the great handicap of the ravages of the Civil War, the percentage of illiteracy is extremely high when compared with those States which have absorbed and are still absorbing a large immigrant population. In fact, the greatest percentage of illiteracy is in the mountain sections, where schools are not convenient of access and where enterprise is stagnant for lack of new blood.

The proof is far from satisfactory that the literate immigrant is a more desirable acquisition than the one unable to read. Illiteracy does not necessarily mean ignorance. Many men of at least average intelligence and good business ability can not read.

In some of the foreign countries from which we draw the most of our immigrant population, if a man's condition is such that he has the opportunity for acquiring an education he is usually well enough circumstanced so that he will not emigrate to a foreign land unless there is some very good reason why he should leave his native country. The immigrant is usually a sturdy son of toil from the rural districts, and to whom no schools are available.

Grover Cleveland, than whom no clearer-headed or more correct thinker ever occupied the White House, vetoed an immigration bill on account of a literacy-test provision, and in his message used this language:

The ability to read and write, as required in this bill in and of itself affords, in my opinion, a misleading test of contented industry and

supplies unsatisfactory evidence of desirable citizenship or of a proper apprehension of the benefits of our institutions. If any particular element of our illiterate immigration is to be feared for other causes than illiteracy, these causes should be dealt with directly instead of making illiteracy the pretext for exclusion to the detriment of other illiterate immigrants against whom the real cause of complaint can not be alleged.

President Emeritus Eliot, of Harvard, said on the same subject:

The only questions which are appropriate are: Is he healthy, strong, and desirous of earning a good living? Many illiterates have common sense, sound bodies, and good characters. Indeed, it is not clear that education increases much the amount of common sense which nature gave the individual. An educational test is appropriate at the time the foreigner proposes to become a voting citizen. He ought then to know how to read.

Cardinal Gibbons is on record as follows:

I am not in favor of any educational test as applied to immigrants desiring to enter the United States. Such a law if passed would, in my judgment, work great harm, for illiteracy is by no means always ignorance. If the immigrant is industrious and thrifty, he will make a useful citizen, whether he be literate or illiterate. The educated schemer is in more ways than one more dangerous than the honest workman, even though he be illiterate.

Another great educator and great President of the United States, Woodrow Wilson, has said:

I think that this country can afford to use and ought to give opportunity to every man and woman of sound morals, sound mind, and sound body who comes in good faith to spend his or her energies in our life, and I should certainly be inclined, so far as I am concerned, to scrutinize very jealously any restrictions that would limit that principle in practice.

It is acknowledged that we have reached our present preeminence among the nations of the world only through the aid of those who have come to us from foreign shores. But the restrictionists claim that the present-day immigrant is from the lowest strata and is an undesirable acquisition. That claim is not borne out by the reports of the Immigration Commission, as appears from the following extract:

The present movement is not recruited in the main from the lowest economic and social strata of European populations. In European countries, as in the United States, the poorest and least desirable element in population, from an economic as well as a social standpoint, is found in the large cities, and as a rule such cities furnish comparatively few emigrants. Neither do the average or typical emigrants of to-day represent the lowest in the economic and social scale even among the classes from which they come, a circumstance attributable to both natural and artificial causes. In the first place, emigrating to a strange and distant country, although less of an undertaking than formerly, is still a serious and relatively difficult matter, requiring a degree of courage and resourcefulness not possessed by the weaklings of any class. This natural law in the main regulated the earlier European emigration to the United States, and under its influence the present emigration, whether or not desirable as a whole, nevertheless represents the stronger and better element of the particular class from which it is drawn.

The history of the immigrant in this country is a continued story in evolution. Take, for instance, the German, than whose descendants none among our people occupy a more honorable place. Although they came from highly educated Germany, many of them took humble positions, often performing menial labor and for modest pay; but they were intelligent, frugal, thrifty, and ambitious. They acquired property, embarked in business enterprises on their own account, and were soon able to furnish positions for and otherwise assist those of their countrymen who followed them.

Only a few years ago ninety-nine out of every hundred men seen in a ditch were knights of the pick and shovel from the Emerald Isle. Now these gallant sons of Erin are conductors, motormen, engineers, fire fighters, guardians of our public safety, and managers in chief of our ship of state, and scarcely is one permitted to land before his welcoming brothers have him put on the force.

Formerly the Jew immigrants were peddlers, old-clothes men, and shoe-string vendors. To-day they are our bankers, prosperous merchants, successful manufacturers, skillful physicians, and able attorneys. Though continuing to come in large numbers, the recruits are looked after, given employment, and otherwise aided by those of their own race already established here.

The vast majority of those who are coming from Italy are industrious, eager for employment, quick to learn, frugal, with a strong desire to become citizens, and ambitious to own land and build for themselves homes in this new and great country. It is within my personal knowledge that they are succeeding. They are barbers, shoemakers, and tailors. They have vegetable gardens and fruit stores. They are brick and stone masons, builders, contractors, and bankers. They own houses for themselves and to let, and their children are becoming educated and entering the learned professions.

And what is true of the above nationalities is true of all. In my district are many Poles, Hungarians, Slavs, and other aliens. They are industrious, frugal, and anxious to get ahead. There is that in the free air of America that inspires all who breathe it to higher ideals and a desire for a higher standard of living.

It is a curious fact, abundantly shown by noting the supporters of measures that seek to restrict immigration, that the opponents of immigration are from those sections which most rarely come in contact with the immigrant. And, further, that of all immigrants they regard the most highly those of that nationality of whom they have seen the most. So here again the rule is established that prejudice and suspicion vanish when knowledge and information arrive.

What any nation is and what she becomes depends upon those who do the real work of extracting from mother earth the wherewithal by which we are nourished.

The present high cost of foodstuffs is due in a large measure to the scarcity of farm laborers. The sons of our farmers are entering other vocations, and it is to the immigrants who seek an opportunity to earn their bread by the sweat of their brows that we must look to take the places thus left vacant by our farmer boys and do the hard, rough work of tilling the soil.

There appears to be a very general impression that immigrants do not go on farms. It is true many of them remain in the cities where there are others of their own nationality until they become accustomed somewhat to their new environment and learn something of our language. But figures taken from reports of the Bureau of the Census show that in the great agricultural States of New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas, Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, and California from 31 to 42 per cent of the farming population are of foreign birth or foreign parentage.

There is, unfortunately, prevalent an impression that a difference in religious beliefs is partly responsible for the continued and growing agitation over this immigration question. I should be sorry to believe any of those interested in this matter are being influenced by any such consideration. The only persons I should be willing to have excluded on account of their religious beliefs are those who have none.

Some of the labor leaders of the country favor greater restriction of immigration, but I do not believe those who hold this view have considered the matter in all its aspects. They formerly took the same view with reference to the introduction of machinery, but soon found the use of machinery increased the demand for high-priced labor.

The industries of the country require the labor of the foreigner, and the immigrant is not a harmful competitor of our American labor. His employment creates a demand for a better grade of labor and is productive of better wages for the American workingman. The work performed by the immigrant is of the hardest kind, and to do which it is almost impossible to secure American labor, but it is work which, nevertheless, must be performed.

The foreign element are by no means antagonistic to organized labor. They know the market value of their work and insist on getting the highest wage prevailing. They are quite ready to join the unions, and a large proportion of the membership of labor organizations in this country are immigrants or their descendants.

The most usual and perhaps just complaint of the representatives of labor is that labor does not get its just proportion of what it produces, partly because capital takes too large a share of what is produced and partly because there are too many drones to support.

It is an increase in the number of our population who will not work that we should try to prevent. There is much wisdom in the philosophy of the old darky who objected to an aristocratic gentleman from another State buying a farm in Georgia on the ground that "there is more white men down here now than we colored men can support."

The necessaries of life are all produced by labor, and the adding to the number of toilers lessens the burden borne by each in producing the necessaries for all.

We have millions of acres yet uncultivated and untold wealth unmined.

Since the foundation of this Government we have opened our doors to those who have come to us to escape religious, political, and industrial oppression and to carve out for themselves a niche in this great monument we have erected to freedom, justice, tolerance, and equality of opportunity. They have come from all quarters of the globe, and with their help we have made this the greatest Nation of all time. They have aided us in extracting the riches from mother earth, in constructing our

transportation systems, in building up our great manufacturing industries, in extending our commerce, in advancing the cause of education, in promoting the arts and sciences, and with us have laid down their lives on the field of battle in defense of our common country. I do not believe the time has arrived when we should selfishly close our doors to those mentally, morally, and physically sound who would yet come.

Mr. HAUGEN. Mr. Chairman, I yield 45 minutes to the gentleman from Minnesota [Mr. STEENERSON].

Mr. STEENERSON. Mr. Chairman, this bill, carrying more than $18,000,000 appropriation for the encouragement of agriculture, has been very carefully prepared and reflects great credit on the committee reporting it. While we are considering the subject of agriculture it may be well to recall some recent political history and legislation affecting agriculture, which is our basic industry.

Three years ago last month, while the Agricultural appropriation bill was under consideration, I made a speech and called attention to the Taft reciprocity proposition which had then just been sent to Congress for approval, and I took occasion to say at that time that if the proposition which contemplated free trade in farm products with Canada should be adopted, it would reduce the income of the farmers of my State by a sum of more than $20,000,000 annually, a great deal more than the total appropriation for the encouragement of agriculture made by Congress. That proposition, notwithstanding the opposition of a majority of the Republicans in the House, was, under the leadership of President Taft, forced through by a combination of a minority of Republicans and an almost solid Democratic Party in the House; but it failed of action in the Senate because it was delayed, and the Sixty-first Congress expired on March 4, 1911. One would have thought that this would have been the end of that proposal, and that President Taft, who had been elected upon a platform pledged to the protection of manufacturers, farmers, and producers alike, would have taken heed of the fact that he was without support of a majority of the Republicans in both Houses of Congress, but by some strange obsession of mind he persisted, and if we may judge from the newspaper accounts of the frequent conferences between him and the Democratic leaders who were to control the next House of the Sixty-second Congress, which had been just elected, he made an arrangement or agreement with those Democrats under which he would call an extra session if they in turn would ratify the reciprocity proposition. In this way the Democrats could gain the advantage of coming together early in the spring of 1911, and have a year and a half in which to make campaign material, and the President would get his way, notwithstanding the opposition of a majority of his own party as represented in Congress. The bargain went through. Congress was called into extra session in April.

The Democrats quickly passed the reciprocity bill through the House, and after several months of debate in the Senate it was also passed there by a combination of Democrats and minority Republicans. It had not been ratified by Canada, and it was there made a party issue. Under the customs of that country the opposition party was entitled to go before the people on that issue, and it was submitted at a special election held in September of that year, and, to the surprise of everyone on this side of the line, it was defeated. During the protracted discussion in and out of Congress it had been urged on the part of the friends of reciprocity, both Democrats and Republicans, that somehow free trade in farm products would cheapen the cost of living for the city people without reducing the price of farm products, while, on the other hand, it was claimed by Republicans who opposed the reciprocity that it would reduce the farmer's prices and would not result in cheapening the cost of living, because the difference would be absorbed by the middleman. The Representatives in Congress from the Northwestern States, where wheat and other grains are the staple farm products, claimed that Canadian competition under reciprocity would tend to reduce their prices, while the Democrats and the Republicans representing large manufacturing districts said that that could not be true, because the United States was a heavy exporter of wheat and other grain, and therefore that the world price, the export price, governed all domestic markets. This was an important question and attracted wide attention.

The Canadian election afforded an object lesson and a demonstration which farmers of the boundary States will not soon forget. As I said, everybody on this side of the line was sure reciprocity would win, and the grain exchanges of Chicago, Minneapolis, Duluth, and elsewhere proceeded to discount the effect of the change. The premium on spring wheat at Minneapolis over the export price, which for years had ranged around 12 cents per bushel, disappeared almost entirely, and the day after reciprocity was defeated in Canada wheat jumped 9 cents per bushel, in Minneapolis and Duluth, and barley 11 cents in two days, flax about the same. All the market news in the papers carried the only possible explanation of this phenomenon, and that is that it was due to the result of the election in Canada and the rejection of reciprocity, and that the theorists who had argued so strongly here in the House and elsewhere were mistaken, and they remained silent—at least for a while.

This was in the fall of 1911, and the Democrats, who by this time had the Republicans badly divided and disorganized, proceeded at the ensuing session to pass their popgun, schedule by schedule, tariff bills, a method shrewdly adopted to bring out the weakest point in the then existing tariff law, but which was promptly abandoned as soon as they gained control and assumed actual responsibility. You have never heard anything about schedule-by-schedule revision since the Democrats came into power. They recognized the power of combination and compromise to the fullest extent, and by that power they reached agreements. The campaign that followed in 1912 was fought mainly on the tariff issue, and a reduction in the cost of living, the destruction of monopoly, and general prosperity were the benefits promised the people in case of Democratic victory.

The result of the election, however, showed that the farmers of the Northern States refused to vote for Taft who had betrayed them and the doctrine of protection and had secured the nomination of his party, although in doing so he had split it in two, and although the platform on which he sought reelection studiously avoided even the mention of Canadian reciprocity which he had made the principal issue of his whole administration. But they, the farmers, also refused to vote the Democratic ticket because free trade in farm products was clearly foreshadowed as one of the promised reforms. Now, we come to the actual performances on the part of Democracy. They enacted the Underwood law, reducing most of the schedules on manufactured goods, but not on all of them, but placed most of the farm products upon the free list.

Wheat is on the free list with a countervailing provision that if any country imposes a duty on exports from this country there shall be a duty of 10 cents per bushel, and gives a drawback of 99 cents on the dollar for imported wheat ground into flour and exported, with a 10 per cent duty on the by-product of feed. The effect of the Underwood law upon the prices of farm products has already been felt. It has wiped out to nearly 3 or 4 cents the premium on spring wheat in Duluth and Minneapolis, as will be shown in the figures I here insert:

*Average prices of wheat, per bushel, in Minneapolis and New York for 1908, 1909, 1910, and 1911.*

[From Yearbook of Agriculture for 1912, p. 575.]

| | Minneapolis. | New York. |
|---|---|---|
| 1908 | $0.98 | $0.95 |
| 1909 | 1.25½ | 1.28½ |
| 1910 | 1.14½ | 1.12½ |
| 1911 | 1.02 | .97½ |

The export freight rate on wheat from Minneapolis to New York is 25 cents per hundred, or 15 cents per bushel; without counting cost of handling and insurance therefor there ought to be a difference of at least 15 cents per bushel between Minneapolis and New York. On this basis we can figure the premium on our spring wheat that we have received in the Minneapolis and Duluth markets as follows:

| | Minneapolis. | New York. | Minneapolis premium. |
|---|---|---|---|
| 1908 | $0.98 | $0.95 3 — | 18 |
| 1909 | 1.25½ | 1.28½ 3 + | 12 |
| 1910 | 1.14½ | 1.12½ 2 — | 17 |
| 1911 | 1.02 | .97½ 4½ — | 19½ |

Here is the quotation of prices for this year—that is, of corresponding grades, taken from the Northwestern Miller—which shows that we are now within 3½ cents of an export basis: February 21, 1914, Duluth, $0.92½; New York, $1.04; 11½ plus 3½ premium.

It might be asked why, if there is a duty of 10 cents per bushel on wheat, it does not enhance the price to that extent at Minneapolis. If our theory is correct, it is this: Under this countervailing clause Canada can at any moment and without notice to us take off the duty. Wheat is purchased by the big

millers many months in advance of its manufacture into flour, and therefore they must take into consideration this contingency. The Minneapolis miller who buys a million bushels of spring wheat for manufacturing it into flour knows that within a month or six weeks, or perhaps two months, the duty may be wholly removed and Canadian wheat come in free, and therefore he must allow something for that contingency, and he does allow for it; and that is the reason that the premium over the export price on spring wheat at Minneapolis to-day does not exceed 5 cents.

What I have said in regard to wheat is true in regard to barley, only to a greater extent, and also as to flax. The privilege of importing wheat for export milling enables the miller to get in the feed which results from the grinding at the low duty of 10 per cent, and this has a depressing effect upon the price of the feed that the farmer has to sell.

But how, you ask, is it possible to export wheat when the price is higher here than abroad? The answer is that very little hard spring wheat is exported, if by that term is meant shipped out of the United States. The total wheat crop of the United States in 1912 was 730,267,000 bushels, and exports were 59,843,584 bushels, or only about 8 per cent, while 92 per cent was consumed at home. The wheat is the raw material of the miller, and he is in that sense the consumer of wheat.

Minnesota in 1912 produced 67,038,000 bushels of wheat, but Minneapolis alone produced 17,031,935 barrels of flour, equivalent to 76,643,606 bushels of wheat, or more than the total production of the State. There was required at least 14,000,000 bushels for food and 6,000,000 bushels for seed in the State. The mills of Minneapolis in 1912 only exported a little over 6 per cent of their total output to foreign countries, and in 1911, 7 per cent, and in 1910, 8 per cent. There are extensive flour mills in St. Paul, Duluth, Crookston, and other places in the State which probably produced nearly as much as the Minneapolis mills, so that the milling demand for wheat in Minnesota is more than twice as great as the surplus produced.

The 196 pounds of flour (when not subdivided called "straight") produced from 4 bushels and 40 pounds of hard spring wheat, is in our mills usually subdivided so that 70 per cent is patent, 22 per cent clears, and 8 per cent low grade. Patent is the highest grade flour, and sells for $1 per barrel over clears, and more than that over low grade. The rest is mill feed, and sells for from $20 to $22 per ton. The patent flour of Minnesota is almost entirely consumed in the United States, but the clear is exported, and is used abroad chiefly to mix with rye flour or to make bread. Low grade is sold to the arts, and used for making molds for castings and the like. The flour trade of Minneapolis especially is highly developed, and special brands are extensively sold in almost every part of the United States. It will thus be seen that while statistics show foreign exports of spring wheat in the shape of flour, it is in reality simply a by-product, and the principal part is used in domestic consumption. In reality Minnesota is a heavy importer of domestic wheat and an exporter of flour, not abroad, but to the other States of the Union. For these reasons the foreign, or export price, as long as the hard spring wheat of Canada is kept out of the domestic market by a tariff, while it influences, does not and seldom has controlled the domestic price. For the same reason in 1912 the farm price of wheat varied greatly according to locality, from $1.22 per bushel in Georgia, $1.13 in Alabama, $1.01 in Virginia, to 64 cents in Montana, 69 cents in North Dakota, and 73 cents in Minnesota. The high price in the first three named States was due to the fact that the local consumption exceeded the local supply.

Next to demand for actual consumption, the demand for manufacture and resale—the milling demand—influences local price. If Montana, for instance, should so develop its enormous water power as to become a milling center equal to Minneapolis, the Montana price would probably approach the Minnesota standard, and competition between these two centers would tend to raise the farm price in both States.

That the cry of the Democratic Party that they were going to reduce the cost of living by giving the people free trade in farm products has been a failure it is, then, perfectly fair to say. They have hit the farmer without helping the consumer. The reasons for this are many and I will explain some of them a little later on.

They promised a free market basket, and of course the things that went into the market basket came from the farm. They did not carry out all the doctrine of their party as expressed in their platform, but they did give it to the farmer.

Mr. SLOAN. Will the gentleman yield?

Mr. STEENERSON. I will yield to the gentleman for a question.

Mr. SLOAN. Does the gentleman regard that as a promise or a threat?

Mr. STEENERSON. I do not know; probably both. They promised that they would free list the articles that were controlled by monopolies and trusts. Gentlemen, who can not remember the eloquent speeches in which they promised to kill monopoly by free listing trust-made goods? What did they do? When they passed the Underwood bill, why, one of the worst and most abominable and tyrannous trusts in the United States—the Tobacco Trust—defied this great Government in its prosecutions. Did they reduce the duties on Schedule F? Oh, no. They said in their report that those duties which had been adopted by the Republican Party for years, many years ago, were all right, although that is absolutely one of the most extraordinary protective tariffs that was ever written on paper; some of them got up to 600 and 700 per cent. [Applause on the Republican side.] Why, leaf tobacco is taxed $1.85 per pound, and it does not cost more than 20 or 30 cents to raise it, and probably not that. It is imported, I believe, for 20 cents, but it is taxed $1.85. Cigars are taxed $4.50 a box and 25 per cent in additional ad valorem. They had for years repeated the assertion of Mr. Havemeyer, president of the Sugar Trust, that a high protective tariff was the mother of trusts, and yet they protected this trust by imposing these extraordinary duties. In England they have some sense; they impose a high duty on raw tobacco for revenue only, but to prevent the duty going to the raiser of tobacco they prohibit the growing of tobacco in the British Isles.

Mr. SLOAN. Will the gentelman yield for another question?

Mr. STEENERSON. Simply for a question.

Mr. SLOAN. Do I understand, then, the promise to break up the Tobacco Trust has gone up in smoke?

Mr. STEENERSON. That is a very witty remark. It is worthy of the gentleman from Nebraska. But if I may be permitted to proceed without interruption I will elucidate this feature of the political question, however, in a more prosaic way. Why is it, gentlemen, the Democratic Party has placed upon the free list the products of the toiler in the only industry which it is impossible to form into a trust and retained high protection duties to shield the monopolies and trusts? That is the question that the people of the United States will ask them. When you promised that you would free list trust-made goods and turned around and free listed the farmer's products, what answer can you make? But you say: "We had to do it. We did not have the heart—and many of them said it with tears in their voices—to tax the bread of the poor; we did not have the heart to tax the meat of the hungry." Very good. That might, perhaps, be an excuse for violating the principles of your platform and party, provided it turned out to be correct. [Applause on the Republican side.] But is it correct? Here we strike at one of the greatest questions of modern times; not a local question to the United States, but universal throughout the world, and that is the cost of living. The Democratic Party has hit at the farmer because he furnished the food to the people, and they said they wanted to reduce the price of the food to the people, and that, of course, is the principal item in the cost of living. The chairman of the Committee on Agriculture stated that the farmer only received 43 per cent of the price of farm products paid by the consumer, and in some instances he does not receive 20 per cent. Well, now, suppose you cut the farmer's price. Is it passed on to the consumer? That is the important question. I might offer some explanation, but the fact remains. Take, for instance, the most common principal article of food in the world—take bread. How is it about bread? I have some very interesting comparisons. One barrel of flour—4 bushels and 40 pounds—No. 1 hard, weighs 280 pounds, out of which we get 80 pounds of mill feed, which is bran and middlings, and the flour which is left is 196 pounds.

Sixteen ounces of flour will absorb 4 ounces of water. One hundred and ninety-six pounds of flour will make 300 to 320 loaves of bread.

We therefore have this situation: That the farmer who sells his wheat for 70 or 80 cents a bushel—and that is the top price in Minnesota this year—if he buys his bread from a bakery, will sell 15 bushels of wheat and get the money for it and turn around and buy with the money received bread made from 4½ bushels of wheat, less the feed, which would be 80 pounds and worth 80 cents. In other words, he would sell for $3 what the baker gets $15 for in the form of bread.

Now, what about the baker? I was curious to know, and I went to a baker and told him that I wanted information. He told me that here in Washington they use Minnesota flour, patent spring-wheat flour, the highest priced flour in the world,

and the best flour in the world, of course, because it comes from the North Star State.

Mr. YOUNG of North Dakota. Except North Dakota.

Mr. STEENERSON. I will include North Dakota, which at one time was a part of Minnesota, in territorial days. It is the greatest wheat State in the Union, and Minnesota comes next.

This baker told me that he paid $3.25 a day, for a day presumably of eight hours. He said that they make a 16-ounce loaf, and they sell it to the wholesaler or storekeeper for 4 cents, and they retail it at 5 cents a loaf. There are from 300 to 320 loaves of bread in a barrel of flour, and, therefore, the final consumer pays about $15 or $16 for the barrel of flour in that form. The miller that I talked with stated that flour fluctuated according to the price of wheat, and that is generally true. There is quite a good deal of competition in the flour-mill business. There has never been a trust. Usually when wheat goes up 1 cent a barrel of flour goes up 5 cents. It requires 4½ bushels to make a barrel. So that 10 cents a bushel makes a difference of 50 cents on a barrel of flour. But how is it about the fluctuation of bread? Why, the baker told me that the price of bread has been the same right in this city for 20 years, with this qualification, that sometimes the loaf was a little larger and sometimes a very little smaller; but it was a very slight difference—only an ounce or two.

Mr. MOORE. Mr. Chairman——

The CHAIRMAN. Will the gentleman from Minnesota yield to the gentleman from Pennsylvania.

Mr. STEENERSON. Yes; for a question.

Mr. MOORE. I want to say to the gentleman that the retail price of bread in all the large cities has been substantially the same, just as the baker said it was, for 20 years, and that the consumer in the cities has derived no benefit whatever from any reduction in the duty on grain or flour.

Mr. STEENERSON. That is undoubtedly correct.

Now, then, let us see about this bread business. The baker stated to me that when flour went up they were sure to decrease the loaf if it went up more than 50 cents; but if anything less than 50 cents, he said they never changed it or raised the loaf until, forsooth, other bakers competing would advertise that they would increase the loaf. I asked him if the trade was organized, and he said it was. The employees are all members of labor organizations, and there is an organization, I am told, of master bakers throughout the whole United States. The master bakers are the proprietors of the bakeries. They hold their conventions. Now, this is simply the same thing that is done by all other middle men. You have your retail grocers' associations, your wholesale grocers' associations, your retail drug associations, your wholesale drug associations, your retail shoe and clothing dealers' associations, and your textile associations, and your department store or retail store organizations. Throughout the whole list, from one end to the other, there is combination. I asked the very intelligent representative of the baker's trade that I talked with what were the purposes of this organization. He said that one of the principal subjects that was discussed at the last annual meeting of the master bakers' convention was the subject of how to get people to discontinue making their own bread. Why, the terrible thing in the eyes of the master baker was that 60 per cent of the housewives of the United States were making their own bread. I asked him if that was true in Washington. "Oh, no," he said, "not in Washington, because we have here a population that is composed of good livers and light housekeepers. They are mostly clerks who are paid higher wages than people in ordinary vocations; and we have colored people who do not make bread, but make corn pone and some kinds of flapjacks. Not more than 10 per cent of the bread is homemade here in the city of Washington. Ninety per cent of it is furnished by the baker." And he thought it ought to be so throughout the United States. And so the principal thing with the National Master Bakers' Association was to discourage the housewives of the country from making their own bread, because, he said, it was plain that if they would quit making their own bread there would be more work and more profit for the bakers. It costs the people of the United States who buy bread more for bread than any other people on the face of the earth.

I went to the Bureau of Labor and they pointed out the fact that they had investigated this question. They had gone to Europe. On page 522 of that bulletin of retail prices in this country and in England and in Wales they show—and I will print the table in the RECORD—that the price of bread in the United States was 223 per cent higher than in England—more than double.

The table is as follows:

*Predominant retail prices of food in England and Wales (exclusive of London) and in the United States compared.*

| Commodity. | Unit. | Predominant range of retail prices. | | Ratio of mean predominant price in the United States (February, 1909) to that in England and Wales (October, 1905), taken as 100. |
|---|---|---|---|---|
| | | England and Wales, exclusive of London (October, 1905). | United States (February, 1909). | |
| Sugar | 1 pound | $0.041 | $0.050–$0.051 | 144 |
| Cheese | do | .142 | .203 | 143 |
| Butter | do | [1] $0.243–.264<br>[2] .284 | .324–.355 | 126 |
| Potatoes | pounds | .054–.071 | .117–.167 | 233 |
| Flour | do | .192–.203 | .233–.274 | 139 |
| Bread | 4 pounds | .091–.112 | .278–.333 | 223 |
| Milk | 1 quart | .031–.031 | .026–.026 | 159 |
| Beef | 1 pound | [1] .152–.172<br>[3] .101–.122 | .122–.162 | 104 |
| Mutton | do | [2] .152–.183<br>[3] .081–.101 | .132–.167 | 116 |
| Pork | do | .152–.172 | .117–.147 | 81 |
| Bacon | do | .142–.183 | .172–.203 | 116 |

[1] Colonial or foreign. [2] Danish. [3] British or home killed.

I said to the Bureau of Labor, "Can it be possible? Is it not a mistake?" They said, "Oh, no; there is no mistake." Then I commenced to figure myself. I went back to my own farm. I know what I get for the wheat, and I can tell that the wheat that made the flour that went into a loaf of bread costs very little, if any, more than 1 cent. The raw materials in a loaf of bread cost 1.85 cents. That includes the milk, lard, and the sugar, and the salt, and the other things besides the flour, but not the cost of distribution and delivery and advertising and all those other things.

Now, if the materials in a loaf of bread right here, of the highest-priced flour in the world, cost 1.85 cents, it stands to reason that you could make a loaf of bread of equal size of a little cheaper flour, such as they use in England, and sell it at a profit even at 2 cents a loaf, which would be only two-fifths of the price charged here, and therefore the Bureau of Labor is probably correct in the statement that we pay in the United States 223 per cent more for bread than the working people of England who buy their bread.

And it is not only a question of bread, it is all along the line of the cost of living. I remember some years ago when we had an investigation of the ship subsidy. I instituted it myself. One of the witnesses was Hermann Sielcken, the president of the Coffee Trust. He testified that his firm imported millions of bags of coffee from Brazil, not only here, but also to Germany, exactly the same coffee; that they bought it at from 8 to 12 cents a pound; and that the coffee sold at retail in this country ready for use, roasted and prepared, at from 30 to 35 cents per pound, and the same coffee, equally roasted, after paying import duty of 7 cents a pound in Germany, was sold at retail there for 1 mark, or 24 cents a pound; so that the Germans got their coffee imported by the same firm that we did for half the price.

I can remember, and some of you can remember, the day when every housekeeper in the land went to the store and bought the coffee in the berry. Every family had a coffee mill. They ground the coffee by hand and roasted it in the family stove—fresh coffee.

Mr. YOUNG of South Dakota. And good coffee, too.

Mr. STEENERSON. Yes; it was good coffee, too. And you bought that coffee at from 12 to 15 cents a pound, and the man who sold it to you made a profit. What has happened? It is simply the development that explains the high cost of living. The first thing done was that the people who got the coffee roasted it, and they secured an arrangement with the railroad companies to charge a higher rate on green coffee than on roasted coffee. Ordinarily the roasted coffee was the finished product, and the raw coffee was the cheaper. But they reversed the rule and charged a good deal higher freight on the raw or green coffee than on the roasted coffee, and consequently the people in the trade quit buying the green coffee where the freight rate was high and bought it roasted. They would grind it, but they made you pay 35 cents a pound for it, whereas it used to cost you 15 cents. Thus the power of the middleman was increased. That is one of the ways by which we have increased the cost of living. It may be easier to have your coffee already roasted, but it is more expensive.

Now, I mention to you these two instances, and there are many other instances. It shows that the Democratic Party is

on the wrong track when it tries to reduce the cost of living by cutting the duties on the farm products alone and leaving the duties on other things. [Applause on the Republican side.]

The farmer asks for no privilege, but he wants a square deal. If he pays a duty on his dress goods and textiles and articles of clothing of from 30 to 50 per cent, and on other manufactures 15 to 25 per cent, and on "luxuries," like tobacco, up to 700 per cent, he wants something of a protection himself; not so much, but so as to give him the preference in his own markets.

Do you know that the farmers of the United States help to pay the $1,000,000,000 a year that we appropriate in Congress to support the Government? It costs the people of the United States $10 per capita to support the Federal Government—the Army and the Navy and all these things that serve us and protect us. It costs the people of the United States, every one of them, equally as much to support the village organization and the municipality and the school district at home. Is he not, after paying these taxes, entitled to the market of the people that he has been supporting by paying protective duties on their manufactures? Is it a fair deal that he should be singled out? Is he not entitled to a little advantage in his own market?

Why should you put the poor poultry raiser in the United States, of whom there are so many that they can not combine into a trust, up against the competition of a Chinaman, who pays labor 6 or 8 cents a day, without making that Chinaman contribute something to the support of our institutions? [Applause.] I ask you why should these men, who do not pay taxes in the United States, have the benefits of our markets without cost? Why should they not have to contribute something to the Common Treasury if they want to come in here?

The question may be asked, but I have never yet heard it answered upon principles of justice. No; the Democratic Party is far afield in attempting to answer and solve the problem of the high cost of living. They have not hit upon the right way.

They have punished the wrong man. I once read a story of a village in some old country in Europe where there was only one blacksmith. He was a good blacksmith, but he had a violent temper, and he also had an enemy. They met in a tavern, and the blacksmith, being intoxicated as well as angry, struck his enemy upon the head and killed him. He was arrested and brought before the judge to be tried for a capital offense, and the people, who I think must have been the progenitors of the Democratic Party, petitioned the judge unanimously and said, "We have only one blacksmith. We need him, and we ask you to spare his life. We have two bakers, and we can spare one. Therefore we ask you to execute one of the bakers in place of the blacksmith." The judge, wanting to be popular, turned the leaves of the law book from one cover to the other, and studied and pulled his hair, and finally rendered judgment, saying, "I see nothing in the law prohibiting the doing of what you ask me to, and therefore your petition is granted, and the baker will be executed as a well-deserved punishment for the horrible crime committed." [Laughter.] Are not the Democratic Party doing just that thing? They are executing the baker for the wrongdoing of the blacksmith. They are stripping farmers of their protection because of the offense of these combines that have raised the cost of living and reduced the price to the farmer at the same time. [Applause on the Republican side.]

Mr. MOORE. Will the gentleman yield?

Mr. STEENERSON. Briefly.

Mr. MOORE. The gentleman was in the House when the Democratic Party was not in full control, was he not?

Mr. STEENERSON. Yes.

Mr. MOORE. Did not the gentleman hear very many professions from the Democratic side of friendship for the farmers of the country, of a devotion that would never die, of a longing desire to help and uplift the farmers of the country?

Mr. STEENERSON. Yes; but I think the farmers have learned better now. They have learned, in the first place, that the party to which they were loyal, the Republican Party——

Mr. ANSBERRY. Progressive, or what?

Mr. STEENERSON. I said the Republican Party, whose principles were for the protection of all alike. The farmers found that they were threatened with free trade in farm products through the reciprocity proposition of President Taft. When they turned that party down by voting for the new party, they found that the Democratic Party gave them a dose a great deal worse than reciprocity with Canada, because we got not only Canadian products, but farm products from Argentina and China and the whole world.

They have read the Scriptures, and they probably now recall the story that is found in Second Chronicles, where King Rehoboam, the son of Solomon, was about to be inaugurated. He held a council with the old men, who advised him to lighten the burdens of the people that had been imposed upon them by King Solomon. Then he counseled with the young men, and they said, No; have a strong administration. Carry on public works and add to the glory of your reign. Make the burdens heavier. So, in his inaugural address—if, with all due respect and reverence, we may so term it—he followed the advice of the young men, and said to the people: "My father also chastised you with whips, but I will chastise you with scorpions."

It was first sought to chastise the farmer with the whip of reciprocity, but the Democrats have succeeded in chastising him with the scorpion of free trade in farm products. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. ANSBERRY. Will the gentleman yield?

Mr. STEENERSON. If I can get some more time, I will yield.

Mr. HAUGEN. I yield to the gentleman one minute.

Mr. ANSBERRY. Would the gentleman go back to the old Payne-Aldrich law?

Mr. STEENERSON. I do not yield, Mr. Chairman. I have not the time.

Mr. ANSBERRY. I submit that the Payne-Aldrich bill——

Mr. STEENERSON. I will say, gentlemen, that you have tried your best to slander the Payne-Aldrich bill, but it will not go. You have failed to solve the problem of the high cost of living. You have failed to bring prosperity. Go and ask the newspapers that report 350,000 idle men in New York and idle men in Lost Angeles, in San Francisco, and from Portland, Oreg., to Portland, Me., and the latest news is that an army has been organized in the State of the gentleman from Ohio by Gen. Coxey that will march to Washington to give visible evidence of the deplorable lack of prosperity in the country. [Applause on the Republican side.]

Mr. HAUGEN. I yield to the gentleman from Pennsylvania [Mr. AINEY].

Mr. AINEY. Mr. Chairman, anent the subject of the President's Mexican policy, I desire to read an illuminating article upon that subject, which appeared in the Public Ledger of Philadelphia to-day, written by former major of Engineers, United States Army, Cassius E. Gillette. I ask leave to print that in the RECORD as a part of my remarks, and yield back the remainder of my time.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. AINEY] asks permission to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEVER. I yield 30 minutes to the gentleman from Alabama [Mr. HEFLIN], a member of the committee. [Applause.]

Mr. HEFLIN. Mr. Chairman, the gentleman from Minnesota [Mr. STEENERSON], who has just spoken, ventured, in a way, to defend the Payne-Aldrich tariff law. He is too wise to come out squarely for that old stand-pat Republican doctrine. Gentlemen are criticizing a law not yet six months old. It has not had time to cut the old white whiskers from the Payne-Aldrich tariff law. Gentlemen over there are not willing to give it a chance.

In order to deceive the farmer into voting the Republican ticket again they are shedding crocodile tears over an imaginary injury done the farmer in the Underwood law. O, how you fleeced the farmer when you lulled him to sleep with the soothing sirup of high protection!

Mary had a little lamb;
Its fleece was white as snow;
It followed her to Pittsburgh one day,
And look at the little thing now.

[Laughter.]

After 16 years of your protection the farmers of the country rose en masse and drove you from place and power in the country. They are tired of your protective theory; they are tired of a system of taxation which enriches one class at the expense of another.

These gentlemen would woo the farmer back into the tariff fold again. Oh, you fleeced him so long and so successfully you want to get hold of him one more time. [Laughter.] If you could get in again, you would fleece him again. A wounded Indian at the battle of the Horseshoe Bend said to the surgeon who was trying to save his life, "Cure Indian and kill him again." [Laughter.]

Politically speaking, you farmed the farmer for 16 years, but he has slipped out of your grasp at last. He refuses to longer submit in silence to your oppression. Here you are trying to deceive him again. He is too intelligent to follow you any longer. You threatened the country with a panic if we dared to take the hands of greed out of the pockets of the American people. [Applause.]

It is not six months since President Wilson signed the tariff bill, but no panic came to gratify these prophets of evil. You told the people in the South that cotton would go to 5 cents a pound just as sure as Wilson was elected President. You said, "Just as sure as you tamper with the tariff cotton will go to 5 cents a pound." We did tamper with it; we cut the claws and broke the jaws of that Republican monster, the Payne-Aldrich tariff law, and cotton sold around 12½ and 13 cents per pound. And, Mr. Speaker, cotton did not go to 5 cents per pound. You said we would have a panic if we dared to touch the banking and currency law. Puck had a good cut on that threat of yours. It had Uncle Sam standing gazing at some red letters saying, "If you dare touch the tariff you will have a panic." Uncle Sam was looking at it with an inquiring expression on his face, and he seemed to be wondering if you really believed that. After we passed the tariff law they had two red lines run through the lines that the tariff would produce a panic, and just above that was "Currency legislation" will produce a panic. We have given you a currency law and you have not produced a panic yet. [Applause.]

Mr. MADDEN. Will the gentleman yield?

Mr. HEFLIN. No; I am sorry, but my time is limited. The tariff law and the currency law both followed. Your banking and currency system was the most oppressive in the history of the Government. Both your tariff law and your currency law have been removed by a Democratic administration.

You said that we could not do that. Well, Col. Marchbanks tells about a fellow in the Confederate Army who was gagged. They found him by the path side down in the woods, gagged, and they said: "Who did that?" He said, as best he could, "Some privates." They said, "You are a lieutenant, and privates can't gag a lieutenant." He said: "Well, by gosh, they did do it." [Laughter.] So you said that we could not reduce the tariff tax and pass a banking and currency law in the interest of the people, but we did do it. [Applause.]

With war on one side of us in Mexico, the President is holding to the wise policy of "watchful waiting," because he does not want to expend millions of the people's money and sacrifice thousands of American lives. [Applause.] Big interests in this country are urging us to go to war because they have large mining interests in Mexico, because they have large ranching interests in Mexico [applause], and they want to protect their property. Widows' weeds and the cries of mothers whose sons are sacrificed in battle do not appeal to them. What care they for the wrongs and crimes? It is the dimes and dollars and dollars and dimes that interest them. [Applause.] No, gentlemen; my colleague from Alabama [Mr. DENT] said truly here the other day that no purely protective tariff bill will ever be written again in this country. If ever again, it will be after this generation of farmers are dead and after their offspring are dead. I did not expect in this Congress to see anyone on that side undertake to defend a tariff tax in the name of the farmer.

But the imposed-upon gentleman from Nebraska [Mr. SLOAN] was inveigled into the difficult task of showing how the tariff tax benefits the farmer. Every time you have given to the farmer 10 cents in tariff sop you have plucked from his purse 90 cents of hard-earned money. [Applause.] I lay down the proposition that, at all times, whenever you have benefited the farmer of this country by 10 cents on something he had to sell you have taken back from him, in what he has had to buy, 90 cents. [Applause.] That is a fine business proposition; but it is not so good for the farmer—to spend 90 cents in order to get 10 cents. So it fell to the lot of the gentleman from Nebraska to revamp and present the old argument—that it benefits the farmer to tax him on all he has to buy. Do you know how you deceived the farmer in the outset? Well, the big manufacturer flourished like a green bay tree under your tariff system. The farmer looked at that tree and said, "Something is wrong in this system." The farmer was restless, and the Republican Party, with its ear to the ground, said, "We have to get that class of people into this protection game somehow. How shall we do it?" "Why, go and tell them that you are going to lay a tax on the people for their benefit." "But he would not believe it." "Well, you keep on telling him until you believe it, and after a while he will believe it, and when he does you have got him in." [Laughter.] So they tried that process, and they deceived lots of them with it. There was a farmer out in Texas who got a little tariff tax on hides. He had a few yearlings, and because of the tariff tax he gathered up $4.32 from the hides that he sold in one year; but his taxes in tariff tax and trust profits in one year on harness, saddles, boots, and shoes was $55.70. So he paid $51.38 in order to enjoy the blessings and benefits of a tax on hides. [Applause.]

That is the way that benefits accrue to the farmer from the Republican tariff tax. But the gentleman from Nebraska is the only one who has had the gall to try the old trick and to proclaim the old threadbare and repudiated doctrine that the tariff benefits the farmer. If he could substitute the Payne-Aldrich-Smoot tariff law for the Underwood law it would be the greatest affliction that he could bring upon the farmers of his district.

But somebody on that side had to go through with the farcical performance of trying to make believe that the tariff benefits the farmer, and, Mr. Speaker, it fell to the lot of the gentleman from Nebraska. I am reminded of the fellow who had never seen a circus, but who determined to go to one. On Saturday he started into the city, and as he was going by a large brick church he heard music within. He looked up at the building and said, "This looks like a pretty good place for a circus, and I will just go in there and see it." So he went in. He went into the vestibule and he listened, and again he heard music. After a while the music died away and he heard some one talking. He opened the door just a little and listened. The preacher had just announced his text about the separation of the sheep and the goats at the last great day, and just then the preacher said, "In this congregation I wonder on that final day who will be the goat." This little fellow heard that talk about animals. The preacher repeated it in a louder voice. "I repeat, who will be the goat?" Nobody stirred or made answer, of course. The little fellow hurried down the aisle and said, "Mister, I didn't expect to take any part in this show, but rather than see it break up, by gosh, I will be the goat." [Laughter and applause.]

Mr. SLOAN. Mr. Chairman, I would like to ask the gentleman if that was one of those angora goats that are under the protected list of the Underwood-Simmons law?

Mr. HEFLIN. So, Mr. Speaker, upon the principle that the burnt child dreads the fire, the old standpatters sidestepped the invitation. The situation was serious. One by one the older ones shook their heads and folded their arms and walked away, and finally the gentleman from Nebraska said, "Well, I would rather not do this, but rather than see this show of tariff protection to the farmer break up and this farcical performance end, I will be the goat." [Laughter and applause.]

Mr. Chairman, the gentleman has said a good deal about tariff protection benefiting the farmer. It is most appropriate and fitting to answer one Republican with the statement of another Republican. The Senator from Iowa, Mr. CUMMINS, had occasion to say a word or two on this subject six months ago, and this is what he said:

> I know that my friend from North Dakota does not agree with me in respect to these things, but I do not believe that we in Iowa receive any direct benefit for the 400,000,000 bushels of corn we raise every year. I do not believe that we receive any direct benefit from the duty on 8,000,000 or 10,000,000 hogs that we market every year. I do not believe that of the $700,000,000 of agricultural products that we pour every year into the channels of trade, protection advances the price of a tithe of them. We will this year supply the people of the United States and the people of the world with a product that will surpass in value $700,000,000, and it is idle for even an enthusiast to assert that the price of these products is directly affected by the protective tariff.

[Applause.]

That statement is from a Republican Senator from Iowa, answering the gentleman from Nebraska, who proclaims to the farmer that high protection is of vast benefit to him. Let me show you what you have done to the farmer. Under your Payne-Aldrich law he could not take a hundred bushels of wheat or corn across over the line into a foreign country and exchange it for the value of that hundred bushels in machinery and bring that machinery right back to his farm without paying half the value again of the machinery to get it over the border line. That is some of your treatment of the farmer. What else under that Payne law? If the farmer owned a plantation in Canada and owned one in the United States and took his sheep over to graze in Canada and kept them over there more than three months you would not let him bring his own sheep back to his American plantation unless he paid a tax on every one of them. That is some of the evidence of your good treatment of the American farmer. The gentleman comes from out in Nebraska, close to the great old State of Kansas. Let me read to him what a Kansan said out there when you were raising money for your campaign funds:

> We have been invited to send a dollar contribution to the Republican campaign fund that is being raised by popular subscription and to which President Roosevelt recently subscribed—

This was before Roosevelt jumped off the elephant and mounted the bull moose. [Laughter.]

> We would like to have our dollar in such select company all right, but we have done all the contributing we intend to do this year. We recently have completed building a house at a cost of something over $4,000, and for every foot of lumber, every pane of glass, every sack

of cement, every pound of nails, and, in fact, for nearly every bit of material that went into it we made a good liberal contribution through the trusts that controlled them, and we guess we have done our share.

It may be treason for a Republican newspaper to talk this way, but facts are facts, and it sorter relieves our conscience to tell the truth about the trusts once in awhile. Well, just let the several trusts to which I have had to pay unwilling tribute in the past year pay our dollar for us. We need it and they do not.

[Applause.]

Now, these are some of the fruits of protection for the farmer. Why, see him as he goes out to work. Under the Payne-Aldrich law you taxed his plow and his plow stock; you taxed the singletree and the iron upon it; you taxed the trace chain, the backband and its buckle; you taxed the hames and collar, the bridle, and the plow lines. But you did not stop there.

When he took his horse out to hitch him to his one-horse wagon you had taxed the bridle that he puts on his horse then and the leather in his harness. You taxed the brads in the harness, and the buckles, and even the thread with which the harness was sewed together; and you also taxed the tires on the wagon. You taxed every rod and bar in that wagon; you taxed the wood taken from the forest where God Almighty intended trees to grow to furnish lumber for man's use and benefit and to build houses to shelter him. That is what you did. Now, you are the pretended friend of the farmer, and you boast of prosperity that you have given him. I am reminded of another story: An old fellow had the rheumatism and he could not get around very well, and so he stayed at home. Finally a peddler came along and told him that if he would put bees on his legs and let them sting him that it would cure him. He tried that remedy. They applied bees, and that old fellow ranted and yelled and said he was worse off than ever. One day a friend came and said, "Uncle Jake, John Jones is coming here to preach and you must come and hear him; you used to know him in the old days." He said, "I would like to hear John Jones, but, to tell you the fact, I am a miserable man and I do not like to go anywhere at all and talk and be talked to." Well, finally they got him to agree to go, and he went and took a seat back in the rear, where he would not be disturbed. The old fellow sat down with his stick and crutch by his side. The preacher began by saying: "It has been a long time since I was here. I see a lot of people that I know. Providence must have been exceedingly good to you all. I want to ask you," speaking to a merchant there, "I knew you in the years gone by. What has Providence done for you?" The merchant stood up and said: "Well, Providence has been exceedingly good to me. I have sold a lot of goods this year. I have got a good line of customers, and they all pay me well," and he sat down. "Good," said the preacher. "Doctor," he said, "what has Providence done for you?" "Well, I have a good line of patients, who pay me well, and Providence has been good to me." "Good," said the preacher. "Now," he said to the lawyer, "what has Providence done for you?" The lawyer said: "Providence has been very good to me; I have had a good many cases, and have been very successful in them." "Yes," said the preacher, "that is good." Then he said, pointing to the old farmer sitting back: "You old fellow, sitting back there all humped up, what has Providence done for you?" The old fellow, gritting his teeth, struggled to his feet and said: "Parson, he's durn nigh ruint me." [Laughter and applause.] That is what you have done to the farmers of this country. [Applause.] Let me tell you another thing. You built a tariff house on the roadside and you put an ear of corn by the side of the door and a shock of wheat and a bundle of oats and you wrote the words, "Protection for farm products; come in." And deceived by your sign the farmer went in, and what happened to him? You have read about the fellow who went to Jericho and fell into the hands of robbers. That is what happened to the farmers in the house of Republican protection. You said to him, "Do you want to buy a watch?" and he said, "Yes; I would like to have a watch." "All right; here is one we will sell you for $40." "All right." He took it and went to his home. And when he got home his wife commenced to read the catalogue about watches and other things, and she said: "John, do you know that the watch they sold to you for $40 they sell abroad for $15, the very same watch, made by the same company and shipped over land and sea thousands of miles? They sell it to the foreigner, competing with him in a foreign country, for $15, $25 cheaper than they have sold it to you, who support your Government, and are compelled in time of war to bear arms in its defense." This is some of your beneficent treatment of the American farmer.

Well, in this house of protection they said to the farmer, "Don't you want to buy a sewing machine?" "Yes; I need a machine." "All right, Uncle Johnnie; we will sell you a machine for $15." And he bought it. When he went home, his wife said: "John, that machine that you paid $15 for they sell in Europe for $7.50. They pay the freight over thousands of miles and sell it in successful competition with the pauper labor of Europe." That is the character of friendship that you exhibit for the American farmer. That is the fruit of the tree of high protection, and "By their fruits ye shall know them." [Applause.]

What else did you do? The farmer said: "I want some agricultural implements and some machinery to use on the farm." "All right; we will sell to you this machinery for $100." He goes home, and his wife says: "Don't you know that they are selling that machinery abroad for $50?" He said: "No; I did not know that. I guess they are treating me that way to show their friendship for me." [Laughter.]

Yes; all that shows your friendship for the farmer. Everything that you manufactured that he needed you sold abroad, under the Payne law, cheaper than you sold it to him in the home land. That is the fruit of high protection.

What else do you do to him in this House of protection? He says, "I am going to build me a barn," and then what do you do? Why, you tax every foot of lumber he puts in the barn to house the produce that he digs from the soil, and you tax every rod and bar and bolt and nail that he puts into that building. What then? You even tax the hinges he puts on the door, and the lock and the key which he uses to prevent thieves from breaking through to steal. [Applause.]

These, Mr. Chairman, are some of the fruits of high protection. But you do not stop there. As this Kansas editor said, for every pane of glass, for every foot of lumber, for everything he uses in building his dwelling house you tax him. You tax the window curtain in his house. You tax the towel that hangs upon the nail by the side of the water bucket on the veranda. You tax everything. And when a child is born unto him you tax the swaddling clothes of the infant of the farmer. You tax his wearing apparel up to youthhood and manhood. You tax all he wears on through life. You do not stop there. You tax the winding sheet of the farmer's dead. And you do not stop there. You taxed the tombstone that stood over his resting place—all this as an evidence of your lasting friendship for the farmer. [Applause and laughter on the Democratic side.]

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. HEFLIN. Mr. Chairman, I would like if the gentleman would yield me five minutes more.

Mr. LEVER. I yield five minutes more to the gentleman from Alabama [Mr. HEFLIN].

Mr. HEFLIN. I have some statistics and other matter here that I will include in my remarks, but I will not have time to refer to them now.

The gentleman hints at hard times. Why, Republican newspapers have said that our export trade has been greater than last year. A Republican paper in Pennsylvania says that the gross earnings of railroads month by month, from February last year to November last year, were greater than the year before. Traffic has not been so great on steamboats and railroads as since Woodrow Wilson went into the White House and we took complete control of the Congress of the United States. [Applause.]

In conclusion, gentlemen, I want to appeal to your patriotism. You stop this political whining about hard times that do not exist. You know that we performed a surgical operation on a mighty sick patient last year—a patient that has needed attention for a long time. The operation was successful, and the patient is feeling fine. He is sorry that he ever fell into your hands and grieved that you ever took him to your hospital. [Laughter and applause.]

Now, the gentleman from Nebraska [Mr. SLOAN] has not been here long. He comes here pleading for a high protective tariff for the farmer, when that old doctrine is dead, dead. The farmers laugh at your performance up here when you talk about protecting them by taxing them. The gentleman is not representing the farmers in this plea. Rip Van Winkle slept for 20 years, and when he went back to the little village of Falling Water everybody he knew before had moved away. And I want to say to the gentleman from Nebraska that the farmers who once lived on the old reservation of high protection have all moved away. They are now occupying the high ground where open markets and competitive buying fix prices. [Applause on the Democratic side.] This talk of protecting the farmer when we are sending our produce to compete in the markets of the earth is the sheerest rot, and, gentlemen, you can not deceive the farmer any longer. The American people have great confidence in President Wilson, the great leader of our party. They are coming more and more to believe in the Democratic Party. It has kept the faith and is fulfilling its pledges to the American people. [Applause.]

Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to print some statements here.

Senator MORRIS SHEPPARD, of Texas, said, September, 1913:

The Republican Party has secured the support of the farmer for the protective system by the maintenance of these agricultural duties and has made him the instrument of his own spoliation. The high duties placed by the Republicans on manufactured goods not only compel the farmer to buy his supplies in a domestic market dominated by combination and monopoly, while he must sell his own product in competition with the world, in spite of the meaningless duties on the insignificant volume of competing imports, but also impedes the sale of his surplus abroad, by reason of the high rates levied by other countries against all American products in retaliation against our own exorbitant tariff charges. Thus the farmer is fundamentally outraged by the Republican protective tariff. In view of these conditions, what could be more amusing than the spectacle of Republican Senators weeping for the farmer whom Republican tariffs have robbed for 50 years? What really grieves them is not the removal of these deceptive duties from the farmers' goods, but the fact that the Democratic tariff bill will enable the farmer to see that his pretended friends are his enemies and his exploiters. If this bill does no more than demonstrate the true character of most agricultural tariffs with which protection for manufacturers has been so cunningly buttressed, if it does no more than reveal to the farmer the protective conspiracy against him, it will have justified its enactment a thousand times over.

A recent investigation by the Department of Agriculture developed the fact that the farmer receives on the average only 50 or 60 per cent of the prices paid for his product by consumers in the towns and cities. Already the new Democratic Secretary of Agriculture has begun a comprehensive study of marketing conditions to the end that the farmer may obtain a larger share of the price paid for his product by the final consumers and that through the elimination of unnecessary expense and unfair handling charges the consumer may obtain a better article at a lower price.

Hon. OLLIE M. JAMES, of Kentucky, who led the fight for free sugar, said September 8, 1913:

Mr. President, as the Senator from Arkansas [Mr. CLARKE] said in the Democratic conference, sugar production in Louisiana has been civilized out of existence. Unless you will do away with your antiquated machinery, unless you will supplant with modern machinery for sugar manufacture those old, open-kettle mills, you can not hope to compete with the world. Sugar is produced in Cuba for 2 cents a pound. It is produced in Java for a cent and a half a pound. It is produced in Hawaii for about 2 cents a pound. It is produced in Porto Rico at about the same figure. How much does it cost in Louisiana? It costs 3½ cents a pound to produce it. Why? Because the sucrose matter of the sugar cane of Louisiana is but 6 or 7 per cent, while the sucrose matter of the sugar cane of Cuba is from 11 to 14 per cent. What you want is a tariff that will make the sucrose matter of your sugar cane, which is only 6 or 7 per cent, bring as much as the sucrose matter of the sugar cane of Cuba brings, which is from 11 to 14 per cent. What the Senator from Louisiana wants is not a tariff that will equalize the cost of production, but one that will equalize the amount of the sucrose matter in the cane of Louisiana with that of the cane of Cuba. And why does that difference exist? In Cuba the cane has to be planted only once in every 10 years. In Louisiana it has to be planted once every year. Why? They have to cut the cane early in Louisiana, because they fear the frost. They do not have to do that in Cuba. What the Senator desires is that we shall write upon the statute book of this land a tax which shall be paid by the people who consume sugar, so as to make sugar-cane growing as profitable in a temperate climate as it is in a tropical climate. Nature itself has decreed, and its decree is beyond the effect of all law, that sugar is more easily and cheaply produced in tropical climates than in temperate climates. I am unwilling to deny the sugar-consuming millions of America the natural advantages that God gave to the soil of the world in the cheapness in the production of sugar. God Himself made Cuba, as He made Louisiana. He made Cuba a tropical climate, where the production of sugar is indigenous to its soil. The production of sugar in Louisiana is not indigenous to the soil to the same extent that it is in Cuba. That is the trouble in Louisiana. They have to cut their cane early for fear of frost. In Cuba it is allowed to stand, and the sugar content in the cane is greater. I am unwilling, Mr. President, to make the sugar consumers of my country pay a protective tariff on sugar that is produced in a tropical climate as it comes in competition with sugar produced in a temperate climate.

But let us see further. My friend spoke of Thomas Jefferson. He spoke of him kindly. I am glad to hear that whatever may have been the waywardness of my friend from the highway of the old party of Democracy, he still has a hankering after Thomas Jefferson. [Laughter.] He tells us that Jefferson would have said practically that a tariff upon sugar was a proper tariff. Mr. President, I only know what Jefferson would have said, and here is what he did say: "Taxes upon consumption, like those upon capital or income, to be just must be uniform. I do not mean to say that it may not be for the general interest to foster for a while certain infant manufactures until they are strong enough to stand against foreign rivals, but when evident that they will never be so it is against right to make the other branches of industry support them."

But I desire to call my friend's attention to the fact that President McKinley, too, said something upon sugar. Here is what he said in a speech in the House of Representatives:

"Last year we paid $55,000,000 out of our pockets to protect whom? To protect the men in the United States who were producing just one-eighth of the amount of the consumption of our sugar. Now we wipe this out, and it will cost us to pay the bounty $7,000,000 every 12 months, which furnishes the same protection at a very much less cost to the consumers. So we save $48,000,000 every year and leave this in the pockets of the people. Sir, when we lift from the American people the vast sum of $48,000,000 of taxes, they can put up every 12 months 48,000 houses costing $1,000 apiece."

So, in the language of the lamented and departed McKinley, I say to-night that we want to lift from the backs of the consumers of America, not $55,000,000, but $140,000,000, and that vast sum saved to them will give them an opportunity to erect 140,000 houses that cost $1,000 each.

HOW A HIGH PROTECTIVE TARIFF IS EATING UP THE FARMERS.

[By Daniel W. Voorhees, of Indiana.]

It is not possible that the fraudulent and monstrous policy of taxing the farmer into poverty in order to make another class of people nabobs and millionaires can much longer delude and mislead anyone fit to manage his own affairs and have the care of a family. The farmers of the United States sell abroad and feed the world. Every pretense of protection for their home markets is a fraud; every duty laid on such articles as wheat, corn, cattle, horses, eggs, poultry, and other like productions of farm life and farm labor is a cheat and a sham, and is so intended.

One-third of his time the American farmer is a toiling serf for the payment not of revenue to his Government, but of naked tribute to those who are protected in charging him from 25 to 100 per cent more than it is worth on every article his wants compel him to buy.

Under the old Payne law the farmer, the householder, the consumer in general paid tariff duties upon articles which he consumed at the following rates:

| | Per cent. |
|---|---|
| Glassware | 60 |
| Knives and forks | 50 |
| Salt | 104 |
| Sugar | 63 |
| Rice | 65 |
| Cutlery | 65 |
| Carpets | 66 |
| Furniture | 96 |
| Blankets | 93 to 140 |
| Flannels | 91 |
| Ready-made clothing | 65 |
| Knitted goods | 95 |
| Shawls | 96 |
| Window glass | 80 |
| Files | 68 |
| Building stone | 50 |
| Iron chain | 183 |
| Machinery | 45 |
| Screws | 128 |
| Women's clothing | 74 to 92 |
| Men's clothing | 78 |
| Cotton goods | 60 |
| Woolen goods | 87 |

In the Underwood bill the duties on all these articles are either removed entirely or are reduced from 33⅓ to 50 per cent. In some instances the reductions are as high as 75 per cent.

The Underwood bill has exposed the humbug and fraud which the Republican Party has imposed upon the farmers for half a century.

Here is a part of the minority report of the Ways and Means Committee in 1909:

There are articles left in the bill on which the rates are as prohibitive as under the Dingley law, allowing very little of importations, raising practically no revenue, and barring out competition. Notable among these are rivets, screws, fence and other wire rods, axles and axle bars, blacksmith's hammers, sledges, track tools, wedges, crowbars, bolt blanks, cast-iron vessels, stove plate, sadirons, muskets, shotguns, rifles, nails, spikes, tacks, needles, steel plates (engraved), stereotype plates, electrotype plates, hooks and eyes, and many other articles named in the schedule.

Again, under Schedule G, the minority view says:

The treatment of the farmer by this bill is along the same lines as have characterized Republican methods in the past. He gets practically no relief, and the laborer and producer have greater burdens imposed upon them. The cost of living for the average man is increased; the advantage of wealth and power is also increased. Heavy taxes are laid on tea, coffee, and substitutes for coffee, which, with cocoa, butter, mustard, pepper, cinnamon, and all sorts of flavors for food, are declared to be luxuries, while figs, lemons, etc., are raised in price without hope of increasing the revenue, etc. Every article of food the laborer must have to live comfortably is heavily taxed; even the salt on his table is not exempt. This schedule was evidently prepared by the same mind which has dominated this bill—a mind certainly not unfriendly to the great trusts.

Mr. STEENERSON. Mr. Chairman, I ask leave to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Minnesota [Mr. STEENERSON] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Alabama [Mr. HEFLIN] yields back one minute.

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from New York [Mr. PLATT].

The CHAIRMAN. The gentleman from New York [Mr. PLATT] is recognized.

Mr. PLATT. Mr. Chairman, I wish I had the eloquence of my eloquent friend from Alabama [Mr. HEFLIN]. I would like to be able to make a speech like that he has just finished, but I would not like to have my ability and eloquence lead me to such utter and absolute disregard of the facts as was shown by the gentleman from Alabama.

I noticed that in speaking of the farmers he did not say a word about the ruin of the farmers of Louisiana who raise sugar. I noticed he did say that a farmer could not take 100 bushels of wheat and go over to Canada and get machinery for it without paying over again half the value of that machinery in duties. Now, as a matter of fact we make all the agricultural machinery used in Canada in this country, or it is made by our companies. I have the honor to represent a district which has in it one of the largest agricultural-machinery factories in the country, and during the consideration of the Underwood bill the owners of that factory did not say a word to me about the tariff. They are perfectly willing to have free trade. They manufacture for export largely. That is how much there is in that farm-machinery talk. The farmer got no benefit from free farm machinery.

Whether protection is right or wrong, everybody knows that the farmers of this country believe in it, and they voted against President Taft because they thought his Canadian reciprocity treaty was going to deprive them of a part of the protection which they had enjoyed; and I think there was some reason in that, because to a certain extent the farmers' market would have been affected. But if reciprocity had gone into effect, the farmers in the United States would have gotten something back in return from Canada, whereas now, under the present tariff bill, the farmers are getting nothing back.

The gentleman from Alabama said that the Democratic Party had passed a currency bill without producing a panic. I want to say that, in order to make that bill panic proof, they had to tack onto it a Republican measure, fathered by Senator Aldrich himself, namely, the Vreeland-Aldrich Act. [Laughter and applause on the Republican side.]

Mr. LEVER. Mr. Chairman, I yield one minute to the gentleman from New Jersey [Mr. TOWNSEND].

Mr. TOWNSEND. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from New Jersey [Mr. TOWNSEND] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. HEFLIN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. LEVER. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois [Mr. WILLIAMS].

The CHAIRMAN. The gentleman from Illinois [Mr. WILLIAMS] is recognized for 10 minutes.

Mr. WILLIAMS. Mr. Chairman, I thank the chairman of the Committee on Agriculture for the opportunity he has given me to address myself to this very important bill. I feel that as a representative of Illinois, one of the greatest, if not the greatest, agricultural States in the Union, I am entitled to be heard, and possibly I have some facts that may be of value.

I not only represent the greatest of all agricultural States, but am directly interested in agriculture. My entire youth was spent on an Illinois farm, and it has been my good fortune to acquire some Illinois lands, which it is a pleasure as well as a profit to manage and operate as a side line to the legal profession. Except for a short interval between the time when I left the farm and took up the law as a profession and the time when I became interested as owner in farm property, I have from infancy been directly interested in and a close student of agriculture and feel qualified to speak upon this subject.

I approve of this legislation. I agree with what was said in the opening speech by the chairman of the committee, that sufficient attention has not heretofore been given to the agricultural interests of this country by Congress, and that the recognition has not been given to this great industry that its importance deserves.

It is only a few weeks ago—two or three weeks ago—that I heard a very remarkable statement made on the floor of this House by a gentleman who is not present, the gentleman from Michigan [Mr. FORDNEY]. It is not my purpose to make a tariff speech, but in connection with my remarks I desire to refer briefly to what he said. He was decrying the fact that the Democratic tariff had ruined the farmer; and, speaking as the Representative of a border State, he took the position that we had opened the markets of our country to the products of Canada, and that we had ruined the home market, and incidentally had struck a fatal blow to the farmer. He quoted with a great deal of relish the importation of oats from Canada since the present tariff law went into operation. I asked him this question—I quote it from the RECORD:

What was the price of oats in October and November, 1912, and what was the price in October and November, 1913?

Those were the months that he was using in comparing the importations of 1912 with the importations of 1913; and here is his remarkable answer, and to my surprise it appeared in the RECORD as he stated it:

Oats were 14 cents per bushel lower in 1913 than they were in 1912.

That stands in the RECORD to-day as the statement of the gentleman from Michigan, that oats in October and November, 1913, under the present tariff law, were 14 cents per bushel lower in the market than they were the year before, under a protective tariff.

I went to the pains of securing from the Department of Agriculture the facts and data with regard to prices, and here are the figures furnished me by that department:

*Oats.*

| | Cents. |
|---|---|
| Nov. 1, 1912 | 33½ |
| Nov. 1, 1913 | 42 to 42½ |
| Nov. 8, 1912 | 33½ |
| Nov. 8, 1913 | 42½ |
| Nov. 15, 1912 | 32 |
| Nov. 15, 1913 | 71½ to 71½ |
| Nov. 22, 1912 | 32½ |
| Nov. 22, 1913 | 41½ |

Oats were 10 cents a bushel higher under the present tariff law than they were under the preceding tariff law, and yet the statement stands unverified in this RECORD by the gentleman from Michigan that oats were 14 cents a bushel lower in 1913 than they were in 1912.

I also took the pains to secure the corn prices for the same months and on the same dates:

*Corn.*

| | Cents. |
|---|---|
| Nov. 1, 1912 | 50½ |
| Nov. 1, 1913 | 70 |
| Nov. 8, 1912 | 49½ |
| Nov. 8, 1913 | 70½ to 70½ |
| Nov. 15, 1912 | 47½ |
| Nov. 15, 1913 | 71½ to 71½ |
| Nov. 22, 1912 | 48 |
| Nov. 22, 1913 | 70½ |

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. WILLIAMS. Yes.

Mr. SLOAN. Has the gentleman examined the prices of corn in November and December of 1913 and in January and February of this year?

Mr. WILLIAMS. I have; and I want to say to the gentleman that in a home paper which I received last week there was the report of a large public sale in my county, one of the corn-producing counties of Illinois, and corn sold at that sale, two weeks ago, in the crib, at 81 cents per bushel. [Applause on the Democratic side.] That is the local price in the greatest corn-producing State—Illinois. [Applause on the Democratic side.]

Mr. SLOAN. Has the gentleman examined the public market reports? I have examined them myself, and I wondered whether the gentleman's information corresponded with mine.

Mr. WILLIAMS. I have; and I find that the price last week was about the same as it was in October and November. [Applause on the Democratic side.]

I have some data here, Mr. Chairman, with regard to the valuation of farm products, to which I desire to call attention by way of impressing upon the committee the importance of legislation favorable to agriculture.

Figures were given here to-day as to the amount of corn, oats, cotton, and other farm products in the year 1909, as shown by the census of 1910. I do not know whether it has been given or not, but I have the valuation of these same products for that year, the market price applied to the amount of production. Eleven of the leading crops in 1909 showed a total aggregate value of $4,813,280,000, or approximately 90 per cent of the total value of all the crops of the United States, which amounted to $5,487,161,000. The farm products in one year, five years ago, amounted to the enormous sum of $5,500,000,000. Of these leading crops corn was the most valuable, followed by hay, forage, cotton, wheat, oats, vegetables, potatoes, tobacco, barley, and apples in the order named. The value of the corn crop alone was $1,438,554,000. Cotton came second, its value being $703,619,000; wheat third, $657,657,000; vegetables, $216,257,000; tobacco, $104,304,000.

I said I represented one of the largest, if not the largest, agricultural State in the Union. Perhaps I represent a greater agricultural interest here than any other Member of this body. Representing the State of Illinois at large, with two Members at large, and apportioning to myself one-half of the population of 6,000,000, I properly speak here for 3,000,000 people, largely engaged in agriculture.

The relative rank of the first nine States in regard to value of crops showed that Illinois led with a total valuation for all farm crops of $372,000,000; Iowa was second with $315,000,000; Texas third with $298,000,000, followed by Ohio with $230,000,000; Georgia, $227,000,000; Missouri, $221,000,000; Kansas, $215,000,000; New York, $209,000,000; and Indiana, $204,000,000.

The State of Illinois ranked first in its production of corn, followed by Iowa and Missouri in the order named, and first in the production of oats.

Now, Mr. Chairman, it would seem to be conceded by all members of the committee that agriculture is the first, the

prime, and the greatest industry, the one upon which we must all rely. This bill, as I understand it, carries with it a total appropriation of about $18,000,000. Compared with the appropriation bills which have been and will be reported to this Congress, it is a very trivial amount, indeed, for the greatest industry in the country.

It carries with it appropriations for the maintenance and operation of a Weather Bureau, Bureau of Animal Industry, Bureau of Plant Industry, Bureau of Soils, Bureau of Entomology (plant insects), experiment stations, and miscellaneous appropriations for numerous branches of the Department of Agriculture, all designed and intended to afford to the farmer extensive and valuable information which he could not otherwise obtain except at great individual outlay. I have found a great demand among the farmers of Illinois for farmers' bulletins and am impressed with the readiness and avidity with which farmers read these publications and profit by them. This is a day and era of progress in every branch of industry and undertaking, and I find the farmers as ready to seize upon and avail themselves of new and advanced methods in agriculture as enterprising and progressive as any other class of citizens, and none appreciate the aid afforded them by the Government more than this great body of our citizens. I find our farmers gladly avail themselves of the distribution of seeds and ready to utilize to the fullest advantage the benefits flowing from the distribution and exchange of seeds throughout the various sections of the country. Scientific farming is materially aided by the investigations conducted by the Government through its Agricultural Department and the dissemination of information derived through its various experiment stations and other branches.

One of the purposes and objects of this bill is to make farm life not only more remunerative but more interesting and attractive to people who plow the fields and produce the foodstuffs for the millions engaged in other enterprises. Much has been said in this debate about young men leaving the farm and going to the cities, and we read in the papers the cry, "Back to the farm." Farm life is becoming more attractive than in former years. Improved facilities, labor-saving machinery, together with rural mails and the telephone and interurban roads, are fast improving conditions on the farm and rendering farm life more endurable than in years gone by. When I was a boy it was my mission to go 2 miles to the country post office once, and then later twice, a week for the mail. At that home is today delivered by the rural mail carrier the daily paper and other mail, and the telephone connecting with the neighbors and near-by towns; and certain it is that existence there is much more to be desired than it was when, astride bare back, it was my mission to carry the weekly mail for the one household. I feel that it is a part of the functions of government, and a duty Congress owes the people, in the liberal and sometimes reckless expenditure of the people's money, to devote some of it toward the betterment of conditions among those who till the fields and produce the necessities of life for a great, growing, and prosperous people largely concentrated in urban centers.

There prevails in my section of the country—Indiana, Illinois, Iowa, Missouri, and other States in that region—a terrible disease or pestilence—the hog cholera—which destroys annually millions of dollars in value of hogs. It was a pleasure to me to vote here recently for an appropriation made with a view to stamping out that most terrible disease. That appropriation was a just recognition of a great industry. I favor appropriations which will bring into play the facilities of this great Government and the learning of its experts to stamp out such diseases as hog cholera, the cattle tick, scab among sheep, and similar enemies of farm products. I favor all such appropriations as a legitimate, honest, and necessary expenditure of the public money, and I stand ready to support this bill with all my might, and only wish that this committee, in the exercise of wisdom as well as economy, had seen fit to make more liberal appropriations for the very many necessary requirements of agriculture in order that this great interest might be further promoted. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. I yield to the gentleman from Nebraska [Mr. SLOAN].

Mr. SLOAN. In these discussions, Mr. Chairman, I desire to stick as closely as possible to facts, and for that reason I shall answer the gentleman from Alabama [Mr. HEFLIN] when I have ascertained certain facts which I think exist.

In answer to the gentleman of the great agricultural State of Illinois [Mr. WILLIAMS], I hold in my hand the greatest paper published in that great State. Referring to the greatest product of that great State, the last quotation that I have before me is that of February 28, which shows that on that date corn No. 4 was valued at 59½ to 60 cents; No. 3 white, 63 cents; and so it ranges as the present price, which seems to be a better authority than that quoted by the gentleman.

Mr. WILLIAMS. Will the gentleman yield?

Mr. SLOAN. In a moment. I do not believe that the farmers of the great State of Illinois represented by the gentleman [Mr. WILLIAMS], raising, as they do, corn, wheat, oats, and meats, should be placed in open competition with Canada, Australia, and the Argentine Republic, while the rice, the mica, the tobacco, and the peanuts of the South are richly protected. And as to protection, I want to appeal to the greatest authority in the gentleman's party, the President of the United States, who believes in it so thoroughly that he saw to it that 80 per cent of the products of his own State of New Jersey were kept upon the protected list.

Mr. WILLIAMS. Did the gentleman give the quotation for No. 2 corn?

Mr. SLOAN. No. 2 is probably here. I suppose it is here. It is cash corn. I can give the gentleman the quotation for May. May corn is only 67.

Mr. WILLIAMS. We want the February quotations.

Mr. SLOAN. I do not see any No. 2 quoted here; but it is probably here, and probably is somewhere around 64.

Mr. WILLIAMS. There is a material difference in the price of corn this year and a year ago, also of oats. How does the gentleman account for that, in view of this very destructive tariff that he talks about?

Mr. SLOAN. The comparison is not between what it is now and what it was a year ago, but the course of prices as they run from the 4th day of October last up to the present time, since which over 6,000,000 bushels of corn have been shipped in open competition with the corn of this country, and driven the price down from 10 to 15 cents a bushel.

Mr. WILLIAMS. Why is the price of corn and oats higher now than it was a year ago?

Mr. SLOAN. I do not know; I know why they have gone down in the last four months—on account of the competition of the multiplied millions of bushels of corn and oats that have come in from other countries.

Mr. WILLIAMS. A year ago we had a protective tariff, and notwithstanding that fact corn and oats are higher by 10 or 15 cents than they were a year ago. [Applause on the Democratic side.]

Mr. PLATT. I want to say that proves conclusively that the Democratic Party has failed to reduce the cost of living. [Laughter.]

Mr. SLOAN. I do not know which horn of the dilemma the Democratic Party is going to take.

Mr. BOOHER. Will the gentleman yield?

Mr. SLOAN. If I have time.

Mr. BOOHER. Under what administration, under what tariff law, was it that you burned corn in Nebraska because it was cheaper than coal?

Mr. SLOAN. It was under Grover Cleveland's second administration that we burned corn in Nebraska because it was cheaper than coal.

Mr. BOOHER. The gentleman did not live in Nebraska at that time. It was in 1882 and 1883, before Cleveland's first administration, as I remember, and under a Republican tariff law.

Mr. SLOAN. I want to say to the gentleman that I did live in Nebraska during the second administration, and that was when we burned corn, and I know that to be a fact. My colleague at my side knows it to be true, too.

Mr. BOOHER. I think you burned in it in 1882 and 1883, too.

Mr. SLOAN. We suffered at the hands of the Democratic Party, whether it was under the first or second administration of Grover Cleveland, and we will continue to suffer during the rest of the Democratic administration, under which our prices are going down and men are out of employment.

Mr. ADAIR. Then, let me say, you are likely to suffer for a good many years, because the Democratic Party is going to stay in power. [Laughter.]

Mr. SLOAN. I want to tell you, my friend, that from that chair to-day your President made it certain that we will not have to suffer more than three years. Because when he repudiated one of the great planks of his platform, giving no reason for it, only the fact that he was in a hole and asked Congress to pull him out, he settled that question. He may be as effective with the other platform plank that has been debated, whether or not there should be a second term attempted, that other plank that for a long time it has been lese majesty to mention at the

White House and high treason to question at the Department of State.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. Mr. Chairman, I yield five minutes to the gentleman from Missouri [Mr. BOOHER].

Mr. BOOHER. Mr. Chairman, I am not going to discuss the burning of corn in Nebraska because it was cheaper than coal.

The people of Nebraska and Kansas suffered for some years from the most severe drought that ever afflicted the country. They had so much corn in some years that it was cheaper than coal and they burned it. Then talk about the tariff law making the prices! [Applause on the Democratic side.]

I am going to read some figures from the gentleman's own speech given the other day on the floor to convince him that the tariff has nothing to do with the importations of goods into the country. Here are the figures he gave you in the speech: In 1897, the last full year of the Wilson tariff bill, the value of the importations under Schedule A, the chemical schedule, was, in round numbers, $19,000,000. In 1911, under the Payne-Aldrich bill, the value of the importations was $48,000,000, more than three times the value of the importations under the Payne-Aldrich bill than under the Wilson bill. Now, did the Payne tariff bill bring about that large importation under the chemical schedule? No; it was the demand of the people for goods, and they got them notwithstanding the high tariff.

Now, take the metal schedule. In 1897 the value of the importations was $23,000,000. In 1911 the value was $58,000,000 under the Payne-Aldrich bill. Did the tariff bring about this large importation; did it destroy the industries of the country? No; the demand of the people required the importations and they got them, and you made them pay twice the tariff tax on them that they ought to have paid.

Take Schedule D, the wood schedule. The value of the importations in 1897, according to the tables that the gentleman furnished, amounted to one and a half million dollars. In 1911 it was $24,000,000, tariff under the Payne law.

Mr. HENSLEY. More imported under a high tariff?

Mr. BOOHER. Yes. Yet the gentleman says that under the present tariff law the manufacturing industries of this country are going to be ruined, because the importations are so great, when under the last low-tariff bill we had in this country the importations were not nearly so great as under the Payne tariff law.

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

Mr. BOOHER. Yes.

Mr. SLOAN. I beg the gentleman's pardon, but I was making no defense of the manufactured article. You have taken good care of the manufactured articles of the East and the South. My complaint in that speech is that you have placed the products of the farm upon the free list.

Mr. BOOHER. Let us see. The gentleman gave us in a schedule the farm importations. He tells us that under Schedule G, agriculture, under the last year of the Wilson bill, the following, in round numbers, was the importation, namely, $33,000,000. In 1911 the value of agricultural imports was $105,000,000, and that under the Payne-Aldrich tariff bill. What were you doing for the farmer? Did you protect him? Not in proportion as you protected every other industry. Under the Wilson tariff bill how was agriculture protected? Will the gentleman answer that? What was the change between the Wilson tariff bill in respect to agriculture and the Payne-Aldrich tariff bill?

Mr. SLOAN. Under the Wilson bill the agricultural products were largely on the free list.

Mr. BOOHER. If that is true, then the lower the tariff upon every manufactured article and farmer's products the less importation there will be, and the greater the importation will be under a high protective tariff. Why, the gentleman simply got his wires crossed, that is all.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. LEVER. Mr. Chairman, I yield the gentleman two minutes more.

Mr. BOOHER. Mr. Chairman, take wood and wood pulp. These figures which the gentleman placed in the RECORD are interesting. I believe they are correct—they are, at least, for my purpose. Under the wood and pulp schedule under the last year of the Wilson bill, 1897, the value of the importation was $5,000,000, and under the Payne-Aldrich bill it was $25,000,000. Whom are you protecting? The great trouble with the high protectionist is that he had an eye for one thing and but one purpose, and that was for the benefit of the manufacturing industries of the country, and they fooled the farmer by putting a pretended tariff upon his products; and it did not do him one particle of good, and they know it. [Applause on the Democratic side.] My friend, Mr. FORDNEY, of Michigan, the other day stood here and bewailed the fact that the price of potatoes up in Michigan was 43 cents a bushel, and the price had been ruined, he said, because there had been so many potatoes imported from Canada. Why, the very day he made that speech potatoes were selling at 90 cents a bushel in my home town. When we get to the bottom of this whole thing you have got to get back at last to the law of supply and demand, and that will fix the price of the farmer's products, as it ought to fix the price of the manufactured products. When you get away from that you are getting into the realms of speculation, and when you begin to speculate on the farmer's product and put him alongside of the manufactured industry of this country and say that you are protecting him as you are the manufactured products, look at the figures you give yourself on your own importations and you will find your pretended protection of the farmer is a fraud. The farmer has at last seen that; he has awakened to the fact that protection that protects the manufacturer is a tax on the farmer. [Applause on the Democratic side.]

The CHAIRMAN. The time of the gentleman from Missouri has again expired.

Mr. HAUGEN. Mr. Chairman, I yield two minutes to the gentleman from Nebraska [Mr. SLOAN].

Mr. SLOAN. Mr. Chairman, in answer to the conclusion of my genial friend from Missouri that the importations were not increased by reason of reduction or the removal of the duties, I want to call his attention to the fact that the Ways and Means Committee in each case made a prediction as to the amount of importations that would probably follow during the 12 months following the passage of the law, and I want to treat of five different articles that the gentleman and his State are largely interested in.

Mr. BOOHER. Just one moment. Is the gentleman going to give us the predictions or give us figures from statistics?

Mr. SLOAN. I am going to give statistics, but I am going to quote the predictions from his leader.

Mr. BOOHER. Under what law?

Mr. SLOAN. The gentleman's party law—the party with which he is affiliated and in which he is in good standing.

Mr. BOOHER. Oh, I am in pretty good standing.

Mr. SLOAN. In the matter of cattle the prediction for the year was $5,000,000 worth. The actual importation in four months following the passage of the Underwood bill was $10,000,000, so that the importations would be $30,000,000 during the year instead of $5,000,000, as predicted, which $5,000,000 was greater than the importations under the last year of the old tariff act. The same is true with regard to horses. The prediction was $612,000, and that was a large increase over the last year's importation. For four months the actual statistics show that the amount of importations was $993,000. In other words, 50 per cent in four months more than was predicted would come in in a whole year. In the matter of oats the prediction was $945,000, and the actual importations for four months were $5,628,405.

Mr. BOOHER. Mr. Chairman, will the gentleman give me those figures again?

Mr. SLOAN. They are right there before the gentleman.

Mr. BOOHER. But I want to take them from the RECORD and see how they compare.

Mr. SLOAN. They are right in there.

Mr. BOOHER. No; the gentleman stated some figures, and I want to take them down.

Mr. SLOAN. Mr. Chairman, I do not propose to repeat this unless my time is extended. The gentleman can find the table on page 4231 of the RECORD.

Mr. BOOHER. Mr. Chairman——

Mr. SLOAN. I can not yield. I want to finish this one point——

The CHAIRMAN. The time of the gentleman has again expired.

Mr. HAUGEN. Mr. Chairman, I yield the gentleman one minute more.

Mr. SLOAN. If, as a matter of fact, the importation of all these farm products is not increased, I would like to hear some intelligent reason from the other side why the duties were removed, when, as a matter of fact, Schedule G, or the farmers' product schedule, was one of the best competitive tariff schedules we had in the whole list. The farmers were fairly protected; no duty on any farm product was prohibitive. But in order to bring about this increased importation they have sacrificed from fifteen to twenty million dollars per year out of the National Treasury; and if as a matter of fact we did not reduce prices of the products of the farm, what was the purpose of the legislation?

Mr. STEENERSON. To reduce the cost of living.

Mr. SLOAN. To reduce the cost of living! If they want to take that view of it, then our farmers will understand you want to reduce the cost of living at their expense, and on that proposition we are willing to go to the country.

Mr. LEVER. Mr. Chairman, I yield one minute to the gentleman from Missouri [Mr. BOOHER].

Mr. BOOHER. Mr. Chairman, I am going to quote from the gentleman's figures again. The gentleman gave dollars for the importation of oats. In the figures the gentleman put in the RECORD the other day he gave the number of bushels of what he gives in dollars to-day, so that is the only difference there is between the two statements. [Applause on the Democratic side.] Now, he says if we did not legislate to reduce the cost of the farmer's product what did we legislate for. We took the old foolish tariff off in order to let the farmer know that he had been fooled. We can reduce the cost of living in this country without taking that reduction out of the farmer and his products, and that is exactly what the Underwood bill proposes to do and it will do.

Mr. HAUGEN. I yield one minute to the gentleman from Nebraska [Mr. SLOAN].

Mr. SLOAN. Mr. Chairman, I desire to be fair, and I desire the gentleman to properly quote me. On page 4227, I gave the number of bushels imported in the four months, and I gave also the values.

Mr. BOOHER. Will the gentleman yield for a minute? That is the reason I tried to get the gentleman to restate his figures a moment ago. The gentleman stated it was $5,000,000, in round numbers. I thought the gentleman made a mistake, because it was 7,004,159 bushels in his figures, as I understood.

Mr. SLOAN. It is not 5,000,000 bushels; it is $4,656,216, and 16,000,000 bushels.

Mr. BOOHER. Oh, no.

Mr. SLOAN. There are two tables given. [Laughter on the Democratic side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from North Dakota [Mr. YOUNG].

Mr. YOUNG of North Dakota. Mr. Chairman, it might not be amiss to remind the House that it is the Agriculture appropriation bill we are supposed to be considering to-day. The debate which has been running along this afternoon has been entertaining and perhaps to some extent instructive. It looks a little as though the tariff question is still an absorbing one. I have noticed to-day that when a speaker began to take up the schedules of this bill and discuss the merits of it these seats were quickly emptied, and when the spellbinders were turned loose on the tariff the retiring rooms were quickly emptied.

During the first session of this Congress I introduced a resolution to provide for printing 500,000 extra copies of Farmers' Bulletin No. 513, "Fifty common birds of the farm and orchard." This bulletin contains much valuable information and pictures showing the colors of the birds. Written descriptions of birds furnish, at best, a poor and uncertain means of identification, so this bulletin is valuable alike to the lover of birds and to those who would know from the economic standpoint those birds which do harm and those birds which are beneficial to farms, orchards, and forests.

The bulletin is generally believed to be the finest ever issued by the Department of Agriculture. The entire original edition was soon exhausted, and I presume every Congressman has received hundreds of requests for additional copies.

The Committee on Printing gave sympathetic consideration to the resolution and had decided to report it favorably, when the chairman of the Committee on Appropriations is said to have objected to the cost, which was estimated at $83,000.

Mr. MURDOCK. Did that end the matter?

Mr. YOUNG of North Dakota. That ended the matter, so far as the consideration of the Committee on Printing was concerned.

Mr. MURDOCK. We did not get the extra bulletins?

Mr. YOUNG of North Dakota. No, sir.

Mr. Chairman, birds are of value to the Nation from the economic standpoint for the services they render in (1) eating harmful insects, their eggs, and larvæ; (2) in eating the seeds of noxious weeds; (3) in devouring field mice and other mammals which injure the crops; and (4) in acting as scavengers.

The bird bulletin was designed to help our farmers, fruit growers, and foresters and their boys and girls to identify the birds which frequent the farm, orchard, and forest. The Nation's material prosperity depends chiefly on agriculture, and any agent which increases the yield of crops or insures their certainty is of direct interest and importance, not only to the farmers but to every citizen. Birds constitute the most valuable of these agents, since they depend chiefly for their food on insects and noxious weed seeds, which are among the farmer's most dreaded enemies.

Authorities agree upon the estimate that insects yearly cause a loss of $700,000,000 to the agricultural interests of the United States. Were it not for our birds the loss would be very much greater, and without them perhaps successful agriculture would be impossible. Therefore a knowledge of the birds which protect his crops is as important to the farmer as a knowledge of the insect pests and noxious weeds that destroy them. Not all birds are beneficial, but nearly all of them. Of those usually classed as harmful there are very few which do not possess some redeeming qualities. The crow destroys the eggs of young and useful birds, but on the other hand he eats many insects and destroys many field mice, so that scientists agree that in much of the region he inhabits, though not all, the crow must be considered as more useful than harmful.

Hawks and owls have also been classed by those lacking knowledge as harmful. No birds have been more misunderstood than these birds of prey. Because one hawk has been seen to catch a chicken all hawks are considered chicken hawks and consequently to be killed whenever opportunity offers. Not only is there a lack of protection afforded to these birds by law but in some States a bounty has been given for their destruction. Ignorance of the economic value of birds is well illustrated in a law passed by the Legislature of Pennsylvania in 1885, alleged in the title to be for the benefit of agriculture, which provided a bounty of 50 cents each on hawks, owls, weasels, and minks.

The report of Dr. Merriam, Chief of the Biological Survey, for 1886 is illuminating. Referring to the Pennsylvania law, he said:

> By virtue of this act about $90,000 has been paid in bounties during the year and a half that has elapsed since the law went into effect. This represents the destruction of at least 128,571 of the above-mentioned animals, most of which were hawks and owls.
>
> Granting that 5,000 chickens are killed annually in Pennsylvania by hawks and owls, and that they are worth 25 cents each—a liberal estimate in view of the fact that a large portion of them are killed when very young—the total loss would be $1,250, and the poultry killed in a year and a half would be worth $1,875. Hence it appears that during the past 18 months the State of Pennsylvania has expended $90,000 to save its farmers a loss of $1,875. But this estimate by no means represents the actual loss to the farmer and the taxpayer of the State. It is within bounds to say that within the course of a year every hawk and owl destroys at least a thousand mice or their equivalent in insects, and that each mouse or its equivalent so destroyed would cause the farmer a loss of 2 cents per annum. Therefore, omitting all references to the enormous increase in the number of these noxious animals when nature's means of holding them in check has been removed, the lowest possible estimate of the value to the farmer of each hawk, owl, and weasel would be $20 a year or $30 in a year and a half.
>
> Hence, in addition to the $90,000 actually expended by the State in destroying 128,571 of its benefactors, it has incurred a loss to its agricultural interests of at least $3,857,130, or a total loss of $3,947,130 in a year and a half, which is at the rate of $2,631,420 per annum. In other words, the State has thrown away $2,105 for every dollar saved. And even this does not represent fully the full loss, for the slaughter of such a vast number of predaceous birds and mammals is almost certain to be followed by a correspondingly enormous increase in the numbers of mice and insects formerly held in check by them, and it will take many years to restore the balance thus blindly destroyed through ignorance of the economic relations of our common birds and mammals.

Owls, because of their nocturnal habits, are even better mousers than hawks. It is their habit to discharge in the form of pellets the fur and bones of their prey, and in 675 such pellets taken in one of the towers of the Smithsonian Institution at Washington Dr. Fischer found the remains of 1,119 field mice, 4 pine mice, 452 house mice, 134 rats, and several other species of small mammals.

In the face of all these benefits conferred by birds as insect, seed, mouse, and rat eaters, we perhaps can view with more charity the thefts of the crows and blackbirds in our corn and grain fields. The tarring of corn proves an effective means of making it unpalatable to crows. It is to be hoped that some means will be discovered for protecting grain fields from the ravages of blackbirds. At present I fear they must be classed as enemies.

Other birds sometimes classed as harmful are the sparrows. It is a great mistake. They are modest in appearance, but the quantity of weed seeds they devour is tremendous. It is practically their only diet in the wintertime.

Mr. PLATT. Will the gentleman yield?

Mr. YOUNG of North Dakota. Yes.

Mr. PLATT. I am very glad to hear what the gentleman had to say about this foolishness of destroying birds that some people think are harmful, birds which, when carefully studied, are generally found to be really beneficial. I think the Department of Agriculture encourages the destruction of the English sparrow. It may possibly be a good thing in some towns to destroy English sparrows, but if you go and look at the average small boy shooting sparrows you will find that he is shooting perhaps five other kinds of sparrows than English sparrows out-

side of the cities and villages, because English sparrows live mostly in the towns. There are 15 or 20—I have forgotten how many—different species of sparrows, and a good many other sparrows are shot than English sparrows. I went walking out near Chevy Chase not long ago, and I saw a great many sparrows, perhaps 150, looking a good deal alike, but which were not English sparrows. Most of them were tree sparrows. They do no harm, but come from the North to spend the winter in the vicinity of Washington, possibly to dodge taxes or something of that kind, and then go back again.

Mr. YOUNG of North Dakota. Do not call them tax dodgers. Too many unjust accusations have been made against them already.

Mr. MURDOCK. Will the gentleman yield to me?

Mr. PLATT. Besides those, there are the well-known white-throated sparrows, which are known in New England as "peabody birds," and field sparrows and song sparrows, both of them among our most delightful songsters; and fox sparrows and Savannah sparrows and grasshopper sparrows, all common enough at some seasons, but not easily recognized.

Mr. YOUNG of North Dakota. I understand the gentleman spends all of his Sundays in the country studying birds.

Mr. PLATT. I want to say that there is not one country boy in a hundred who knows the difference between these sparrows.

Mr. YOUNG of North Dakota. Well, why not help along a campaign of education?

Mr. LEVER. I would like to ask the gentleman from New York [Mr. PLATT] if it is not a fact that the English sparrow is driving out our native birds?

Mr. PLATT. I think there is a little truth in that, but not very much. I think there are some wrens and bluebirds that are driven out by the English sparrow around suburban houses, but as a rule field birds disappear for some other reason than that. Some years ago bluebirds became very rare in my section of New York State, and it was afterwards ascertained that a hard winter had killed them during migration far south of New York. For the past few years they have greatly increased. I may add that, according to John Burroughs, English sparrows are gradually decreasing in our cities, and this is perhaps because horses are decreasing, as automobiles displace them, and perhaps also because there is greater activity in street cleaning, depriving them of their food.

Mr. MURDOCK. Is the gentleman from North Dakota going to touch on the use of the migratory duck?

Mr. YOUNG of North Dakota. I did not intend to do so, inasmuch as I have only a few minutes.

Mr. MURDOCK. What purpose does the migratory duck serve, if any?

Mr. YOUNG of North Dakota. Well, he does not do any harm, and he helps to clean up the waters of ponds and sluggish streams and rivers. Perhaps the gentleman from New York, who spends all of his Sundays and nearly all of his time investigating the subject of birds, and carries a bird book in his pocket, can satisfy the gentleman from Kansas.

Mr. PLATT. Well, the gentleman knows that this congressional life is so strenuous that I get little time to study birds, and I know nothing about the Kansas duck.

Mr. LEVER. I want to say to the gentleman from Kansas that it is intimated that his love for corn is one of the reasons for corn going up. [Laughter.]

Mr. MURDOCK. I want to say to the gentleman that there is an effort being made to protect the migratory duck in my State.

Mr. BOOHER. Where does the duck find any water in Kansas?

Mr. MURDOCK. He alights in our cornfields, which he can not find in Missouri, as a rule. [Laughter.]

Mr. YOUNG of North Dakota. The gentleman from North Carolina [Mr. LEVER] hinted, a few minutes ago, that sparrows are somewhat harmful in that they are nest wreckers or drive out better birds. I think, however, that is very greatly magnified. In defense of the much-abused sparrow, I want to quote from an authority. Dr. S. D. Judd, who made a special study of seed-eating birds, reported that 700 seeds of pigeon grass were found in the stomach of a sparrow; and the investigations of Prof. Beal, of Iowa, showed that this species of sparrow destroyed annually 875 tons of weed seeds. That is a great quantity of noxious weed seeds for the one State of Iowa. I think the chairman of the Committee on Agriculture, in his address yesterday, placed the total value of all crops last year at nine billions. If we estimate the total consumption of weed seed by the combined members of the sparrow family at 1 per cent, which the Department of Agriculture officials declare is not a violent assumption, the sum saved to the farmers last year amounted to $90,000,000. Little wonder that a kind Providence notes the fall of the sparrow. [Applause.]

Mr. SLOAN rose.

Mr. YOUNG of North Dakota. I yield to the gentleman from Nebraska [Mr. SLOAN].

Mr. SLOAN. Mr. Chairman, I call the gentleman's attention to the fact that the $33,000 asked for would be about one-tenth per cent of the duties paid under Schedule G under the old law. [Laughter.]

Mr. YOUNG of North Dakota. Mr. Chairman, the demand for the reprint of the bird bulletin is great. I presume every Member of Congress can testify to that. It is reflected not only by letters requesting copies, but by the press. Mr. Charles W. Sibley, editor of the Rolette (N. Dak.) Record, declares that the preservation of bird life is a greater question than the tariff question, the currency question, or the Mexican problem, and in an editorial he quotes the Fargo Forum as follows:

BOYS AND BIRDS.

The Fargo Forum is to be commended for its earnest appeals for the protection and preservation of bird life and its protests against the violation of the laws of God and man in that relation. An editorial article in that newspaper rebukes the semicivilized young criminals who destroy one of man's most valuable assets and rightly places much of the responsibility on parents and guardians. The Forum's article is as follows:

"It is a lamentable fact that boys are killing song birds in the vicinity of Fargo. The worst feature is, that it is such an unnecessary evil, for the boys who are killing song birds could get just as much fun, and far more good, out of studying and protecting the birds than in killing them."

Note particularly what the Forum editor says about the responsibility of parents:

The boys who are breaking the law in this way, and thus putting themselves in the way of arrest and punishment, are not to be too severely censured. They are but following the natural instincts of the boy. But the parent who allows the boy to take his gun out and slaughter the beautiful and valuable song birds is much more to blame.

The editor follows this with a wise suggestion:

The Forum offers this suggestion to parents: Instead of buying him a gun, get your boy a pair of good field glasses, or even a good pair of opera glasses will do. Then write to one of the North Dakota Representatives in Congress or to the United States Department of Agriculture in Washington and request them to mail you a copy of Farmers' Bulletin No. 513. This bulletin is entitled "Fifty Birds of Farm and Orchard." The name gives a good description of the book. It contains some very valuable information of about 50 of the most common birds which inhabit the United States and almost all of them are common to this part of the country. The book is illustrated with colored pictures of each one of the birds described.

This little book also contains a very compact statement of the value of birds to the farm and fruit land owners of the Nation. It is said that insects yearly cause a loss of upward of $700,000,000 to the agricultural interests of the Nation. The bulletin makes this statement: "Were it not for our birds the loss would be much greater, and indeed it is believed that without the aid of our feathered friends, successful agriculture would be impossible."

A Fargon who is greatly interested in birds and bird life made the statement recently that it would be a good thing if every school child in America could have a copy of this bulletin placed in his hands. It should at least be possible to have a copy in the hands of every schoolteacher in the country. The bulletin will be furnished free by the Department of Agriculture.

I hope this editor had the gift of prophecy, and that extra bulletins will be printed, thus making it possible for the department to supply the bulletins to those who request them. Unlike many other Government publications, the bird pamphlets, with their rich colorings, are never thrown away. But, to quote the editorial further:

Having armed the boy with this book and a pair of good glasses, the parent should take a little interest in the game. Send the boy out to see how many of the birds described in the book he can find. And when he comes back encourage him to discuss the trip.

It is surprising how many birds can be found in almost any clump of trees or bushes with the aid of a pair of glasses. And it is not only far more fun than shooting birds, but it is fun that is instructive, and, what is of far more value, will instill into the boy a love for the great out-of-doors, with its natural and abounding life, that will make him a better man and a better citizen.

It is suggested to the local Audubon Society that this boy menace to the bird life of the locality could be turned into an asset by a little organized effort to direct the boys into habits of bird protection, rather than bird destruction.

But, Mr. Chairman, the Appropriations Committee chairman is reported to object to a reprint of the bulletin because it will cost $33,000. Too much money? Why, the much-abused little sparrow saves the Nation $90,000,000 annually. I presume if the appropriation were asked for the purpose of killing something that it would find a ready and favorable response. One hundred and forty millions for the Navy, to kill, but not a dollar to teach the boys to save life.

Mr. BARTON. Will the gentleman yield?

Mr. YOUNG of North Dakota. Certainly.

Mr. BARTON. Is it not the fact that of all the bulletins sent out to your constituency that bulletin is the most popular one and the one that you have the most requests for?

Mr. YOUNG of North Dakota. Yes; and very often from boys and girls, too.

Mr. BARTON. Is it not also true that the school-teachers ask for these books to supply the school children with information, so that they may become acquainted with the birds of this country?

Mr. YOUNG of North Dakota. That is true.

Mr. BARTON. It has been so in my experience. I would like to ask you again what you think your chances are to bring that out from the committee?

Mr. YOUNG of North Dakota. I think it all depends on you gentlemen. If there are enough here who wish to have the bulletin reprinted, I do not think $33,000 will stand in the way. I do not think that such an amount of money could be spent to better advantage.

Mr. LEVER. Does the gentleman say that the chairman of the Committee on Agriculture objected to the printing of that book or the chairman of the Committee on Appropriations?

Mr. YOUNG of North Dakota. I said the chairman of the Committee on Appropriations, and I do not want the gentleman to understand otherwise.

Mr. Chairman, I have been talking chiefly from the economic standpoint, which is perhaps a minor consideration. The pleasure which birds bring to the human family can not be measured. Poets have sung of them in all the ages. I appeal to all whose parents taught them to love the birds and nature to help spread the gospel of protection to bird life. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 20 minutes to the gentleman from Missouri [Mr. RUBEY], a member of the committee. [Applause.]

Mr. RUBEY. Mr. Chairman, we have listened with much interest to the tariff discussion here this afternoon, and I for one am glad that it has occurred. I believe that plenty of material has been placed in the RECORD to enable us to show by the arguments of those upon the other side of the House that we are right in our contention that the so-called protective-tariff scheme, which has been held out to the farmers of this country for 16 years or more, is wrong; that it has not increased the price of farm products, and that the farmers have received absolutely no benefits from it. I desire to say, however, that politics should have nothing to do with agriculture, the subject now under discussion, and I am glad to testify that while the members of the Committee on Agriculture are divided politically they are always united when it comes to legislating for the upbuilding of the great agricultural interests of this country. I will go even further than that, and say that Congress is the friend of the farmer. Members of this House realize the importance of the development of this great industry, and not one of them would knowingly cast a vote that would be injurious to agriculture.

Mr. Chairman, I want to discuss for a little while this afternoon some phases of agriculture, that great calling known and recognized by all men in all ages as the oldest, most honorable, as well as the most important vocation ever followed by mortal man. [Applause.] We are to-day in the midst of a great awakening in the study and development of agriculture. Never before in the history of our country has the importance of the farming industry so impressed itself upon the minds of men in every walk of life as at the present time. The banker, merchant, manufacturer, railroad man have all awakened to its importance. They have at last come to realize that under present conditions it is not only desirable for the success of their own business, but they have concluded that agriculture and the success of agriculture is for the benefit of all, and upon it depends the happiness and prosperity of the entire Nation. [Applause.] To-day if you will go with me to the meeting of any banking association, I care not whether it be an association of bankers in their national convention or whether it be an association of bankers in their State convention, you will find upon an examination of their programs that they are devoting a very large part of their time to the discussion of the subject of agriculture. They are striving earnestly to bring about increased prosperity among the farmers and to improve the general conditions of rural life. Railway officials are constantly sending out over their lines specially equipped agricultural trains fitted up with exhibits of farm products and modern machinery. These trains are accompanied by the best agricultural lecture talent that can be obtained. Their coming is heralded weeks in advance, stops are made at important stations, and everything possible done to arouse the people to the importance of agricultural development. In almost every city and town of importance in the land commercial clubs have been organized and earnest efforts are being made by them to secure hearty cooperation between the city and the country.

Why this awakening? In the early days of this Republic our population was small, the amount of rich, fertile land available for cultivation was great. The farmers in those days paid little or no attention to methods of cultivation; they cared nothing about rotation of crops; the question of soil fertility did not bother them. When a piece of land, by reason of long use, became less productive, they simply cleared up another to take its place. The rich, virgin soil brought forth abundant harvests, the farmer had plenty and to spare, and his surplus went to feed the people of other lands. To-day we are face to face with new conditions. Our population has reached nearly the 100,000,000 mark and is increasing by leaps and bounds. Our chairman stated in his opening speech that within 30 or 40 years there will be 200,000,000 people in this country, and the question will then arise, how are they to be fed and clothed? The amount of good land suitable for farming purposes is growing less and less. With the growth of population has come the development of other industries—mining, manufacturing, and commerce. There is an ever-increasing population in the cities and a consequent decreasing population in the rural communities. Production has not kept pace with increasing numbers and how we shall feed and clothe our people will soon become the all-important question.

The chairman of our committee [Mr. LEVER] in his very eloquent address the other day pointed out to us how the decrease in the number of cattle, sheep, and hogs year by year threatens our meat supply, and how the decreased production of grain threatens to take from us our daily bread. These are serious conditions which confront us. People all over the land have come to realize the gravity of the situation, and this accounts for the increased activities in behalf of better farming and for improved conditions of country life. How to make the farm more productive, obtain a better quality of products, conserve the fertility of the soil, bring the farmer better returns for his labors, make country life more attractive, keep upon the farm those who are already there, and induce still others to take up this noble calling. These are the questions which confront not only us but the people everywhere throughout the length and breadth of the land.

It is a deplorable fact, Mr. Chairman, and one to be greatly regretted, that in this country of ours thousands upon thousands of bright, intelligent country boys and girls leave the farm every year to engage in other vocations. How can this great exodus be stopped? These boys and girls constitute the most important factor of farm life, and if they can be kept on the farm the future success of agriculture will be solved. How can it be done? Let us consider this question for a moment. The boy should be made to feel that he is an important factor in the development of the farm. He should be taken into partnership and should have an interest in the grain, live stock, and, where possible, in the farm itself. He should be encouraged to study agriculture and to familiarize himself with improved methods of farming.

A little more than a year ago, Mr. Chairman, I stood in a great assembly hall in the historic city of Columbia, S. C. All around me were hundreds of boys and girls, representative of the flower of the youth of that fair land. They were the winners of the boys' corn clubs and the girls' canning and tomato clubs. As I looked into the bright, upturned faces of those boys and girls my mind went beyond them; I saw in my imagination the great army of boys and girls, numbering thousands, who had contested with them for the prizes, and I said to myself, here indeed is an illustration of what can be done to arouse the enthusiasm of the youth of the land. These boys and girls will not leave the farm to fight their way in unknown and untried vocations. They will stay where they are, and in the future years they will be the men and women who will stand for better agriculture and advanced farm life throughout all that great Southland. [Applause.] What has been done in the South is being done in other parts of this country. We have clubs in the North, East, and West, and they are doing wonderful work to encourage boys and girls to remain on the farm. Corn clubs, poultry clubs, pig clubs, canning clubs, tomato clubs, potato clubs, organized among the boys and girls in every community will instill into them a love of agriculture and will solve the question of keeping them upon the farm.

Last summer more than 200,000 boys engaged in the corn-club contests. All could not win a prize, but the efforts put forth by each one of them will not be lost. Let us see what has been accomplished. The world's record was won by a 14-year-old boy from Alabama, who produced 232.7 bushels of corn on 1 acre. The average production of corn for the whole United States is about 30 bushels to the acre. In the corn clubs of the North and West the average production was nearly 114 bushels, while in those of the South the average production was 154 bushels to the acre.

Fortune did not favor all. The drought struck the crops of a boy in my own State, and when he was asked by the agent of

the Department of Agriculture to report the results of his efforts he penned his reply in poetry, as follows:

MY CORN.

No use for a boy to look forlorn
When it's too dry in the Ozarks to raise good corn.
He can feed the fodder to the goats
And throw the nubbins to the shoats.
I have done the best that I know how—
I used the harrow, then the plow.
I plowed it deep and close at first,
Then plowed it shallow to quench its thirst;
But it remained dry as dry could be.
I looked and looked and looked in vain—
If I do not succeed, I'll try again.

Improved roads, improved schools, especially the consolidation of districts and the organization of country high schools, will do much to make country life more attractive and keep the boys and girls at home. How many well-to-do farmers with large families have you known, who felt compelled to move to town to educate their children. The farmer who moves to town for the purpose of educating his children weans the boys and girls away from the farm; they become enamored with city life, and rarely, if ever, return to the farm. We have in almost every city and town a number of farmers who have retired from farm life and with their families have moved to town. The farmer who thus retires from farm life and takes the boys and girls to the city strikes a deadly blow at the great industry which he has so long pursued.

The best place on earth to raise a boy is upon the farm. High schools should be established in the country. We should take the high school out to the boys and girls in the country rather than bring the boys and girls to the high school in the city. [Applause.] Keep them upon the farm, educate them upon the farm; if necessary, in order to educate them, send them from the farm to the near-by city school. What if the boy does have to walk 2 or 3 miles to school; it is good for him; will make him sturdy, robust, and healthy. The happiest days of my life were those when as a boy I walked 2½ miles from the farm to the city school. [Applause.]

But, Mr. Chairman, what is being done in the States to encourage the boys and girls upon the farm? My friend from South Carolina, Mr. LEVER, can tell you what they are doing in his State. My good friend Mr. CANDLER, of Mississippi, who spoke here this afternoon so eloquently, can tell you what they are doing in his State. Let me tell you briefly what is doing in Missouri to encourage the poor boys who live out upon the farms. A few weeks ago one of our great daily papers, the St. Louis Republic, began the task of raising money with which to send 12 poor boys from the farms to the State agricultural college. It was proposed to pay the entire expenses of each boy at the college for one year. Money came in rapidly, subscriptions came from bankers, merchants, lawyers, and men in every vocation of life, and in a very short time they raised enough to send 12 boys to the agricultural college. But the work did not stop there. It was taken up by the country press all over the State, and country editors are to-day raising money with which to send one poor boy from each county to the State agricultural college. The result will be that when the agricultural college opens next September there will be from 100 to 200 poor farmer boys there to receive the advantages of a year's study in agriculture. When their work has been completed and they have returned to the farms each one of them will not only be better prepared for the work himself, but he will spread information and increase the enthusiasm for advanced agriculture in the community in which he resides.

Right here, Mr. Chairman, I want to emphasize one thing, lest we forget: We must not neglect the man upon the small farm. The man away out yonder at the head of the hollow, with 40 acres of land, striving earnestly and manfully to earn a livelihood for himself and family, is entitled to our consideration and our encouragement. [Applause.] We want to remember that man as well as the man who lives upon the thousand-acre farm. [Applause.] The small farmer should be encouraged and helped by both State and Nation. Take care of the small farmer and the large one will take care of himself. It is far more important in this great country of ours that we should have a large number of small farms, well cultivated, than a fewer number of large farms. [Applause.] The tenant should be encouraged to become a landowner; we should in every way possible discourage farming by proxy and encourage the man to own the land which he cultivates. [Applause.]

While we are endeavoring to secure increased production, improve country schools, build better roads, develop country life, we must not forget that one of the most important questions to the farmer to-day is the question of the best means of marketing his crop. Until within the last year the attention of the Government has been given to the question of production, and little or no attention has been paid to the question of distribution. In 1912 it is estimated that the crop yielded $6,000,000,000 to the producer, but when the same crop reached the consumer it cost him $13,000,000,000. In other words, the farmer received six billions and the consumer paid thirteen billions, a difference of seven billions, which latter sum went into the pockets of those who distributed the crop. Clearly, it has been more profitable to distribute than to produce.

Millions of dollars worth of farm products go to waste every year because the farmer does not know where to sell, although these products are in demand at reasonable prices at many of the market centers of the country. Fruit falls ungathered from the trees and vegetables rot upon the ground while within reasonable distances they are in demand at good prices. If we will take up the question of distribution of farm products and deal with it with the same energy and enthusiasm with which we have dealt with the question of production, we shall equalize the great difference in the prices received by the producer and those paid by the consumer, and the enormous waste now prevalent throughout the country will be turned into profits for the farmer, and the sum total of the Nation's wealth will be thereby greatly increased.

A year ago we created in the Department of Agriculture a Division of Markets and appropriated $50,000 to start it. In this bill we have increased that appropriation to $200,000. The work of the Division of Markets bids fair to become one of the most important functions of the Government, and when it has been fully organized and put into complete operation it will save annually hundreds of millions of dollars. Both the producer and the consumer will be benefited by this great saving.

The Department of Agriculture has been doing a great work for the upbuilding of the industry throughout the length and breadth of the land, and in this work it has been receiving the hearty cooperation and the earnest support of every State in the Union. While the amount of money carried in this bill for direct aid to agriculture is comparatively small, being a little less than $10,000,000, yet the scope of the work is broad, and great good will be accomplished. Here are a few important items in the bill: We are appropriating $375,000 to aid the Southern States in fighting the boll weevil; nearly $300,000 to prevent the spread of the gypsy and brown-tail moth in the New England States; $400,000 for the extermination of the cattle tick; $625,000 for the quarantine work and eradication of diseases of cattle and sheep.

A few days ago we passed an emergency bill appropriating $500,000 for the eradication of hog cholera and $100,000 for the suppression of a disease which has recently developed among the horses of the West. It is estimated by the Department of Agriculture that the annual loss from animal diseases alone amounts to $212,850,000. How important it is, therefore, that these diseases should be checked and, where possible, eradicated. The Department of Agriculture not only seeks to acquaint the farmers with the best method of cultivating and caring for the crops, but it also comes to his relief in fighting every known insect and blight which is injurious to crops. Over $600,000,000 is lost every year as the result of ravages of insects and blights upon the various crops of the country. What a field for labor here. Much of this loss can be saved if proper methods are used.

Mr. Chairman, my time is passing; I must conclude. The Congress of the United States is the friend of the farmer; this Congress, as well as preceding ones, has done much to develop country life and give to those residing upon the farm at least some of the modern conveniences.

A few years ago $50,000 was appropriated to experiment in the matter of the rural free delivery of mail. This year the appropriation for that purpose amounts to more than $50,000,000, and all over the country farmers are having their daily mail delivered at their doors. The last Congress gave him the parcel post, and to-day he is receiving not only his mail, but he can receive or send by mail packages, within certain limits of size, weighing as much as 50 pounds. This House has twice gone on record in favor of assisting in giving the farmer good roads. The Shackleford road bill, appropriating $25,000,000, passed the House only a few days ago by a vote of 282 to 42. We have only recently passed the Lever agricultural extension bill, which, in my humble opinion, is the most important law looking to the future development of agriculture that has been enacted for a quarter of a century. One more important measure and we shall have, in part at least, done justice to the great agricultural classes. We must establish a rural credits system. The farmers have been paying excessive and exorbitant rates of interest; they must be placed upon the same plane with other interests, so that they can obtain money at reasonable rates. I feel quite certain that such a bill will receive the approval of this Congress before we adjourn. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from Tennessee [Mr. SELLS].

Mr. SELLS. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. HAUGEN. I yield to the gentleman from Illinois [Mr. MANN].

Mr. MANN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from Minnesota [Mr. MILLER].

Mr. MILLER. Mr. Chairman, I have hitherto felt disinclined to interject into the debates in this House any discussion of matters pertaining to the Philippine Islands, for two reasons: First, I did not think the time was yet opportune for consideration of these matters. Second, it has been my earnest desire that the present administration should have a fair and free opportunity, unhampered and undisturbed by criticism, to make a fair and honest trial of the system which it has established in the islands.

However, recently there has been published abroad in this country a statement which requires some attention at once. The present Governor General of the Philippine Islands a short time ago sent a telegram to the President of the United States, which telegram, with the response of the President and some comment thereon, constitute the publication referred to. The two telegrams are as follows:

For the first time in three years general appropriation bill passed legislature to-day, demonstrating harmony in the government here. The bill effects saving of over $1,000,000 in the current annual expenses, without in any respect impairing efficiency. This and other economies will avert treasury deficit impending on my arrival. Bureau of health and bureau of education were granted substantially amounts recommended by their directors. New accounting features introduced, greatly improving old system. Receipts of bureaus hereafter to revert automatically to general treasury, instead of allowing chiefs of bureaus to spend such sums in their discretion for purposes not specifically authorized.

Salary cutting was confined to higher officials. No salaries of $3,000 or under were cut; thus of 9,000 officials and employees only about 100 have salaries reduced. Salaries between $3,000 and $5,000 cut 5 per cent; salaries over $5,000 cut 10 per cent; salaries of judges, scientists, and engineers not cut at all; Commission and Governor General cut 10 per cent.

Bill passed both houses unanimously, and, in my opinion, is an extremely wise and conservative measure.

FRANCIS BURTON HARRISON.

—

FRANCIS BURTON HARRISON: My sincere congratulations on the appropriation bill.

WOODROW WILSON.

This correspondence presents two features requiring consideration. In the first place, there is a felicitation upon the legislature of the islands and upon the present policy of the Government for a happy outcome of insular legislative activities. Second, there is conveyed the suggestion that when the present administration took charge of affairs in the islands it faced a deficit of a million dollars.

Mr. Chairman, I am forced to the statement that neither of these views is correct. First let me direct attention to the question of a deficit. Gov. Gen. Forbes, who retired in August last, was one of the most capable, efficient, and experienced financial experts that has ever been charged with duties in the Philippine Islands. All the years he was in private business in America his work and training were of such a character as to make him an expert in the matter of audit, account, and general finance. With the aid of his advisers he prepared with great care, greater than ordinary care, the budget for the last year of his office. Careful account was kept of the revenues of the government, and estimates and expenditures were shaped to keep them well within those revenues. After the American election of 1912, when the Democratic Party was victorious, there soon followed a falling off in the revenues of the Philippine Islands, due to causes later to be considered. Mr. Forbes, with almost microscopic care, kept expenditures down in harmony with the declining revenues, and when he left office there was a certainty that at the end of the year there would be a surplus in the treasury, making allowance for all expenditures, of a million pesos. This fact had the certainty of mathematics.

In this telegram Mr. Harrison suggests a possible deficit of ₱1,000,000. In this he is honestly mistaken. The mistake is due to the colossal blunders, to call them nothing else, of the man the present administration selected as its financial adviser and that of the Philippine Assembly. It is open and notorious that this adviser got all muddled up on his figures, misadvised the government there, and is solely responsible for the statement of a deficit in the Forbes administration. His report was at first accepted, but lately has been found to be ridiculously and outrageously at variance with the facts. He is no longer the financial adviser of the government there, and is no longer in the Government service. Gov. Harrison's mistake, therefore, is the mistake of this man and the Forbes administration, instead of being open to the criticism suggested, should be given unmeasured and enthusiastic praise for the scientific care exercised in financial administration. These facts of incompetence and radical error on the part of the financial adviser doubtless, when he wrote his telegram, were not known to the present Governor General, and I hope indeed that the committee will understand when I say this telegram contains a misstatement that it is not an intentional one but an unintentional one, made because of misinformation or misunderstanding of the facts.

But this is the minor one of the features that I would call attention to. Is the present condition in the Philippine Islands legislatively one upon which the American people and the Philippine Islands can be felicitated? I am driven to the necessity of quoting from home authority in the islands in this regard and to the presentation of certain facts of a most astounding nature.

The last night I was in the islands I made a visit to the Philippine Assembly in regular session in the historic room of the ayuntamiento. I was most graciously received, and treated with a dignity and courtesy reflecting great credit upon the members of that body. In the address I delivered on that occasion I congratulated them and America upon the existence of the assembly and upon the character of the work of the assembly. I told them in my judgment they had worked nobly and gave great promise for the future. I meant every word. They have done nobly. Not, indeed, if compared with legislative bodies of modern advanced countries; not at all. But such a comparison is unfair to the Filipino. The tottering steps of the child may be feeble compared to the vigorous stride of the athlete, but they are splendid achievements, perhaps, in the light of that child's age and experience. So with the Philippine Assembly. In estimating the work of this institution do not let their mistakes fill your vision, but consider how this representative assembly sprang from nothing and how it has had to labor, without previous training or experience. Until the American flag was raised above them, the islands of the Philippines had never witnessed a decent government or beheld a decent governmental institution. There was no heritage of political thought, governmental experience, or ideas. There was no governmental instinct in the fiber of the people, because it had never been permitted to grow there; nor were they aided by lessons gained from their neighbors, because they have never hitherto had neighbors capable of teaching anything in the way of representative government. So when we have in mind the conditions under which this assembly was instituted and under which it has continued to exist, we can say its record is a credit to its people. It has done well if it has been able to do anything at all.

So I trust it will be understood that what I now have to say respecting the work of the present assembly does not proceed from hostility to that institution, but is the comment of a sincere friend, one who is eager to help whenever he acts, and who will be a supercilious, canting critic never.

There are many papers published in the Philippine Islands, some in the dialects of the people, some in Spanish, and some in English. It has been stated on certain occasions by natives of the islands that some of the English papers have not manifested sufficient cordiality toward the aspirations, ideas, and activities of the Filipinos. This charge has not been made against all the papers but against some. Of the editors of English papers or English-Spanish papers published there, I have no doubt that the editor of the Philippines Free Press is nearer than any other to the Filipinos, understands them better, mingles with them more intimately, and is regarded by them more highly. While fearless and outspoken, this editor is inherently a friend of the Filipino people. In the last copy of the Philippines Free Press which has come to the United States I find this editorial:

THE FAILURE OF THE ASSEMBLY.

From the day of the inauguration of the assembly, the Free Press has stood up for it, defended it, commended it, befriended it.

From the first we have tried to see the good in it and look with a lenient eye on its shortcomings.

However, even benevolence and indulgence have their limits, and those limits have been reached in the present appropriation bill.

That the assembly was misled, in the first place, by its financial misadviser, Mr. Phipps, and his tale of woe about a depleted treasury, will be admitted. It will also be admitted that the assembly was

acting under great pressure in the matter of time. Nevertheless, after making due allowance for those unteward circumstances, the fact remains that the appropriation bill as it left the hands of the assembly was a disgraceful piece of legislation.

There seems to be a disposition on the part of some assemblymen to find absolution for their delinquency in the final responsibility for the bill resting with the commission. Which is nothing but a feeble evasion of their plain duty, which is to prepare an appropriation bill as perfect and flawless as human effort can make it.

Nor can refuge be sought in the plea that they are not experts in dealing with facts and figures, for the experts are at their disposal, and there is nothing humiliating in calling upon them. During the recent tariff discussion in Congress the services of scores of experts were requisitioned.

At this serious juncture in the affairs of the Filipino people, when they are on trial as never before, it might have been thought that their representatives would have done their utmost to acquit themselves creditably. But the reverse has been the case. And what Gov. Gen. Harrison, fresh from a committee which has been handling appropriation bills amounting to ₱2,000,000,000, must think of the assembly is something which may best be left to the imagination. Nor is his opinion of that body likely to be enhanced from the fact that in the final analysis on him must fall the burden of the work which the assembly shirked.

The assembly can do better. And next year we trust it will do better. In the meantime it might not be a bad idea to adopt Chairman Adriatico's suggestion and appoint a committee which shall be empowered to conduct an investigation into the various departments of the Government and their workings with a view to submitting recommendations at the next session.

That is the opinion of one who has long lived in the islands, who is friendly to the Filipinos, and who has watched the deliberations of this body day by day. Not much like the Governor General's telegram. Pretty severe arraignment of the native legislators. Rather pessimistic over the whole situation. Truth is, the bill as it left the hands of the assembly and went to the commission was a most unscientific mess of appropriations of public money. There had been real effort to reduce expenditures, commendable in itself, but there had been a severe lack of appreciation of the real needs of the Government, and had the bill as it left the popular assembly been approved by the upper body, or commission, governmental suicide would have followed. The commission practically made the bill. It rearranged the expenditures, provided for the fundamentally essential necessities, and raised the amount carried in the bill more than ₱3,000,000. There has been general effort to cut down expenditures, an effort born of the direst necessity. When the present insular legislature and Governor General aimed at retrenchment they aimed at a splendid thing. More than that, Mr. Chairman, they aimed at a necessary thing. To avert impending and imminent calamity they have been forced to cut their expenditures down to the last peso. They have been forced to do it by a condition of things in the Philippine Islands that demands the serious consideration of the American people. It is not too much to say that at this hour in the Philippine Islands there is absolute business stagnation, the revenues of the Government have fallen to an extent producing national calamity, and there is hopelessness for the immediate future.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield?

Mr. MILLER. Certainly.

Mr. MURDOCK. The gentleman has neglected to say what I think he should say, that he has been recently in the Philippine Islands.

Mr. MILLER. I am very glad to be able to say, Mr. Chairman, that I have traveled through all the Provinces and regions of the Philippine Islands and have conferred with the various peoples resident in the different parts of the islands, and have personally observed conditions there.

Mr. MURDOCK. How recently?

Mr. MILLER. I spent five months in the journey, beginning last July and ending the latter part of December.

This business depression is the occasion for the financial condition of the Government, demanding that the expenditures be cut to the quick and then some.

I want to direct the attention of the committee for a moment to the state of business in the islands since the American occupation. I find that in 1899 the exports and imports of the Philippine Islands together amounted to $27,756,729. In 10 years they leaped up 100 per cent, amounting to $58,838,940. In 1909 the tariff law enacted by Congress gave to the Philippine Islands free admission into the United States of certain of their great commodities. Instantly business in the Philippine Islands boomed everywhere. Business prosperity suddenly sprang into being. Never had such an incentive been given to industry in the history of the archipelago, and in three years thereafter, or between 1909 and 1912, the total exports and imports had leaped to $105,869,816. It may be interesting to note what part of this business was with the United States. I find in 1899 the United States had a trade with the Philippine Islands amounting to the insignificant sum of $4,691,507. Ten years later it had gradually grown to $14,847,918, but immediately after these favorable provisions in the bill to which I have called attention became a law it leaped up to $42,390,222, the amount in 1912.

It may be that some consideration ought in addition be given to the collections from internal-revenue sources. In 1906, the first year available, we find total collections of internal revenue amounting to $4,434,364. In six years this had leaped up over 100 per cent, to $9,035,922. One further item may properly be considered in anything like a picture of the wonderful growth of business in the islands. There exists in the islands a tax upon the gross business conducted by merchants and manufacturers. The first year of this tax for which we have figures was 1909. The figures of that year show a total business of $190,000,000, and three years thereafter, in 1912, that had leaped up to $286,000,000. So, from the standpoint of exports and imports, from the standpoint of internal-revenue collections, from the standpoint of internal business of the islands, there was marked progress during all of those years. True, indeed, it is that there has been a regular growth in business prosperity in the islands from the hour of American occupation, a growth steady and progressive always; expanding enormously after the tariff act of 1909. There was national and individual prosperity in the islands. Business was developing, Government revenues were increasing, public works and education were being liberally supported. But, my friends, the picture of prosperity must stop there. The election of 1912 resulted in a Democratic victory; in December the Democratic President-to-be made his Staunton speech in favor of Philippine independence, and instantly business paralysis followed. The decline was gradual at first, but has been precipitate since the institution of the new administration in the Philippines. No sooner had the present administration taken charge in Washington than the business of the islands began rapidly to fall until in the last few months since the new system was put into practice they have fallen until the condition is appalling. It is not a theory, but it is a serious condition that confronts the islands to-day. Let me state the figures. During the last year the imports into the islands have declined ₱17,000,000, or $8,500,000. The exports from the islands have declined ₱14,000,000, or more than $7,000,000. During the only three months for which we have figures following the institution of the present administration in the islands—I mean since the inauguration of the present Governor General—we find that the exports from the islands have declined more than ₱7,000,000 in these three months, the first of the present administration. In the single month of October they fell from $6,544,564 to $4,246,001, and in the last month, December, they fell from $4,051,381 to $2,506,476, more than 40 per cent.

That means that the revenues of the insular government are being cut almost in half, due to business stagnation, and the decline is accelerated as the months pass. Let them heroically cut expenses then if they would not instantly plunge into national bankruptcy. No wonder, then, economy has been the watchword; no wonder economy has been exercised. It is the economy a man out of work is forced to practice in buying fewer shoes for his children, having less to eat in the house, and eliminating all the comforts of life. It is bare existence they are struggling for. It may be said that collections of internal revenue may give some relief, but here again is the same story, because internal-revenue receipts are intimately interlocked with business in the islands. During the last four months for which figures are available I find that the deficit over the preceding period of last year amounts to 271,000 pesos, or $185,000. And so it is all along the line.

Mr. MURDOCK. Will the gentleman yield?

Mr. MILLER. Certainly.

Mr. MURDOCK. What is the tax on gross business, say, for 1912?

Mr. MILLER. Two hundred and eighty-three million dollars' worth of business in 1912 taxed at the rate of one-third of 1 per cent. This is a part of the internal-revenue receipts. There are no figures for 1913 available.

Mr. MURDOCK. There are no figures?

Mr. MILLER. None obtainable now. I quote again from the Philippine Free Press, a paper in the Philippine Islands. I might bring in scores of published editorials and expressions stronger in their terms than this, but I prefer to be conservative and to present the most temperate statement. In the issue of January 17, 1914, this paper editorially speaks as follows:

For here, as elsewhere, we have that linguistic paradox, but commercial axiom, of political agitation breeding economic stagnation. It is true that agriculturally the country, due largely to favorable climatic or weather conditions, is better than ever before; but money is tight, and that enterprise which makes for expansion and upbuilding is practically at a standstill. In business nearly every one is marking time. As a result no large stocks are being laid in, few or no real estate transfers are taking place, no unnecessary purchases are being made.

and generally among those who own land or other property—on the part of the Americans at least—there is a headlong disposition to sell rather than buy. Everywhere retrenchment is the word.

Now, it may naturally be inquired, What reason is there for this business stagnation? What reason is there for it after a period of 15 years of general upbuilding, the last three years of which became a tremendous crescendo in business activity? Why, instead of the hitherto onward progress, has there come this sudden and complete collapse? It is because the policy of this administration in the islands has destroyed the safety and efficiency of the Philippine system of government and the islands are suddenly confronted with the thought that there might be Philippine independence. This is the reason for the present chaos; this is the reason for apprehension over the future.

The possibility of Philippine independence is sufficient in itself to drive business terror stricken from the islands; but there is something more immediate that has stopped the wheels of industry. When the recent change of administration occurred it seemed necessary, apparently, on account of the exigencies of American politics, and also on account of the long-repeated promises to the Filipinos in Democratic platforms, to give something immediately to the Filipinos. Blinded by partisanship and in Egyptian darkness, as far as any true knowledge of the islands and the people is concerned, the present administration gave a majority of the commission to the Filipinos. This looks mild, but it is revolutionary. It destroys the check and balance of the Government there and gives opportunity for the happening of every conceivable calamity. It will work as long as there is no strain and every commissioner obeys absolutely the will of the American President; but that makes of it little else than a despotism. Such a scheme of government instituted there must of necessity bring serious injury to business.

Then, in addition, the efficient and experienced heads of departments, bureau chiefs, and employees have been all at once removed, to the serious and lasting detriment of the Government.

No sooner had the present Governor General taken his oath of office than he inaugurated a policy of discharging the tried and trained officials of American origin then in the Philippine service. Now, we expected that there would be many changes, and it was natural to expect that they would occur, but no human mind ever dreamed that changes would be made in the way they were or in the wholesale manner in which they occurred. And in passing I may be permitted to observe that up to the present hour the policy of the administration at Washington—I say up to the inauguration of the present administration, the policy has been to deal with the islands on a nonpartisan basis. More Democrats than Republicans have been named by Republican Presidents of the United States as Governors General of the Philippine Islands. In appointing to less important positions every one conversant with Philippine matters knows a man's politics were seldom inquired into, the only consideration being a man's fitness for the office. This was right. Partisan politics in America should have no bearing in the Philippine Islands. So in the commission of the last administration there were some lifelong Democrats; so in the bureaus there were many who were Democrats at home; so in the less important offices there were many, many Democrats; so in the American judiciary of the islands there were many Democrats. The reason for this is simple. Most of these Government officials and employees were citizen soldiers who responded as volunteers to their Nation's call and as soldiers went to the islands. The South, ever gallant in the hour calling for heroism, had responded most enthusiastically, and a large portion of the volunteer regiments which reached the Philippines were full of sons of Dixie land. These men found the climate more nearly like their own part of America than did their no less gallant brothers from the North, and in consequence many remained to enter the Government service.

As I journeyed from Province to Province, meeting both native and American officials, I found, to my surprise, more of those who expressed their politics at home said they were Democrats than said they were Republicans, but invariably added: "I do not know the home politics of any of those with whom I am working; we here are Americans, doing the work of Americans as we understand the duty of America." These men in truth have felt they were something more than governmental employees, whether their office was high or low; that indeed they were missionaries of good government, manhood, and public ideals, living illustrations of the lessons America is trying to teach the Filipino people. [Applause on the Republican side.]

I understand the present Governor General, when on his way to assume the duties of his office, at Hawaii gave out an interview, in which he said it would give him sardonic pleasure to remove all Republicans who were in office in the Philippine Islands. I do not know whether he said that or not. At all events, he did not take occasion to deny it. Whether he said it or not, it appears from his conduct ever since he reached Manila that he indulged himself in a way that can be adequately described only as "sardonic." He made a great mistake, however, in thinking that those men who were officials in the islands were all Republicans, because a large part of them were not. The wholesale removals he made soon took the character of an anti-American movement, and the belittling of all the work of previous days gave further reason for the feeling, which soon became general and now quite universally exists, that the present administration in the islands is actually hostile to Americans and American interests in the Orient. The present Governor General never intended such a result, but that result has inevitably followed from the program adopted by this administration and the manner in which the Governor General has carried out that program. As a matter of fact, the American government heretofore existing in the Philippines has been the most efficient and economical government ever maintained by Americans, either in their own country or elsewhere. It has not been a partisan Republican government; it has been absolutely and purely American, with the noblest upholding of American ideals yet attained by Americans anywhere.

To wipe out this structure, root and branch, in the twinkling of an eye; to deprive the Government of practically all its tried and well-trained men in a moment of time; to kick out of office with positive brutality honorable men who have rendered honorable and distinguished service to the Filipino Government, and thus to give opportunity for decrying governmental acts theretofore made and for the growth of an anti-American sentiment; to do these is indeed ample to stop the wheels of industry, paralyze business, and create grave apprehension for the future.

It was expected a change of administration would result in a change of many prominent officials. That would be proper. But he who beheld the brutal methods employed in making the changes blushed for the honor of his country in the far-away Pacific. No one dreamed further that the whole governmental structure would be gutted. It would take hours to discuss the number and importance of the changes made. For the present I can do no more than call attention to the program—how it has destroyed efficiency, removed the check by America on Filipino legislation and administration, and developed a most unfortunate and unwholesome sentiment. Consequent upon this created condition business and industrial development, which for years had been booming, suddenly collapsed, and unless a decided change in system and policy occurs the future is full of horror. But I can dwell no longer upon this phase. There are some other things I think we need to know about and we need to know about them now. The impression has gone out that these Americans who were removed from the service in the Philippine Islands were highly paid officials. That is true with some, but they were relatively few in number. We are not in the least concerned about them save as to the method of removal.

But nothing has been said of the hundreds of men who were holding minor positions throughout the islands and who have been discharged without a moment's warning. Now, possibly that does not appeal to you particularly strong, but it will in a minute. These men have long been employees of the Government; they are ex-volunteer soldiers, who first fought for their country and later did their country's work in establishing good government in the islands. Their services were needed, and they have served their country well.

Mr. SHERWOOD. Were those who were discharged without warning Filipinos or Americans?

Mr. MILLER. Americans. In its wisdom this administration might have seen fit to discharge these men; but, if so, it should have been done with decency and in a way to give them a chance. Could they have had a few months' or even weeks' warning, the result would not have been so full of calamity. These men were suddenly kicked out upon a community that was being taught to abuse them, one where business had collapsed, where no employment was available, and their consequent suffering has been extreme. One of the greatest of the papers in the Philippine Islands, the Manila Times, on January 20, 1914, startled the islands—and it ought to startle the world—with the condition of these discharged men and their families, which they found by a careful investigation carried through many weeks. I will read a part of it:

Scores of Americans in Manila, in Pasig, and in Malabon, separated from the Government service to permit of Filipinization, and dumped upon a community unable to provide them with employment, are facing the possibility of privation and want. Ninety per cent of these men are old soldiers, and as such are entitled to free transportation to the United States; but many of them have Filipino wives and children, and honorably prefer to stand by their families.

Here, briefly and baldly, is the result of an investigation which has been conducted by the Manila Times. It discloses a condition which in

a month or two must become acute, and already in many individual instances is such as to be pitiable. These men in some cases are without the necessities of life, living on a little rice and fish, seeking vainly for the means of earning money.

Several men, whose position is well-nigh desperate, have talked with a Times man, and in every case there has been an earnest request that their names be withheld from publication. "If the Government gets hold of our names, a constabulary man will be sent after us, and we'll be deported," they said, "and what will become of our wives and children then?"

All attempts to dissuade them from this belief were unavailing. There is deeply rooted in the minds of all of them the conviction that the government of the Philippines as now constituted "has no use for Americans," and they point to the fact that Gov. Gen. Harrison has given assurances that old soldiers should not be allowed to suffer, while, nevertheless, they, who came out here with the Army, are reduced well nigh to starvation.

The life stories of these unfortunates read about alike. Here is one which can be taken as a type of all the rest:

"The fact is," he said, "that I have held out as long as I could, but it's getting beyond me. I don't want to exist on charity; all I want is a job which will make me enough to support my wife and children. I've always played the game; I've helped others when I could; and the result is that now I find myself without anything put by. Doctors' bills have something to do with it, of course.

"Now, to be honest with you, I have nothing in the house but a little rice, and I don't see where I am going to get any more. I have spent days in the search for employment, and everywhere I go they tell me that they are laying off Americans and taking on Filipinos. Of course I could make a getaway on a transport, but I won't do that. My wife has been a good wife to me, and I have my children to think of. I've got to stay by them.

"Right where I live there are plenty more like me. Out in San Lazaro, in Santa Mesa, in Tondo, in other places I could take you where there are dozens.

He prefers to stand by his wife and his children. Thank God that those soldier boys of days gone by, who left the sunny Southland and the rigorous Northland of America to drive a tyrant from the Orient and give relief to a suffering people, and who remained to establish good government in a land that knew it not, however humble the part they played, were men to the end and revealed to the world the possibilities of American manhood. Thank God that these American boys were true to the cause of humanity in their soldier days, and thank God they are true to humanity as citizens under the flag. Easy for them to leave, because the American Government will carry them back to the shores of America free; but if they come, they must come alone. They prefer to continue in starvation and want, if need be, with their wives and their children, rather than repudiate their sacred domestic ties, leave their families a public charge, and get free rides home to America. [Applause.]

From an editorial in the same paper I quote the following:

To many Americans the story that the Times prints to-day of the condition to which scores of their countrymen have been reduced will come with a shock of painful surprise. Here are soldiers of the days of '98, men who fought faithfully through the stirring times that followed Dewey's coming, in pitiable circumstances. They are tied to the land in which they remained by the bonds of wife and children, and they have honorably determined that they will not desert those dependent on them. Many of them are on the brink of actual want, and every day that passes must make the condition more acute.

This is not the time for discussion of how or why these men are here. In Cleveland's words, it is not a theory, but a condition, which faces the Government and the community. Of the hundreds of Americans who are out of work a proportion do not deserve help; that is admitted. But there remain scores of men who are worthy, decent, respectable citizens. These have a claim on us all—the claim that is voiced by our common humanity—and they have a special claim on a government which is still American and whose recent activities have had much, if not all, to do with their plight. They do not ask for charity, but for the honorable employment which will enable them to support wives and children, and they have a right to receive it.

There is not an American who, seeing what the Times man has had to see, hearing what he has had to hear, would not demand that something should be done, and done at once. There is no time to waste when men, women, and children are facing starvation in our midst.

Mr. SLOAN. Will the gentleman yield?

Mr. MILLER. Certainly.

Mr. SLOAN. I do not understand what the gentleman means by "deporting" these men.

Mr. MILLER. They have no visible means of support, and not having employment, and not having any money, under the law of the land they could be made to leave the islands and brought back to the United States.

Mr. SLOAN. Is that law ever enforced?

Mr. MILLER. I am unable to say definitely, but think it is. I do know that they keep vagabonds from America out of the islands.

Mr. WILLIAMS. Mr. Chairman——

The CHAIRMAN. Does the gentleman yield to the gentleman from Illinois?

Mr. MILLER. Certainly.

Mr. WILLIAMS. I do not understand your point. Is it because they are removed on account of political reasons?

Mr. MILLER. I have not so stated. I do not say. All I have to say is that they are removed, and were removed without a moment's notice.

Mr. WILLIAMS. You do not mean to say the administration is not removing Democrats?

Mr. MILLER. I have no complaint to make in respect to that, and do not wish to enter into a discussion in respect to that. I state the bold facts as they are here.

Mr. GARRETT of Tennessee rose.

The CHAIRMAN. Will the gentleman from Minnesota yield to the gentleman from Tennessee?

Mr. MILLER. I will.

Mr. GARRETT of Tennessee. Has the gentleman any information as to why they were removed?

Mr. MILLER. Why, yes.

Mr. GARRETT of Tennessee. Will the gentleman give it?

Mr. MILLER. They are removed, as the article says, to permit the Philippinization of the administration of the affairs of the Philippine Islands. That is, they were removed in order that Filipinos might be put in their place.

Mr. GARRETT of Tennessee. In other words, the present administration is trying to give the government of the Philippines to the Filipinos?

Mr. MILLER. That is not my complaint at all. My complaint is that the present administration found some upright, honorable American citizens in the Philippine Islands, who had nobly done their duty under the flag when the bullets were flying and who had given these people a good, honest administration of their public affairs since, and kicked them out like dogs, without bread to eat and without a word of warning. [Applause.]

I will read further:

Their want and their helplessness are a standing disgrace to the community while they are allowed to perish, and a reproach to the Government which should permit those who have faithfully served it thus to fall on evil days. Of the worthy among these men, more than 90 per cent are old soldiers. They came to the Philippines at the bidding of a clean, honorable impulse—patriotism it may be, or youthful love of adventure—or they received orders and obeyed. Those who say that there was self-seeking in the coming of those men of fighting days are fools or liars, for there was hardly an American of that time who did not believe the Philippines to be a fever-stricken, pestilential, white man's grave. They were mustered out here—no fault of their own—and they settled down to work. Now, after 15 years, many of them find themselves destitute; and if there is no bitterness in their hearts that this should be so the more honor to them! Honor, too, to those who have determined to stand by their helpless dependents rather than desert them when the pinch comes.

Mr. Chairman, another great paper published on the islands, the Cablenews-American, at a later date has this to say—and it is the last paper that has come from the islands:

Gov. Gen. Harrison yesterday authorized the Cablenews-American representative to issue meal tickets to several Americans, single men, who have signified their desire to return to the United States on the next transport. These men have all decided to go home because they realize that the usual avenues for securing employment have been closed in these islands, and they are desirous of grasping this opportunity of getting back to the United States in comfort and safety with the promise of a small sum of money when they arrive at their destination.

Last evening four more men signified their intentions of accepting this offer, and they also will be taken care of to-day. Many applications have been received at the office of the Cablenews-American from Americans with families dependent on them for support. These men have no employment and no means of livelihood. They have no food in their houses, so money and provisions were meted out to them.

You and I are glad to know that a beneficent Government is handing out to these heroes of 1898 and 1900 and 1901 meal tickets until they can get free transportation back home.

In years to come, when Columbia teaches American youth of the deeds of heroism and self-sacrifice that give American history a splendid chapter in human events, deeds which have inspired humanity and constitute our chief heritage, will she in pride or shame unfold the picture of these American soldier citizens in the distant Orient, whose bravery and whose sacrifices have been requited by a brutal discharge from public service and their protection from starvation secured by issuing meal tickets.

I am obliged, Mr. Chairman, at once to leap to the consideration of another item. The new Governor General having felicitated the legislature upon its work, it might not be improper to call attention to one or two things that the legislature has done, and I now do it, not in a spirit of hostility, but in order that the facts may be known.

One of the last things they did on the last night of the session was to pass an act giving a franchise to the Marconi system to erect 40 or 50 wireless stations in the Philippine Islands. As the bill passed the assembly it contained a provision that in case of war the control of those wireless stations in that system should be placed in the hands of the United States. But as it finally passed, by reason of an amendment made by Commissioner Ilustre, it provides that in case of any war the control of the wireless system shall be in the hands of the Philippine Government. In other words, here is an enacted law taking out of the hands and control of the United States this entire system of telegraph in the event the United States is at war

with Japan or any other country. This is positive and open hostility to the United States; this contains all the spirit and almost the elements of treason. It is a bold, audacious affront to the United States—one of the early fruits of this impossible system of government established by this administration. In passing, I beg to observe that Commissioner Ilustre, recently appointed by this administration to his high office, is a notorious anti-American agitator.

That is mild, however, compared with one or two other things. I find that business—dead generally—is being stimulated in quarters other than American. A timber concession has just been made under the law to a large lumber company of England. This concession covers 150,000 acres, includes 2,000,000,000 feet of the most valuable timber in the world, is exclusive in its nature, and covers the best present timber concession in the islands. I personally investigated the area covered by this concession, and am, in general, familiar with it. It is true that under the law other concerns could have bid on the tract, but as a fact no other bid was received. There was therefore no competition. Chief significance must be attached to the fact that at this time no other concern was able to or did bid on the concession. This vast timber wealth, therefore, goes under the control of a great British concern.

However, there is one other thing that in the last few moments of my time I wish to call to the attention of the House, and I sincerely hope that every man within the sound of my voice will get the full import of what I mean. There is in the islands a government monopoly, or practically so, in the manufacture of ice, although there are some independent manufacturers. It was desired on the part of many Filipinos that the government should go out of business in that line. The legislature passed an act authorizing the Governor General to sell or lease the government ice plant. There was then passed by the Philippine Legislature the following monstrous joint resolution:

*Resolved by the Philippine Assembly (the Philippine Commission concurring)*: That it is in the public interest and contributes to the well-being of the Filipino people, as well as to the stability and security of the interests legitimately established or in future to be established in the Philippine Islands, that the Governor General be, and hereby is, requested that in making use of the authority conferred upon him by law for selling or leasing the Government ice plant he require from every applicant for purchase or lease, as the case may be, the following:

"That the purchaser or lessee state in writing that he is informed of the message of the President of the United States addressed to the Filipino people and communicated to said people by the Governor General of the Philippine Islands on the 6th day of October, 1913, and of the reply message of the Philippine Assembly, made in the name of the Filipino people and approved and sent on October 16, 1913; that said purchaser or lessee bind himself not to engage in or aid, by means of contributions in cash or otherwise, any propaganda directed against the policy of the Government of the United States outlined in such message of the President and the aspirations of the Filipino people set forth in said reply message of the Philippine Assembly, whether under the pretext of vested interests or under any other pretext, and that said purchaser or lessee shall further bind himself to exact a similar engagement from his administrators, agents, successors, and assigns."

Adopted January 14, 1914.

Students of legislative bodies, pause here. You can never find elsewhere the equal of this. Human experience has no parallel. Bold, defiant, brazen partisanship! Or is it the puerile prating of an infant mind? This was passed by the entire legislature, therefore has the approval of the assembly, the commission, and the Governor General. If the Governor General was opposed to it, he was powerless to stop it. Significant fruit of the new system!

This resolution makes one particular expression of political ideas the law of the land. It reveals a trait of character that exists and destroys government in Central America, Mexico, and other Latin countries—complete intolerance toward the views of the other side; determination by tyrannical use of power to crush out opposition and destroy opponents; and a complete misconception of the responsibility of the temporary majority that is vital to the existence of free institutions.

This resolution not only binds the present but the future. All who ever participate in the ownership of this ice plant must take this solemn vow. People yet unborn must sometime pledge their allegiance to a political idea that in one year may be as dead as the dead ever become.

In addition, Mr. Chairman, when a lumber company recently took a timber concession under the general law, they were required to sign a statement similar to this. There was no warrant in law whatever requiring this. The act was actually unlawful, and is of such a serious character as to constitute full ground for impeachment. It has also been announced that in the future no person, partnership, or company shall be granted by the legislature or secure from the Government any franchise or contract unless a sacred pledge, such as this, is duly signed.

Oh, we need to go hence to learn politics. You gentlemen on the Democratic side have a great majority here. Let me commend this to you: Pass a law that hereafter no bidder on a Government contract, no beneficiary under a permit to build a dam, no man doing business for the Government, shall be allowed to do it unless he subscribes to the Democratic platform and says so help him God that he will always fight the Republican Party and the Bull Moose. [Applause on the Republican side.]

Mr. BAILEY. Mr. Chairman, with the main purpose of this measure I am in full sympathy. We can not carry to the farmer too much information regarding his great industry. The extension plan of education is in the highest degree admirable. University extension has been a blessing to the masses who might never have had any benefit from university training otherwise. And now the same idea is to be applied in carrying to the farmer the latest word in agricultural science. But I must confess that I am just a trifle old-fashioned and that instinctively I am inclined to shrink from widening the sphere of influence of the Federal Government. It has seemed to me that education was properly a function of the State, and I have been greatly interested in the work done by many of our States, notably by Wisconsin, Kansas, Nebraska, Iowa, Ohio, and my own State of Pennsylvania, in raising the standard of agricultural knowledge. The figures given in the report accompanying this bill are indeed impressive. They show that in the growing of corn the excess production under the demonstration method over the average production for the entire State of Texas during the year 1912 was 47 per cent; Oklahoma, 98 per cent; Arkansas, 62 per cent; Mississippi, 126 per cent; Alabama, 156 per cent; Georgia, 157 per cent; South Carolina, 132 per cent; North Carolina, 134 per cent; and Virginia, 75 per cent. In cotton the excess of production under demonstration methods ranged from 39 per cent in Texas to 174 per cent in Georgia; the excess in Oklahoma having been 77 per cent; in Arkansas, 79 per cent; in South Carolina, 100 per cent; and in Alabama, 147 per cent. No one can take in the significance of these figures without agreeing with the committee that the value of demonstration work is fully vindicated in the results.

There is one thing, Mr. Chairman, that it would be well to bear in mind in going along. We are proposing to spend a good many millions of public money on this work. Fortunately, it is a good work, which will bring substantial returns, in this differing from the frightful expenditures which we have been making and are proposing to continue on Army and Navy, these expenditures bringing no returns except the necessity of still further expenditures and an ever-increasing anxiety regarding the safety of our country and the perpetuity of its institutions. The larger our Army has grown, the more our naval equipment has been expanded, the greater has become the nervous tension of our jingo friends; and were we to believe them there would be no such thing as peaceful sleep. Our days would be filled with anxious dreads and our nights with unspeakable alarms. Happily no similar pathological effects can be expected to follow the expenditure of public money for the extension service provided for in this bill. No rest will be broken, no nerves stretched to the breaking point, no thrill of alarm sent through scare headlines from ocean to ocean when we mobilize the great teaching force we are about to send forth on its mission of light and leading. So we may look upon this expenditure with quite a different regard from that called for by those expenditures for "preparedness," which but aggravate our fears and stimulate our painful anxieties.

Yet the millions called for in this great measure must come from all the people and we are proposing to return it in benefits to some of the people. The money that is to be used in this extension work will come largely from taxes laid upon the necessities of the masses. We are going to tax the miners, the men working at the forge, the day laborers, the artisans, the scrub women, the clerks, the clergymen, all the hosts of Americans who herd in the centers of industry; and we shall take the money thus derived for the purpose of carrying the knowledge of better methods to the men on the farm. Doubtless they will return an equivalent in the form of an increased production of corn, wheat, and other foodstuffs which will reach the mass of consumers at lower prices. This is the theory. Will it become a demonstrated fact? Will this any more than a thousand other advances and improvements ameliorate the condition of the farmer or the people as a whole?

More than a third of a century ago the late Benjamin Butler computed that with a given amount of labor the farmer of that day produced two hundred times as much wealth as the farmer of 100 years before. He pointed out to farmers that the real problem confronting them was, not how to produce more corn and wheat, hay and hogs, cattle and horses, but how to secure a larger benefit from their toil. He rightly held that if the farmer of his day produced two hundred times as much as the

farmer of a century before he ought to be two hundred times better off; and, if he were not, he held that there must be something wrong; the farmer in some way must have been the victim of a robbery.

Mr. Chairman, I do not think that it will be pretended that the farmers, as a class, are to-day two hundred times better off than the farmers of a century ago. Of course, the farmer in this year of grace has advantages and can enjoy certain things that the very richest farmer in the early years of the nineteenth century never so much as dreamed of having. The humblest farmer can to-day cut wheat with a machine that automatically performs the work of a dozen or more men. He can ride as he plows. He can do work with steam that formerly was performed with horses or oxen. He can wear store clothes. When he visits the circus he can travel by rail or in an automobile. The things that were luxuries to the rich of a hundred years ago are now common necessities.

IS THE FARMER BETTER OFF?

But what proportion does what he gets bear to this vastly increased production? Is the farmer relatively better off? That is the question. The farmer is undoubtedly free from certain hard conditions that his forefathers had to face. His children have schools at their doors. Clothing is cheaper and more easily procured. Labor has been lightened by more improved machinery. Nature has been taught to yield more generously to his better methods. The markets of the world compete for his products, and steam and electricity have become his servitors. Science has run to his aid and divulged to him secrets that pour riches into his lap; but, strangely enough, these riches slip through and slip away. He toils as long and as hard as ever; the mortgage is as hard to lift; the taxes press as burdensomely as ever; the bills are not easier to meet; the savings grow as slowly as they grew for the farmer who turned the sod with a wooden plow and thrashed his grain with a flail. He plants vineyards, but too often others eat the fruit thereof. He raises chickens and turkeys and ducks, but mostly for the market. When these things bring good prices he does not have them on his table—except, perhaps, when the preacher comes.

I am persuaded, Mr. Chairman, that most of the farmers devote the larger part of their inquiries at the institutes held under extension methods to the question of how to increase the sum of their products. Certainly all the scientific investigation at the experiment stations and agricultural colleges is in that direction, and I note that in farmers' journals practically all the discussion tends toward the one end of getting more out of the ground. If I were speaking to them directly, I should ask them to consider how to get more of what they get out of the ground into their pockets or into their stomachs or upon their backs or into their homes or into the development of those higher faculties that must too often be stunted by the mere struggle for existence. It seems to me infinitely of less importance to increase production than to secure an equitable distribution. There is really no lack of good things in this rich, teeming world of ours. Nature is generous to us. We plant a single seed and reap a hundred or a thousand from it. With a pair of fowls we may soon have a barnyard full of chickens. Our hogs and sheep and cattle multiply rapidly. We plant a tree to-day and to-morrow it showers golden fruit into our laps. Sun and wind, rain and snow, all work for us. The very dews of heaven and the frosts that nip the schoolboy's nose are our ministers. If we are poor, it is not because our common mother earth is a niggard.

THE PROBLEM OF THE FARMER.

The problem, then, Mr. Chairman, is not how to produce more but how to get the benefit of what we produce. Do you think that if farmers generally could increase their production they would be generally better off? It is quite clear that if the individual farmer increases his production, production in general remaining the same, he will be better off. But we are talking now of the farmers as a body, not of a particular farmer. Individually the farmer may by attending an agricultural institute for the purpose of learning how to increase the results of his individual labor. Those farmers who do not attend and who thus miss the valuable hints, suggestions, and instruction there available must obviously fall behind in the race. They will not understand as well as the other when to plant, what to plant, and how to plant. They will not know much that he will be able to turn to account in the care of stock, in the marketing of crops, in the cultivation of fruits, in the making of butter, and in the enrichment of soils. He will have an advantage over them. With the same effort he will be able to obtain better results. But if all the farmers were equally informed, if all equally availed themselves of the advantages which the agricultural institutes offer; if all employed the best machinery; if all were instructed in the scientific mysteries of soils and fertilizers; if all knew equally the values the farmer is taught to appreciate in such institutes, what difference would it make to farmers as a whole? The sum of their production would be greater. But would their relative condition be improved?

THE CASE OF LORD SCULLY.

If it would be improved, then it should have been improved by the enormous increase of production noted during the last century. The farmer at the opening years of the twentieth century should be two hundred times richer on the average than the farmer at a corresponding period of the nineteenth century. But no one will contend that he is. This observation applies only, of course, to the farmer who farms a farm, not to the farmer who farms the farmers. The farmer who farms the farmers in many instances is more than two hundred times better off than his predecessor of 100 years ago. Lord Scully, for example, who farms nearly all the farmers of one of the richest agricultural belts in one of the greatest agricultural States of America, does not feel the need of attending farmers' institutes. He fixes his rents so high that the farmers he farms are spurred by hard necessity to increase production to the last limit in order to meet his inexorable demands. They do all the scheming and planning; they study, or should study, scientific methods; they invest, or should invest, in improved machinery; they exhaust, or should exhaust, their resources in experiment; they make all the hazards and bear all the losses. His business ends with the collection of the rent.

However, we are not talking of the farmer who farms the farmers, although he is becoming steadily a more important factor in American social adjustments. The tenant farmer and the farm laborer are relatively less rare than they were before. The farmer who owns the ground he tills is gradually yielding to a pressure that must eventually take away his cherished independence. But as yet the independent owner is an important factor in our social organization. Of the farmers of the country most of them still own their own land and are improving their farms, with the expectation that they and their children will reap the benefits of the labor and care they are bestowing.

It is by no means certain that they or their children will do so. There are forces silently at work that are tending to undermine all their efforts and all their labors. The thing that has kept the farmer of to-day from being two hundred times better off than the farmer of a hundred years ago is still busy. The farmer acquires the secret of making two blades grow where but one grew before, but there is an alchemy whereby the second blade is taken from him and made serviceable to some one who did nothing whatever to produce it. And this is the matter to which I wish to call most earnest attention. I would not discourage the farmer from fitting himself in the largest possible measure for the individual effort he must make if he would succeed. But while seeking thus to advance himself as an individual farmer is it not important that he should seek not less strenuously to advance the welfare of farmers as a whole? I think it will be seen from what has been said already that increase of production does not necessarily imply increase of wealth for those who produce. And possibly I may make this a little clearer if I refer to locomotive engineers. They are now among the best paid skilled workmen. They get from $3 to $5 per day. But suppose the number of persons qualified to run locomotives was doubled or quadrupled? Can it be imagined that engineers would still get the wages now paid? Engineers now get comparatively good pay because by comparison they possess superior skill; and so the individual farmer who possesses unusual knowledge makes more money than the farmer less happily equipped. But the best equipped farmer makes less money than he ought to make, because there are invisible taxes which eat away his substance and compel him to labor without reward.

FARMERS AND THE TAXGATHERER.

Farmers as a class are watchful of the taxgatherer. They do not pay taxes with much greater cheerfulness than they pay that other inevitable debt. At the best they regard a tax as a necessary evil. It is seldom they can see that it is a payment for value received. The farmer who does not hesitate to pay any other obligation will grumble when his tax bill is presented. He often regards the assessor as his natural enemy—and not without reason. County officials he looks upon as birds of prey—as many of them are. A mill added to his tax is heavier than a millstone about his neck.

Yet the least part of the tax he pays is that handed over to the county treasurer. There are other taxgatherers whom he wots not of—taxgatherers who levy tribute upon him at every

turn from the cradle to the grave and render him no equivalent whatever. These invisible taxes are, indeed, the ones which suck away his lifeblood. If the county commissioners were to make even an attempt to get from him a tenth of what he yields to the invisible tax takers without a murmur and unconsciously now, he would head a mob, as was done in Macoupin County, Ill., some years ago, and tar and feathers and rides on a rail would become fashionable.

The least part of the taxes the farmer pays is those he sees. A prime minister of England told the King that a 3 per cent tax would provoke a revolution. "But I can tell you a method," he said, "whereby you can tax the last rag off the back of nakedness and the last crust out of the mouth of hunger without creating a murmur. Let the tax be indirect, so that it shall be paid unawares, and you may levy a tax of 10 per cent and no one will protest. They will merely complain of the 'hard times.'" That this is as true now as it was when Pitt formulated a policy which eventuated in untold misery in Great Britain we have only to look around us and see.

The hand of the taxgatherer falls upon every farmer in America every time he sweetens his coffee or eats a wedge of pie. He feels it again when he fills his pipe or lights a cigar. He can not even step in with a friend to "see a man" without also inviting the invisible taxgatherer to "take something." The invisible taxgatherer meets him when he comes with a wail into the world and follows him relentlessly through all the vicissitudes of life until he retires with a sigh into that green tent whose curtain never outward swings.

THE FARMER AND THE PRIVATE POWER.

How much thought has the farmer ever given to these invisible taxes? Has he ever thought that perhaps the bulk of the charges he pays for freight and for passage on railways is not for service, but for tribute? The railways enjoy a private taxing power. They exercise a function of the State and compel those who ride upon them or ship goods over them to render tribute. Probably very much more than half the income of railways is really tribute. And this is true of telegraphs and telephones and other public services controlled by private monopoly. The secret of their tremendous power lies in their almost unchallenged exercise of the functions of the State, which only the people themselves should employ. The people complain of the water in monopoly stocks. What does this water mean? It is simply the measure of the tax the monopolies are able to collect. Incredible millions thus go annually into the pockets of a few people, not as payment for service rendered but as forced contributions. These millions represent an invisible tax upon the farmers and other producers of the land. It is lost to them as much as though it had been taken from them by highway robbers instead of by legal process.

Mr. Chairman, there are some 4,000 taxgatherers in this country outside those visible ones which present themselves to the farmer in the guise of local collectors. The farmer can hardly purchase a thing to eat or to wear or to work with that has not concealed in it one or more of these 4,000 taxgatherers. Each takes a little out of his pocket. Some of the little goes into the Public Treasury—and perhaps it is devoted to the purchase of armor plate at $450 per ton. Some of it goes into the coffers of private persons he has never seen and perhaps will never know. For when a dollar goes by means of these invisible taxes to the Government at least $5 has gone under the old high-tariff system to enrich private concerns. Under the old, beautiful Republican régime the farmer bought a barrel of sugar. It cost him about $18. Of this $18 about $12 was sugar; the other $6 was tax; and that tax went to the Sugar Trust. Happily, the Democratic Party, under Woodrow Wilson and the leadership of OSCAR UNDERWOOD, has put a quietus on this particular gatherer of invisible taxes, as well as on some others.

Gigantic sums have been drained and are being drained out of the pockets of the workers of this land for the maintenance of a great army and the exploitation of distant peoples. Not so long ago we were startled by a billion-dollar Congress. To-day a two-billion-dollar Congress has become commonplace. Whence is all this money—this labor—to come? Are the Morgans and the Rockefellers and the Carnegies going to pay it? No; they are going to get it in one way or another. It was not so long ago that Mr. Carnegie made some $40,000,000 in a single year in steel. Almost every dollar of this enormous sum represented a tax on labor and industry. The working people of every kind have paid it. He spent some of it in courting the good opinion of the robbed by building a library here and there to perpetuate his name. Mr. Rockefeller has cleaned up no one knows how many millions from Standard Oil alone. Little of it was legitimately earned by him. He squeezed it out of workers by means of a private tax.

The workers did not see the tax when they paid it; but it came out of their pockets, nevertheless, and they got nothing in return save the comfort of gloating over such evidences of prosperity as Mr. Rockefeller is pleased to reveal in gifts to universities where economic truth is not permitted to be taught. No one knows what the income of the late Mr. Morgan was; but, big or little, it practically all represented the power of private taxation. He controlled railroads and banks and coal mines, and through all these he levied tribute upon labor in various forms. He rendered no service, unless extortion were such. But he was a great financier, and when at the zenith of his power he squeezed Uncle Sam into a hole he was willing to help Uncle Sam out—on Mr. Morgan's terms.

HIGH TAXES AND HARD TIMES.

Mr. Chairman, I could deluge you, if I chose, with figures showing how these invisible taxes eat away the substance of the farmer and of the people at large. The farmer quarrels with the county commissioners if they add a single mill to the tax rate. But when a dollar or $5 slips through the farmer's hands by invisible means into private coffers he merely complains of "hard times." Hard times! Why should there be any "hard times" save when a famine visits the land? And when has a famine visited the land? Was it in 1873? Was it in 1893? Was it in 1907? There were "hard times" then, but the crops were good; there was no pestilence abroad; there were plenty of men able to work and willing to work; and there were millions of people wanting the things which men were anxious to produce. But somehow the men could not get work; the people who wanted things could not get them. Women and children starved because there was too much grain; farmers in the West burned their corn while idle miners in the East suffered for bread; little feet left trails of blood in city snows because there were too many shoes; thousands of shivering wretches went in tatters because there was an overproduction of coats; two or three families huddled miserably and indecently in a single room because there was an oversupply of houses; and tramps camped in vacant fields because there was no work.

Mr. Chairman, was there ever more monstrous nonsense? The colt which swam the river to get a drink was bright in comparison with the man who accepts the notion that "hard times" result from an oversupply of good things. You could not make a bird believe it had to die of starvation because there were so many worms. And you know a bird has less sense or at least a smaller brain in proportion to its size than any other vertebrate. The horse in the pasture could never be convinced that he ought to jump over into the big road and starve because there was too much grass inside. But we men, we lords of creation, we men who sit in Congress or elect Members of Congress and rain makers for high office, we the august and the unapproachable, we who go to the other side of the world to teach the heathen and grab anything not nailed down, what have we to say when we are told that plenty causes famine? Why, we say that is so; that explains the whole mystery; we starve on account of the big crops; we freeze because of all the coal that has been mined; we go barefoot by reason of the surplus of shoes; we wear a ragged coat or no coat because there has been so much wool grown and so much cloth woven; we crowd into noisome tenements or live in cramped houses because too many buildings have been put up; there is no money to be had because the banks are bursting with it.

Of course if one of us should go home and tell his little boy about this sort of thing the boy would think his papa had broken his temperance pledge. For there is no little boy, I hope, in this broad land who is fool enough to believe any such rot—at first. He must associate with grown-up folks and read able Republican speeches and learned professorial articles in magazines and hear the plutocratic orators go up and down the land telling us how we grow rich by shipping more things out of the country than we get back before he can master the idea. By the time he is old enough to vote he has had his natural perceptions so blunted, his common sense so perverted, his reasoning faculties so debauched by following the devious logic of economic dream books, and the ignis fatuus of our PAYNES and our MANNS and our FORDNEYS, that he is quite capable of believing anything except the truth. And then he is fully prepared to cast his ballot for some more invisible taxes.

HOW FARMERS SAVE AT THE SPIGOT.

It would be worth the while of our farmer friends to hold at least one institute a year, to find out how to keep what they produce. The professors who visit the institute to instruct the farmer might with profit give a little attention to this very great concern of the farmer. For what shall it profit a man if he double his crop and some fellow get it without rendering an

equivalent? The farmers save at the spigot in the matter of taxes. I am constrained to believe that the county officials generally will bear watching. But if our local officials were twice as extravagant as most farmers believe them to be; if they were twice as reckless in applying taxes to private uses; if they junketed and jaunted twice as much as they have ever done at the expense of the taxpayers; and by these excesses required the farmer to pay twice the taxes he now must turn into the county treasury, the farmer would still be able to drive a fast horse and take his annual holiday at the seashore if he could unload all his invisible taxes. His increased product goes through these. I have not named all of them, and I could not name all of them in twice the time at my disposal. Every monopoly in the land of whatever name or nature is engaged in levying invisible taxes. You get them wrapped up in the dress you buy for your wife, in the hat you purchase for your daughter, in the jackknife you get for your boy, in the gewgaw you get for the baby. When the latter cuts its teeth it does so on a rubber ring that is more tax than rubber. You can not get medicine for it without getting a dose of tax along with the drug. And if the little one should die the Coffin Trust extends an invisible hand for tribute.

But these taxes, Mr. Chairman, are not all. They are not the most important. The purely private taxes, the collectors of which you do not know, these are enormously more in the aggregate and they are more oppressive. You do get something for the taxes you pay the Government. The people get something back from the Government, but what do they get back from the horde of trusts which still flourish in spite of trust busting and in spite of all restrictive legislation?

If I could speak directly to the farmers of the land, I would ask them to look after these invisible taxes. I would say: "Do not forget them. They are sucking out your lifeblood. You must stop them or they will destroy you. Do not think that this is mere pessimism. Do not consider me an alarmist. There are tendencies in this country which no thinking man can observe without disquiet. We are traveling a road which has led other nations to death. May we hope to travel it to a happier goal? We already have a great armament afloat, and we are proposing this year to spend $150,000,000 more on this establishment. What is the occasion of this stupendous armament? What enemy is threatening us? On militarism, in one form or another, we are spending $500,000,000 a year. What does this all mean? What does it mean to the farmer, to the artisan, to the laborer, to those who do the work and pay the taxes? It is a fine thing for the steel makers, the gun founders, the powder manufacturers, and the shipbuilders. Their fortunes grow till a million seems less to them than a dollar to the man in the furrow. Where is it going to stop? The common people are bending under their burdens. Taxes, visible and invisible, are pressing them to the ground. Of every dollar they earn perhaps more than half goes in some sort of tax. The average of our tariff taxes alone, until the adoption of the Underwood bill, was approximately 50 per cent. The tax may or may not have gone into the Public Treasury. In some instances it went into the dividends of the textile trust."

Mr. Chairman, the trouble with most of our taxes is that they do not stay where they are put. Take the tax on merchandise, for example. The merchant does not pay it. He collects it from his customers, with a percentage, and merely turns it over to the State, less his percentage. Or, take the tax on whisky, beer, and tobacco; it is not paid by the distiller, the brewer, the tobacconist.

THE CONSUMER PAYS.

The consumers of these articles pay it. And so with nearly all other taxes on commodities, businesses, and the like. They do not fall at last on those who seem to pay them. They fall upon the consumer. Happily the Democratic Party has written into the law of the land an income tax, a direct tax, a tax that will stay where it is put, a tax which can not be shifted and which will tend in some degree to equalize the burdens of government. But this is only one step in the right direction. We should not pause until direct taxation is the rule and not the exception; and as the very simplest tax, as the tax that will stay where it is put, as the tax which will discourage nothing but monopoly, as the tax that God himself has provided for and that is infallibly collected, if not by the Government for the people, then by individuals for their own private gain, I beg this House and the people of this country honestly and candidly to consider what is called the single tax—the tax on land values only, on the value of land, irrespective of improvements. This tax would fall only upon valuable land; it would not rob farmers of their land; it would merely prevent speculation in land; and it would relieve labor and labor products from all burden; it would encourage industry; it would check forestalling; it would wipe out invisible taxation; it would destroy monopoly; it would raise wages; it would restore industrial independence; it would eliminate the trusts; and, above all, it would make men free.

Mr. Chairman, I can not undertake in the time allotted me to go into a discussion of the single tax, much as I would like to lay its merits before this House; but let me implore you not lightly to dismiss it from your consideration. Sir, you can not investigate it with an unprejudiced mind, it seems to me, without accepting it as a solvent for the muddle in which the early years of the century find us. Do not imagine that it involves a scheme for the placing of all the burdens of government on the shoulders of the farmer. Remember that this is a tax on land values, not on land. And where do we find land values? Where land is worth $10, $20, or $50 an acre, where corn and wheat are grown, or where it is worth $5,000 or even $15,000 a front foot, as in New York and Chicago? Bear in mind that the farmer would not be taxed on his improvements—his houses, barns, fences, drains, live stock, growing grain, orchards, and implements; only upon the value of his bare land. There would be no other tax save this land-value tax for him to pay; no indirect or invisible tax, no private tax, no tax that did not represent to him a benefit received. I am fully persuaded, after years of honest study and investigation, that under the single tax the farmer would pay less directly than he pays now; indirectly he would pay nothing at all.

This question, Mr. Chairman, is fundamental, and I consider it in the broadest fairness and candor. Let no small prejudices blind the farmer's vision. He is being done to death by invisible hands. There is but one escape. He must stop these secret and insidious taxing agencies or he will perish by the same forces that worked out in the destruction of the people of old Rome and that are sapping away the vitality of the United States. It took Rome 500 years to die. Will it take so long for America to pay the penalty of injustice if she shall continue her course? Remember that we live in an age of telegraphs and steam. We stride over the road that Rome traveled in 7-league boots.

[Mr. LLOYD addressed the committee. See Appendix.]

Mr. FESS. Mr. Chairman, the Republican Party's future is assured by the devotion of the rank and file to its mission to secure for all the people the largest exercise and enjoyment of the rights and fruits of citizenship. The party of Lincoln, Garfield, and McKinley, whose history is the record of the most marvelous prosperity of all the American people known to history, will not brook disintegration over quarrels between aspiring leaders. Whatever may separate the aspirants for place, the rank and file will stand by the tenets of their party.

The mass of voters, whether partisans of Taft or Roosevelt, will ultimately act from the dictates of judgment rather than prejudice for or against a leader or leaders. This will be done neither from dislike of the one nor admiration for the other.

The future of the Progressive movement as a third party must wholly depend upon whether its autonomy is necessary to secure needed reforms. From this point of view it is well to recall the various efforts of third-party organizations.

The first was in 1805, known as the "Quids," a third something. This movement was headed by John Raadolph, of Roanoke, in his opposition to Jefferson. It was personal and factional and inevitably short lived, never reaching beyond a local significance.

The second effort was in 1828–1836 by the Anti-Masonry Party. This party swept many State elections, and in 1832 cast the electoral vote of Vermont for its presidential candidate, William Wirt. Its weakness as an organization consisted in its being purely negative. Its platform consisted of two planks—opposition to all secret orders and forcible suppression of the Masonic order. The movement caught such leaders as John Q. Adams, Henry Clay, and William H. Seward, and passed away as suddenly as it appeared.

The third movement was in 1834–35, known as the "Loco-Focos." This was but one expression of an unrest that had appeared among native Americans in various cities. It was noticed from 1820 to 1840 in a labor movement in which Robert Dale Owen was so prominent. At its first appearance it cast 6,000 votes, and was then lost in the Anti-Masonry movement. Its second appearance was the Loco-Foco episode, which was soon lost in the more famous American movement, in opposition to the Catholics. This campaign was fought upon a platform of three planks: (1) America for Americans, (2) anti-Catholicism, and (3) regulation of immigration. It was in this movement where the public-school question was made an issue. Its first convention was held in Philadelphia in 1845, with 140 delegates from 14 States. At this time it had four Members in Congress and was active in all the Northern States. It named no candidate in 1845. A second convention was held in 1847 in Pitts-

burgh, but adjourned to meet in Philadelphia in September, 1848, when it recommended Zachary Taylor for President. The one result of this movement was the defeat of Henry Clay for President in 1844. When it coalesced with the other parties it had six Congressmen in the lower House. This same movement was revived in 1853 under the name of "Know-Nothing" Party, which held its first national convention in 1856 in Philadelphia and nominated Millard Fillmore for President, who was also indorsed by the Whig Party as its standard bearer. This party again appeared for the last time in 1860 under the caption of "Constitutional Union" Party, with John Bell as its candidate, who carried but three States. To recapitulate it will be noted that this Nativist movement, elements of which are always present, began in 1835 as a revulsion against the influence of foreigners, and bore a religious coloring. It was revived in 1843 as the "American Republican Party," and again in 1847 as the "Native American Party." Its next appearance was in 1853, almost as a secret order, and 1856 took on the name "Know-Nothing Party." In 1860 it again appeared as the "Constitutional Union Party," and was lost in the issues of Civil War. Since the war it has appeared infrequently and only once as an organized movement—in 1888—when its convention ended in dissension.

The fourth third-party movement grew out of the slavery agitation. It is known successively as (1) (1833) National Anti-slavery Society, (2) (1836–1844) Liberty Party, (3) (1848) Free Soil Party. This movement is historically known as the "Abolition" agitation, and must not be confused with the Republican Party of 1856. William Lloyd Garrison, its greatest tribune, battled with all his mighty power of voice and pen against making it a political issue, much less a partisan one. But he lost the fight. Its first candidate, James G. Birney, received 7,069 votes in 1840 and 62,300 in 1844. In 1848 it dropped the name of "Liberty" for "Free Soil" and nominated Van Buren, the Democratic ex-President, who polled 291,263 votes. In 1852 it dropped back to a little over one-half, when it gave Hale but 155,825 votes. This is the last campaign it conducted as a party. By the next campaign it was absorbed by the newly organized Republican Party, which drew from all ranks, not upon the platform of abolition of slavery but upon that of opposition to further extension of slavery. In this connection it is interesting to note the bitter attacks upon such leaders as Lincoln by such abolition advocates as Wendell Phillips, who charged the Republican leaders as making a covenant with the evil one and denominated Lincoln the slave hound.

The Republican Party owes its rise and virile growth to no single issue. While opposition to further extension of slavery was its slogan, yet it took a broad national view and drew from every party its very lifeblood. The Democratic Party, its chief opponent, lost to the Republicans the very best ability it possessed in its ranks throughout the Northern States. It also took most of the rank and file of the old Whig organization, as well as the Native American movement. Its very inception made it cosmopolitan as well as virile, with the essential winning contest grounded in moral conviction against the inherent wrong of traffic in human beings. The issue that compelled settlement, so fundamental to the life of the Nation, and which had been compromised in the spirit of cowardice, had not only disintegrated the Whig Party, the chief opponent of the party of slavery, but it had hopelessly split the Democratic Party, as well as confused the floating element seeking a lodgment outside of both parties.

The rise of the Republican Party was totally due to the attitude of the leading parties toward the all-embracing issue before the people. Had either party taken a rational stand on the slavery issue, the Republican Party would not have arisen. But, on the contrary, both parties in convention assembled resolved that the slavery agitation must cease. It would have been as sensible to resolve that the tide should cease to flow. Since the rise of the Republican Party it has held continued sway of the Government save the two terms of Cleveland (1885–1889, 1893–1897) and the present administration (1913).

During this period the dominant issue, after reconstruction incident to the war, has been industrial rather than political or moral. The party in power responsible both for what is done and what is omitted is made the target of attack by third-party advocates. This explains the attitude of the third-party prohibition leaders, who succeeded in encompassing the defeat of Blaine in 1884. Throughout its checkered career it has had little to say against any but the Republican Party, from whose ranks its members came. It also explains the rise of the Liberal Republican movement of 1872, led by such men as Horace Greeley, Carl Schurz, Charles Sumner, George W. Julian, Murat Halstead, and men of like note. It will be recalled that this movement which polled nearly 3,000,000 votes to the three and one-half million votes cast for Grant was conducted against the Republican Party as a protest against the leaders and leadership under Grant. It did not succeed in defeating the leader, and naturally coalesced with the party after this protest, although its total vote in the only election it held approached that cast for the regular nominee.

Another source of third-party agitation since the war is found in the soft-money advocates, so prominent in certain quarters to-day, notwithstanding the decisive repudiation in 1896 and 1900. Aside from the numerous spasmodic efforts prior to and during the war, the most prominent is that known as the "Greenback" agitation of 1878. This grew out of opposition to the effort on the part of the Government to resume specie payment. This craze for soft money, or paper money, is with a certain class the "cure-all" for industrial stagnation. It stirred the country in 1878, and again in 1896, under the slogan of "free and unlimited coinage of silver at 16 to 1," it swept the country as with a cyclone. In the former case it went no further than a third-party movement, but in 1896 it encompassed the Democratic Party under the leadership of the present Secretary of State. In neither case was it sufficient to defeat the sound-money principles of the Government. In 1896 the soft-money advocates within the Republican Party withdrew to favor either the Democrats or the third party. While the sound-money element of the Democratic Party withdrew, some to join the Republican Party under the lead of McKinley, while others to form a second third party.

Still another source of the third-party movement is found among Socialist thinkers. This movement is rapidly encompassing the disaffected labor parties. Its phenomenal growth is to be expected in a democracy, where a free field is opened to all agitators, and where the ballot is the natural weapon of public as well as private opinion.

An analysis of these movements will reveal these various elements which are prominent in most third-party propaganda.

A democracy is the training ground of popular leadership. It is the fertile field of aspirants for place and power. Naturally places to be filled are less numerous than aspirants. Few are chosen, many are left; hence disappointment. Those on the outside are dissatisfied with the machine, and not infrequently many on the inside fret at its operations; hence new organizations are sought. Among these elements so prominent will usually be found, first, the young man, who must not only win his spurs against odds within his party but most frequently under the withering scorn of the "standpatter," who bitterly resents any and all suggestions of the "butter-in." Often the younger man, who knows his ability, and frequently discerns too truly the motives of the leaders, prefers to fight in a new party rather than to suffer surveillance to the old. Hence the prominence of this element of young men in a new party. Second, the reformer will invariably make his appearance in the new party. This is due to two things—first, party lines never hang heavily upon reformers, either because he does not see the necessity of party influence in legislation, or else, seeing it, he prefers to be independent for the sake of his cause; second, to the average man reformation and allegiance to party are incompatible. This element will return to the party with the ease it left it when the cause is won, for party to such is a means, not an end. Third, closely related to the reformer stands both the clergy and the scholar in politics. The clergy will readily leave party to join a new movement the moment it is convinced that moral issues demand it. Like the reformer, the clergyman will not refuse to realign with the party of choice the moment he is convinced the issue for which he contends can be reached by so doing.

The scholar is most likely to join a new movement, since the very character of his profession leads him to resent dictation for party sake. He is apt to look upon party fealty as evidence of mental weakness. He is also inclined to deal with matters as they ought to be rather than as they are. His mind is fixed upon the ideal more than the real. He is a theorizer who regulates conduct by codes, rather than a doer who meets a condition as he finds it. In his impatience with the tardiness of the party leaders he leaps at the remedy of party abandonment and makes the common blunder of failing to distinguish between party leaders and party principle. In this class will appear many of the moralizers, who are deeply concerned about a higher standard of citizenship, and who leap at one bound from one set of undesirable leaders to follow, often blindly, another imbued with like domination. (4) Still another very prominent element to make up third-party movements is the discredited leader. In the very nature of leadership in a democracy the discredited leader is inevitable. The position of leadership, from the nature of the case, involves selection, which presupposes rejection. No matter how prominent the head of any

movement is to-day, he will inevitably become second to-morrow if the movement is growing. This is noted in every walk of life, both private and public. It is not confined to politics, but extends to life socially, industrially, religiously, sociologically, and to every activity. The leader of every popular movement must see that his tenure must be limited. If he meets the situation by withdrawing voluntarily, nothing more is heard. If he does not, he is displaced and frequently discredited. Most often in the political field he seeks a third party as outlet for his activities. This element is most significant in all third-party episodes. (5) Closely associated with the last class is what is popularly known as the "sorehead." He does not necessarily belong to the former class, since he may not have reached the position of leadership, although he often does. He is the voter who is a chronic knocker, whose chief business is to find fault with the existent situation. He sees no good in his party and takes peculiar pleasure in announcing his determination to leave it for another, not because he wants to especially, but because his conscience (?) compels it. His motive is not so much to help the organization to which he goes as to hurt the one from which he comes. He seeks coalition with his former enemies in order to cripple his former friends. All third-party movements have many voters from this source. (6) Closely allied to this last class is another class, whose chief motive is to punish his party for what he regards as a dereliction of duty. His observations lead him to conclude his party no longer represents the principles for which it once stood and for which he now stands. He becomes dissatisfied with the leaders of his party. He does not discriminate between the fundamentals of his party's principles and the attitude of temporary leaders. His unsettled mind is a fertile field for the cheap or popular magazine with its penny-a-line articles of protest.

In his desire to do the right thing he looks for a guide. While his devotion to his party is strong, he will follow a leader in whom he has confidence, even to the abandonment temporarily of his party. At such a time the appearance of the popular leader, especially when there is the semblance of injustice done him, is the opportune moment. To the cause of such leader there will not be wanting men in every part of the country who, as former leaders in the party and especially if displaced by others, rightly or wrongly, will rally to the standard. At such juncture the quiet citizen, who has fed his distrust upon the food of the popular magazine, stimulated by mutterings of suspicions of his neighbors, decides to at least deliver what he calls a rebuke. This element furnishes the larger portion of all third-party movements. When the rebuke is once delivered, he stands ready to return his allegiance if opportunity offers.

A failure to properly judge this element, to discriminate between the leader with a grouch and the rank and file in its interest, is the item of disappointment in all third-party movements, both to those who go out and those who remain. Leaders of third parties and their lieutenants invariably fail to discriminate between the vote for their standard bearer when the fight is at its heat and definite abandonment of their own party for a third party. The rank and file, in spite of professions of leaders, in time will discover that the third party will not successfully promulgate their views simply because their own party will do so if such views are worthy.

This is the history of every third-party movement known to our Nation. It is true of the "Quids" (1805), the Anti-Masonry (1828–1836), the Native American (1835, 1843, 1853), and the various parties since the war. It will be true in the case of the Progressive Party. No student of the past could fail to see the similarity of this movement to other movements in our past. Most of the principles contended for by the Progressive Party are Republican, not by inference but by actual enactment. If there are men in the Republican Party adverse to such principles, they must not be confused with the party. The common error is to judge a party's principles by the men we call leaders rather than by the consensus of the rank and file. This is never true in a rational democracy. The people do not reflect the opinion of leaders, but the leaders invariably reflect the conviction of the people. Likewise a newspaper reflects the sentiment of its readers, else it would be without them.

Here is to be observed the real value of third-party movements. If from indifference, bad influence, or whatever reason a party's representatives neglect or actually refuse to take up measures of common weal, a third party can compel it so soon as it reaches the place where it holds the balance of power. If the contention is worthy, the issue will be indorsed by one or both of the contending forces in a popular government, and the cause of the third party being satisfied the party passes away by absorption. If the cause or issue is unworthy, it dies because of its unworthiness. Most third-party propaganda have resulted in such an awakening as to redound in good to the nation, whether by clarifying the issue or riddance of predatory and intolerable leaders.

The honest citizen whose ruling desire is to vote right will be little actuated either by desire to vindicate his leader or to punish his party. In the present instance, as soon as he rightly discerns the inevitable consequences of the Progressive movement to be what has always been the results of such movements he will refuse to be further led by leaders who have gone too far to return. Such men as gathered in Ohio on the 4th of January and again in Lima on the 12th of February of this year, including some of national reputation, have placed themselves outside of the party they recently left by unnecessary and unfortunate utterances against the party of former attachment. They are left to the alternative of maintaining their new organization or openly embracing the Democratic Party or suffer the humiliation of eating their own words spoken in heat. It is too much to expect them to do the latter at once, although it was done by Charles Sumner, Carl Schurz, Murat Halstead, and others after 1872. However, they declared they had won by compelling the party to assert itself. It is too early for the Progressive leaders to enter the Democratic Party, as that would weaken the Democrats by the gain to the Republicans at once of the rank and file of the Progressives who are being used by their leaders in the interest of the Democrats by dividing the Republican vote. Whatever may be the agreement between the Progressive and Democratic leaders, it can not apply to the rank and file. The mass of voters who supported Col. Roosevelt are still loyal to Republican principles. Many of them voted for Col. Roosevelt as Republicans. They will rebuke the Progressive leaders the moment they fully understand the real purpose of keeping up the Progressive organization. With them Democratic success is not the purpose. Even Republican defeat, the purpose of their leaders, is not their purpose. When they rightly comprehend that their allegiance to the new party is the price paid the Democrats for the appointments already delivered as so much consideration, they will register their protest, as has always been done in the past. Third-party propaganda can take but one course. Note the record:

The purpose of the Quids in 1805 led by John Randolph was the defeat of Jefferson. The purpose failed, and the Quids evaporated. The purpose of the antimasonry movement in 1828 was to elect Andrew Jackson against J. Q. Adams. Jackson would have been elected without their efforts. The anti-Masons coalesced with other parties, mostly the Whigs. The purpose of the American Party in 1844 was to defeat Henry Clay. They succeeded, and the party discontinued. The purpose of the Liberal Republicans in 1872 was to defeat Grant. It failed, and nothing more was heard of the movement. The purpose of the third party—Prohibitionists—in 1884 was to defeat Blaine. In this they succeeded, and as a party it is pitiably weak at the very moment when the temperance sentiment is growing by leaps and bounds. The purpose of the Silver Republicans in 1896 was to defeat McKinley. In this they failed; nothing more is heard of the movement. The purpose of the Gold Democrats of the same year was to defeat Bryan. He would have been defeated without their influence, and they evaporated. Now, what was the purpose of the third party—Progressives—in 1912? The defeat of Taft. In this they succeeded. What is now their purpose? To defeat the Republicans in State and Nation. This purpose, as in the past, is confined to the leaders. Will it win the rank and file? Not if history has any lessons for the hour. Few people will seriously contend that the Progressive element of the Republican Party had no ground for their contention. But the method chosen to correct the mistakes is the grievous error. It results in little more than a mere scramble for place by political leaders whose all is wrapped up in the continuance of their new party organization, which must be short lived at best.

Party success must never be measured by the enthusiasm of a convention of interested delegates or formal statements of party leaders. It must be gauged by the sentiment slowly forming about the quiet firesides where judgment rules rather than personal sentiment. It will be interesting to watch the history of this Progressive movement and note how history repeats itself, simply because the rational issues of the Progressive movement are tenets of the Republican Party. The vote in 1912 was an expression of personal attachment to a leader rather than dissatisfaction with their party or opposition to its principles.

The Republican Party takes its stand upon its record of the past. It was born of a moral awakening and came as the champion of freedom. It rallied to its ranks under the leadership of its first great President, Abraham Lincoln, who became

the savior of the Nation, elements of all parties who took an uncompromising stand against slavery. It conducted the affairs of the Nation through the most mighty civil war known to man. After sealing in blood the covenant of an "indissoluble union of indestructible States" it began the work of rehabilitation. It wrote into the Constitution the thirteenth, fourteenth, and fifteenth amendments, and has done its utmost to make them mean what they say. Out of a distracted credit it promulgated sound money which up to this very hour sees every dollar, whether specie or paper, worth a dollar in gold in every country of the world. It inaugurated the system of protection to American capital for the sake of the employment of American labor at American wages, which it consistently maintained. It stands by the policy of endeavoring to make two blades of grass grow where before only one grew. Instead of opening our markets to European goods, it prefers to open the American mills to American workingmen. It believes in building up an American market as against a foreign market. It jealously guards that home market, knowing that next to the producer must stand the consumer. To this end it believes in buying American-made goods from firms employing American labor rather than European goods made by European labor. It is not a question of maxims but one of markets. It believes in the policy of the protection of sugar at home, made in the mills of Ohio and Michigan, of Colorado and California, established by American citizens, investing American capital, employing American labor; mills whose products are supplied by American farms, and in turn sold as a finished product to American homes at a cheaper rate than it will be sold later in Europe. Such a policy is wiser than to close up the mills, drive out the capital, displace our labor for the sake of Europe. In a word it denounces the cry of buying in the cheapest market, which simply means to go to Europe for goods made by cheap labor at the expense of our better-paid labor here, until our people are at the mercy of the foreign price. It declares such a doctrine unpatriotic and demands the right to buy in the market in which you can pay the easiest. This American policy which has built up our industries involves some problems which need adjusting. But destruction of industry is not a rational procedure for social and industrial adjustment. These problems will be solved by the Republican Party, and solved aright.

If, for any reason, evils grow out of a system, the rank and file of the party will compel correction, even though party leaders may hesitate. This correction will not come by an attack upon the party policy, but by a reformation of the evil. The existence of trusts is not due to the system of protection, but to the modern economic doctrine—where combination is possible, competition is impossible. The Sherman Act, a Republican measure which bears the name of one of Ohio's greatest Republicans, which was allowed to be dormant under Cleveland, but which was given vital meaning by McKinley, Roosevelt, and Taft, at this very hour is commanding the support of the present Democratic President, who has asked Congress to sustain the law. The Republican Party to-day stands committed to the greatest task in its history. By an unfortunate dissention of the leadership, not shared by the rank and file, the common opponent, the Democratic Party, was permitted, by a minority vote, to direct the affairs of the Government. It is headed by a man of ability and sincerity, who looks upon his office as a position of command. He ordered the deed. By direction of that section of country consistently opposed to stimulating American industries we have seen a reversal of our American policy in the interest of a foreign one. We now face the once most marvelous organization of industry ever known, employing the most skillful labor yet known, at the highest wages ever known, distracted and distressed. Industries are closing their doors, others reducing time; business stagnant; armies of men walking the streets of great cities demanding work, and only one year since the inauguration of the much-flaunted "New Freedom" and less than six months of its application to our industries. When these theorists were cautioned against this attack upon our country's ability to employ our labor, invariably we were met by the demogogic reply, "Oh, you are speaking for the interests while we are legislating for the people." And this at a time when any man in America who wanted work could find it, and at good wages.

How like the days of 1894 under the only other free-trade law of our history. Then amid suffering from distracted industries, Democratic protests were heard, denouncing every man who reminded the country that the fruit of a reversion of national policy was being experienced. The man who was bold enough to call things by their right names and place the responsibility where it belonged, was denounced as unpatriotic. The country was informed that the soup house and bread line were due not to Democratic administration but to a world-wide condition. When the Republicans went before the country in 1896 with a pledge to restore prosperity, the Democratic Party headed by the present Secretary of State ridiculed "general prosperity" and declared the cause of the suffering was a monetary one, and offered the free coinage of silver 16–1 as a remedy. As they, in 1896, would not dare to go before the country upon the free-trade propaganda under which the country was suffering, so in 1916, they will be looking for another issue, for no man will likely be bold enough to ask the country to indorse a policy that in less than six months promises to duplicate the situation of 20 years ago.

Utterances of Democratic statesmen and Democratic editors are to-day most similar to what was heard then. Whenever a Republican calls attention of the country to the industrial situation under the "New Freedom," we hear the charge that such statements are not patriotic. The author is stigmatized as a "calamity howler." It is not infrequent to hear a statesman (?) declare how prosperous is the country, and that in the face of the appealing calls from charity associations in the cities for aid for the needy.

When the head of the Industrial Commission, a Government bureau, innocently gave out the facts that in New York alone 350,000 men were unemployed, the desire of Democratic leaders to suppress such information was disclosed by the furious criticism they offered against the informant. In due time a made-to-order explanation was forthcoming. To bolster up the courage of the proponents of this un-American policy, which has reversed the American policy for a foreign one, we are informed that the commission is to institute an investigation, with a promise of a social peace through experts. "Social peace" is akin to "new freedom," and will have the same effect. Catch phrases sound well to the ear, but are a poor diet upon an empty stomach. Instead of taking joy junkets over the land and to other countries to learn how other lands care for their unemployed it would tally with a higher degree of statesmanship to remove the cause of unemployment. Unemployment is the condition of lack of industry. It is due to the demagogic folly of attacking the producer, who alone employs labor, in the imaginary interest of the consumer. It is the farcical practice of Democratic administration to strike down the employer of labor upon the cheapest of the cheap profession that such legislation is on behalf of the people as against the "interests."

But we are told times are growing better. Strange statement. When less than 18 months ago the country was promised that no legitimate business would be injured, but greatly benefited, now we are daily given the promise that the depression cotemporary with Democratic success will soon be relieved.

Let us see what the prospects are, according to Bradstreet.
